PREFACE

In accordance with the new plan explained at length in the preface of the preceding volume, this book accomplishes a threefold purpose. It is Supplemental Digest No. 9 of the Original Digest set; it is volume X of the Abridged Reports, and volume IV of the Consolidated Digest.

The decisions of the Commission are published very irregularly and frequently a number of volumes overlap. While the greater portion of this book contains the decisions from Volume 112 I. C. C. to 132 I. C. C., it is advisable to call attention to the fact that there are a few points from 104 I. C. C., 107 I. C. C., and 109 I. C. C. which did not appear in the preceding volume but were published since then, and are included in this volume.

This book is arranged alphabetically, similar to the preceding volumes, by such subjects as are the ordinarily accepted divisions into which the principles governing interstate traffic naturally classify themselves. This can best be seen by referring to the Table of Contents, which immediately follows, and is a reprint of the entire classification. It is earnestly recommended that readers study this classification, printed in the front of the book. By seeing the entire classification together, it is easier to become familiar with it, and it will be found a simple way of finding the decisions desired.

The classification, section numbers, and topics in this volume, with the exception of the new subjects added, are exactly the same as in the other volumes, so that when the reader finds decisions of interest in any volume, he can turn to the same subject and section number in any book and obtain all other distinctions and variations on that principle.

Owing to the rapid development of traffic law, some new subjects have been added, which were not in the other volumes, because at the time of their publication, such divisions of the law had not yet been developed. Others will be found greatly amplified since the publication of the preceding volume.

It is again earnestly suggested that readers of this book study the Table of Contents very carefully. As about ten thousand points of traffic law are classified, it can readily be understood that familiarity with the classification is necessary to make the book of the quickest available use. We

have tried to evolve a logical and complete analysis of the field of traffic law and a classification which affords a birds-eye view of the entire subject. But no classification is self executing.

Inasmuch as there are many points which may not be logically classified under a particular head, but which may, nevertheless, have some bearing on it, cross-references are inserted redirecting the reader to such points.

In all cases where it is possible to do so a so-called "fact point" has been made. These "fact points" show tersely, but completely, all evidence on which the Interstate Commerce Commission or the court bases its decision in the particular case. The author has attempted to summarize in an easy, readable style, ton-mile revenues, distances, commodities, rate comparisons and other evidence presented in the particular case. Not only therefore, have all traffic principles been classified but also the economic principles and facts governing each particular case.

The decisions are arranged chronologically under each section, the most recent decisions being placed last.

At the back of the book will be found indexes to the cases involved. Commencing with the volume immediately preceding the indexes of commodities and localities were discontinued. The Commission is now preparing an index of commodities and localities from the inception of the Commission. There is also published by private interests a cumulative index of commodities. The demand for such indexes in the one volume does not appear intense and such indexes are therefore discontinued. It is believed more benefit will be derived by the subscriber if we eliminate any feature which subsequent developments may cause to become mere "padding".

The author takes this opportunity of thanking the many subscribers whose kindly letters of appreciation have been a real reward for the large expenditure of personal time involved in the preparation of this work.

Appreciation is also expressed for the courtesy of the West Publishing Company in permitting the author to make use of their digests and head notes of the state court and federal cases which the author has used in this volume and preceding volumes.

HERBERT C. LUST.

Chicago, Ill., November, 1928.

I. APPLICATION OF ABSORBED RATE.

§1. In General.

(a) Prior to decision in 52 I. C. C. 209, carriers absorbed loading and unloading charges at public stockyards, but not elsewhere. In that case carriers refusal to absorb out of their line-haul revenues increases for loading and unloading livestock at public stockyard at Chicago was upheld, on ground that it was duty of shippers rather than of carriers to load and unload livestock and other carload traffic. Since adoption of section 15 (5) of act, carriers have been required to perform loading and unloading of ordinary livestock at public stockyards without extra charge to shippers. However, duty still rests upon shippers to load and unload such shipments at other than public stockyards. Southwestern Horse & Mule Asso. v. A., T. & S. F., 129 I. C. C. 730, 737.

II. DISCRIMINATION.

See Discrimination.

§1½. In General.

(a) In original report, 98 I. C. C. 619, failure of carriers to absorb out of applicable rates the entire compress charge on cotton originating at and forwarded from Jonesboro, Pine Prairie, and Mamou, La., compressed at Alexandria, and reshipped to New Orleans, was not found unreasonable, it being shown that compression was not "at the expense of the carrier" as provided by tariff. Upon further hearing, original report reversed as under terms of the tariff carrier extended to shipper the protection of the through rate, not only in event that compression was "by and at the expense of the carrier," but also when, as here, after compression, it was redelivered to originating carrier, irrespective of whether compression was done by the carrier or some other agency. In either instance carrier would obtain entire haul from point of origin to destination, and transportation facilities accorded would be identical. Reparation awarded. Haas & Co. v. Director General, 123 I. C. C. 121.

§3. Refusal to Absorb.

(a) Nitrate of soda: Proposal to increase rates on, from ship side at New Orleans and subports to points in Arkansas and Oklahoma on class A lines by discontinuing absorption of handling charges at ports, thereby establishing same basis as that applying to destinations on other than class A lines, found not justified. Proposed increase would seriously affect use of this commodity as a fertilizer in its competion with other fertilizers. Moreover, the yield of revenue under present rates seems ample. Nitrate of Soda from New Orleans, 104 I. C. C. 761.

III. CONTROL AND REGULATION

See Control and Regulation.

§4. In general.

(a) The Commission has repeatedly found that a carrier can not be compelled to absorb the switching charges of a connecting line in the absence of unjust discrimination or undue prejudice. Romann & Bush Pig Iron & Coke Co. v. A. T. & S. F. Ry., 129 I. C. C. 509, 510.

IV. REASONABLENESS.

See Reasonableness of Rates.

§5. In general.

(a) Southwest Missouri R. R., respondent, proposed to absorb 30c per ton of the charges for draying carload shipments of lead or zinc ore or concentrates, from the wagon scales of any mine in Kansas or Oklahoma to desig-

nated loading tracks of that carrier in Oklahoma and southeastern Kansas. The mines are served principally by the Northeast Oklahoma and the Mineral Belt, whose loading tracks extend to within a few hundred of almost every mine in the district. All of the ore, however is drayed across wagon scales at the mines before it is loaded on the cars, and the teamsters receive a minimum charge of 50c per ton for the socalled turnaround haul of one quarter of a mile or less. For longer hauls the charges are graded upward from the minimum, but the ore is generally hauled to the nearest loading track or one within the turnaround distance, as the shippers will not ordinarily pay more to have it hauled to a more distant loading point. Respondent operates an electric line from Carthage and Joplin, Mo., to Picher, Okla., which is in the heart of the ore field, but there are only six or seven mines adjacent to its loading tracks. It is mainly a passenger carrying line. Original decision, Drayage absorptions by S. W. M. R. R. Co. 113 I. C. C. 179. The fact that the other lines may be in a relatively prosperous condition, however, would hardly be sufficient reason by denying them the privilege of establishing similar absorptions if respondent is permitted to establish its proposed absorption arrangement. In the event such absorptions were established, respondent would be at the same disadvantage as at present, and in addition it would lose the 30c per ton on all of the ore handled by it. The proposed absorption, however, would be equivalent to a reduction in the joint rates from the loading tracks to the smelting points which are already subnormal in the sense that they are as low or lower than the rates in effect on June 25, 1918, and this reduction would be made without the approval of connecting lines parties to such rates and over the objections of protestants whose rates are generally the same. Certainly it would create a dangerous precedent to permit a carrier to use such an arrangement to invade the field already adequately served by other carriers. Considering the low level of the rates, the announced intention of the other lines of publishing similar absorptions, and the possibility of the practice spreading, the Commission is of the opinion that the proposed schedules would promote destructive competition. At any rate, viewing the proposed arrangement as an extension of the carriers service the proposed schedules do not "plainly state the places between which property and passengers will be carried," as required by section 6. It is, therefore, unnecessary to pass upon the propriety of the constructive station practice in this case. The Commission is not without sympathy for respondent's desire to increase its revenues so that it may operate with profit, but it must give consideration to other things besides respondents situation and needs. Moreover, it is not persuaded that respondent would accomplish its purpose through the absorption of drayage charges. HELD, proposed schedules violate section 6 of the act, because they do not plainly state the places between which the property will be carried, and that they would create undue prejudice and preference in violation of section 3. HELD, further, a method of publishing rates for the transportation of certain classes of property which provides by way of absorption for a uniform reduction in the rates is neither a proper method nor one which satisfies the requirements of section 6. Furthermore, the proposed schedules, if permitted to become effective, would be inconsistent with the performance of the duty imposed upon the Commission by the act. Schedules proposed not justified. Absorption of drayage charges, 128 I. C. C. 405.

(b) Proposed absorption of charges for draying lead or zinc ore to loading tracks of Southwest Missouri R. R. in the Picher district of northeastern Oklahoma and southeastern Kansas, found not justified. Under proposed schedules absorption would be paid on ore drayed from mines at distance from loading tracks at charges graded upward from minimum-haul charge but such hauls being longer than from other mines in the district, shippers would not incur the longer haul and pay the higher rate on account of the absorption. Difference in rates is not predicated upon absorption or nonabsorption of drayage charges, and such difference does not excuse the discrimination between loading tracks. Moreover, ore produced in more distant fields is sold on same market as that from central fields and failure to make the same absorption on such shipments would be productive of undue prejudice and preference. See 27 I. C. C. 347. Absorption of Drayage Charges, 128 I. C. C. 405, 411.

(c) Proposed absorption would be equivalent to a reduction in joint rates from loading tracks to smelting points, which rates are already subnormal, and reduction would be made without approval of connecting lines parties to such rates. Moreover, it would create a dangerous precedent to permit a carrier to use such an arrangement where field is adequately served by other carriers. Considering the low level of rates, announced intention of other lines of publishing similar absorptions, and possibility of practice spreading to other commodities similarly handled, commission is of opinion that proposed schedules would promote destructive competition. Under such circumstances similar reduced rates have previously been found not justified under section 15a of the act. See 69 I. C. C. 589. Absorption of Drayage Charges, 128 I. C. C. 405, 412.

(d) Proposed schedules for absorption of drayage charges on lead or zinc ore to loading tracks of Southwest Missouri R. R. in Picher district of Oklahoma and Kansas, found not to "plainly state places between which property and passengers will be carried," as required by section 6 of the act. Proposed arrangement differs from that prescribed in 34 I. C. C. 453; 91 I. C. C. 539 in that rates are published to apply from loading tracks and not mines or wagon scales, and no obligation rests upon respondent to complete the service beyond end of its rails. While it refers to wagon scales as constructive stations they are not so designated in suspended schedules nor could they be treated as such because proposed absorption would not pay for hauling ore from wagon scales at more distant mines in the district and service will extend only so far as proposed absorption would pay for hauling ore to the tracks. Moreover, no definite points are given and it is doubtful as to where constructive stations could consistently be located. Absorption of Drayage Charges, 128 I. C. C. 405, 413.

(e) Upon further hearing, finding in previous report 102 I. C. C. 353, that switching charges and assessment thereof in addition to road-haul rate on lumber from sawmills in Idaho and Washington, milled in transit at Spokane, Wash., are not unreasonable, discriminatory or unduly prejudicial, affirmed. Nothing of record would warrant a finding that refusal to absorb switching charges under such circumstances as described is in violation of either section 2 or 3 of the act, as tariff provisions with respect to switching charges and their absorption which apply to complainant's traffic apply also to traffic of its competitors. Moreover, in 49 I. C. C. 613; 88 I. C. C. 413, it was found that carriers may lawfully absorb switching charges on competitive traffic, and refuse to absorb them on traffic that is not competitive, so long as all shippers similarly situated are treated alike. Federal Match Corp. v. G. N., 128 I. C. C. 415.

(f) Rates assailed represent increases which are results of cancellation of former absorptions and burden of proof is upon defendant. Amer. Fruit & Veg. Shippers Ass'n. v. Amer. Ry. Exp. Co., 128 I. C. C. 651, 660.

(g) Complainant alleged refusal of defendant to absorb connecting line switching charges, assessed and collected at designated destinations for delivering carload shipment of grain products to socalled off line industries, was and is in violation of tariffs. The grain under consideration originates at points exclusively on defendants line, in forwarded to, and milled at, established transit stations on defendants line which are also junction points with other railroads, and the grain products are thence shipped over defendants line to destinations on that line where delivery to consignee must be accomplished through a switching service performed by another carrier. The record presented indicates that all the traffic was local to the defendants rails and noncompetitive in character from a transportation standpoint. No tariff provision published by defendant has been pointed out which provides that defendant will absorb destination switching charges of other lines on that class of traffic. HELD, complaint dismissed. Southern Kansas Millers Club v. A. T. & S. F. Ry., 129 I. C. C. 632.

§5½. Legality.

See Legal Rates; Legality of Rates.

(a) Upon investigation by commission on its own motion into and concerning a certain tariff of Southwest Missouri R. R., an electric line, providing for absorption of drayage charges on ore from the Picher, Okla., district FOUND: Such tariff is nothing more or less than a statement that out of its published tariff rate the carrier will make to shippers at

certain mines, either directly or through the medium of payments to teamsters employed by them, specified rebates varying in amounts in inverse ratio with accessibility of such mines to its rails, but that shippers at other mines, including those nearer to as well as farther distant from its rails, will be required to pay full published tariff rate if they tender at same loading tracks like traffic for like transportation. Such tariff clearly results in unjust discrimination under section 2, and provides for application of more than one rate in violation of section 6, of the act. Drayage Absorptions by S. W. M., 113 I. C. C. 179.

(b) The Commission has in a number of cases found that carriers may lawfully absorb switching charges on competitive traffic, and refuse to absorb such charges on traffic that is not competitive, so long as all shippers similarly situated are treated alike. Federal Match Corp. v. G. N. Ry., 128 I. C. C. 415, 417.

I. POWER TO REGULATE.

See Control and Regulation.

§1. Jurisdiction of Commission.

See Interstate Commerce Commission I; Jurisdiction of Commission.

(a) Proceeding instituted by commission on its own motion pursuant to section 20 (8) of the act under which it is required to prescribe classes of property for which depreciation charges may properly be included under operating expenses and percentages of depreciation which shall be charged to each class of property, classifying carriers as it may deem proper for the purpose. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295.

(b) Prior to 1920 commission's power over depreciation accounting was vague and discretionary, but amendment of 1920 made the power definite and its exercise mandatory. The amendment is in no way inconsistent with prior provisions of section 20; it clarifies those provisions so far as depreciation accounting is concerned. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 325, 326.

(c) Upon contention that if section 20 of the act gives commission power to require depreciation charges, the statute is in this respect unconstitutional and invalid, since it attempts to give commission managerial powers over carriers, HELD, It is not commission's province to pass upon constitutionality of statutes enacted by Congress. However, the power conferred by section 20, as amended in 1920, is clearly no more an invasion of managerial functions than power to determine what are reasonable rates that a carrier may charge, or what securities it may properly issue. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 325, 326.

(d) The provisions of section 20 (5) of the act specifically empower commission to require and prescribe amount of depreciation charges of carriers, and general power to prescribe a uniform system of accounts also implies and includes the power to require accounting for depreciation. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 323, 328.

(e) Where a local telephone company undertakes to originate or deliver toll messages, practically all of its property is open for use in interstate commerce and at any time may be so used. Under such circumstances Congress has power to regulate accounting practices of such companies with respect to their property, including accounting for depreciation. Stated otherwise, telephone property, although used largely for local business, is subject to Federal regulation when it is subject to interstate use. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 332.

II. APPLICATION TO RATES.

§3. In general.

(a) The rates of depreciation of steam locomotives used by common carriers,

as generally computed by them in annual reports which they are required to file with commission, average about 4 per cent. United Chem. & Organic Products Co. v. Director General, 112 I. C. C. 687, 692.

(b) The policy of protecting credit by manipulating maintenance expenditures is uneconomic and may be perilous to investors. Where credit is protected by misrepresenting facts there is nothing on the face of accounts to indicate, except by resort to extensive comparisons, that repairs or renewals have been deferred. Net income is no protection to investors if procured at expense of upkeep, and while deferring of proper maintenance may not be a serious matter if confined to comparatively short periods and deficiency made good without undue delay, its extension over any length of time invites disaster, to which investors have frequently fallen. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 316.

§5. **Construction of Commission's Rules.**

(a) Contention that paragraphs (1) and (3) of section 3 of the act vitiate an operating agreement providing for joint use of terminal facilities in so far as it provides for an equal division of interest and taxes not sustained. Those charges are distinctly capital charges, based upon terminal property itself, not upon its use, and are divided among lines in proportions of their equitable titles to or interests in property. For their respective uses of property the lines also severally assume proportionate maintenance and operating expenses. This is not undue prejudice, preference, or discrimination within meaning of paragraph (1). Also, as essentially capital charges, they have no direct or indirect relation to interchange of traffic between several lines within contemplation of paragraph (3). M.-K.-T. v. K. C. T. 104 I. C. C. 203, 224.

(b) Working capital is understood to include, usually, three parts; First, investment in a stock of material and supplies; second, cash necessary to pay operating expenses incurred for common-carrier service prior to time when revenues from that service are available; and, third, a buffer fund of cash constantly on hand to cover amply recurrent and fluctuating deficiencies in the inflow of revenue applicable to payments falling due. Divisions Received by B. R. R. & C. Co., 104 I. C. C. 415, 426.

(c) These proceedings instituted on motion of the Commission arise out of provisions of paragraph 5 of section 20 of the act which requires the Commission as soon as practicable to prescribe, for carriers subject to the act, the classes of property for which depreciation charges may properly be included under operating expenses, and the percentages of depreciation which shall be charged with respect to each of such classes of property, classifying the carriers as it may deem proper for this purpose. There is general agreement that, with the exception of land and grading, most of the property units which make up the plant of a railroad or telephone company are gradually worn out in operation or are abandoned from time to time in favor of better substitutes. There also can be no doubt that the cost of such worn out or abandoned property units is a part of operating expense to be charged against the service. The basic question is whether such cost should be charged in bulk at the time when each unit is retired, or should be anticipated by periodical installments spread over its service life. It is conceded that the service lives of most units of railroad and telephone property are terminable. It is also conceded that the consumption of these units in service is an expense of operation. The question is only whether this expense should be accounted for, in the light of the best available information, as a continually accruing expense, or whether it should be accounted for as an expense suddenly incurred in its entirety at the time when the unit is retired. The Commission has no hesitation in reaching the conclusion that the former method of accounting will conform much more closely to the facts than the latter. The depreciation reserve, when all is said and done, is merely a record of the undoubted fact that the service lives of existing property units have to a certain extent been consumed. It may be an imperfect record, subject to correction or modification from time to time, but no question can exist as to the underlying fact. The fact may also be that appreciation has taken place in certain other property units, or that accumulated surplus is sufficient to counterbalance the effect of depreciation, or that the earning capacity of the company has enhanced the value of its securities, or that yearly retirements equalize to such an extent that operating expenses will be approximately the same whether or not there is accounting for

depreciation. These are all facts, which, if established, it may be desirable that the accounts should indicate, so far as practicable; but not to the exclusion of the fact of depreciation. Having reached the conclusion that depreciation charges are necessary in order that the accounts may properly reflect the facts of operation, it is, strictly speaking, immaterial whether or not they burden patrons or investors. The doctrine that accrued depreciation must be deducted in determining rate base value has been upheld very definitely by the Supreme Court. That being the case, the depreciation or installment method of accounting becomes a necessary measure of self protection, so far as the companies are concerned. Notwithstanding these decisions of the Supreme Court, however, the railroad, gas, and electric companies are not ready to concede this doctrine, and hence their insistence upon the retirement method of accounting. Depreciation accounting conforms with far greater accuracy than the retirement method to the actual facts with respect to operating costs. Neither investors nor the public are left in doubt in regard to the costs which are currently being incurred and ought currently to be met in the interest of prudent and sound economy. If these costs be met, the financial condition of the companies will be strengthened and they will be able to face the future with a greater degree of assurance. There will be no need for mortgaging the future to meet the debts of the past. Investors and the public generally will be protected against extreme fluctuations in operating expense and against unnecessarily large volume of outstanding securities demanding interest or dividend payments. Depreciation accounting, in short, conforms to the principles of conservative and constructive finance. The purpose of a system of accounts is to record the facts as to the operations of the carriers. Depreciation is a fact, so far as certain classes of property are concerned, and unless it be properly accounted for the record is incomplete and misleading. Long before 1920 and acting under general authority, the Commission required the carriers to set up in their accounts charges for depreciation on equipment, and no one has seriously questioned its power to make this requirement. Yet if it has such power with respect of equipment, plainly it also has it with respect to other classes of property. Assuming that depreciation is a fact, and the Commission has so found, the proper recording of that fact in the accounts is no more a matter for the exercise of managerial discretion than the proper recording in the accounts of the amounts paid for the wages of trainmen or for the purchase of fuel. The power to prescribe a uniform system of accounts implies and includes power to require accounting for depreciation, and the Commission has such power prior to the act of 1920. The amendment of that year gave it in addition power to determine the facts as to the amount and extent of depreciation. But this additional power is clearly no more an invasion of managerial functions than the power to determine what are the reasonable freight rates that a railroad company may charge or what securities it may properly issue. It seems to be well established that where a local telephone company undertakes to originate or deliver toll messages, and most of them do so undertake, practically all of its property is open for use in interstate commerce and at any time may be so used. Under such circumstances, no doubt would seem to exist as to the power of Congress to regulate the accounting practice of such companies with respect to their property, including the accounting for depreciation. HELD, that depreciation is the loss in service value not restored by current maintenance other than extraordinary repairs, and incurred in connection with the consumption or prospective retirement of property in the course of service from causes against which the carrier is not protected by insurance, which are known to be in current operation, and whose effect can be forecast with a reasonable approach to accuracy. HELD, the term "extraordinary repairs" shall, for the purposes of this finding, be construed to mean repairs involving renewals of substantial portions of a unit of property which are made in connection with the reconstruction or restoration of the unit or which involves renewals of longitudinal sections of continuous structures or the replacement of parts of such structures of a particular type by the substitution of parts of an improved type or design. That the term "service life" shall be construed to mean: In the case of units of property which are ultimately retired as units and which are not subject to extraordinary repairs, the estimated period of time between the installation of the unit in question and its prospec-

tive retirement. In the case of units of property which are not ultimately retired as units, but are continued in service indefinitely by extraordinary repairs, the estimated average period of time between the installation of the sections or parts of the unit in question which are renewed from time to time by the extraordinary repairs and their prospective retirements. In the case of units of property which are ultimately retired as units but have their period of service prolonged by extraordinary repairs, the estimated period of time is between the installation of the unit and its prospective retirement as a unit. That the term "net salvage value" shall be construed to mean the amount received for property retired and disposed of, or the amount representing the secondhand value if suitable for reuse, after deducting the cost of removing the property and of recovering the salvage. In cases where the cost of removal and recovery is greater than the value of the material recovered, "net salvage value" may be a minus quantity. That the term "service value" shall be construed to mean: In the case of units of property which are ultimately retired as units and which are not subject to extraordinary repairs, the difference between the ledger value of the unit and its estimated net salvage value at the time of prospective retirement. In the case of units of property which are not ultimately retired as units but are continued in service indefinitely by extraordinary repairs, the difference between the ledger value of the unit and the estimated net salvage value of materials recovered in connection with the extraordinary repairs. In the case of units of property which are ultimately retired as units but have their period of service prolonged by extraordinary repairs, the difference between the ledger value of the unit and the estimated net salvage value at the time of prospective retirement plus the estimated cost of extraordinary repairs intervening between installation and retirement after deducting the estimated net salvage value of materials recovered in connection with such repairs. That the total expense of depreciation in connection with any unit of property is its service value determined as above provided. Ledger value, as the term is used in the above and subsequent findings in this report, shall be determined in accordance with findings (8) and (9) infra. HELD, annual depreciation charges shall be computed at such percentage rate of the ledger value of the unit of property in question that the service value may be distributed under the straight line method in equal annual charges to operating expenses during the estimated service life of the unit. Annual charges so computed shall be reduced to a monthly basis by dividing by 12. HELD, that the classes of property of telephone companies for which depreciation charges may be properly included under operating expenses are the classes of property included in this category by the tentative report of the depreciation section, and in addition the class of property known as "right of way." HELD, classes of property of steam railroad companies for which depreciation charges may properly be included under operating expenses are the classes of property placed in the category by the tentative report of the depreciation section and in addition the following classes of property: ties, rails, other track material, ballast, right of way fences and paving. This find is subject to one important qualification. In case the railroad can show that its life is dependent upon a particular source of traffic, that it must be abandoned once that source is exhausted, and that exhaustion can be predicted with reasonable degree of accuracy, then the entire property of that railroad may be classed as depreciable. It seems desirable that depreciation due to this particular factor should be handled through a special amortization account rather than through the depreciation reserve. It would seem that equipment, which is movable and upon abandonment of a particular railroad can be used elsewhere, should be excluded from this treatment. HELD, group basis of depreciation accounting should be adopted, and that it should be applied to such primary investment accounts under the respective classifications for steam railroad companies and telephone companies as include property hereinbefore found to be depreciable. HELD, the percentages of depreciation which shall be charged by steam railroad companies and telephone companies with respect to each primary account of depreciable property shall be determined as follows: Each such company shall estimate the percentages of depreciation which it deems applicable to the ledger value of each such primary account, such percentages being based upon service values and service lives, developed by a study of the company's history and experience and such engineering informa-

tion as may be available with respect to future prospects. In each case such estimates shall be accompanied by sworn statements showing the bases therefor and the methods employed. In the case of steam railroad companies, such estimates and the accompanying statements shall be filed with this commission within the time prescribed in the order hereinafter entered. In the case of telephone companies such estimates and the accompanying statements shall be filed, within the time prescribed, with the state commission or commissions having jurisdiction over the particular company, except that where no state commission has jurisdiction or is willing to act in the premises they shall be filed with this commission. In the case of steam railroad companies this commission shall, after an office check, prescribe by temporary order the percentages of depreciation which shall be charged with respect to each class of property of each company, and in the case of telephone companies this commission shall by temporary order prescribe similar depreciation percentages, following the recommendations of the state commissions to the extent that such advice can be procured. After the issuance of the temporary orders, opportunity shall be afforded at public hearings, if desired, for the presentation of evidence by all interested parties with a view to the modification of such orders and for the submission to this commission of views based on such evidence. In the case of telephone companies, such public hearings shall be conducted for this commission, so far as possible, by state commissions. HELD, steam railroads shall make a subdivision or redistribution of their road and equipment investment accounts as between each of the primary accounts embracing depreciable property and all other primary accounts, determining the amount which shall be entered in each of the primary depreciable accounts as follows: In the case of equipment, the amounts shall be based on the records and data now used in connection with depreciation accounting on equipment, subject to such modifications as the Bureau of Accounts may find necessary to correct possible inconsistencies. In the case of other property installed prior to July 1, 1914 quantities and prices determined by the Bureau of Valuation, as shown by the inventories on file in said Bureau, shall be used. In the case of other property installed subsequent to June 30, 1914, but prior to the date of valuation, the quantities shown by the inventory shall be used but the prices shall be the actual cost of the property as recorded under the accounting classifications of the commission. In the case of other property installed subsequent to the valuation date, actual quantities and costs shall be used as recorded under the aforesaid accounting classifications. In all cases the amounts so determined shall be recorded for each primary acount by valuation sections. The amounts which shall be entered in each of the primary depreciable accounts having thus been determined, their aggregate shall be deducted from the lump sum theretofore carried for road and equipment, and the remainder shall be carried in the investment accounts as an unadjusted item representing all other primary accounts. In the case of ties, rail, ballast, and other track material laid since June 30, 1914, actual costs shall be used notwithstanding the provisions for replacement accounting in the effective classifications. Where actual cost is not available, average prices shall be used based on the cost of the material on hand as of the date the material was placed in track. Where the material now in track was secondhand when last placed in track, the cost shall be upon the basis of its then value as secondhand material. Provided, however, that this finding shall be subject to the following exceptions: (a) in the event an agreement has been or is hereafter reached between the Bureau of Valuation and the carrier with respect to cost, the agreed figures shall, when different, be substituted for the inventory figures. And in the event that a change in the inventory figures has been or is hereafter ordered by the commission, the basis so ordered shall be substituted. (b) In case of unadjusted item remaining for all other primary accounts, after deduction of the aggregate of the adjusted primary depreciable accounts, proves to be a minus or a plainly inadequate quantity, the amounts entered in each of the primary depreciable accounts shall be, subject to the approval of the commission, proportionately reduced to the extent necessary to avoid such a result. HELD, in determining the amounts to be respectively credited to the primary investment account and charged to the material and supplies account and to the depreciation reserve in the case of the retirement of

a unit of property, amounts for specific units shall be used as far as practicable; but that where that is impracticable, because of the relatively large number and small size of the units, average amounts shall be used. Such accounting shall be in accordance with detailed instructions hereinafter to be issued by the Bureau of Accounts of the commission. HELD, where a longitudinal section of a continuous structure, such as a long trestle, right of way fence, snowshed, wire line, etc., is renewed in its entirety, or where parts of such structures of a particular type are replaced by the substitution of parts of an improved type or design, such as the substitution of concrete for wooden posts in a fence or of copper for steel wire in a telephone line, the ledger value of the property so retired, determining by taking a proper proportionate part of the total ledger value of the continuous structure, shall be credited to the investment account and the same amount, after deducting net salvage value, shall be charged to the depreciation reserve. HELD, when the total cost of repairs to a particular unit of property exceeds a certain minimum sum and also exceeds a certain minimum percentage of the ledger value of said unit, then the cost of such repairs, in excess of said minimum percentage shall be charged to the depreciation reserve; provided, however, that if the total cost exceeds a certain maximum percentage of the ledger value, the unit shall be deemed to have been retired from service and shall be accounted for accordingly. The minimum and maximum figures to be used in the application of this rule shall be covered by instructions to be issued by the Bureau of Accounts of the commission. HELD, when depreciable property is retired the loss in service value shall, whether or not the cause of the retirement is a recognized factor in depreciation, be charged in its entirety to the depreciation reserve; provided, however, that (a) if the cause of retirement is not a recognized factor in depreciation but is a cause against which the carrier is insured, the depreciation reserve shall be credited with the full amount of the insurance recovered. (b) if the cause is not a recognized factor in depreciation nor covered by insurance, the carrier may, upon proof that the charge will result in undue depletion of the depreciation reserve and with the approval of the commission, increase the amount charged each year to operating expenses on account of depreciation over a period of years in the future to the extent necessary to make good such depletion. HELD, in the case of steam railroad companies an estimate should be made, as of the date when the system of depreciation accounting herein prescribed is made effective and in accord with the principles hereinbefore set forth, of the past accrued depreciation in the property unprovided for by a depreciation reserve, and that the amount so estimated should concurrently be credited to the depreciation reserve and charged to a suspense account on the assets side of the balance sheet. Such estimates of past accrued depreciation unprovided for shall be made by the carrier, subject to check and revision by the commission. Depreciation accounting with all its difficulties is, the Commission is persuaded, a method which will produce a much more nearly accurate reflection of the facts than will retirement accounting. While the Commission does not minimize the difficulties and possible dangers, it is confident that in the course of actual practice and experience they will continually decrease in importance. In the early days of every form of public supervision of private enterprises the difficulties to be encountered create alarm by their apparent multitude and magnitude. In actual practice they gradually lose their formidable character as principles are developed and precedents set. So it will be with depreciation accounting. Owing to the radical change in present methods of accounting which are involved in the case of steam railroad companies, the orders entered are made effective on Jan. 1, 1928, in order that there may be an adequate period of preparation. Telephone and Railroad Depreciation charges, 118 I. C. C. 295.

(d) Locomotive repairs can not be equitably apportioned between services on basis of hours of service alone, without regard to things which affect relative costs, such as the size, tractive capacity, or other characteristics of locomotives used and number of miles run in such services. Rates of P. & P. U. Ry., 115 I. C. C. 469, 489.

(e) Proceeding instituted by commission on its own motion pursuant to section 20 (8) of the act under which it is required to prescribe classes of property for which depreciation charges may properly be included under operating expenses and percentages of depreciation which shall be charged to each class of

property, classifying carriers as it may deem proper for the purpose. Telephone and Railroad Depreciation Charges 118 I. C. C. 295.

(f) Contention that the retirements of most units of a large composite railroad or telephone property tend to equalize, i. e., become same in amount from year to year, found not adequately supported by data of record, the evidence indicating rather that opposition to depreciation accounting is based partly on a desire to adjust retirement charges from year to year in accordance with financial needs. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 303, 305.

(g) With exception of land and grading, most property units which make up the plant of a railroad or telephone company are gradually worn out in operation or are abandoned from time to time in favor of better substitutes. Cost of property thus consumed or abandoned is, therefore, plainly a part of cost of rendering service, and carrier accounts should conform to and adequately record this fact. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 303, 306.

(h) Depreciation charges may not involve diversion of actual funds from either patrons or investors, for where a company is operating at a deficit they will serve only to increase extent of the recorded deficiency. Stated in another way, if depreciation charges are an unnecessary burden, that burden will fall upon patrons where revenue is sufficient to cover such charges and leave a reasonable return, but where revenue is inadequate, the burden may be shared by patrons and investors or be borne wholly by latter. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 307.

(i) The accruing of depreciation charges upon books of common carriers does not necessarily mean that corresponding amounts are collected from the public served. If, after depreciation charges have been accrued, net earnings are insufficient for payment of a reasonable return, then burden of such charges is borne in whole or in part by investors. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 307.

(j) "Depreciation reserve" is a record of undoubted fact that service lives of existing depreciable property units have to a certain extent been consumed. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 308.

(k) The cost of rendering service involved in consumption or abandonment of depreciable units of property is not adequately recorded when no account is taken of this cost prior to time of retirement of such units. An adequate record requires proportionate, periodical charges, i. e., depreciation charges, throughout the service lives of the units. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 306, 308, 309.

(l) Depreciation accounting is a necessary measure of self-protection to carriers, in view of decisions of United States Supreme Court to effect that accrued depreciation must be deducted in determining rate base. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 310.

(m) All things considered, depreciation accounting in the long run is less burdensome to patrons and investors than retirement accounting, since former conforms to principles of conservative and constructive finance. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 306, 313.

(n) Future service lives of common-carrier property can be estimated with sufficient accuracy, subject to public supervision and modification and correction from time to time, to meet needs of depreciation accounting. But in public regulation of this matter, it is desirable to err on the side of overestimating rather than underestimating service lives. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 313, 314.

(o) No good purpose is served, so far as depreciation accounting is concerned, by attempting to distinguish between present and future patrons and their interests. Purpose of depreciation in accounting is to charge cost of current consumption of property in service against current users of property; but method of spreading such cost over a period subsequent to retirement of property is available for use in emergencies. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 314, v15.

(p) Depreciation accounting properly supervised, has for its purpose an adequate record of facts, and it is difficult to justify a departure therefrom for sake of preserving carrier credit. Some better method of preserving such credit, if it needs preserving, ought to be devised than one which accomplishes its results by an incomplete or imperfect record of

actual cost of operation. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 316.

(q) The policy of protecting credit by manipulating maintenance expenditures is uneconomic and may be perilous to investors. Where credit is protected by misrepresenting facts, there is nothing on the face of the accounts to indicate, except by resort to extensive comparisons, that repairs or renewals have been deferred. Net income is no protection to investors if procured at expense of upkeep, and while deferring of proper maintenance may not be a serious matter if confined to comparatively short periods and deficiency made good without undue delay, its extension over any length of time invites disaster, to which investors have frequently fallen. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 316.

(r) Upon contention that if depreciation accounting is extended to cover all depreciable railroad property it will add so materially to operating expenses that further increases in rates will be necessary, HELD: If depreciation accounting is a method by which facts with respect to cost of operating railroad and telephone companies are recorded with approximate accuracy, then that method should be adopted regardless of its effect on rates, since nothing is gained by a refusal to face facts or by deferring to some future date burdens which ought to be borne now. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 317, 318.

(s) Reasons now exist which have not heretofore existed for distinguishing proper provision for depreciation from other means of protecting carrier property, such as accumulation of surplus or rebuilding or improvement programs under guise of maintenance, and also for carefully limiting and supervising such depreciation charges. There is nothing in past history which proves that depreciation accounting is unsound in principle or likely to produce harmful results, on the contrary, there is reason to believe that railroads in past that have best served the public and investors have been those which, in one form or another, have made provision for accruing depreciation. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 317, 318.

(t) Depreciation method of accounting conforms with far greater accuracy than retirement method to actual facts with respect to operating costs. Under the former, neither investors nor public are left in doubt in regard to costs currently being incurred and which ought currently to be met in interest of prudent and sound economy. If these costs be met, the financial condition of carriers will be strengthened and they will be able to face the future with a greater degree of assurance. There will be no need for mortgaging the future to meet debts of the past and both investors and public generally will be protected against an unnecessarily large volume of outstanding securities demanding interest or dividend payments. In short, depreciation accounting conforms to principles of conservative and constructive finance. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 319.

(u) The need for depreciation accounting is emphasized by provisions of sections 15a of the act relative to recapture by the Government of excess income and by existing situation with respect to public regulation of both steam railroad and telephone companies. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 318, 319.

(v) Depreciation accounting is supported by prior decisions of commission in valuation proceedings, by decisions of United States Supreme Court, and by decisions of other courts and Federal and State commissions. It is also in general accord with provisions which at present time are embodied in accounting classifications of steam railroads and telephone companies and which were included in those classifications when section 20 of the act was amended. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 320, 323.

(w) Depreciation is a fact, so far as certain classes of property are concerned, and unless it be properly accounted for the record of a system of accounts is incomplete and misleading. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 325.

(x) Upon contention that if section 20 of the act gives commission power to require depreciation charges, the statute is in this respect unconstitutional and invalid, since it attempts to give commission managerial powers over carriers, HELD: It is not commission's province to pass upon constitutionality of statutes enacted by Congress. However, power

conferred by section 20, as amended in 1920, is clearly no more an invasion of managerial functions than power to determine what are reasonable rates that a carrier may charge, or what securities it may properly issue. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 325, 326.

(y) The provisions of section 20 (5) of the act specifically empower commission to require and prescribe amount of depreciation charges of carriers, and general power to prescribe a uniform system of accounts also implies and includes power to require accounting for depreciation. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 323, 328.

(z) Depreciation accounting for telephone companies, classes A, B, and C, is practicable, but determination of depreciation percentages for various classes of telephone property is a task as to which the commission may well avail itself of the cooperation, services, records, and facilities of State commissions, under provisions of section 13 (3) of the act. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 332.

(aa) The function of depreciation is to account currently for consumption or exhaustion of service life of property from causes known to be in operation and effect of which can be forecast with reasonable accuracy, whereas function of insurance is to afford protection against possible contingencies which can not be foreseen and which may or may not ever occur. Telephone and Railroad Depreciation Charges 118 I. C. C. 295, 341.

(bb) Obsolescence may frequently be a factor to be reckoned with in determining depreciation charges. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 342.

(cc) Depreciation is loss in service value not restored by current maintenance other than extraordinary repairs and incurred in connection with consumption or prospective retirement of property in the course of service from causes against which carrier is not protected by insurance, which are known to be in current operation, and whose effect can be forecast with a reasonable approach to accuracy. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 342.

(dd) Depreciation expense is based upon original cost of property to accounting company, and depreciation accounting requires an analysis of investment and apportionment of appropriate amounts to primary accounts covering depreciable property, under road and equipment for steam railroads. While accounts of steam roads in general furnish no adequate record of property costs, the deficiency may be supplied, with sufficient accuracy for purposes of depreciation accounting, by appropriate use of inventories of commission's Bureau of Valuation. Investment accounts of telephone companies are, in general, sufficiently adapted to such accounting; but if it should develop that they are not, this matter can then be dealt with. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 343, 347.

(ee) The total expense of depreciation in connection with any unit of property is its service value determined by taking into consideration ledger value, net salvage value, and extraordinary repairs. In determining net salvage value the cost of removing property or recovering salvage at time of retirement should be deducted. The retirement of continuous structures such as fences, snowsheds, etc., and of certain other units of property such as equipment, is postponed either materially or indefinitely by application of piecemeal renewals or rebuilding programs, termed "extraordinary repairs" and it is, therefore, essential to a properly comprehensive system of depreciation accounting that provision be made therefor in the reserve. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 347, 351.

(ff) Practice whereby transferred units of property are changed from a cost basis to an assumed market-value basis found to result in fictitious credits for salvage to depreciation reserve, and to run counter to principles underlying commission's accounting regulations, which require that property be charged to the plant account at cost. It also leads to unnecessary and undesirable complications in determination of depreciation charges. Property once acquired should remain in the plant account at cost until finally abandoned or put to a new use different from that for which it was originally installed. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 352, 353.

(gg) Annual depreciation charges of railroad and telephone companies required to be computed at such percent-

age rate of ledger value of unit of property in question that service value may be distributed under the straight-line method in equal annual charges to operating expenses during estimated service life of the unit; annual charges so computed to be reduced to a monthly basis by dividing by twelve. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 356.

(hh) The sinking-fund and straight-line methods of accounting for depreciation compared and latter approved because it is simpler and easier to apply. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 353, 356.

(ii) Where a railroad can show that its life is dependent upon a particular source of traffic and that it must be abandoned once that source is exhausted, and that such exhaustion can be predicated with a reasonable degree of accuracy, then entire property of that railroad may be classed as depreciable. Depreciation due to this particular factor, however, should be handled through a special amortization account rather than through the depreciation reserve and equipment which is movable, and upon abandonment of a particular railroad can be used elsewhere, should be excluded from this treatment. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 366, 367.

(jj) The unit and group plans of accounting for depreciation compared and latter approved for telephone and railroad companies. Operating companies required to account for depreciation charges on leased property, the groups of property and reserves applicable thereto to include improvements thereon. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 367, 372.

(kk) The unit and group plans of accounting for depreciation compared and latter approved. Groups of property and reserves applicable thereto should correspond with primary accounts in road and equipment of steam railroads and of fixed capital of telephone companies, including improvements on leased property. Operating companies must also account for depreciation charges on property leased. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 367, 372.

(ll) The determination of prospective service lives is crux of depreciation accounting. Consequently accuracy of records with respect to consumption of property in service which such accounting is designed to afford, is wholly dependent upon accuracy with which prospective service lives are estimated. It is impossible, however, to lay down any general rule which will apply in case of all companies or even in case of a particular class of companies, owing to different conditions which surround use of property in each individual case. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 372.

(mm) It is impossible to prescribe uniform depreciation percentages for various classes of depreciable property applicable to all companies alike. However, method of determining the percentages of depreciation which shall be charged by steam railroad and telephone companies with respect to each primary account prescribed, and cooperation of State commissions in supervision of the matter availed of in case of telephone companies. Both classes of companies also required to keep adequate property records and maintain in convenient and accessible form engineering data bearing upon prospective service lives. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 372, 380.

(nn) Some classes of property are of such a character that it is not practicable to keep individual unit costs. In determining debits and credits to various accounts under depreciation accounting, amounts for specific units required to be used so far as practicable; but where impracticable, average amounts are to be used. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 380, 381.

(oo) Rules prescribed for depreciation accounting to take care of so-called continuous structures and extraordinary repairs which extend the span of life of such property as equipment. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 381, 382.

(pp) While certain causes of retirement of property, such as fires and other contingencies, are not factors to be included in estimate of depreciation charges, all losses at time of retirement are required to be charged to depreciation reserve, with provisions for compensating adjustments where necessary. Accordingly, rules prescribed to take care of retirements for causes which are not factors in depreciation. Telephone

and Railroad Depreciation Charges, 118 I. C. C. 295, 383.

(qq) Amount of accrued depreciation not previously accounted for by steam railroads, as of the date depreciation accounting for fixed property becomes effective, required to be computed and shown in accounts. Accordingly, a method of adjustment to take care of such past unprovided for depreciation, prescribed. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 384.

(rr) The cost of extraordinary repairs when made and service value of property when retired required to be charged to appropriate primary accounts under maintenance expenses and concurrently corresponding amounts released from depreciation reserve to special accounts provided for that purpose under maintenance expenses. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 385.

(ss) Ordinary maintenance has a bearing upon depreciation accounting. Just as the life expectancy of property may be extended by reconstruction repairs, so it may be curtailed by neglect of ordinary maintenance. It is, therefore, desirable that in prescribing depreciation percentages and charges that commission should be informed, so far as possible, in regard to upkeep of the property. Accordingly, carriers required to include in their annual reports to commission sworn statements showing by primary accounts extent to which ordinary maintenance has been neglected or deferred. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 385, 386.

(tt) Depreciation accounting is speculative only in that it applies to future conclusions drawn partly from past experience and partly from a thorough knowledge of existing facts. The retirement method is also founded on fact but it neglects to take into account all facts. Strict logic would require that advocates of retirement method should neglect to take into account accrued interest, accrued rentals, accrued taxes and audited vouchers until actually paid. While these and similar items can in general be estimated with greater mathematical accuracy, it does not follow from this fact that depreciation charges can not be calculated with sufficient accuracy to achieve their purpose. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 386.

(uu) Depreciation accounting is a method which will produce a much more nearly accurate reflection of facts than will retirement accounting. While com mission does not minimize the difficulties and possible dangers, it is confident that in course of actual practice and experience they will continually decrease in importance. In early days of every form of public supervision of private enterprize the difficulties to be encountered create alarm by their apparent multitude and magnitude but in actual practice they gradually lose their formidable character as principles are developed and precedents set. So it will be with depreciation accounting. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 387.

(vv) Retirement accounting furnishes a record which may be a wholly untrustworthy reflection of facts. By postponing needed retirements a company may make a showing of earnings, designed to mislead investors, this result being generally accomplished in absence of an inquiry extending beyond face of the accounts. On other hand, by concentrating or accelerating retirements a company may conceal prosperity which it does not wish to disclose. Even if there be no intent to mislead or deceive, irregularity in retirements which is often inevitable may, and frequently does, produce that result. The facts in regard to constantly accruing consumption of capital in service are not recorded and record is in all cases deferred until consumption is complete. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 387.

§7. Destruction of Records.

(a) Although the regulations permit of the destructions of a carriers records after a certain number of years, they do not require it. Wertheim Coal & Coke Co. v. L. V. R. R., 112 I. C. C. 513, 515.

III. REPORTS OF COMMISSION.

§8. In General.

(a) The rates of depreciation of steam locomotives used by common carriers, as generally computed by them in annual reports which they are required to file with commission, average about 4 per cent. United Chem. & Organic

Products Co. v. Director General, 112 I. C. C. 687, 692.

(b) Ordinary maintenance has a bearing upon depreciation accounting. Just as the life expectancy of property may be extended by reconstruction repairs, so it may be curtailed by neglect of ordinary maintenance. It is, therefore, desirable that in prescribing depreciation percentages and charges that commission should be informed, so far as possible, in regard to upkeep of property. Accordingly, carriers required to include in their annual reports to commission sworn statements showing by primary accounts the extent to which ordinary maintenance has been neglected or deferred. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 385, 386.

ACROSS-LAKE RATES

See Equalization of Rates §3 (i).

(a) Proposal to restrict application of class rates from points in Indiana to Minneapolis, St. Paul, and Duluth, so as to eliminate cross-lake routes through Michigan, and thus remove existing departures from long-and-short-haul provision of section 4 of the act, found not justified. The cross-lake routes which it is proposed to cancel are reasonably direct and move a substantial volume of traffic, and either continuance is also desirable for emergencies during periods of traffic congestion. Class Rates to Twin Cities, 107 I. C. C. 665.

(b) Proposed increased translake rate on salt from Ludington and Manistee, Mich., to Chicago, Ill., and intermediate points, applicable over car-ferry route of the Pere Marquette to Milwaukee, and C., M. & St. P. beyond, found justified. In Salt Cases of 1923, 92 I. C. C. 388, commission fixed minimum translake rate 1 cent under all-rail rates. The Pere Marquette has its own rails from Ludington and Manistee to Chicago, but the differential in favor of translake route attracts all the traffic and in order to secure the entire haul it desires to maintain same rate over both routes. In the general cases carriers were specifically authorized to apply all-rail rate over translake route and commission sees no reason for changing the finding made therein to effect that a translake rate equal to all-rail rate is justified. Salt from Ludington Group, 112 I. C. C. 255.

ACT TO REGULATE COMMERCE

I. CONSTITUTIONALITY.
II. INTERPRETATION IN GENERAL.
III. TIME OF TAKING EFFECT.
IV. ENFORCEMENT.
V. AMENDMENTS.
§1. War legislation.
VI. TRANSPORTATION ACT.
§2. Construction in general.

CROSS REFERENCES

See Bills of Lading §1a; Carmack Amendment; Commodities Clause; Crimes §2; Cummins Amendment; Discrimination; Government Control; Interstate Commerce; Long and Short Hauls II; Loss and Damage I; Panama Canal Act; Special Contracts II; State Rates and Regulations; Telephone and Telegraph Companies III; Transportation Act.

I. CONSTITUTIONALITY.

See Discrimination §1; Loss and Damage §1, §2; Pipe Lines §2.

(a) Judicial decisions recognize paramount authority of Congress to regulate interstate and foreign commerce, and in certain of them uphold direct assertions of its supreme authority or exercise thereof through commission as against existing contrasts of conflicting exercise of a state's police power. See 219 U. S. 467 and other cited cases. M.-K.-T. v. K. C. T., 104 I. C. C. 203, 221.

(b) Upon contention that if section 20 of the act gives commission power to require depreciation charges, the statute is in this respect unconstitutional and invalid, since it attempts to give commission managerial powers over carriers, HELD: It is not commission's province to pass upon constitutionality of statutes enacted by Congress. However, power conferred by section 20, as amended in 1920, is clearly no more an invasion of managerial functions than the power to determine what are reasonable rates that a carrier may charge, or what securities it may properly issue. Telephone and Railroad Depreciation Charges, 118 I. C. C. 295, 325, 326.

II. INTERPRETATION IN GENERAL.

See Crimes §2; Discrimination

§1; Export Rates and Facilities §1½; Long and Short Hauls §2½; Loss and Damage §2.

(a) It is not the purpose of interstate commerce act that commission should attempt to equalize fortunes, opportunities, or abilities and disregard transportation conditions, Diffenbaugh Case, 222 U. S. 42, 46; but this principle does not foreclose commission from considering probable effects which would follow prescribing of relationships in rates proposed by certain shippers and opposed by their competitors. See 78 I. C. C. 549, 552. Morrell & Co. v. N. Y. C., 104 I. C. C. 104, 124.

(b) Judicial decisions recognized paramount authority of Congress to regulate interstate and foreign commerce, and in certain of them uphold direct assertions of its supreme authority or exercise thereof through commission as against conflicting exercises of a State's police power. See 219 U. S. 467 and other cited cases. M.-K.-T. v. K. C. T., 104 I. C. C. 203, 221.

(c) From a consideration of the statute as a whole it appears that Congress conferred upon commission full power to determine just and reasonable rates for transportation of mail. The provision for reexamination gives commission power to reexamine, upon application by carriers, mail pay rates previously prescribed and if it is of opinion that rates for services covered by applications were not fair and reasonable as of and following dates applications were filed, so to fix and determine rates that are fair and reasonable. Railway Mail Pay, 104 I. C. C. 521, 524.

(d) The word "action" as used in section 16 (3) of the act must be interpreted to mean "action at law." Pfister & Vogel Leather Co. v. E. R. R., 112 I. C. C. 659, 660.

(e) Contention that the word "practice" as used in the act relates only to matters between shippers and carriers and not to questions affecting handling of traffic between carriers, not sustained. The word as used in paragraphs (6) and (11) of section 1 and paragraph (1) of section 15 of the act clearly comprehends within its meaning questions relating to handling of traffic between carriers. C., R. I. & P. v. B. & O., 113 I. C. C. 681, 683.

(f) The phrase "under substantially similar circumstances and conditions," as found in section 2 of the act, refers to the matter of carriage and does not include competition. See 44 I. C. C. 455 and cases there cited. Winding Gulf Colliery Co. v. C. & O., 115 I. C. C. 113, 119.

(g) The provisions of section 16 (3) of the act, whereby the limitation period is extended 90 days from time of beginning of an action by carriers for recovery of charges, relates to actions at law and has no application where additional charges are paid by shippers under protest upon demand of carriers. Parkersburg Rig & Reel Co. v. B. & O., 115 I. C. C. 539, 542.

(h) From the language of section 16 and its history, it is clear that Congress did not intend to permit carriers to collect undercharges after two years and within three years from accrual of a cause of action and yet deny shippers the right to challenge reasonableness of the rate thus collected. Instead, Congress intended, and by paragraph 3 (d) has provided, that regardless of whether undercharges are collected in two years or three years the shipper may file his complaint within 90 days after such charges are paid. Crerar Clinch Coal Co. v. A. A. R. R., 118 I. C. C. 171, 173.

(i) Prior to amendment of June 7, 1924, to section 16 of the act, a shipper clearly had right to file complaint alleging unreasonableness of a rate which carrier sought by action in court to collect in whole or in part after two years and within three years from the time cause of action accrued. The amendment (Par. 3-d) should not be construed as taking away this right on shipments delivered prior to amendment's passage but on which undercharges are paid subsequent thereto. Its purpose, among other things, was to make certain that the right existed not only where action was brought by carrier to collect undercharges but where, without such action, the undercharges were paid. Crerar Clinch Coal Co. v. A. A. R. R., 118 I. C. C. 171, 173.

(j) The fundamental purpose of the act is "to compel the carrier as a public agent to give equal terms to all," "to cut up by the roots every form of discrimination, favoritism, and inequality," and to "place all shippers upon equal terms." See 200 U. S. 361, and other cited cases. Service on K., O. & G. Ry., 118 I. C. C. 412, 418.

(k) Power to determine whether state

action will obstruct interstate commerce inheres in the United States as an incident of its power to regulate such commerce. Alabama & V. Ry. Co. v. Jackson & E. Ry. Co., 46 Sup. Ct. 535.

(l) Where interstate and intrastate transactions are interwoven, the regulation of the latter is so incidental to and inseparable from regulation of the former as properly to be deemed included in authority of Congress over the former. United States v. New York Cent. R. Co., 47 Sup. Ct. 130.

(m) While in 249 U. S. 557, Supreme Court declared the specific purpose of section 4 (2) is to insure and preserve water competition and to prevent competition that kills, the only fair construction to be placed upon that portion of the act is that it is not applicable except in those cases where rates have been increased after water competition has been eliminated. Woodstock Lbr. Co. v. B. & A., 129 I. C. C. 255, 257.

ACTIONS AT LAW

See Cars and Car Supply §33; Courts I; Demurrage §22; Finance Dockets VIII, §10 (a) Long and Short Hauls §17; Special Contracts IV; Undercharges §7½.

(a) The word "action" as used in section 16 (3) of the act must be interpreted to mean "action at law." Pfister & Vogel Leather Co. v. E. R. R., 112 I. C. C. 659, 660.

(b) In order to warrant recovery by carrier against shipper for damages alleged to have been caused by failure to comply with interstate commerce regulation requiring shipping of carbon bisulphide in metal cans of 28-gauge, it is necessary to prove failure to fulfill such obligation caused injury. W. A. Hover & Co. v. Denver & R. G. W. R. Co., 17 Fed. (2d) 881.

ADDITIONAL CHARGES AND SERVICES

See Agency; Allowances; Baggage Car Service; Branch Lines; Bridges and Tolls; Car Ferry; Compress Companies and Charges; Demurrage; Drayage; Evidence §2½; Export Rates and Facilities; Facilities and Privileges; Floatage; Heater Car Service; Lighterage; Reconsignment; Refrigeration; Special Rates and Services; Storage; Substitution of Tonnage; Switch Tracks and Switching §5; Terminal Facilities; Warehouses; Weights and Weighing §6, §7.

(a) If a shipper is given an additional service peculiarly necessary for his particular shipments he should pay a reasonable charge for that service. Protective Service Rules on Perishable Freight, 104 I. C. C. 79, 87.

ADJACENT FOREIGN COUNTRY

See Alaska; Canada; Coastwise Traffic; Foreign Commerce; Loss and Damage §2½; Mexico; Porto Rico; Through Routes and Joint Rates.

(a) Commission may not prescribe joint rates for future to destinations in adjacent foreign countries. Washington Publishers' Asso. v. A. C. & H. B., 104 I. C. C. 4, 9.

(b) Canada: Commission may not prescribe joint rates for future to Canadian points, but as to rates constructed on combination, such factors as apply wholly within United States are subject to its jurisdiction. In respect of joint rates, and likewise joint-rate factors used in constructing combination rates, American lines over which shipments move are subject to commission's jurisdiction and all carriers parties to such rates are jointly and severally liable for any damage resulting from their unlawfulness. See 83 I. C. C. 460 and other cases cited. Washington Publishers Asso. v. A. C. & H. B., 104 I. C. C. 4, 9.

(c) Mexico: Complaint alleging unreasonable rates on chick-peas (garbanzo) shipped in bond from Mexico to New Orleans, thence exported to foreign countries or Porto Rico, dismissed for want of jurisdiction. Since March 2, 1917, the act has not been applicable to Porto Rico, nor does it confer upon commission jurisdiction over transportation of property from Mexico through United States to Porto Rico, in so far as such transportation takes place within United States, even though transportation were shown to have been partly by railroad and partly by water under a common control, management, or arrangement for continuous carriage or shipment, not here shown, and even though Porto Rico is a

territory appurtenant to the United States. Fernandez & Co. v. S. P., 104 I. C. C. 193.

(d) Where unreasonable rates are assessed on shipments moving from points in the United States to Canadian destinations, commission's order awarding reparation can be entered against the American lines only. Such action, however, should not be construed as affecting any right of Canadian lines to participate in making reparation. Vera Chemical Co. v. A. C., 104 I. C. C. 408, 412.

(e) Canada: Proposed adjustment of rates on lumber and related articles from south Pacific coast origin groups to Canadian points, involving advances and reductions, and designed for purpose of equalizing those rates with north Pacific coast points, found not justified as a whole. Carriers long maintained equal rates from this general territory but parity was disrupted when rates from north Pacific coast points were revised without concurrent revision from south Pacific coast points. While circumstances warranting higher rates from north Pacific coast points on one kind of lumber than on other kinds are not necessarily controlling as to rates from south Pacific coast points, reductions proposed will restore former equalization, no reason appearing why the disparity should be continued or why equal rates should not obtain. The evidence, however, does not support a finding that change proposed in the minima, restriction proposed in the lumber list, or cancellation of transshipment or proportional rates is warranted. Lumber and Related Articles 107 I. C. C. 57.

(f) Adjacent foreign country rates: If rates on traffic moving from Canadian points to destination in the United States are found to be unduly prejudicial, commission clearly has power under the act to require removal of such undue prejudice. Newsprint Paper from Eastern Canada, 109 I. C. C. 701, 703.

(g) The Commission has no jurisdiction to prescribe joint rates from or to adjacent foreign countries to or from points in the United States or to control the charges that carriers in adjacent foreign countries may make for transportation services in those countries, but can deal only with the carriers and transportation within the confines of the United States. Spanish River Pulp & Paper Mills v. A. & W. Ry., 113 I. C. C. 343, 350.

(h) Upon contention that commission has no jurisdiction to pass upon joint rates applying in part to transportation without territorial boundaries of United States, HELD: While commission has no jurisdiction to prescribe such rates for future or to control charges that carriers in adjacent foreign countries may make for transportation services in those countries, it can deal with carriers and transportation within the confines of United States and prescribe the limit of rates in which carriers under its jurisdiction may participate in so far as transportation takes place within boundaries of the United States. See 17 I. C. C. 588, and other cited cases. Spanish River Pulp & Paper Mills v. A. & W., 113 I. C. C. 343, 350, 351.

(ij) The Commission has exercised jurisdiction to award against American lines as participating tort feasors, reparation for damages which resulted from the imposition of excessive international joint rates. Spanish River Pulp & Paper Mills v. A. & W. Ry., 120 I. C. C. 251, 254.

(k) Power or authority of commission to pass upon lawfulness of international joint rates and fix maxima in which the American lines may lawfully participate is not as a matter of law, dependent upon adequacy or inadequacy of divisions accorded or available to those lines. Spanish River Pulp & Paper Mills v. A. & W., 120 I. C. C. 251, 252.

(l) Upon contention that commission can go no further than to require American lines to withdraw from any joint rate to or from an adjacent foreign country deemed excessive or otherwise objectionable, and may deal only with rates of those lines to or from international boundary, HELD: Commission does not undertake to prescribe joint rates as between American and foreign lines but merely determines what in its judgment will be maximum joint rates in which American lines can participate. The proportion of rates to accure to each line is left to negotiation between participants, and if foreign lines decline to join in such rates the American lines are forced to withdraw from joint rates which exceed the maximum, in which case commission can then determine and prescribe specific rates to be applied to or from boundary. If complainants are

then dissatisfied, their remedy lies in the hands of the foreign regulatory body. Spanish River Pulp & Paper Mills v. A. & W., 120 I. C. C. 251, 253.

(m) Recognizing point of termination of commission's authority to deal with international joint rates for future and citing International Nickel Co., 66 I. C. C. 627, the commission entered a "cease and desist order" in lieu of an order to establish and maintain rates. See 98 I. C. C. 339. Spanish River Pulp & Paper Mills v. A. & W., 120 I. C. C. 251, 254.

(n) Where American carriers subject to the act join in maintenance of rates which are in violation of the law, fact that point of origin or destination may be in another country and that carriers not subject to commission's jurisdiction may be parties thereto, is an incident which does not nullify requirements of the act as to American lines. The commission has exercised jurisdiction to award, against American lines as participating tort faesors, reparation for damages resulting from imposition of excessive international joint rates. See 66 I. C. C. 627. If commission may take this action how much more rational is assumption that it may require American lines to refrain from participating in and applying rates which will render them subject to such judgments. Spanish River Pulp & Paper Mills v. A. & W., 120 I. C. C. 251, 253, 254.

(o) Provisions of fourth section of the act apply where point of origin is in an adjacent foreign country and intermediate point and more distant point of destination are in the United States. See 74 I. C. C. 733. Newsprint and Wall Paper, 126 I. C. C. 166, 168.

(p) Commission is without power to prescribe reasonable rates for future on shipments originating in a foreign country. Duplex Printing Press Co. v. B. C. E., 128 I. C. C. 692, 693.

(q) The commission is without jurisdiction to prescribe a rate for the future from a point in the United States through a foreign country to a point in the United States. See 69 I. C. C. 337; 102 I. C. C. 27. Montello Granite Co. v. M., St. P. & S. S. M., 129 I. C. C. 427, 429.

(r) Upon contention of carrier that commission has no jurisdiction to consider reasonableness of charges, assailed; to prescribe charges for future; or to award reparation, on ground that such charge applied in part to transportation without the territorial boundaries of the United States, FOUND: In numerous cases the commission has considered joint rates between Canada and the United States, found them unreasonable, and awarded reparation against United States lines for full amount of damages sustained. See 66 I. C. C. 627. Simpson Co. v. G. T. W., 129 I. C. C. 430, 431, 432.

ADVANCED RATES

I. CONTROL AND REGULATION.

- §1. Jurisdiction of Commission.
  - (1) Inquiry into reasonableness.
  - (2) Power to require advance.
  - (3) Prescribe minimum rate.
  - (4) To suspend advance.

CROSS REFERENCES

See Canada (c) (kk); Demurrage §20; Mails; Overcharges (n); Proportional Rates; Through Routes and Joint Rates VI; Water Carriers VI.

I. CONTROL AND REGULATION.

See Control and Regulation.

§1. Jurisdiction Of Commission.

(2) Power to Require Advance.

See Interstate Commerce Commission I; Jurisdiction of Commission.

(a) The commission does not subscribe to proposition that where freight

rates are producing, on the property devoted to freight service, the rate of return which has been fixed as fair, the commission can as a matter of law authorize no increase in such rates to correct deficiencies in aggregate earnings growing out of inability of passenger business to meet its full share of revenue burden. Freight and passenger service are both essential and both may be subjected to reasonable rates and charges to produce the fair aggregate return authorized by law even though thereby a higher rate of return may be exacted from the one than from the other. Revenues in Western District, 113 I. C. C. 3, 22, 23.

§1(4). To Suspend Advance.

See Suspended Rates.

(a) Carriers, in proposing certain increased rates suspended by commission, urged that if the commission can not consistently allow proposed schedules to become effective that its findings be deferred until another formal proceeding involving same rates is decided. HELD: The act fixes period during which commission may suspend operation of proposed schedules and requires that proceedings of this character be expeditiously handled. Grain and Products, 115 I. C. C. 615, 617.

(b) Carriers in a suspension proceeding must show that proposed increased rates are not only reasonable under section 1, but also that they will not transgress any other sections of the statute. Federated Metals Corp. v. C. R. R. Co. of N. J., 126 I. C. C. 703, 710.

§1½. In general.

(a) Under Interstate Commerce Act, §§ 1, 2, 3, and sections 13, 15, as amended, and 15a, as added by Transp. Act 1920, Interstate Commerce Commission HELD authorized to increase mimimum rate on salt from Detroit to Chicago, without finding that prior rate was noncompensatory or unreasonable, in order to relieve discrimination otherwise resulting adversely to mines located in New York, Kansas, and Louisiana, and carriers serving them, and for purpose of preventing any prejudicial discrimination between localities, particularly in view of provisions of section 15a for so-called recapture of excess earnings thus allowed. Jefferson Island Salt Mining Co. v. United States, 6 Fed. (2d) 315.

§2. Limitation of Power.

(a) Carriers in proposing certain increased rates suspended by commission, urged that if the commission can not consistently allow the proposed schedules to become effective that its findings be deferred until another formal proceeding involving same rates is decided. HELD: The act fixes the period during which the commission may suspend operation of proposed schedules and requires that proceedings of this character be expeditiously handled. Grain and Products, 115 I. C. C. 615, 617.

II. JUSTIFICATION OF INCREASE.

§2½. In General.

(a) Proposal to increase rates on wagon parts, iron and steel, including skeins from Chattanooga, Tenn., to Charleston, S. C., Hopkinsville, Ky., and Laurel and Meridian, Miss., designed to align such rates with rates from Ohio and Mississippi River crossings to Mississippi Valley points and to meet objections from Louisville interests, found not justified. Present rates are not unduly low, and proposed revision would separate iron and steel wagon parts from special iron and steel list. Wagon Parts to Southern Destinations, 104 I. C. C. 179.

(b) Proposed increases, from the El Dorado-Smackover field in Arkansas, in domestic rates on crude petroleum and fuel oil and in export and coast-wise rates on crude petroleum and refined, gas, fuel, and road oils, to New Orleans-Baton Rouge district in Louisiana, and in export and coastwise rates on crude petroleum and fuel and gas oils to Texas ports, found not justified. While the record lacks detailed information as to degree in which present rates, established to meet an emergency when industry was in a state of depression, yield profit to carriers, facts tend to support conclusion that circumstances and conditions surrounding movement are so unusually favorable to economical handling of traffic as to be almost unique. Petroleum from Arkansas, 104 I. C. C. 651.

(c) Refuse: Proposed increased interstate rates on manufacturing plant refuse, including ashes and cinders not having value for construction purposes, and on quarry strippings, between points on rates on refuse material having such Indiana Harbor Belt R. R., to basis of

value, found not justified. While present rate might be inadequate for service performed, carrier's desire here is to advance rate to prevent diversion of this undesirable traffic from competing lines maintaining higher rates for similar services. Such situations do not warrant general increase proposed; moreover, present rate is not shown to be confiscatory or unremunerative. Ashes and Cinders, 107 I. C. C. 408.

(d) Grain, products, and other commodities: Proposal to increase class and commodity rates on, between certain Iowa and South Dakota points and points in Colorado and Utah by eliminating some origin points from Missouri River rate group and placing them in a higher-rated group, found not justified. While proposed rates compare favorably, distance considered, with rates shown in comparison, there is no showing as to whether origin points or destination from and to which comparative rates are group points, or as to other circumstances or conditions surrounding transportation under such rates. Neither is extent of proposed increases shown, other than rates on grain and products between Iowa points and western destinations, the burden being upon respondents to justify all increases proposed in suspended schedules. Grain and Products from Iowa and South Dakota, 109 I. C. C. 27.

(e) Lumber: Proposed increase in transcontinental rates on, from western producing points to Ripley and Manchester, Ohio, to a basis 5 cents higher than group bases applicable to Trinity and South Ripley, Ky., which would result in rates higher than to farther distant eastern destinations, found not justified in that through rates from the origin territory are blanketed to eastern groups over large areas. Present rates also found to result in undue prejudice in favor of points on C. & O. and nonprejudicial basis prescribed. Lumber from Pacific Coast Points, 109 I. C. C. 140.

(f) Respondents propose to increase the local rates on petroleum and its products, in carloads from Texas to Vicksburg and Natchez, Miss., and to New Orleans, La. Protestants chief concern appears to be caused by the respondents proposal to disrupt the large group of producing points which now have a common rate of 22.5c on petroleum to Vicksburg and Natchez. The distances of these points from Natchez and Vicksburg range between 230 and 554 miles. That the present rate of 22.5c which respondents propose to cancel, falls short of being a maximum reasonable rate is amply proven. HELD, proposed rates justified with the exception of rates on fuel oil and low grade petroleum products from Wichita Falls and Fort Worth and points grouped with them, which should not be more than 80% of the rates on refined oil between the same points. Petroleum oil and its products, 118 I. C. C. 471.

(g) Proposal of carriers forming circuitous routes from points in Scranton and Williamsport, Pa., groups to increase their class and commodity rates on traffic moving to c. f. a. and western trunk-line territories to basis of rates in effect from higher-rated intermediate groups, found not justified. Class and Commodity Rates from Pennsylvania, 115 I. C. C. 331.

(h) Proposed increased rates on cream and related articles, moving in baggage cars on passenger trains, between points on the C. & E. I., by cancelling present rates based on the so-called Beatrice scale, and putting into effect rates based on distance scale prescribed in 46 I. C. C. 601, for application generally in c. f. a. territory, found justified. Although a few carriers have voluntarily published cream rates lower than the c. f. a. scale, that is the basis of rates prevalent in this territory on interstate shipments and there is nothing of record to justify requiring carrier to maintain lower rates over its line than those found reasonable for application over other roads in this territory. Cream and Related Articles, 115 I. C. C. 447.

(i) Principal reason advanced by protestant against a proposed increased rate was that the municipality will shortly let a contract for construction of an expensive courthouse and they desire no change in rates until that contract is awarded. HELD: Contracts of this nature can not control establishment of reasonable rates. Iron and Steel to Shreveport, 115 I. C. C. 612, 614.

(j) Carriers, in proposing certain increased rates suspended by commission, urged that if the commission can not consistently allow proposed schedules to become effective that its findings be deferred until another formal proceeding involving same rates is decided. HELD: The act fixes period during which com-

mission may suspend operation of proposed schedules and requires that proceedings of this character be expeditiously handled. Grain and Products, 115 I. C. C. 615, 617.

(k) Respondents proposed to increase their rates on potatoes and cabbage, carloads and less carloads, from Virginia on the Norfolk Southern to destinations in central territory. Respondents also proposed to provide that rates on these commodities to Toledo, Cincinnati and Cleveland, O., Pittsburgh, Pa., and Wheeling, W. Va., from certain Norfolk Southern stations will apply only when traffic is routed by way of Suffolk, Va., and N. & W. and connections or Virginian and connections. The present rates from Virginia are less than those in effect from Norfolk and contravene the fourth section. Proposed schedules are intended to correct this situation by making these rates not lower than those from Norfolk. The record shows that the present rates on potatoes in certain instances are higher and in others lower from representative points in Virginia than from points in North Carolina. The record is persuasive that the proposed rates in numerous instances are reasonable. They would, however, create fourth section violations at points where no such violations now exist. HELD, schedules not justified. Vegetables from Virginia, 120 I. C. C. 319.

(l) Respondents proposed to revise their rates on fresh fruits and vegetables, in carloads, from southern Missouri, eastern Oklahoma, Arkansas and Louisiana west of the Mississippi river, called 9702 territory, to points in such territory and to Memphis, Tenn., and Mississippi river crossings south thereof. The present rates are a group adjustment as to origin territory, and are not made with any particular reference to the distance. Respondents offered no justification whatsoever for publishing higher rates to Memphis than to St. Louis. The rates on practically all traffic to Memphis are generally lower than to St. Louis from most of the 9702 territory. HELD. schedules not justified. Fruits and vegetables, 120 I. C. C. 395.

(m) Respondents proposed to increase a large majority of the rates on pears, in crates, boxes, or baskets, in carloads, from Group 4, embracing points in central and eastern Washington, eastern Oregon, northern Idaho, and western Montana, to east-bound transcontinental groups F, G and J. The $1.69 rate will contine to apply under respondents tariffs from specified points in Group 4 to Mitchell, S. D., and various other fruit jobbing points in South Dakota. This rate is applicable via Sioux City and the establishment of the $1.73 rate to the latter destination would result in a fourth section violation. The record shows a need for some readjustments in the rate structure from Group 4 points to the destination described which could be accomplished by appropriate tariff publications. The proposed changes confined as they are to pears, add to the defects existing instead of providing a cure. HELD, increased rates not justified. Pears from north Pacific coast points, 122 I. C. C. 642.

(n) Proposed increased rates on wooden handles, l. c. l., from producing points in Arkansas and Missouri to destinations in Louisiana and Texas, found not justified. Wooden handles constitute only commodity on which there is a departure from the normal groupings on l. c. l. traffic from and to origin and destination territories here involved and although present schedules include a number of points for which this special basis serves no purpose because of seeming abandonment of plants, the record presents no sound reason for a discontinuance of this special basis at points where its maintenance has made possible a continuance of the industries at the respective places. If any disadvantages are present by reason of existing adjustment, the suspended schedules will do little more than shift them and create disparities in the rates from complaining points which for a long period have been accorded substantially same treatment. Wooden Handles from Arkansas and Missouri, 123 I. C. C. 146.

(o) Obviously rate increases for future must take into consideration probable future trends as well as immediate needs, and can not be calculated with extreme nicety. New England Divisions, 126 I. C. C. 579, 590.

§3. Burden of Proof.

See Burden of Proof; Evidence I.

(a) Proposed increased rates on newspapers shipped in baggage cars on passenger trains between points in trunkline and c. f. a. territories, found justified. While there are no previous decisions which respect to this class of

traffic to guide commission in determining reasonable rates, facts that none of the general rate increases have been applied to this traffic; that proposed rate represents but a small increase over rate in effect in 1900, in comparison with large increases in operating costs since that year; and that local and out-of-town retail prices of newspapers have been advanced generally since that time by different amounts, indicate that newspapers have not borne their relative share of increases in revenue and increased costs of transportation. Newspapers in Baggage Cars, 104 I. C. C. 527.

(b) The burden of proof to justify proposed increased rates rests upon carriers. Newspapers in Baggage Cars, 104 I. C. C. 527, 529.

(c) Proposal to increase rates on salt from Hartford and Mason City, W. Va. to C. & O. stations, Fernald, Ohio, to Bath, Ind., inclusive, found not justified, respondents having offered no evidence in support of proposed increase. Salt from Ohio and W. Va. Points, 104 I. C. C. 730.

(d) Rates proposed by carriers must be shown to be not only reasonable but otherwise lawful. South Dakota R. R. Commers. v. C. & N. W., 107 I. C. C. 35, 47.

(e) Proposal to increase class and commodity rates on grain and products and other commodities between certain Iowa and South Dakota points and points in Colorado and Utah by eliminating some origin points from Missouri River rate group and placing them in a higher-rated group, found not justified. While proposed rates compare favorably, distance considered, with rates shown in comparison, there is no showing as to whether origin points or destination from and to which comparative rates apply are group points, or as to other circumstances or conditions surrounding transportation under such rates. Neither is extent of proposed increases shown, other than rates on grain and products between Iowa points and western destinations, the burden being upon respondents to justify all increases proposed in suspended schedules. Grain and Products from Iowa and South Dakota, 109 I. C. C. 27.

(f) The burden is upon carriers to justify all increases in rates proposed in suspended schedules. Grain and Products from Iowa and South Dakota, 109 I. C. C. 27, 30.

(g) The statute casts upon carriers burden of justifying proposed increased rates suspended by commission, and withdrawal of protest which led to suspension does not of itself permit conclusion that proposed changes are justified. Classification of Hand Pea Hullers, 109 I. C. C. 143, 145.

(h) Plaster board, wall plaster, stucco, and plaster blocks: Proposed increased rates on, in straight or mixed carloads, from Los Angeles and Seattle to Utah common points, principally on ground that present rates are too low, but also for purpose of placing Los Angeles and Seattle on a more nearly equal basis, found not justified. Rate comparisons submitted by carriers, unaccompanied by a showing of similarity of transportation conditions, found to be of little probative value. On other hand, protestants instanced a number of rates from eastern points to destinations in western territory which have recently been reduced, and contend that present rates should be reduced instead of increased. Plaster Board to Utah Common Points, 112 I. C. C. 3.

(i) The justification of increased rates is the burden respondents must bear regardless of the mechanics by which the rates are constructed. Combination rule on brick, 115 I. C. C. 293, 295.

(jk) Proposal of carriers forming circuitous routes from points in Scranton and Williamsport, Pa., groups to increase their class and commodity rates on traffic moving to c. f. a. and western trunk-line territories to basis of rates in effect from higher-rated intermediate groups, found not justified. Class and Commodity Rates from Pennsylvania, 115 I. C. C. 331.

(l) Proposed increased rates on import and inbound coastwise shipments of fertilizers from Texas Gulf ports to Shreveport, La., and points in Shreveport group, designed for purpose of putting all Texas and Louisiana Gulf ports upon a parity with New Orleans, found not justified. Carriers failed to sustain burden of proof resting upon them to justify the advances proposed, the only justification offered is that they are attempting to carry out what they consider to be commission's view as expressed in a pending proceeding. Fertilizers from Texas Ports, 115 I. C. C. 582.

(m) The burden of justifying pro-

posed increased rates rests upon carriers. Fertilizers from Texas Ports, 115 I. C. C. 582, 584.

(n) Proposed increased rates on newsprint and poster paper from Camas, Wash., and Oregon City and West Linn, Oreg., to destinations in Washington, Oregon, and Idaho, found justified. Evidence presented by protestants is meager, their allegation of discrimination which will result from proposed rates being shown to result from competitive influences beyond control of carriers here involved. Respondents, on the other hand, point out that they are merely restoring basis of rates which formerly existed and which, except for general rate changes, remained in effect for many years without complaint; also that proposed rates and earnings compare favorably with those on numerous commodities from Portland to same destinations. Paper between North Pacific Coast and Spokane, 118 I. C. C. 123.

(o) Proposed increased rates found not justified even though protestants did not appear at hearing and respondent merely offered an explanation of proposed advances rather than justification therefor. Class Rates Between Wyoming and Nebraska and South Dakota, 118 I. C. C. 237.

(p) Proposed increased class rates between points in Wyoming, on one hand, and Nebraska and South Dakota, on other, found not justified. Protestant entered no appearance at hearing and carrier merely offered an explanation of proposed advances rather than justification therefor, indicating that no increase in rates was intended and that it is willing to republish rates so as to preserve existing level. Class Rates between Wyoming and Nebraska and South Dakota, 118 I. C. C. 237.

(q) Horizontal increases in freight rates in 1920, resulted in disturbances to rate relationships and differentials in various instances, but that fact in and of itself does not establish unreasonableness. Paris Flouring Co. v. N. Y., C. & St. L., 118 I. C. C. 291, 292.

(r) Proposed rate changes, mainly increases, on grain and products, including flaxseed, between Minnesota, the Dakotas, Iowa, Wisconsin, and Illinois, principally North Dakota and Minnesota to the larger terminal markets, found not justified. While carriers showed that present rates are low and proposed rates not unduly high, and that unfavorable transportation conditions attend the movements from North Dakota and Minnesota, these conditions were not translated into terms of cost of service or a showing made that they are more burdensome than conditions attending the movement of other important traffic. Nor did carriers show that earnings under present rates are low, either intrinsically or by comparison with those on other commodities. On other hand, shippers' evidence as to relative earnings and cost of service warrants conclusion that present rates are by no means unremunerative, and that earnings thereunder compare favorably with those on other traffic and with earnings derived by other carriers in the western group. Grain and Products, 122 I. C. C. 235.

(s) When carriers in an I. & S. proceeding propose what in substance amounts to a general increase in rates over a large area on agricultural commodities which have been shown to be affected by depression, they must clearly demonstrate that such increase is justified under the law including provisions of the Hoch-Smith resolution. Grain and Products, 122 I. C. C. 235, 264.

(t) The burden of justifying rates increased since January 1, 1910, rests upon carriers. American Door & Mfg. Co. v. B. & O., 122 I. C. C. 471, 472.

(u) Burden of justifying proposed increased rates rests upon carriers. Grain and Products from North Dakota, 123 I. C. C. 49, 55.

(v) As a prerequisite to approval of the Commission of the rates under section 1 it is only necessary for the respondents to show, as it is in all suspension proceedings where it approves rate changes, that the rates were within the limits of reasonableness, not more than reasonable maxima nor less than reasonable minima. Federated Metals Corp. v. C. R. R. of N. J., 126 I. C. C. 703, 709.

(w) The burden of justifying increased rates rest upon carriers. Grain and Products to Arkansas, 128 I. C. C. 29, 30.

(x) Burden of proof is upon complainant to show that rates charged were inapplicable. Nebraska Bridge Supply & Lbr. Co. v. A. G. S., 128 I. C. C. 94. 96.

(y) Where rates have been increased since 1910, burden is upon carrier to justify reasonableness of rate charged

for service performed. Western Paper Makers Chemical Co. v. A. C. L., 128 I. C. C. 244, 245.

(z) Carriers introduced no evidence, contending that complainant had not shown the rates to be unreasonable. Burden is upon carriers to justify reasonableness of rates increased since 1910. Republic Creosoting Co. v. A. G. S., 128 I. C. C. 547, 550.

(aa) Rates assailed represent increases which are results of cancellation of former absorptions and burden of proof is upon defendant. Amer. Fruit & Veg. Shippers Asso. v. Amer. Ry. Exp. Co., 128 I. C. C. 651, 660.

(bb) Burden of proof to show that proposed increased rates are just and reasonable is upon carrier, and this is especially true where commodities affected are the products of agriculture. See 122 I. C. C. 235, 264. Fruit and Vegetables Between Pacific Coast States, 129 I. C. C. 569, 570.

§5. Right to Advance.

(½). In General.

(a) Proposal to increase rates on nitrate of soda from ship side at New Orleans and subports to points in Arkansas and Oklahoma on class A lines by discontinuing absorption of handling charges at ports, thereby establishing same basis as that applying to destinations on other than class A lines, found not justified. Proposed increase would seriously affect use of this commodity as a fertilizer in its competition with other fertilizers. Moreover, the yield of revenue under present rates seems ample. Nitrate of of Soda from New Orleans, 104 I. C. C. 761.

(b) Respondents proposed a general revision of rates on potatoes, carloads, from Wisconsin and elsewhere in western trunk line territory to destinations in southeastern Missouri. The present and proposed rates are published as joint rates, but respondents state that those proposed are constructed generally upon a combination of the local rates from Wisconsin producing points to St. Louis, Mo., or Thebes, or Cairo, Ill., plus Table 12 rates prescribed in 77 I. C. C. 473. In many instances, however, the rates proposed to destinations near the Missouri-Arkansas line are those applicable from Wisconsin producing points to Arkansas destinations, such as Moark, Blytheville, Pittman, St. Francis, and Boynton. The rates from Wisconsin points to the latter destinations are not made upon the full St. Louis, Thebes, or Cairo combinations but in most instances by application of differentials aggregating 19c over the 9702 rates from St. Louis to Ark. On shipments from the territory considered, rates made by adding to the scale rate from the gateway the local to the gateway compare favorably with rates in other territories instanced by respondents. But when compared with lower rates, distance considered, not only to farther distant destinations in Arkansas but also to intermediate destinations in south eastern Missouri where observance of the fourth section requires maintenance of the rates to the Arkansas destinations, or compared with the rates from the same territory of origin to destinations in southwestern Missouri and Kansas, the Commission is not convinced that the rates proposed would be reasonable. Held, proposed schedules not justified. Potatoes to Missouri, 113 I. C. C. 289.

(c) Proposed increased rates on pears, in crates, boxes, or baskets, from Group 4 points in Washington, Oregon, Idaho, and Montana, to eastbound transcontinental Groups F, G, and J, designed for purpose of equalizing rates from Group 4 and the Rogue River district, found not justified. Rates proposed would disrupt rate relationships of long standing, both as to origin and destination groups, and result in fourth-section violations. While record shows a need for some readjustment in the rate structure from Group 4 points, which could be accomplished by appropriate tariff publications, the changes here proposed, confined as they are to pears, add to the defects existing instead of providing a cure. Pears from North Pacific Coast Points, 122 I. C. C. 642.

(d) Respondent, Louisville & Nashville, proposed to increase its rates on forest products, in carloads, from Decatur, Ala., and a few related points to Nashville, Tenn. Present rate on common woods is 11.5 cents and that on walnut, cherry and cedar 13.5 cents. Proposed rate on both groups is 14 cents. Distance from Decatur to Nashville is about 120 miles. From most of the other origin points, which are intermediate, the distances are as much as 18 miles shorter. The increases were decided upon to put Decatur on the same rate basis as Florence and Sheffield, Ala., respectively about 125 and 130 miles southwest of

Nashville, on a branch of respondents line which connects with the main line at Columbia, Tenn., 75 miles north of Decatur. The rate on both groups of woods shown above from Florence and Sheffield to Nashville being 14 cents, HELD, suspended schedules not justified. Forest Products from Decatur, 126 I. C. C. 252.

(e) Respondents proposed to increase their rates on granite, stone and marble, in carloads, from and to points in New England. The proposal is broad in scope, affecting New England generally, except that the local rates of the Maine Central, Central Vermont, and several other of the smaller roads are not proposed to be increased. Subject to certain exceptions the increases would be brought about by the cancellation of commodity rates. Certain increased commodity rates are proposed where it is impracticable to do away with commodity rates owing to the existence of socalled overhead commodity rates to trunk line territory. Other increased commodity rates on the basis of 80% of sixth class rates are contemplated from quarries to cutting plants from which there is a substantial movement by rail. The classification ratings which would generally become applicable if the commodity rates were canceled as proposed are sixth class for rough quarried material and material sawed on not more than four sides, and fifth class for material sawed on more than four sides or chiseled, dressed, hammered or sand rubbed. On much of the traffic there would be no increases. Loss and damage claims are inconsequential. Commodity rates much below the class rates apply on this traffic from New England to trunk line and central territories. They were made to assist New England producers in reaching distant markets in competition with southern and western producers. Many of the present commodity rates in New England compare favorably with those in the south and west. HELD, proposed schedules not justified, without prejudice to the establishment of rates on the sixth class material for application between points on class A lines not in excess of those prescribed in Plymouth Quarries v. N. Y. N. H. & H., 129 I. C. C. 621, with rates on the fifth class material between points on such lines not more than 25% higher than those on the sixth class material, and with rates between points on class B lines and between points on class B and class A lines not more than 10% higher than those between points on class A lines on the respective classes of material. Granite, stone, and marble in New England, 132 I. C. C. 514.

(f) Burlington, respondent, proposed to increase its rates on molding sand, in carloads, from Dallas City, Ill., to Burlington, West Burlington and Keokuk, Ia. Dallas City is on respondents Carthage branch, 56 miles north of Quincy, Ill. The distances over respondents line from Dallas City to Burlington, West Burlington and Keokuk are 16, 20 and 59 miles respectively. Present rates are 75c to Burlington and West Burlington, and $1 to Keokuk. Prior to May 7, 1927 the rates were 76c and $1.11, respectively, and they would be reestablished if the suspended schedules were permitted to go into effect. The level of rates on common and molding sand is generally lower in Illinois Freight Association territory than in western trunk line territory or central territory. The record is persuasive that the proposed rate of 76c will not be unreasonable on molding sand, in carloads, to Burlington and West Burlington, but respondent has not justified the proposed increase in the rate to Keokuk. HELD, proposals not justified, without prejudice to the filing of new schedules in conformity with the findings. Molding sand from Dallas City, 132 I. C. C. 540.

§5 (2). To Equalize Rates.

See Equalization of Rates; Relative Rates.

(a) Proposed increased commodity rates on common black powder from Fairchance, Pa., to Carneys Point, N. J., and points taking same rates, designed to restore parity of relationship formerly existing between commodity rate and first class rate from and to these points, found not justified as to c. l. traffic, but justified as to l. c. l. shipments, latter being satisfactory to all parties concerned. Black Powder from Fairchance, Pa., 104 I. C. C. 45.

(b) Proposal to increase to former basis rates on salt from Ohio producing points to destinations west of Missouri River, found justified. In complying with commission's order in 92 I. C. C. 388, carriers, through error, published reduced rates to points west of Missouri River. Considering wide area of salt production and influence which keen competition has upon rate structure, reduction made in error would give rise to re-

adjustment elsewhere. Moreover carriers here do not propose a new adjustment of rates but simply seek to restore relationship previously existing. Salt to Western Trunk Line Territory, 104 I. C. C. 101.

(c) Grain, products, and alfalfa meal: Proposed increased rates on, from Colorado common points and points grouped therewith to destinations in Wisconsin and Upper Peninsula of Michigan, found justified except where such rates from Utah common points, combinations of local to and proportionals beyond Omaha, or rates to farther distant destinations in violation of long-and-short-haul provision of section 4 of the act. Proposed joint rates equal combination of locals to and from Missouri River cities, which is generally rate basis on these commodities from points west of Missouri River in Oklahoma, Kansas, Nebraska, Wyoming, and eastern Colorado. Grain and Products from Colorado, 104 I. C. C. 281.

(d) Proposal to increase rates on petroleum and products from points on B. & O. between Charleston and Gassaway, W. Va., to Buffalo, N. Y., to basis of rate from Cabin Creek Junction, W. Va., to a point on C. & O., found justified. Proposed rate will result in equalizing rates over all routes, will not be unreasonable, and will effect a proper and relative adjustment with rates on this traffic from other producing points in same general territory. Petroleum from W. Va., 104 I. C. C. 676.

(e) Proposed increase in rate on salt from Pomeroy, Ohio, Hartford, Mason City, Malden, Witcher, and Dickinson, W. Va., to Cincinnati and points within Cincinnati switching district, designed to prevent a threatened disruption of adjustment from other points, and to bring about a better relationship with rates from other producing fields, found justified when used as a local rate, but not justified when used as a proportional rate on shipments moving beyond. Salt from Ohio and West Virginia Points, 104 I. C. C. 730.

(f) Proposal to increase interstate rates on soda products, other than caustic soda, from Syracuse and Solvay, N. Y., to New York lighterage points, found justified. Proposed increase will equalize rates on these commodities over the lines of all carriers, and will effect a more equitable relationship of rates from competing points in c. f. a. territory and Syracuse and Solvay to trunk-line territory, including New York Harbor points. Soda Products to New York Lighterage Points, 107 I. C. C. 171.

(g) Proposed increased rates on brick and related articles taking same rates, including hollow building tile, from Sligo, St. Charles, Climax, and New Bethlehem, Pa., to points in Buffalo and Rochester, N. Y., territory, which would place Clearfield and Curwensville, competing points in the Clearfield group, on a parity with these origin points without disrupting lever of rates in that group, found justified except as to rates from New Bethlehem. Brick and Related Articles to New York, 109 I. C. C. 10.

(h) Proposed increased rates on brass, bronze, and copper articles between points in official classification territory found not justified in their entirety. The increases sought might seriously disturb rate relationships upon which the industry has developed. Reasonable basis of rates suggested. Brass, Bronze, and Copper Articles, 109 I. C. C. 351.

(i) Burlington, respondent, proposed changes in its method of publishing class rates which would result in increases on traffic moving between points on its Billings-Casper division, on the one hand, and on its Alliance-Billings line in southwestern South Dakota and northwestern Nebraska, on the other hand. No increase in rates was intended and respondent is willing to republish the rates so as to preserve the existing level. HELD, schedules not justified. Class rates between Wyoming and Nebraska, 118 I. C. C. 237.

(j) Proposed increased rate on rock, phosphate from points in Florida to Roanoke, Ala., by restoring Group 5 rate previously in effect, found not justified. Roanoke at present enjoys rate applicable to points in Group 4, which reduction was made for purpose of placing that point on a parity with points in the Atlanta - La Grange group. Moreover, distance to Roanoke is less than that to most points in Group 4, and while element of distance is disregarded to a greater or less extent in establishment of group rates and is not necessarily controlling in determining reasonableness of such rates, it may be a very important factor where a system of group rates exists, in determining the group in which a particular point belongs, and it is clear that Roanoke properly belongs in Group 4. Phosphate Rock from Florida, 115 I. C. C. 229.

(k) Proposed increased rate on paper and paper articles from Holyoke, Mass., to Newark and Nutley, N. J., via the New Haven railroad, for purpose of establishing higher commodity rate at present in effect from and to same points via the Boston & Maine, found not justified. Equal commodity rates have applied via both lines and the New Haven contends that cancellation of that rate by the Boston & Maine has removed any necessity for its further continuance via its own line. Contention, however, loses sight of the fact that route of the Boston & Maine is over 100 per cent greater than that of the New Haven and that former carrier is not the rate-making line. Moreover, no evidence was offered showing that present rate is unremunerative. Paper from Holyoke, 115 I. C. C. 336.

(l) Proposed increased rates on salt from Pomeroy, Ohio, and Hartford, Mason City, and Malden, W. Va., to Louisville, Ky., and Jeffersonville and New Albany, Ind., designed to bring about a better relationship with rates and car-mile earnings over certain routes and to remove existing fourth-section departures, found justified when used as local but not justified when used as proportional rates on shipments moving beyond. See also 104 I. C. C. 730. Salt from Ohio and West Virginia, 115 I. C. C. 370.

(m) Proposed increased rates on imported iron and steel articles from Texas Gulf ports to St. Louis, points in Oklahoma and Kansas, and Little Rock and Pine Bluff, Ark., and proposed restriction of import class rates so that fifth-class rates will not apply on iron and steel articles from those points to destinations involved, designed for purpose of restoring domestic and import rates to the same level, found not justified. Reasonable maximum rates for future prescribed. Import Iron and Steel from Gulf Ports, 115 I. C. C. 373.

(n) Proposed increased rate on imported iron and steel articles from New Orleans and other Gulf ports, excluding Texas Gulf ports, to St. Louis, and its restriction to lines east of Mississippi River, and proposed increased rates on those articles from New Orleans to Little Rock and Pine Bluff, Ark., designed for purpose of restoring domestic and import rates on this traffic to same level, found justified, nothing inherent in import traffic, as such, being shown which would entitle it to lower rates than domestic traffic. Import Iron and Steel from Gulf Ports, 115 I. C. C. 373.

(o) Proposed increased rates on import and inbound coastwise shipments of fertilizers from Texas Gulf ports to Shreveport, La., and points in Shreveport group, designed for purpose of putting all Texas and Louisiana Gulf ports upon a parity with New Orleans, found not justified. Carriers failed to sustain burden of proof resting upon them to justify the advances proposed, the only justification offered is that they are attempting to carry out what they consider to be commission's view as expressed in a pending proceeding. Fertilizers from Texas Ports, 115 I. C. C. 582.

(p) Proposed increased class rates between Gary, Ind., and points in northern Indiana and southern Michigan over Elgin, Joliet & Eastern Ry., to full Chicago basis in line with those in effect over other roads, found justified. Class Rates via Elgin, Joliet & Eastern Ry., 118 I. C. C. 263.

(q) Respondent, C. St. P. M. & O. Ry., proposed to increase its rates on grain and grain products, in carloads, from South Dakota stations on its Mitchell branch west of Sioux Falls, S. D., to Omaha, Neb. Although the tariff naming the rates is silent as to routing, not only the origin points but Omaha are on the line of respondent, and the traffic moves all the way over its line through Org, Minn., Sioux City, Ia. and Emerson, Neb. The route through Salem, S. D., and C. & N. W., beyond is 39 to 90 miles shorter. The rates proposed represent the present local rates to Sioux City plus the published proportional rates of 5c on wheat and 4c on corn from Sioux City to Omaha. The proposed revision was made at the request of the Sioux City Grain Exchange so that the rates would reflect the differentials which now obtain, Sioux City over Omaha, on business from those points to the south and southwest. HELD, proposed schedules not justified. Grain and grain products from South Dakota, 122 I. C. C. 393.

(r) Respondents, C. & N. W. and C. M. & St. P. proposed to increase the rates on lumber, carloads, from Chicago, Ill., and points taking the same rate, to

destinations in Illinois and Wisconsin. The present rates on lumber between Chicago and the various destinations under consideration have been in effect for several years and are the same in both directions. The proposed rates apply only on traffic moving from Chicago. The rates in the opposite direction remain unchanged. This would result in increases in the rates from Chicago to the destinations under consideration of from 1c to 3c over the rates in the opposite direction. The record shows that protestant agreed to or acquiesced in the establishment by other carriers of rates to destinations in Illinois and Wisconsin the same as the rates proposed by respondents. Failure to protest the proposed increased rates of the other carriers created a situation as between intrastate and interstate rates that might unduly prefer the users of the latter. The proposed adjustment will remove such a possibility and be an improvement over existing conditions. The proposed increased rates do not appear unreasonable. HELD, schedules justified. Lumber from Chicago, 122 I. C. C. 726.

(s) Proposed increased rates on pears, in crates, boxes, or baskets, from Group 4 points in Washington, Oregon, Idaho, and Montana, to eastbound transcontinental Groups F, G, and J, designed for purpose of equalizing rates from Group 4 and the Rogue River district, found not justified. Rates proposed would disrupt rate relationships of long standing, both as to origin and destination groups, and result in fourth-section violations. While record shows a need for some readjustment in the rate structure from Group 4 points, which could be accomplished by appropriate tariff publications, the changes here proposed, confined as they are to pears, add to the defects existing instead of providing a cure. Pears from North Pacific Coast Points, 122 I. C. C. 642.

(t) Proposed rates on articles in uniform brick list from points in Illinois, Indiana, Missouri, and Iowa to destinations in Wisconsin, Michigan, Minnesota, and North Dakota, found not justified. While rates proposed to Wisconsin and Minnesota are not unreasonably high but are in some instances lower than between points in c. f. a. territory, from points in that territory to Chicago and Peoria, and from Chicago to various destinations in Iowa, Nebraska, and Missouri for comparable distances, record fails to warrant proposed rates higher to Michigan than to Wisconsin. Moreover, an increase is proposed from Chicago to Duluth while no change is proposed to St. Paul, and proposed differential from St. Louis, Mo., over Chicago to the Twin Cities is also out of line with other present and proposed differential relationships. Western Brick Co. v. N. Y. C., 128 I. C. C. 479.

§5 (2½). Fourth Section Violations.

See Long and Short Hauls.

(a) Wisconsin and Michigan points: Proposed increased rates on grain and products and alfalfa meal from Colorado common points and points grouped therewith to destinations in Wisconsin and Upper Peninsula of Michigan, found justified except where such rates exceed rates to farther distant destinations in violation of long-and-short-haul provision of section 4 of the act. Grain and Products from Colorado, 104 I. C. C. 281.

(b) Ohio points: Proposed increased rates on lumber and forest products from Latonia, Newport, and Covington, Ky., to Hamilton, Middletown, Miamisburg, and Dayton, Ohio, found not justified in so far as suspended schedules would create fourth-section departures, the present rates in some instances applying to more distant destinations to which no increase is proposed. Fourth section relief denied. Lumber from Kentucky to Ohio Points, 104 I. C. C. 387.

(c) Proposed increase in transcontinental rates on lumber from western producing points to Ripley and Manchester, Ohio, to a basis 5 cents higher than group basis applicable to Trinity and South Ripley, Ky., which would result in rates higher than to farther distant eastern destinations, found not justified in that through rates from this origin territory are blanketed to eastern groups over large areas. Present rates also found to result in undue prejudice in favor of points on C. & O., and nonprejudicial basis prescribed. Lumber from Pacific Coast Points, 109 I. C. C. 140.

(d) Respondents proposed to cancel a rate of 83.5c applying on potatoes, carloads, from Monte Vista and Colorado points on the D&RGW through Fort Worth, Tex., to points in Texas on the T. & P., between, but not including, Fort Worth and El Paso, leaving applicable through the same gateway rates of 88c to stations Benbrook to Big Spring, in-

clusive, 100c to Midland, 109c to Pecos, and 111c to stations Toyah to Ysleta, inclusive minimum 24,000 pounds from June 15 to Aug. 31, and 30,000 pounds from Sept. 1, to June 14 inclusive. In 1922 a rate of 83.5c was established to meet the rate from Greeley, Colo., to El Paso. It was not the intention of the T. & P., to participate in that rate, which was to have been observed as maximum only at intermediate points on the direct routes. The suspended schedules would eliminate fourth section departures and place the points under consideration on the general basis of rates now applying from and to all other points in the same origin and destination territories for substantially the same distances. Held, schedules justified. Potatoes from Colorado to Texas, 112 I. C. C. 389.

(e) Proposed increased rates on potatoes from Monte Vista and surrounding Colorado points on the Denver & Rio Grande Western to certain destinations in Texas on the Texas & Pacific found justified. Present rates were established to meet competition from Greeley, Colo., and were to apply as maxima only at intermediate points on direct routes. In establishing revised rates from Colorado to Texas to comply with fourth section requirements, the present rates were inadvertently continued to destinations here considered, nor were they restricted in their application to direct routes, as intended. Proposed schedules will eliminate these existing fourth-section violations and place points under consideration on general basis of rates now applying from and to all other points in same origin and destination territories for substantially same distances. Potatoes from Colorado to Texas, 112 I. C. C. 389.

(f) Proposed increased rates on petroleum and products from New Orleans and Baton Rouge, La., and other Mississippi River crossings, and also from Ohio River crossings, to Carrollton, Ky., found not justified. Carriers showed that proposed rates are for purpose of removing fourth-section departures and will restore rates previously in effect which were inadvertently omitted from the tariffs when petroleum rates in the Southeast generally were revised. Protestant however in support of its contention that proposed rates are unreassonable compared them with various lower rates for comparable distances. Reasonable rates for application on this traffic suggested for publication. Petroleum to Carrollton, 113 I. C. C. 587.

(g) Proposed increased rates on canned goods from La Crosse, Wis., Winona, Minn., and points grouped therewith, to Danville and Springfield, Ill., St. Louis, Mo., and points taking same rates, designed for purpose of removing discrimination and violations of long-and-short-haul provision of section 4 of the act, found justified. Compared with rates on canned goods applying generally from Wisconsin to other destination territory and with those in effect generally in c. f. a. territory, the proposed rates do not appear unreasonable. Canned Goods to Illinois and Missouri, 115 I. C. C. 289.

(h) Proposed increased and reduced rates on potatoes from points in the Carolinas on Atlantic Coast Line R. R., to destinations in c. f. a. territory, designed for purpose of removing departures from the long-and-short-haul clause of section 4 of the act, found not justified, it being shown that under proposed adjustment new fourth-section departures would be created in instances where none now exist. Taylor Produce Co. v. A. C. L., 115 I. C. C. 633.

(i) Proposed changes in rates on cotton linters and cottonseed-hull fiber or shavings, involving both increases and reductions, increases predominating, from the Southwest to Missouri, Mississippi, and Ohio River crossings, and northern, eastern, and western points, found not justified. Under schedules proposed, maladjustments would be created, origin relationships disturbed, and instead of removing fourth-section departures as intended, new departures would be created. Moreover, carriers here arbitrarily propose to put the whole industry on a rate plane made to fit the highest graded commodity produced by protesting shippers without having given consideration as to whether the traffic could bear the radical increases proposed, and in view of unqualified testimony of every oil-mill operator that traffic could not stand the increases, their ultimate result would be to kill the traffic and thus reduce existing revenues of carriers. Cotton Linters from Southwest, 118 I. C. C. 419.

(j) Proposed increased rates and routing restrictions on potatoes and cabbage, from points in Virginia on the Norfolk Southern to destinations in c. f. a.

territory, for avowed purpose of correcting existing violations of long-and-short-haul provision of section 4 of the act, by which rates from points here involved are lower than rates in effect from Norfolk, found not justified. While comparison with rates in effect between various points for comparable distances indicates that proposed rates, in numerous instances, are reasonable, their establishment, without corresponding advances from competing points in North Carolina, would result in undue prejudice, and leave uncorrected many fourth-section violations in addition to creating new ones at points where no such violations now exist. Vegetables from Virginia, 120 I. C. C. 319.

(k) Respondents proposed to increase the rate on bituminous coal, carloads, from Harrisburg and other points in southern Illinois on the Big Four to destinations in Missouri on the Frisco, Gravois to Ste. Genevieve, from $1.40 to $1.71. Gravois is the first station south of the St. Louis, Mo., switching limits on the river line of the Frisco and distance from that point to Ste. Genevieve is about 54 miles. The record is persuasive that the proposed rate of $1.71 is not unreasonable but the proposed schedules would leave uncorrected a number of fourth section departures. HELD, suspended schedules not justified without prejudice. Coal southern Illinois to stations on St. S. F. in Missouri, 123 I. C. C. 125.

(l) Proposed increased local interstate rate on tanning extract from Lynchburg, Va., to Norfolk, Pinners Point, and Portsmouth, Va., higher than from Charlottesville, Va., found not justified. Lynchburg is intermediate to Charlottesville and under the increase proposed a higher rate would apply to former than to latter, in violation of long-and-short-haul clause of section 4 of the act. Tanning Extract from Lynchburg, 122 I. C. C. 647.

(m) Proposed increased rate on bituminous coal from stations on the C., C., C. & St. L. Ry., in southern Illinois, to destinations on the St. Louis-San Francisco from Gravois to Ste. Genevieve, Mo., found not justified. While record is persuasive that proposed rate is not unreasonable as compared with rates contemporaneously in effect from and to same points via other routes, proposed schedules would leave uncorrected a number of fourth-section departures. Coal from Southern Illinois, 123 I. C. C. 125.

(n) Proposed increased rates on unmanufactured tobacco from points in central Kentucky to St. Louis, Mo., and East St. Louis, Ill., found justified. Present rates are and have been for many years in violation of long-and-short-haul provision of section 4, and are lower than those found reasonable in 81 I. C. C. 184, from points in Ohio to St. Louis for comparable distances, whereas proposed rates would be relatively reasonable and would remove fourth-section departures now existing. Unmanufactured Tobacco from Kentucky, 126 I. C. C. 93.

(o) Respondents, C. & O. and its connections, proposed increased rates on petroleum and petroleum products, in carloads, from New Orleans, Port Chalmette, Baton Rouge, North Baton Rouge, Mereaux, and Gretna, La., Natchez, Vicksburg and Gulfport, Miss., Mobile, Ala., Pensacola, Fla., and points taking the same rates to Lexington, Winchester and Quinsenberry, Ky. Lexington is served by the Southern, and by C. & O. and L. & N. Winchester is about 18 miles east of Lexington and is served by the C. & O. and L. & N. Quinsenberry is a local station on the C. & O. between Lexington and Winchester about 1 mile west of Winchester. Distances are 862 miles to Lexington, 880 miles to Quinsenberry and 881 to Winchester. Present rate for C. & O. Delivery is 38c, to be increased to 41.5c. Respondents state that the L. & N. and Southern are considered the rate making lines with respect to this traffic and that the rate adjustment under suspension was proposed for the purpose of placing the rates for C. & O. delivery on a parity with the existing rates for delivery by the rate making lines. Lexington, except for stations on the C. & O. to the east thereof, is practically surrounded by points taking the 41.5c rate. No transportation conditions are shown which would warrant the application of lower rates for C. & O. delivery than those effective over the more direct routes of the Southern and L. & N. The record indicates that the rates sought to be increased are unduly low and that the rates under suspension would not be unreasonable for future application. But the adjustment proposed would create a fourth section departure in connection with the route from Baton Rouge to Cincinnati via Lexington and Ashland.

HELD, proposed schedules not justified without prejudice to the filing of new schedules which will not contravene the fourth section of the act. Petroleum to Kentucky points, 132 I. C. C. 89.

(p) Respondents propose generally to increase their rates on iron and steel articles in less than carloads, between points in New England. The increases would be brought about by the cancellation of commodity rates, except where that is impracticable due to the existence of socalled overhead rates from trunk line territory to New England. About 25% of the total less than carload iron and steel tonnage in New England moves under the commodity scale. For distances up to 50 miles practically all of the traffic now moves by truck. The less than carload movement from trunk line territory is small in volume, the shipments generally moving in carloads direct to consignee, or to dealers for distribution in less than carload shipments or by motor. In many instances rates from and to intermediate points would exceed those proposed for longer distances. HELD, schedules not justified. Iron and steel articles in New England, 132 I. C. C. 355.

(q) Proposed elimination of routes via Montgomery, Ala., in connection with joint rates on cotton originating at points in Alabama and Mississippi on the Southern and various other lines, and restriction of such routes so that the Southern will secure the long haul on traffic which it originates or receives from its connections, found justified, except where such restrictions will create unauthorized fourth-section violations. Elimination of routes via Montgomery will not retard movement of cotton from and to points considered; will not subject shippers to increased rates; nor otherwise injure the public interest, as rates now applicable via Montgomery also apply over routes to which traffic is proposed to be confined. Routing on Cotton, 129 I. C. C. 387.

(r) Proposed increased rate on potatoes from Kansas City, Mo.-Kans., to, Coffeyville, Kans. found not justified. Rate proposed would not only result in a fourth-section departure, in that a lower rate would apply through Coffeyville to a point beyond, but would unduly prefer other near-by Kansas competing points to which lower rates obtain. Potatoes from Kansas City, 129 I. C. C. 458.

(s) Proposed revision of rates on lime between points in southern territory for purpose of removing fourth-section departures; of eliminating inequalities between producers; and of providing a uniform basis of rates to apply between points in the South, found justified. Proposed rates are same as or lower than those on lime prescribed in 85 I. C. C. 341, and other cited cases between points in c. f. a. territory and between various other points, and comparison with rates on brick, wall plaster, lumber, and various other commodities indicates that proposed rates are on a low level and produce relatively low car-mile earnings. Respondents directed to publish rates between other points in southern territory indicated, to become effective contemporaneously with those herein found justified. Lime Between Southern Points, 129 I. C. C. 635.

(t) Proposed increased rates on potatoes and vegetables from points in Nebraska, Colorado, Utah, New Mexico, Wyoming, Idaho, Montana, and Oregon, to destinations in Arkansas, Tennessee, and Kentucky, in purported compliance with findings in 120 I. C. C. 245, found not justified. Carriers propose to remove prejudices therein found to exist by increasing rates to Little Rock, Pine Bluff, Helena, Memphis, and points taking same rates, rather than by reducing the rates to southern Arkansas group. Proposed increases would both create and increase fourth-section violations. Furthermore, the reasonableness of present rate on potatoes is involved in several cases now pending, in which the need of a general revision of rates is indicated. Potatoes and Vegetables from Western Points, 129 I. C. C. 652.

§5 (3). Commodity Relationship.

See Classification §17, §22; Comparative Rates; Evidence §12; Relative Rates.

(a) Proposed increased local rates on petroleum and products from points in Texas, Oklahoma, and Arkansas to Vicksburg and Natchez, Miss., and other Mississippi River crossings found justified with exception of rates on fuel oil and other low-grade petroleum products from Wichita Falls and Fort Worth and

points grouped with them, which should not be more than 80 per cent of contemporaneous rates on refined oil between same points. Petroleum Oil and its Products, 118 I. C. C. 471.

(b) Respondents proposed to revise their rates on granite, marble and stone, in carloads, from New England and New York producing points to Wisconsin, Minnesota and northern peninsula of Michigan. Proposed rates will result in both increases and reductions. At present there is a spread of 5.5c between the rates on rough quarried marble and those on dressed marble, and the rate on polished marble is 5c higher than that on the dressed product, and 11.5c higher than the rate on rough quarried marble. Under respondents proposal the rate on rough quarried marble would be only 1.5c less than the rate on dressed marble, but the rate on the dressed product would be 11c less than the rate on polished marble. If joint rates were not in effect on traffic to the Twin Cities the use of the proportional rate to Chicago and the local rates of 13.5c on dressed marble and 12c on rough marble beyond would make through combination rates of 42.5c and 41c, respectively. HELD, proposed schedules on carved, lettered, polished, or traced granite, marble and stone have been justified, proposed schedules on other granite, marble and stone not justified. Granite, Marble and stone from eastern points, 122 I. C. C. 319.

§5 (4). Unreasonable Low Prior Rate.
See Evidence §43.

(a) Proposed increased interstate rates on manufacturing-plant refuse, including ashes and cinders not having value for construction purposes, and on quarry strippings, between points on Indiana Harbor Belt R. R. to basis of rates on refuse material having such value, found not justified. While present rate might be inadequate for service performed, carrier's desire here is to advance rate to prevent diversion of this undesirable traffic from competing lines maintaining higher rates for similar services. Such situations do not warrant general increase proposed; moreover, present rate is not shown to be confiscatory or unremunerative. Ashes and Cinders, 107 I. C. C. 408.

(b) Proposed revision of rates on bananas from Gulf ports to southeastern and Carolina territory found justified, except as to increased c. l. rates. A careful consideration of the record convinces commission that banana rates from such ports to the Ohio River, in so far as they apply over lines proposing increases, are upon less than a maximum reasonable basis. Rates proposed, however, are subject to criticism for the elimination of which a distance scale of rates is suggested. Bananas from Gulf Ports, 109 I. C. C. 211.

§5 (6). Erroneous Rate.
See Erroneous Rates; Evidence §22¼.

(a) Proposal of Chicago & Eastern Illinois to increase interstate rate on grain and screenings from Mount Vernon, Ind., to Louisville, Ky., and Indiana points in same rate group, by restoring rates previously in effect, which were reduced in error, found justified. Proposed increase will enable this carrier to meet competition of L. & N. at point of origin. Grain and Products to Ohio River Crossings, 104 I. C. C. 764.

(b) Proposal to increase rates on concrete roofing slabs from Chicago and group points and from Terre Haute, Ind., to destinations in c. f. a. territory, designed for purpose of correcting error in establishing present basis of rates, found justified. Proposed increase will result in placing rates of all carriers involved on a parity, and will place Chicago on a parity with other producing points in that territory. Concrete Roofing Slabs, 107 I. C. C. 335.

(c) Proposal to increase rates on hay from St. Louis and East St. Louis to certain destinations on Mobile & Ohio R. R. in Mississippi south of Tupelo, designed to correct error in rate publication, found not justified. Proposed increase would effect a general adjustment of hay rates in Mississippi Valley by respondent without cooperation with other carriers in same territory. Moreover, record does not justify establishing rates contrary to principles announced in Southern Class Rate Investigation, 100 I. C. C. 513, for establishment of class rates, or upon a basis different from that provided in 64 I. C. C. 306. Hay to Mississippi Points, 109 I. C. C. 36.

(d) Proposed increased proportional rate on iron and steel articles from Natchez and Vicksburg, Miss., to Shreveport, La., found justified. Carriers cancelled proportionals formerly in effect upon assumption that by so doing higher

distance rates prescribed in 77 I. C. C. 473 would become effective. Proportional rates, however, were not considered in cited case and carriers now propose to restore preexisting rates. In justification thereof carriers show that they compare favorably with rates on same commodities from other important Mississippi River crossings to destinations west thereof; also that continuance of present low westbound rates which became lower than those eastbound through printer's error, would result in breaking down joint rates in effect from principal iron and steel producing centers to Shreveport. Iron and Steel to Shreveport, 115 I. C. C. 612.

§5 (7). Expense of Competition.

See Competition; Market Competition.

(a) Proposed revision of rates on fruits and vegetables between points in California and Oregon, Washington, Idaho, Utah, and Montana, resulting in both increases and reductions, the former predominating, found not justified. While some of present rates, because of active water competition, may be lower than they might otherwise be, earnings produced do not show that they are unremunerative, and economic condition of deciduous-fruit industry is such that it can ill afford an increase in rates. Moreover, proposed revision was published without giving interested shippers a public hearing at which they might have had an opportunity to express their views. Fruits and Vegetables Between Pacific Coast States, 104 I. C. C. 66.

§5 (7¼). Low or High State Rate.

See State Rates and Regulation.

(a) Upon contention that proposed increased rates on sand, gravel, and crushed stone from Nebraska to Iowa, should not be permitted on ground that they would then exceed intrastate rates in effect between points in Iowa and thereby result in undue prejudice, HELD: To reject the proposed increases on that ground would be to hold that intrastate rates may control interstate rates. See also 38 I. C. C. 742. It does not follow that intrastate rates should be used as a standard of reasonableness of interstate rates. Combination Rule on Sand, Gravel, and Stone, 112 I. C. C. 231, 234.

(b) Proposed increased rates on lumber from Chicago, Ill., and adjacent points to destinations in Illinois and Wisconsin, found justified. Proposed adjustment is an endeavor of respondents to increase their rates from Chicago to level of corresponding rates now in effect over other carriers' lines, record showing that they are not unreasonable as compared with rates to other destinations for comparable distances. Moreover, protestant acquiesced in establishment of similar rates by other carriers and failure to protest such increases has created a situation as between intrastate and interstate rates that might unduly prefer users of the latter. Adjustment proposed will not only remove such possibility but will improve existing conditions. Lumber from Chicago, 122 I. C. C. 726.

§5 (8). To Prefer Particular Locality.

See Evidence §2, §40½.

(a) Proposed increased rates on gravel, crushed stone, and sand between points in Oklahoma and points in Kansas resulting from a proposal of carriers to restrict rates which are on a distance basis so that they will not apply where the haul is over more than two lines, found not justified. No justification is shown of record for maintenance between points in Kansas and points in Oklahoma of a basis of rates on these commodities higher than those applying intrastate in Kansas and Oklahoma, or than those prescribed as reasonable in Memphis Southwestern Investigation, 77 I. C. C. 473. Gravel between Kansas and Oklahoma, 120 I. C. C. 523.

(b) Respondents propose to increase carload rates in central territory on paving and roofing pitch, paving and roofing tar, coal tar and oil tar, from 70 to 80% of sixth class rates. Since Jan. 1, 1911 tar and pitch have been rated sixth class in the official classification, but during this time have always moved at lower rates under exceptions to the classification, or in certain instances under commodity rates. The general testimony that the protestant distributes its products throughout central territory and that in so distributing it meets the competition of Chicago and St. Louis, and the showing of the different levels of rates available to the competing plants and the community of interest of respondents in those rates affords sufficient warrant for a finding that the increase in the disparity between the Cincinnati rates, on the one hand, and the Chicago and St. Louis rates, on the other,

which would be produced by the rates here proposed would result in undue prejudice to the protestant which has not been justified. HELD, respondents have failed to justify the suspended rates under section 3 of the act. Pitch and tar in c. f. a. territory, 122 I. C. C. 573.

III. EVIDENCE.

See Evidence.

§7. Change in Conditions.

(5). Competition in General.

See Competition.

(a) Proposed revision of rates on fruits and vegetables between points in California and Oregon, Washington, Idaho, Utah, and Montana, resulting in both increases and reductions, the former predominating, found not justified. While some of present rates, because of active water competition, may be lower than they might otherwise be, earnings produced do not show that they are unremunerative, and economic conditions of deciduous-fruit industry is such that it can ill afford an increase in rates. Moreover, proposed revision was published without giving interested shippers a public hearing at which they might have had an opportunity to express their views. Fruits and Vegetables between Pacific Coast States, 104 I. C. C. 66.

(b) Rods, in coils: Proposal to restrict, throughout official classification territory, application of the billet basis of rates to bolt, nail, rivet, or wire rods and chains iron or steel in coils, so that it will apply on such commodities only when round in cross section, found not justified. Effect of the proposed restriction would be to increase the rates now effective on rods, in coils, which are not round in cross section. The distinction between round and not round does not reflect any substantial difference in material, stage, or process of manufacture, value, or transportation characteristics other than volume of movement. Moreover, the burden resting upon carriers to justify the increase has not been borne, nor has it been made to appear that the resulting difference in rate level would be free from undue prejudice as between round rods and rods of other shapes when shipped in coils. Iron and Steel Articles, 104 I. C. C. 616.

(c) Proposed increased rates on terne metal from Newark, and Brills, N. J., to Buffalo, N. Y., and Buffalo rate points and other destinations in c. f. a. territory found justified under section 1 of the act, but not justified under section 3. Terne metal is now subject to same rates as tin, and this relationship will be disrupted if the terne-metal rates are advanced as proposed. Rates on tin plate and terne plate are the same practically everywhere; these commodities are used for precisely the same purposes, except that terne plate may not safely be used in making food containers, and competition exists between tin and terne metal in sufficient degree to make unlawful the maintenance of higher rates on terne metal than on tin. Moreover, the very cheapness of terne metal indicates that if there is to be any difference terne metal should reasonably have lower rates than tin. Former decision in 113 I. C. C. 487, modified. Federated Metals Corp. v. C. R. R. Co. of N. J., 126 I. C. C. 703.

§7 (6) Disputes Concerning Divisions.

See Divisions §4.

(a) A dispute as to divisions does not afford justification for an increase in rates. Sulphur from Baltimore, Md., to Canada, 112 I. C. C. 485, 487.

(b) Proposal to increase rates on sulphur from Baltimore, Md., to Hamilton, Ont., Canada, found not justified. In 89 I. C. C. 383, commission prescribed reasonable rates from New York and Baltimore to Hamilton, and carrier here endeavors to advance Baltimore rate to the New York level. The increase sought, however, centers about a disproportionate division accorded Canadian lines, but commission has repeatedly held that a dispute as to divisions does not afford justification for an increase of rates. Sulphur from Baltimore to Canada, 112 I. C. C. 485.

(c) A dispute as to divisions does not afford justification for an increase in rates. Sulphur from Baltimore to Canada, 112 I. C. C. 485, 487.

(d) The Commission has consistently found that disagreement over divisions of joint rates is no justification for increasing rates. Restriction of transit on lumber, 129 I. C. C. 669, 671.

§7 (7). Lack of Revenue.

See Evidence §51.

(a) Upon applications of carriers in western district seeking increases in freight rates, generally averaging 5 per cent, with exceptions as to certain com-

modities, predicated on alleged existence of a financial emergency in that district, HELD: No such emergency exists in western trunk-line territory as a whole as would warrant commission in prescribing a general percentage increase in freight rates therein. Record held open for further consideration in connection with proceedings relating to the Hoch-Smith Resolution (S. J. Res. 107). Revenues in Western District, 113 I. C. C. 3.

§7 (8). Percentage Increases.

See Percentage Rates.

(a) Upon applications of carriers in western district seeking increases in freight rates, generally averaging 5 per cent, with exceptions as to certain commodities, predicated on alleged existence of a financial emergency in that district, HELD: No such emergency exists in western trunk-line territory as a whole as would warrant commission in prescribing a general percentage increase in freight rates therein. Record held open for further consideration in connection with proceedings relating to the Hoch-Smith Resolution (S. J. Res. 107). Revenues in Western District, 113 I. C. C. 3.

(b) Proposed increased rates on scrap lead and zinc from Pittsburgh, Pa., group points to destinations in trunk-line and New England territories over the Pennsylvania, equal to 80 per cent of sixth-class rate, and reductions in rates on those commodities over Pittsburgh & Lake Erie, found justified. While proposed rates over the Pennsylvania are higher than present rates on slab zinc and pig lead and are a greater percentage of the sixth-class rate than are the Chicago-New York rates, they are the same as those over the Baltimore & Ohio and are lower than those found reasonable on brass, bronze, and copper articles in 109 I. C. C. 351. On the other hand, proposed rates over Pittsburgh & Lake Erie are lower than rates on slab zinc and pig lead, but they are same as those proposed over the Pennsylvania and no protest thereto was introduced at the hearing. Scrap Lead and Zinc from Pittsburgh, 129 I. C. C. 541.

§7. (9). Government Orders or Advances.

(a) Respondents proposed to readjust certain rates on grain and grain products in carloads and less carloads, from Birmingham, Ala., and Chattanooga and Knoxville, Tenn., to southeastern destinations. The changes here proposed would result in reductions as well as increases in specific rates from the border points and were brought about by certain changes in rates in Georgia in compliance with an order of the Georgia Commission which prescribed a distance scale of class rates between points in that state. The rates so prescribed were generally somewhat higher than the interstate rates. No increased rates are proposed from Knoxville, except on flour and the only increased rates from Chattanooga are on flour to all of the ports, and on grain and flour to Jacksonville for beyond. The greater part of all grain and grain products handled in the south now moves, and will continue to move, under transit on through rates from northern and western points, and there is no present proposal to change these rates. The rates which respondents here propose to readjust are applicable only on shipments, or parts of shipments, originating at the border points, or on grain or grain products which, because of restricted transit arrangements at Birmingham, are forced to move on local rates from that point. Respondents have failed to sustain the burden of justifying the increased rates. Milling interests at Birmingham meet keen competition from those at Nashville. HELD, suspended schedules not justified. Grain and grain products to southeast, 123 I. C. C. 569.

§8½. Comparisons.

See Comparative Rates; Evidence §12, §13.

(a) Brass, bronze, and copper articles: Proposed increased rates on, between points in official classification territory found not justified in their entirety. No justification exists for charging a lower rate on copper than on iron and steel articles which load heavier, move in greater volume, and are far less valuable than copper. Furthermore, increases sought might seriously disturb rate relationships upon which the industry has developed. Reasonable basis of rates suggested. Brass, Bronze, and Copper Articles, 109 I. C. C. 351.

(b) Proposed increased distance commodity rates on interstate shipments of scrap and waste paper from Pacific coast

points to Boston by water, thence by rail to points in New England, for distances of 50 miles and under, found not justified. Proposed rates exceed those maintained by respondents for same distances on a number of comparable commodities and rates maintained on same commodities for similar distances between points on lines of other carriers. Similar increases on shipments originating on and destined to points on respondents' lines, found justified. Various Commodities between New England points, 113 I. C. C. 44.

§8½a. Combination Rule.

See Infra §9½; Combination Rule.

(a) Combination rates assessed on hogs from points in Iowa to New England destinations, with transit at Mississippi River crossings, both factors of which were increased under General Order No. 28 of director general, found illegal. Tariffs governing one factor carried combination rule providing for application of but a single increase to through rate, which constituted a holding out to that effect which must be made good. Reparation awarded. North Packing & Provision Co. v. Director General, 104 I. C. C. 607.

(b) Contention that so-called combination rule applies only by its own terms at junction points, and not at a basing or rate-breaking point, not sustained. As the term "junction point" is used in tariffs here involved, it must be construed to include such well-established rate-breaking points as Mississippi River crossings, which is in keeping with long recognized and universal practice followed by carriers of breaking rates at these points. North Packing & Provision Co. v. Director General, 104 I. C. C. 607, 613.

(c) Contention that combination rule, which provided for application of a single increase to through rates made on combination, was not applicable where a transit arrangement was availed of, upon theory that business was not a continuous through rail movement, such movement having been arrested by virtue of transit privilege, not sustained. Following 257 U. S. 247, commission has consistently applied the principle that transit does not affect continuous shipment from point of origin to final destination. North Packing & Provision Co. v. Director General, 104 I. C. C. 607, 613.

(d) Proposed increased rates on sand, gravel, and crushed stone from points on C., B. & Q., in eastern Nebraska to points in Iowa and Missouri, by cancellation of the combination rule, thereby leaving applicable the full combinations, found not justified. While the proposed rates are too high, it is shown that present rates are on rather a low basis and could well be increased to some extent. Schedules ordered canceled without prejudice to filing of others naming rates in conformity with those herein approved. Combination Rule on Sand, Gravel, and Stone, 112 I. C. C. 231.

(e) The purpose and effect of the combination rule is to provide for only one increase under General Order No. 28 of the director general to through combination rates rather than to the separate factors. Combination Rule on Sand, Gravel, and Stone, 112 I. C. C. 231, 232; Montgomery Cotton Exchange v. L. & N., 112 I. C. C. 325, 328.

(f) Proposed increased through rates on grain and products from Omaha and South Omaha, Nebr., and Council Bluffs and Des Moines, Iowa, when from beyond, and from Illinois Central stations to Arkansas destinations, found not justified. Present proportionals from Des Moines to Arkansas are on a parity with those from Omaha, and competition between these markets is keen, since both draw from same territory. If proposed rates are permitted, the disparity will prevent Des Moines from competing with Omaha. Moreover, in 102 I. C. C. 186, rates on grain originating beyond Des Moines were found unduly preferential and prejudicial to extent they exceeded contemporaneous rates on grain originating beyond Omaha to same destinations, and, in 104 I. C. C. 742, the commission stated that through rates should be somewhat less than the sum of rates to and from an intermediate point, and to urge that combinations are the general basis for constructing rates is not sufficient to justify proposed increases. Grain and Products to Arkansas, 113 I. C. C. 209.

(g) The reason for establishment of so-called combination rule was to prevent multiple increases in rates made upon combinations of locals. Security Cement & Lime Co. v. B. & O., 113 I. C. C. 579, 581.

(h) Where one of the tariffs used in making combination rates on through shipments contains a rule that such rates

will be subject to the increase but once, there is a holding out to the shipper of the rates so constructed, or, in other words, an undertaking by the carrier publishing that rule to protect the resulting aggregate rate. Standard Oil Co. v. A. T. & S. F. Ry., 113 I. C. C. 597, 604.

(i) Respondents proposed to cancel the application of the so-called combination rule on brick and related articles, in carloads, from points in Iowa, Missouri, and Kansas to destinations in Iowa, Missouri, Kansas, Nebraska, North and South Dakota, Minnesota, and other western states and in some instances to establish proportional rates to and from certain junction points. Joint rates are not generally provided on brick and related articles, in carloads, from producing points in the states named to destinations on connecting railroads in other states, particularly to points in the northwest, but combination rates are constructed by the use of the combination rule. The proposed schedules are the result of concerted effort on the part of carriers in western trunk line territory to cancel the use of the combination rule. In lieu thereof some of respondents propose to establish proportional rates from and to specified junctions, which rates are generally 1.25c less than the local rates, and would result in the same combination rates as are now in effect. But in other instances the rates would be increased as much as 2.5c or more, where respondents have intended but failed to propose proportional rates that reflect the full deduction of 1.25c to and from the junction point. The combination rule as applied to brick and related articles contemplates the deduction of 2.5c from each component of a combination rate, and the addition of 2.5c to the sum of the components so reduced. It may be gleaned from the present record that respondents hardly expect the Commission to sanction the increases that they have either intentionally or inadvertently proposed because of a failure of the various respondents to coordinate their efforts in a unified attempt to eliminate the application of the combination rule by the establishment of proportional rates which would result in combination rates not in excess of those now in effect. HELD, schedules not justified. Combination rule on brick, 115 I. C. C. 293.

(j) Complainant attacked combination rate charged on 163 cars of coke shipped between May 23 and Sept. 26, 1919, 49 from Benham, Ky., and 114 from Chattanooga, Tenn., to destinations in Utah and Idaho as inapplicable, because based on rates both factors of which were increased by specific amounts under G. O. 28 of the Director General instead of on a through rate reflecting only a single increase. As the tariffs carrying the factors up to Chicago and Memphis and the tariffs publishing the factors beyond to destination did not contain or make reference to a combination rule applicable on this commodity at the dates of shipment, it follows that the principle laid down in the Sligo case 62 I. C. C. 643, is clearly not applicable to these shipments. HELD, rates attacked applicable except that on shipments which moved between June 1 and Sept. 4, 1919 from Chattanooga, Tenn., through Evansville, Ind., to Spanish Fork, Midvale, Elsinore, and Lehi, Utah, and on June 2, 1919 from Benham, Ky., through Chicago to Lehi, Utah, the combination rates were inapplicable to extent they exceeded $8.90 from Chattanooga and $10.40 from Benham, reparation awarded. Utah Idaho Sugar Co. v. Director General, 115 I. C. C. 707.

(k) Where one of the tariffs used in making combination rates on through shipments contains a rule that such rates will be subject to the increases but once, there is a holding out to the shipper of the rate so constructed which the carrier should protect. Utah Idaho Sugar Co. v. Director General, 115 I. C. C. 707, 708.

(l) Where one of the tariffs used in making combination rates on through shipments contains a rule that such rates will be subject to the increase specified therein but once, there is a holding out to the shipper of the rate so constructed which the carrier should protect. Standard Lumber Co. v. A. C. L. R. R., 118 I. C. C. 703, 704.

(m) Proposal to cancel combination rule on brick and related articles between stations in Iowa, Missouri, Kansas, Nebraska, the Dakotas, Minnesota, and other western States, and, in some instances, to establish in lieu thereof proportional rates to and from certain specified junctions, found not justified. While the commission has commented upon the undesirability of the combination rule from a tariff standpoint and has made suggestions looking to the ultimate elimination of combination tariffs, such

suggestions did not contemplate increases in rates. Carriers can not expect commission to sanction advances which would here be brought about because of a failure on part of carriers to coordinate their efforts in a unified attempt to eliminate the rule by establishing proportionals which would result in combinations not in excess of those now in effect. Combination Rule on Brick, 115 I. C. C. 293.

(n) The Commission has repeatedly sanctioned the carriers efforts to eliminate that rule (combination rule) by the publication in its stead of joint or proportional rates, but have denied authority to cancel it where unjustified increased rates would result. Combination rule on lumber, 129 I. C. C. 564, 567.

§9½. **Double Advances.**

See Supra §8½a.

(a) Combination rates assessed on hogs from points in Iowa to New England destinations, with transit at Mississippi River crossings, both factors of which were increased under General Order No. 28 of director general, found illegal. Tariffs governing one factor carried combination rule providing for application of but a single increase to through rate, which constituted a holding out to that effect which must be made good. Reparation awarded. North Packing & Provision Co. v. Director General, 104 I. C. C. 607.

(b) Contention that combination rule, which provided for application of a single increase to through rates made on combination, was not applicable where a transit arrangement was availed of, upon theory that business was not a continuous through rail movement, such movement having been arrested by virtue of transit privilege, not sustained. Following 257 U. S. 247, commission has consistently applied the principle that transit does not affect continuous shipment from point of origin to final destination. North Packing & Provision Co. v. Director General, 104 I. C. C. 607, 613.

(c) Shipment moved under combination rates, each factor of which was increased under General Order No. 28 of Director General. Tariff naming second factor contained combination rule which provided a method for constructing through rates made on combination, but made no reference to tariff carrying first factor, nor did the latter contain any reference to rule. FOUND: Following the Sligo case, 62 I. C. C. 643; 73 I. C. C. 551, and other cited cases, rate charged was inapplicable and reparation awarded. Miller & Brickley Grain Co. v. Director General, 107 I. C. C. 81.

(d) Shipments moved under combination rates each factor of which was increased under General Order No. 28 of director general. Tariff governing second factor carried the combination rule which provided for application of a single increase to through rates made on combination. First factor contained a similar rule which was restricted in its application. HELD: Following 81 I. C. C. 193, and other cited cases, effect of restricted tariff was tantamount to absence of a rule, and rates constructed by application of but a single increase to through rate as contemplated by rule contained in tariff governing second factor found applicable. Reparation awarded for overcharges. White Star Refining Co. v. A., T. & S. F., 109 I. C. C. 577.

(e) On coal moving from Crested Butte, Colo., to destinations in Nebraska and Kansas, no joint rates were in effect. Charges were collected on basis of a combination reflecting both increases authorized under General Order No. 28 of director general and general advances of 1920. Tariff governing one factor carried combination rule which provided a method for constructing through combination rates, tariff governing second factor contained no specific formula. HELD: The rule fixed a definite basis for constructing combinations, and since there was no tariff authority for the 1920 increases they should not have been added. The applicable rates, following 62 I. C. C. 643; 73 I. C. C. 551, and other cited cases, were through rates constructed in conformity with the rule. Shipments found overcharged and reparation awarded. Foster Lbr. Co. v. C., B. & Q., 113 I. C. C. 734.

(f) Respondents proposed to increase their carload rates on brass, bronze and copper ingots, pig, scrap, and related articles between points throughout official classification territory in purported compliance with 109 I. C. C. 351. Principal protest is in regard to the rates to and from points taking 60 and 70% of the rates between Chicago and New York. The rate of 40c prescribed between the points named was scaled back to and including the 71% group, resulting in a rate of 28.5c between New York and that

group, which was blanketed to and including points in the 60% group, including Pittsburgh, to and from which the sixth class rate is the same amount. If the 40c rate had been scaled to all of the percentage groups, it would have produced rates from New York of 28c to the 70% group, 27c to the 67% group, and 24c to the 60% group. The findings in the previous case were clear and specific, and the proposed rates to and from the 60 to 70% groups, are not in accordance therewith, and they have not been justified. The present record, however, discloses that a rate of 24c between New York and the 60% group would not only be 1c lower than the present rate to and from Pittsburgh but it would be slightly lower than the present rates to and from numerous intermediate points, and it would prevent the application of the sixth class rates to and from a large intermediate territory. The sixth class rates to Rome of 22.5c from New York and 25c from Baltimore are as low or lower than the corresponding rates for like distances under the central territory scale. Such rates do not appear to be unreasonable for application on the traffic under consideration. HELD, a rate not in excess of 27c would be reasonable for application on the fifth class rates between New York and points in the 60% group, including Pittsburgh, with rates from and to the other ports based on the usual differential basis. The rates proposed to and from Norfolk in the suspended schedules have not been justified, but the Commission is of the opinion that the Baltimore rates to and from this territory, subject to the Baltimore-Columbus rate as minimum, would be reasonable for application to and from Norfolk. Respondents proposed no evidence regarding the rates to Brockville, Ont., Can., and they are not justified. It is proposed to cancel present commodity rate of 76c per ton on the fifth class articles from Shadyside, a station near East Liberty, Pa., to Homestead, Pa., all in the Pittburgh district and to substitute therefor the full sixth class rate of 9c. The proposed sixth class rate does not appear to be excessive for local line haul movements of that distance; but as a factor of combination rates, in the absence of joint rates, it would result in a double increase in many instances, and as to interstate traffic the proposed cancellation has not been justified. HELD, proposed schedules not justified without prejudice to filing of tariffs in accordance with the findings. Brass, bronze and copper ingots, 118 I. C. C. 725.

(g) Where the combination of separately established locals or proportionals is the usual and recognized basis of rates, the application of an increase to each component of such combination rate is governed by applicable tariffs in effect on date of shipment, and if neither of the tariffs carrying component rates contains or makes reference to a combination rule, there is no holding out to shipper under principle announced in Sligo case, 62 I. C. C. 463; 73 I. C. C. 551. Utah-Idaho Sugar Co. v. Director General, 115 I. C. C. 707, 709.

(h) Shipments moved under combination rates to each factor of which the increase pursuant to General Order No. 28 of Director General has been added. One of the tariffs naming a factor of the combination rate provided that through rates would be subject to but a single increase. HELD: In 62 I. C. C. 643; 73 I. C. C. 551, principle was laid down that where one of the tariffs used in making combination rates on through shipment contains such a rule, there is a holding out to shippers of rates so constructed which publishing carrier must protect. Rates charged were therefore inapplicable, applicable rates being those constructed in accordance with combination rule which provides a specific method for constructing through rates made on combination, published in some one of schedules naming a factor of combination rate. Reparation awarded. Pioneer Coal & Coke Co. v. Director General, 128 I. C. C. 49.

(i) Where one of the tariffs used in making combination rates on through shipments contains a rule that such rates will be subject to but one increase, there is a holding out to shippers of the rates so constructed which the carrier publishing the rule is obligated to protect. Pioneer Coal & Coke Co. v. Director General, 128 I. C. C. 49.

§11½. Differentials or Rate Relationship.

See Differentials; Relative Rates.

(a) Proposed increased translake rate on salt from Ludington and Manistee, Mich., to Chicago, Ill., and intermediate points, applicable over car-ferry route of the Pere Marquette to Milwaukee, and the C., M. & St. P., beyond, found justi-

fied. In Salt Cases of 1923, 92 I. C. C. 388, commission fixed minimum translake rate 1 cent under all-rail rates. The Pere Marquette has its own rails from Ludington and Manistee to Chicago, but the differential in favor of translake route attracts all the traffic and in order to secure the entire haul it desires to maintain same rate over both routes. In the general cases carriers were specifically authorized to apply all-rail rate over translake route and commission sees no reason for changing the finding made therein to effect that a translake rate equal to all-rail rate is justified. Salt from Ludington Group, 112 I. C. C. 255.

(b) Proposed general revision of rates on potatoes, increases predominating, from points in Wisconsin and elsewhere in western trunk-line territory to destinations in southeastern Missouri, found not justified. While proposed rates are shown to be reasonable as compared with rates in other territories, the reverse is true when compared with lower rates, distance considered, not only to farther distant destinations in Arkansas, but also to intermediate destinations in southeastern Missouri where observance of the fourth section requires maintenance of the rates to the Arkansas destinations. Also when compared with rates from same territory of origin to destinations in southwestern Missouri and Kansas. Potatoes to Missouri, 113 I. C. C. 289.

(c) Respondents, G. N., N. P., and Soo Line, generally increased rates on cream and some increased rates on milk, cream, and buttermilk transported on passenger trains in a certain territory embracing points in Montana, North Dakota, Minnesota and other northwestern states. The traffic consists almost entirely of sour cream in 10 gallon cans, weighing on the average, as filled, about 100 pounds each, and moving interstate principally between Minnesota and North Dakota points from country stations to creameries. The cream is picked up at various points along the line, generally in small lots, loaded in baggage cars by railroad employes, and unloaded at destination in some instances by railroad employes and in others by both railroad and creamery employees. In certain instances the cars on arrival at destination are full and in others contain only a few cans, depending on the territory served and the amount of traffic received, transferred, and delivered along the route. The empty cans are returned free, requiring about the same service as filled cans. The traffic has to be checked and waybilled and otherwise handled and cared for something like less than carload way freight. Prior to July 1, 1918 the cream traffic on respondents lines was handled by their respective subsidiary express companies, and was subsequently taken over by the American Railway Express, but since April 1, 1921 it has been transported by respondents themselves. From and to the principal points the proposed rates up to 500 miles are the same as those applicable within the state of Minnesota, which are provided by a scale prescribed by the Minnesota Commission in July, 1922. HELD, rates attacked not justified. Milk and cream in Northwest, 115 I. C. C. 77.

(d) Respondent, C. & E. I., proposed increased rates on cream and related articles between points on its line. Respondents present rates on cream are on the so-called Beatrice scale prescribed in 15 I. C. C. 109, for the transportation of cream to Chicago, Ill., from the territory lying between Detroit and Port Huron, Mich., upon the east and Colorado common points on the west. It now seeks to cancel these rates and put in effect rates about 12% higher on the scale prescribed in 46 I. C. C. 601, for application generally in c. f. a. territory. This basis provides rates on cream 25% higher than on milk. The cream shipments are all less than carload and move in baggage cars on regular passenger trains. Respondent terms it a pick up service and cream, being a perishable commodity, must be handled promptly. It is transported in 5, 8, and 10 gallon metal cans. The rates include the return of the empty cans. Because of the necessity of keeping the cans separated according to stations and owners, the empty cans can not be loaded in tiers and hence occupy about as much space as the filled ones. Although a few carriers have voluntarily published cream rates lower than the c. f. a. scale in this territory, that is the general basis of rates. There is nothing of record which would justify the Commission in requiring respondent to maintain lower rates on cream over its line that it has found reasonable for application over the other roads in this territory. HELD, suspended schedules justified. Cream and related articles, 115 I. C. C. 447.

(e) Upon contention that carriers were never authorized to increase the

differential existing on coal from anthracite fields in Pennsylvania to destinations in the metropolitan district of Boston over those to latter point, FOUND: In dealing with similar situation in 113 I. C. C. 161, it was stated that previous approval of a differential is no indication that change in conditions which brought about general increases and reductions, did not warrant a subsequent change in the differential. Chadwick Coal Yard Co. v. N. Y., N. H. & H., 129 I. C. C. 165, 168.

§14. Benefit to Industry.

See Evidence §45.

(a) Fact that commodities consumed along a carrier's line can be supplied from origins on other parts of its system neither affords justification for, nor establishes reasonableness of, proposed increased rates from points located off the system. Grain and Products, 115 I. C. C. 615, 616.

§14¾. Previous Decision of Commission.

See Previous Decision of Commission.

(a) Proposal to increase to their former basis rates on salt from Ohio producing points to destinations west of Missouri River, found justified. In complying with commission's order 92 I. C. C. 388 carriers, through error, published reduced rates to points west of Missouri River. Considering wide area of salt production and influence which keen competition has upon rate structure, the reduction made in error would give rise to readjustments elsewhere. Moreover carriers here do not propose a new adjustment of rates but simply seek to restore relationship previously existing. Salt to Western Trunk Line Territory, 104 I. C. C. 101.

(b) Proposal to readjust rates on clean rice and products from points in Arkansas, Louisiana, and Texas, and from Memphis, to points in c. f. a. and western trunk-line territories, resulting in both increases and decreases, found not justified as a whole. Proposed readjustments is in purported compliance with, and direct result of, the commission's conclusions in the Stuttgart case, 93 I. C. C. 517, and while it meets rates prescribed in that decision in so far as reductions are concerned, the increases proposed are not in harmony with rates fixed therein. Rice from Arkansas, Louisiana, and Texas, 104 I. C. C. 681.

(c) Cheese. Proposal to cancel commodity rates on, from southern Wisconsin points to Chicago and certain other destinations, leaving in effect higher class rates, designed for purpose of aligning rates on this traffic with general level of rates to Chicago, found not justified. Present earnings on cheese from and to points involved compare favorably with earnings on other commodities between points in western trunk-line territory. Moreover, many of the rates which it is proposed to cancel are those prescribed in 16 I C. C. 85, as subsequently modified by general changes. Cheese to Illinois and Wisconsin, 107 I. C. C. 340.

(d) Proposal to increase rates on apples from points in Virginia on Washington division and Manassas-Harrisonburg branch of Southern Ry. and from points on Washington & Old Dominion Ry. to eastern destinations, by restoring rates previously in effect, found justified, except where proposed rates exceed existing fifth-class rates c. l., and third-class l. c. l., built on official classification level as applied from the Shenandoah Valley and found reasonable in 31 I. C. C. 145. Apples from Virginia Points, 107 I. C. C. 349.

(e) Proposal to increase rates on ore and concentrates from producing points in California, Nevada, and Utah to Utah and California smelter points, found not justified except in instances and to extent authorized in 64 I. C. C. 477; 100 I. C. C. 180, and by subsequent special permission. Proposed rates would so reduce or obliterate margin of profit of producers of ore and concentrates in these territories as to curtail seriously or restrict entirely their present operations. Moreover, present basis of rates has been voluntarily maintained for more than three years, and in present condition of mining industry the substantial increases proposed ought not to be permitted except upon clear and convincing justification, in respect of which evidence here wholly fails. Ore and Concentrates between Calif., Nev., and Utah, 107 I. C. C. 357.

(f) Proposal to increase rates on hay from St. Louis and East St. Louis to certain destinations on Mobile & Ohio R. R. in Mississippi south of Tupelo, designed to correct error in rate publication, found not justified. Proposed increase would effect a general adjustment of hay rates in Mississippi Valley by respondent without cooperation with

other carriers in same territory. Moreover, record does not justify establishing rates contrary to principles announced in Southern Class Rate Investigation, 100 I. C. C. 513, for establishment of class rates, or upon a basis different from that provided in 64 I. C. C. 306. Hay to Mississippi Points, 109 I. C. C. 36.

(g) Proposed increased and reduced rates on fresh meats and packing-house products from points in western trunk-line territory to points in Arkansas, Western Louisiana, and southern Missouri, reflecting changes in relationships as among origin points, found justified in so far as they effect changes from all points except Mason City, Iowa. Proposed rates, representing principally reductions, are based on differentials over rates prescribed in 101 I. C. C. 308, and present differentials are substantially those required to be continued in 23 I. C. C. 652. Fresh Meats and Packing-House Products, 109 I. C. C. 95.

(h) Hullers: Proposed increased ratings on hand pea hullers, l. c. l., in southern, western, and official classifications, designed for purpose of according ratings thereon to conform to those prescribed or approved by commission on power hullers in 98 I. C. C. 357, found not justified. Hand hullers, being both heavier per cubic foot and cheaper per pound than power hullers considered in the cited case, no justification exists for suspended schedules under which they would be rated alike. Proposed minimum weight and c. l. ratings in southern and western classifications found justified, but in official classification a c. l. rating higher than rule 25 found not justified. Reasonable ratings suggested. Classification of Hand Pea Hullers, 109 I. C. C. 143.

(i) Proposed increased and reduced rates on newsprint paper from Shawinigan Falls, and other points in northeast Canada taking same or related rates, to Nashville, Knoxville, and Memphis, Tenn., purporting to be in harmony with commission's findings in 78 I. C. C. 258, and 101 I. C. C. 605, found not justified. Rates from these Canadian mills to Tennessee points have been same as or related to those from competing mills in New England, establishment of proposed rates without similar readjustment of rates from New England mills would result in undue prejudice to Canadian mills, and record does not warrant disruption of present long-standing adjustment. Newsprint Paper from Eastern Canada, 109 I. C. C. 701.

(j) Respondents proposed to increase the carload rate on sulphur from Baltimore, Md., to Hamilton, Ont., Can. Present commodity rate is 25c, proposed to be increased to 28c. The crude sulphur originates at Gulf, Tex., and moves from that point to north Atlantic ports, by rail by Galveston, Tex., thence by water. In 89 I. C. C. 383 the Commission found rate of 28c unreasonable to extent it exceeded 25c, and it is this rate that is proposed to be increased. Distance 473 miles. HELD, suspended schedules not justified. Sulphur from Baltimore, Md. to Canada, 112 I. C. C. 485.

(ja) Respondents proposed to increase the rates on tin cans, in carloads, from Roanoke, Bedford, Buchanan and Troutville, Va., to destinations in Alabama and Florida and the Mississippi valley. The points of origin are served by the N. & W. Tin cans are rated fifth class in southern classification, but at present they move on commodity rates from the points of origin to southern destinations, including Jackson, Miss. It is proposed to cancel those commodity rates and to apply the higher fifth class rates. Prior to March 15, 1924, class rates applied on tin cans from Roanoke and Bedford to the destinations under consideration, and the rates from Buchanan and Troutville were made on a differential over Roanoke. HELD, suspended schedules not justified without prejudice to the filing of new schedules of rates not higher than those which would result from the application of fifth class rates prescribed in 113 I. C. C. 200. Tin cans from Virginia, 118 I. C. C. 91.

(jb) Proposed increased proportional rate on iron and steel articles from Natchez and Vicksburg, Miss., to Shreveport, La., found justified. Carriers cancelled proportionals formerly in effect upon assumption that by so doing higher distance rates prescribed in 77 I. C. C. 473 would become effective. Proportional rates, however, were not considered in cited case, and carriers now propose to restore preexisting rates. In justification thereof carriers show that they compare favorably with rates on same commodities from other important Mississippi River crossings to destinations west thereof; also that continuance of present low westbound rates, which became lower than those eastbound through printer's error, would result in breaking down

joint rates in effect from principal iron and steel producing centers to Shreveport. Iron and Steel to Shreveport, 115 I. C. C. 612.

(jc) Upon further consideration former report, 115 I. C. C. 373, affirmed and proposed increased rate on imported iron and steel articles from New Orleans and other Gulf ports, excluding Texas Gulf ports, to St. Louis, and its restriction to lines east of Mississippi River, and proposed increased rates on those articles from New Orleans to Little Rock and Pine Bluff, Ark., found not justified. Import Iron and Steel from Gulf Ports, 118 I. C. C. 482.

(jd) Upon further consideration former report, 115 I. C. C. 373, affirmed and proposed increased rates on iron and steel articles, imported from Texas Gulf ports to St. Louis, to points in Oklahoma and Kansas, and to Little Rock and Pine Bluff, Ark., and proposed restriction of import class rates so that fifth-class rates will not apply on iron and steel articles from these points to destinations involved, found not justified. Reasonable maximum rates from Texas Gulf ports prescribed for the future. Import Iron and Steel from Gulf Ports, 118 I. C. C. 482, 488.

(je) Proposed increases in interstate rates on sand, gravel, and crushed rock, within Chicago switching district and from the district to destinations just outside, pursuant to commission's decision in 109 I. C. C. 441, found justified in part. Chicago Gravel Co. v. A., T. & S. F., 118 I. C. C. 633.

(jf) Proposed increased rates on brass, bronze, and copper articles in official classification territory, published in purported compliance with commission's findings in 109 I. C. C. 351, found justified in certain respects, but not justified in instances where they do not meet requirements of report in case cited. Brass, Bronze, and Copper Ingots, 118 I. C. C. 725.

(k) Recogizing point of termination of commission's authority to deal with international joint rates for future and citing International Nickel Co., 66 I. C. C. 627, the commission entered a "cease and desist order" in lieu of an order to establish and maintain rates. See 98 I. C. C. 339. Spanish River Pulp & Paper Mills v. A. & W., 120 I. C. C. 251, 254.

(l) Proposed increased rates on grain and products between Kansas and Oklahoma, found not justified. Carriers proposed group rates which they contend are those authorized in 101 I. C. C. 116, wherein maximum distance-scale rates were prescribed between Kansas and Oklahoma. However, authority was specifically denied in that case to increase any existing rates where lower than maximum scale prescribed. Here carriers propose to increase rates to the maximum scale prescribed in cited case, which is clearly unauthorized and contrary to findings therein. Grain and Grain Products, 122 I. C. C. 301.

(m) Proposed increase in basis of rates on paving and roofing pitch, paving and roofing tar, coal tar, and oil tar from 70 to 80 per cent of sixth class in c. f. a. territory, the basis applicable on asphalt, found not justified. While a review of conclusions in 61 I. C. C. 719, wherein 80 per cent of sixth class was prescribed in official classification territory on these commodities justifies carriers' attempts to replace the pitch and tar rates on a parity with those on asphalt in so far as reasonableness of rates is concerned, such an adjustment would produce a disparity in rates between producers at Cincinnati, and St. Louis and Chicago in favor of competing plants at latter points, resulting in undue prejudice to Cincinnati producers. Pitch and Tar in C. F. A. Territory, 122 I. C. C. 573.

(n) Proposed revision of rates on bananas from Gulf ports to southeastern, Carolina, and Mississippi Valley territories, Ohio River crossings, and other southern points, in purported compliance with commission's findings in the Banana case, 109 I. C. C. 211, found not justified. The suspended rates, in so far as their application to southeastern and Carolina territories are concerned, are not in accordance with commission's report in cited case. Moreover, the further revision contemplated by carriers to and from points not involved in that proceeding, if permitted to become effective, would create preferences and inequalities which commission can not sanction. Proper revision of rates upon basis of a mileage scale suggested. Bananas from Gulf Ports, 123 I. C. C. 181.

(o) Proposed increases in class rates between Washington and Oregon points, on the one hand, and Columbia River basin points, on the other, to conform to the general rate adjustment in Wash-

ington and Oregon, and in purported compliance with commission's findings in 113 I. C. C. 38, found justified. Pursuant to findings in 21 I. C. C. 640, interstate distributive class rates were established generally in Washington and Oregon, but because of potential, if not actual, water competition on the Columbia River, no advance was made in rates ing,which rates have longed been debetween points involved in this proceedpressed. Increases proposed place these which for similar distances are the same rates on the distributive scale basis as, or less than. scale of class rates prescribed in 74 I. C. C. 207 for application in same general territory. Class Rates Between Oregon and Washington, 128 I. C. C. 108.

(p) Proposed increased rates on sugar from New Orleans and other Louisiana refining points to points in southern and eastern Texas, and from Sugarland and Texas City, Tex., to Shreveport and other Louisiana points and to Vicksburg, Miss., and other Mississippi River crossings south thereof, found not justified in so far as they exceed those that will result from application of maximum reasonable rates prescribed in Consolidated Southwestern Cases, 123 I. C. C. 203. Proposed rates are higher than those under distance scale prescribed in 77 I. C. C. 473, for application in same general territory and proposed rate to Houston without appropriate change in present ocean-and-rail rate from New York via New Orleans to Houston, would create an adjustment contrary to long-and-short-haul provision of section 4 of the act. Moreover, rates constructed on bases prescribed in Consolidated Southwestern Cases will provide reasonable, nonprejudicial, and nondiscriminatory rates between points involved. Sugar Between Louisiana and Texas Points, 128 I. C. C. 309.

(q) Respondents proposed increased rates on potatoes and other vegetables, in carloads, from Nebraska, Colorado, Utah, New Mexico, Wyoming, Idaho, Montana and Oregon to Arkansas, also to Memphis, Tenn., and a few other destinations in Tennessee and Kentucky. Respondents stated their only reason for publishing the proposed rates was their purpose to comply with the order in Arkansas Jobbers & Mfrs. Asso. v. C. R. I. & P. Ry., 120 I. C. C. 245. Respondents proposed to comply with the order by increasing the rates to Little Rock, Pine Bluff, Helena, Memphis, and points taking the same rates, rather than by reducing the rates to southern Arkansas points. HELD, proposed schedules not justified. Potatoes and vegetables from western points, 129 I. C. C. 652.

§15. Standard for Judging Advance.

See Evidence §55, §56; Relative Rates.

(a) Shippers in opposing a proposed revision in rates on an individual commodity estimated the annual increase in revenue which would be produced thereby, and introduced evidence to show increased prosperity of carriers with a view to showing that they were not in need of this additional revenue. HELD, Such evidence is of little or no force in determining the propriety of rate level on an individual commodity. See 263 U. S. 456, 482. Bananas from Gulf Ports, 109 I. C. C. 211, 219.

(b) Proposed increased rate on paper and paper articles from Holyoke, Mass., to Newark and Nutley, N. J., via the New Haven railroad, for purpose of establishing higher commodity rate at present in effect from and to same points via the Boston & Maine, found not justified. Equal commodity rates have applied via both lines, and the New Haven contends that cancellation of that rate by the Boston & Maine has removed any necessity for its further continuance via its own line. Contention, however, loses sight of the fact that route of the Boston & Maine is over 100 per cent greater than that of the New Haven and that former carrier is not the rate-making line. Moreover, no evidence was offered showing that present rate is unremunerative. Paper from Holyoke, 115 I. C. C. 336.

(c) N. C. & St. L., and other respondents proposed to make certain changes in the rates on agricultural implements, in carloads, from southeastern producing points to the Mississippi and Ohio rivers and to Mississippi valley territory, including New Orleans, La. According to respondents the proposed adjustment is part of the readjustment begun in 1923 and is intended to place the rates from and to the points under consideration on a level comparable with those established on July 1, 1923 on agricultural implements from the Ohio river crossings and other points to the Mississippi valley and the southeast. There is no uniformity in the commodity descriptions applying in

conjunction with the present rates, different rates applying to different descriptions. They are sixth class. The suspended rates vary from about 85 to 90% of the sixth class rates prescribed in 100 I. C. C. 513, 109 I. C. C. 300 and 113 I. C. C. 200. In official territory this commodity moves under fifth class rates. The suspended rates are lower than the scale prescribed in 77 I. C. C. 473. The record suggests the necessity for a comprehensive readjustment of all rates on this commodity within the south, but there is nothing to indicate that the necessity for a revision in connection with rates to the Mississippi valley is any greater than that incident to those applying to, from, or within other subterritories of southern territory. HELD, suspended schedules not justified. Agricultural implements between points in southeast, 122 I. C. C. 191.

(d) This proceeding has to do with the rates on grain, including flaxseed, and grain products, in carloads, throughout an extensive territory in the northwest. In this territory there are ordinarily three groups of commodities taking the grain and grain product rates, or rates directly related thereto, wheat and articles taking wheat rates, coarse grain and articles taking like rates, and flaxseed and articles taking like rates. The coarse grain rates are 90% of the wheat rates. The flaxseed rates from North Dakota are from 0.5 to 3c higher than the wheat rates, the maximum excess being 110%. Distance scales are provided to apply in the absence of specific rates, but there are specific rates from most of the shipping points to the large terminal markets. The suspended schedules include interstate rates from, to, and between points in Minnesota, North Dakota, South Dakota, Iowa, Wisconsin and Illinois. The carriers lines in the territory involved form two distinct groups, and these will be referred to respectively as the northern and southern lines. PROPOSALS OF THE CARRIERS. The carriers now propose a general distance scale. From North Dakota the Important rates are to Minneapolis and Duluth. The rates to Chicago from North Dakota, a large portion of Minnesota, and the more northerly part of South Dakota are made on the Minneapolis combination. It follows that all increases proposed in the rates from such points to Minneapolis will be reflected in the rates to Chicago. From the remainder of the territory involved the rates to Chicago are lower than the Minneapolis combination. COMPARATIVE RATES. The carriers principal reliance is upon rate comparisons tend ing to prove that the present rates from Minnesota and North Dakota are unduly low, and that even if the proposed rates are in general lower than the rates which move most of the grain to the primary markets from other producing sections. The rates from Minnesota points to Minneapolis and Duluth are generally on a lower level than the rates to these markets from North Dakota points. It is shown that the proposed rates are in general substantially lower mile for mile than the rates which the Commission prescribed from South Dakota. One explanation of the fact that the unit earnings of the northern lines compare so well with the earnings of the lines in western trunk line and southwestern territories is that the latter certainly move a considerably greater portion of coarse grain under rates 90% of the wheat basis, and that they probably move a large proportion of the lighter loading grain products. But this, of course is not an explanation of the earnings on wheat separately. A further explanation which applies to wheat as well as to grain and grain products generally is the fact that the northern lines, with the possible exception of the Soo, move relatively much less grain and grain products from the primary markets on proportional rates. The bulk of their movement is from the farms to the markets. There is reason to believe that the proportional rates from the markets are in general on a substantially lower level than the inbound rates, due to the pressure of competitive influences which do not affect the movement from the farms. COST OF SERVICE. In these proceedings the carriers have made no attempt to estimate the cost of service in connection with grain traffic or to compare such cost with the revenue received. They have, however, introduced evidence tending to show that there are special services incident to this traffic and that the transportation is attended, to some extent, by unfavorable conditions. No attempt was made by the carriers to show how these unfavorable conditions and special services affect the cost of service as a matter of dollars, nor to make comparison with the similar services and conditions attending the movement of other traffic. The Commission

knows that there are comparatively few kinds of traffic as to which the carriers are unable to show so-called special services of more or less importance. While there undoubtedly is a marked peak in the movement of grain to the northern primary markets, it is also true that there is a substantial movement in every month of the year. Grain moves in box cars which are also used for many other commodities. Respondents did not attempt to determine to what extent grain is responsible for empty box car movement. COMPARATIVE EARNINGS. Nowhere in their testimony did the carriers touch upon the ton mile or car mile earnings of the rates in issue, nor attempt to compare these earnings with those derived from other forms of traffic. The Minnesota scale is considerably lower relatively for the long hauls than for the short and medium hauls. HOCH-SMITH RESOLUTION. When the carriers in an investigation and suspension proceeding propose what in substance amounts to a general increase in rates over a large area on agricultural commodities which have been shown to be affected by depression, they must clearly demonstrate that such increase is justified under the law including the provisions of the resolution. CONCLUSIONS AS TO SUSPENDED RATES. The carriers attempted justification of the suspended rates depends primarily and chiefly upon rate comparisons. Considering this showing alone, they have made out a strong case. The comparisons are very numerous, cover a wide range, and include many rates which the Commission has fixed. They warrant the conclusion that, judged by other rates from the grain fields of the western territory to primary markets, the present rates on grain and grain products from North Dakota and Minnesota points to Minneapolis and Duluth are in general low, and that the proposed rates are in general not unduly high. It is significant, however, that the carriers case practically ends with this showing. They have, indeed, endeavored also to show that the movement of grain from the North Dakota and Minnesota farms is attended by various unfavorable transportation conditions. But little attempt has been made to translate these conditions into terms of cost of service or to show that they are essentially more burdensome than the conditions which attend the movement of many other important forms of traffic. No evidence was offered by the carriers, such as they frequently present in rate cases, with a view to showing that the earnings of the rates which they are seeking to increase are either intrinsically low, or low by comparison with the earnings derived from the rates on other commodities. No attempt was made to show the actual or the relative cost of service. HELD, respondents have not sustained the burden of justifying the proposed increases. It is evident, especially in the light of the Hoch Smith resolution that the rate structure in the northwestern and western trunk line regions requires an analysis and investigation of a more thorough and fundamental character than it has yet received. It is also clear from the record in this case that the rates on grain and grain products, particularly to the primary markets, are deserving of a consideration, from the standpoint of relative earnings and fair share of the transportation burden, which perhaps has not hitherto been sufficiently given them. THE COMPLAINT PROCEEDINGS. The rates on grain and grain products from South Dakota and to a lesser extent from North Dakota are relatively higher than the corresponding rates within Minnesota. The Commission has recognized in past cases that the rates from the more sparsely settled and less well developed western portions of the Dakotas may properly be higher, relatively, than the rates from the eastern portions, and it also appears that traffic density within South Dakota and from points in that state to the Minnesota terminals is less than in the case of North Dakota. But even if allowance be made for these conditions, the disparity between the Minnesota rates and those from points in these adjoining states seems in many cases to be undue. The issue which is dominant is section 1. If the Commission should undertake to correct disparities by prescribing rates on the present Minnesota level throughout the regions here involved, other and equally serious disparities would by that action be created elsewhere. The rate comparisons presented by the carriers have made that plain. Moreover, the record does not warrant the prescription of rates on that basis. While the carriers have not justified rates in excess of the Minnesota level neither have complainants sufficiently shown that the Commission can lawfully reduce interstate rates to that level. Under all the circumstances, the Commission believes

that the interests of both carriers and shippers will be better served if the issues in these complaint proceedings are reserved for disposition in the general investigation. If complainants and the carriers, however, differ with this conclusion, and desire these issues to be determined upon this record without further delay and upon a basis which may be temporary in view of the general investigation, they may so advise the Commission and this matter will be given further consideration. Except as to the relatively small portion which is consumed at Minneapolis and Duluth, grain or its products received at these terminals is reshipped east for export or domestic consumption. The demand for proportional rates is thus in practical effect a demand for reductions in the general rate level from North Dakota and South Dakota. There are no proportional rates direct from the grain producing fields to the Missouri river or other primary markets. Undoubtedly if granted to Minneapolis and Duluth similar rates could not properly be withheld from competing markets. HELD, the conclusions herein, in respect to both the proposed rates and the complaint proceedings, are without prejudice to any different conclusions that may be reached in the general investigation. Grain and grain products, 122 I. C. C. 235.

IV. REASONABLENESS OF ADVANCED RATES.

§17. In General.

See Absorption of Charges §3 (a); Any Quantity Rates I (e) (g); Baggage Car Service; Blanket Rates §18; Branch Lines §1 (t); Differentials §8 (3i); Emergency Rates (c); Equalization of Rates §3 (h) (i); Refrigeration §3½ (d), §4 (k) (l); Through Routes and Joint Rates VI.

(a) Proposed increased commodity rates on common black powder from Fairchance, Pa., to Carney's Point, N. J., and points taking same rates, designed to restore parity of relationship formerly existing between commodity rate and first-class rate from and to these points, found not justified as to c. l. traffic but justified as to l. c. l. shipments latter being satisfactory to all parties concerned. Black Powder from Fairchance, Pa. 104 I. C. C. 45.

(b) Proposed increased rates on grain and products and alfalfa meal from Colorado common points and points grouped therewith to destinations in Wisconsin and Upper Peninsula of Michigan, found justified except where such rates exceed combinations of local to and proportionals beyond Omaha. Grain and Products from Colorado, 104 I. C. C. 281.

(c) Proposed increases from the El Dorado-Smackover field in Arkansas, in domestic rates on crude petroleum and fuel oil and in export and coastwise rates on crude petroleum and refined, gas, fuel, and road oils, to New Orleans-Baton Rouge district in Louisiana, and in export and coastwise rates on crude petroleum and fuel gas oils to Texas ports, found not justified. While the record lacks detailed information as to degree in which present rates, established to meet an emergency when industry was in a state of depression, yields profits to carriers, facts tend to support conclusion that circumstances and conditions surrounding movement are so unusually favorable to economical handling of traffic as to be almost unique. Petroleum from Arkansas, 104 I. C. C. 651.

(d) Proposal to increase rates on apples from points in Virginia on Washington division and Manassas-Harrisonburg branch of Southern Ry., and from points on Washington Old Dominion Ry. to eastern destinations, by restoring rates previously in effect, found justified, except where proposed rates exceed existing fifth-class rates c. l., and third-class l. c. l., built on official classification level as applied from the Shenandoah Valley and found reasonable in 31 I. C. C. 145. Apples from Virginia Points, 107 I. C. C. 349.

(e) Respondents proposed to increase the rates on grain and its products, in carloads, from Omaha and South Omaha, Neb., and Council Bluffs and Des Moines, Ia., when from beyond, and from stations on the I. C., to stations on the former J. L. C. & E., now a part of the Frisco, and to cancel the transit arrangement at Cairo, Ill., now in effect on traffic from points on the I. C. The J. L. C. & E. in the northeastern section of Arkansas, runs in an eastwardly direction from Jonesboro to Barfield, about 63.9 miles, through Nettleton, Leachfield, and Blytheville. It connects with the Cotton Belt at Jonesboro and Blytheville and M. P., at Nettleton. The present through proportional rates from Omaha of 28.5c

on wheat and 26.5c on coarse grain are applicable over I. C., to Gale, Ill., Cotton Belt to Jonesboro and J. L. C. & E. The lowest combination rates would be 31.5c on wheat and 28c on coarse grain except to Blytheville and Wilson, which are on the Frisco's direct line from St. Louis, Mo., to Memphis, Tenn. To these points the combination rates would be 25 and 23.5c. The I. C. permits transit at Cairo on grain, and introduced no evidence to sustain the proposed cancellation of the transit agreement. The respondents have not sustained the burden of justifying the proposed rates. HELD, proposed schedules not justified. Grain and its products at Arkansas, 113 I. C. C. 209.

(f) Proposed increased rates on sand, gravel, and crushed stone from points on C., B. & Q., in eastern Nebraska to points in Iowa and Missouri, by cancellation of the combination rule, thereby leaving applicable the full combinations, found not justified. While the proposed rates are too high, it is shown that present rates are on rather a low basis and could well be increased to some extent. Schedules ordered canceled without prejudice to filing of others naming rates in conformity with those herein approved. Combination Rule on Sand, Gravel, and Stone, 112 I. C. C. 231.

(g) Respondents proposed to increase the rates on petroleum and petroleum products carloads from New Orleans and Baton Rouge, La., and other Mississippi River crossings and also from Ohio River crossings, to Carrollton, Ky. Carrollton is on the Ohio and Kentucky Rivers, and is also the northern terminus of the Carrollton & Worthville a railroad 10 miles in length. Worthville, Ky., its southern terminus is the point of interchange between that road and the L. & N. The increased rates are proposed to eliminate the existing fourth section departures at Worthville and other intermediate points on the L. & N. Respondents have not justified the proposed increases. The record indicates and the Commission concludes that the present rates to Carrollton of 26.5c from Evansville, Ind., and 30.5c from the Illinois points are not out of line; that the rates from points grouped with Cincinnati and Louisville should not exceed 19.5c and the rates from points grouped with New Orleans and Baton Rouge should not exceed 43.5c. HELD, suspended schedules not justified without prejudice to the filing of new schedules not in conflict with conclusions shown herein. Petroleum to Carrollton, 113 I. C. C. 587.

(h) Respondents proposed increased rates on canned goods, carloads, form La Crosse, Wis., Winona, Minn., and points grouped therewith to Danville and Springfield, Ill., St. Louis, Mo., and points taking same rates. The origin groups are mostly in western Wisconsin west and north of Madison, Wis. The present rates from these points to Danville, Springfield, St. Louis are 24.5c. From Madison, Milwaukee and other intermediate points the rates generally to the same destinations are 28.5c on canned fruits, meats and vegetables and 24.5c on canned milk. Apparently this results in fourth section violations by some routes, although respondents state there is none by the direct routes. It is proposed to increase the rates on all canned goods from the La Crosse-Winona group to 28.5c except in a few instances where this would exceed the fifth class rate of 28c. Compared with rates on canned goods applying generally from Wisconsin to other destination territory and with those in effect generally in central territory, the proposed rates do not appear to be unreasonable. HELD, suspended schedules justified. Canned goods to Illinois and Missouri, 115 I. C. C. 289.

(i) Respondents proposed to increase the carload rates on paper and paper articles, except building or roofing, toilet and tissue paper, classified fifth class or lower in the official classification and exceptions thereto, from Holyoke, Mass., to Newark and Nutley, N. J. The present rate on traffic originating on the New Haven from Holyoke to Newark and Nutley is 22.5c the same as the sixth class rate from Springfield, Mass., to the same destinations. Holyoke is 8 miles north of Springfield, and is served by the New Haven and the B. & M. Nutley is local to the Erie 4.5 miles north of Newark, which latter point is on the Erie, D. L. & W., Pennsylvania, L. V. and C. of N. J. On traffic to Nutley, originating on the New Haven, a route via the Poughkeepsie Bridge through Danbury, Conn., and Campbell Hall, N. Y., is specified, while to Newark it may be routed either via Poughkeepsie Bridge or by way of New York Harbor in connection with the Pennsylvania, L. V. or C. of N. J. out of Jersey City. A commodity rate of 22.5c was established and maintained by the B. & M. and its connections from Holyoke to Newark

from Dec. 31, 1918 to Sept. 25, 1924, on which date it was canceled, leaving in effect the sixth class rate which applied until May 31, 1926 of 28.5c when a 27c commodity rate was established. It is this latter rate, which is also applicable to Philadelphia that the New Haven desires to place in effect in lieu of the 22.5c rate. Respondent adduced no evidence tending to show that the present rate is unremunerative and the record does not warrant approval of the proposed increased rates. HELD, schedules not justified. Paper from Holyoke, 115 I. C. C. 336.

(j) Respondents proposed to increase the rates on salt, in carloads, from Pomeroy, O., and Hartford, Mason City and Malden, W. Va., to Louisville, Ky., and Jeffersonville and New Albany, Ind., from 13c to 16c. Of the points of origin, Pomeroy, Hartford and Mason City located on the Ohio River, Pomeroy on the north bank and Hartford and Mason City on south bank, all within a few miles of each other; Malden is about 6 miles east of Charleston, W. Va., or about 70 miles by rail southeast of the other points named. The shortest distance from any point of production named to Louisville is 282 miles from Mason City via Kenova, W. Va., using the B. & O. to that point and C. & O. beyond. Present rates, however, apply by many routes, the single haul of the B. & O. from Mason City to Louisville being 389 miles and the general average of all the reasonably direct routes from all points of origin to the points of destination being about 315 miles. HELD, rate of 16c justified for local application but when used as proportional rates on shipments moving beyond, not justified. Salt from Ohio and West Virginia, 115 I. C. C. 370.

(k) Respondents proposed to establish a rate of 17.5c, carload minimum weight 80,000 pounds, on railway car material from Chicago, Ill., and certain stations on the E. J. & E. in Illinois and Indiana to St. Louis, Mo., and Mt. Vernon and East St. Louis, Ill. These commodities now move from and to these points under a rate of 22c, minimum 36,000 pounds, the rate applicable on articles generally in the iron and steel list, and the rate proposed would result in a lower basis of charges on carloads loaded in excess of 64,000 pounds. The contention that the schedules in question would not result in undue prejudice seems fully supported by the evidence. In other words, there appears to be no competition between car material and other iron and steel articles. On the other hand, while there is intense competition between the freight car manufacturers, the only freight car building plants in this territory are found in the Chicago switching district and in the destination district here. Such manufacturers in the Chicago districts have no ground of complaint, as the rates paid by them on car material are extremely low compared to the rate here proposed. No shippers have appeared in opposition to the change proposed and apparently the manufacturers of railway car material in the Pittsburgh territory have no interest in the rate under consideration inasmuch as the St. Louis manufacturers have never purchased their car material in Pittsburgh territory. HELD, schedules justified. Railway car material, 118 I. C. C. 105.

(l) Respondents proposed to increase the rates on newsprint and poster paper from Camas, Wash., to Oregon City and West Linn, Oreg., to certain destinations in Washington, Oregon and Idaho. Camas is on the north bank of the Columbia River, 14 miles east of Vancouver, Wash., and is served by the S. P. & S. Oregon City is on the east bank of the Willamette River, 15 miles south of Portland, Ore., and West Linn is directly across the river. The present and proposed rates from Camas to points in Washington apply over the intrastate route of the S. P. & S. They also apply interstate over the boat line of the W. T. Co,. to Portland and the rail line of the O. W. R. R. & N. beyond. To most destinations the present rate is 40c, proposed 54.5c. It is evident that the Millwood plant is entitled to any advantage that results from the proximity of its location to Spokane and other nearby consuming points. The record clearly shows that the rate from Millwood to Tacoma and Seattle has resulted from competitive influences beyond respondents control. HELD, schedules justified. Paper between North Pacific coast and Spokane, 118 I. C. C. 123.

(m) Proposal to increase rate on phosphate rock from points in Florida to Roanoke, Ala., by restoring Group 5 rate previously in effect, found not justified. Roanoke at present enjoys rate applicable to points in Group 4, which reduction was made for purpose of placing that point on a parity with points in the Atlanta-La Grange group. Moreover, dis-

tance to Roanoke is less than that to most points in Group 4, and while element of distance is disregarded to a greater or less extent in establishment of group rates and is not necessarily controlling in determining reasonableness of such rates, it may be a very important factor where a system of group rates exists, in determining the group in which a particular point belongs, and it is clear that Roanoke properly belongs in Group 4. Phosphate Rock from Florida, 115 I. C. C. 229.

(n) Proposed increased rates on cream and related articles, moving in baggage cars on passenger trains, between points on the C. & E. I., by cancelling present rates based on the so-called Beatrice scale, and putting into effect rates based on distance scale prescribed in 46 I. C. C. 601, for application generally in c. f. a. territory, found justified. Although a few carriers have voluntarily published cream rates lower than the c. f. a. scale, that is the basis of rates prevalent in this territory on interstate shipments and there is nothing of record to justify requiring carrier to maintain lower rates over its line than those found reasonable for application over other roads in this territory. Cream and Related Articles, 115 I. C. C. 447.

(o) Principal reason advanced by protestant against a proposed increased rate was that the municipality will shortly let a contract for construction of an expensive courthouse and they desire no change in rates until that contract is awarded. HELD: Contracts of this nature can not control establishment of reasonable rates. Iron and Steel to Shreveport, 115 I. C. C. 612, 614.

(p) Upon contention that tariff reference mark indicating an increase in rate contemporaneously with a change in wording of an item was an admission by carriers that shippers prior to that change were entitled to lower rates, HELD: No such admission may be implied from use of an increase mark or symbol, as such symbols do not affect validity or applicability of items to which they refer. See 50 I. C. C. 207. General Motors Truck Co. v. G. T. W., 118 I. C. C. 99, 102, 103.

(q) Proposed increased rates on paper, newsprint and poster, from Camas, Wash., and Oregon City and West Linn, Oreg., to destinations in Washington, Oregon, and Idaho, found justified. Evidence presented by protestants is meager, their allegation of discrimination which will result from shavings, involving both increases and reproposed rates being shown to result from competitive influences beyond control of carriers here involved. Respondents, on the other hand, point out that they are merely restoring basis of rates which formerly existed and which, except for general rate changes, remained in effect for many years without complaint; also that proposed rates and earnings compare favorably with those on numerous commodities from Portland to same destinations. Paper between North Pacific Coast and Spokane, 118 I. C. C. 123.

(r) Proposed increased class rates between points in Wyoming on one hand, and Nebraska and South Dakota, on other, found not justified. Protestant entered no appearance at hearing and carrier merely offered an explanation of proposed advances rather than justification therefor, indicating that no increase in rates was intended and that it is willing to republish rates so as to preserve existing level. Class Rates between Wyoming and Nebraska and South Dakota, 118 I. C. C. 237.

(s) Prior to the 1920 increases, rate on bulk corn from Blue Island and Chicago, Ill., and Hammond, Ind., to various points contiguous to Portland, Me., carried a 2-cent differential over rate to New York. In applying horizontal increases the 2-cent differential was continued to Portland and other points in this territory, whereas to destinations here involved a 40 per cent increase was applied disrupting the rate parity. Subsequently the equalization was restored. Upon complaint seeking damages on shipments moving during the interim, HELD: The general increases resulted in disturbances to rate relationships and differentials in various instances, but neither that fact nor showing here made establishes unreasonableness of rate charged. Nor did complainant establish damages by reason of discrimination or prejudice which was removed by voluntary reduction. Paris Flouring Co. v. N. Y., C. & St. L., 118 I. C. C. 291.

(t) Horizontal increases in freight rates in 1920, resulted in disturbances to rate relationships and differentials in various instances, but that fact in and of

itself does not establish unreasonableness. Paris Flouring Co. v. N. Y. C. & St. L., 118 I. C. C. 291, 292.

(u) Proposed changes in rates on cotton linters and cottonseed-hull fiber or shavings, involving both increases and reductions, increases predominating, from the Southwest to Missouri, Mississippi, and Ohio River crossings and northern, eastern, and western points, found not justified. Under schedules proposed, maladjustments would be created, origin relationships disturbed, and instead of removing fourth-section departures as intended, new departures would be created. Moreover, carriers here arbitrarily propose to put the whole industry on a rate plane made to fit the highest grade commodity produced by protesting shippers without having given consideration as to whether the traffic could bear the radical increases proposed, and in view of unqualified testimony of every oil-mill operator that traffic could not stand the increases, their ultimate result would be to kill the traffic and thus reduce existing revenues of carriers. Cotton Linters from Southwest, 118 I. C. C. 419.

(v) Respondents proposed to increase the rates on gravel, crushed stone, and sand, in carloads, between certain points in Oklahoma and certain points in Kansas. The rates are on a distance basis and the scale applies over routes made up of not more than three lines. Respondents propose to restore the provision limiting the application to no more than two lines. HELD, schedules not justified. Gravel between Kansas and Oklahoma, 120 I. C. C. 523.

(w) Proposed increased rates on cotton from Tennessee River landings between Florence, Ala., and Paducah, Ky., served by the St. Louis & Tennessee River Packet Co., to New Orleans, La., found not justified, evidence failing to show any justification for maintaining rates from boat landings on a higher basis than joint-line rates applicable from rail points in same territory. Cotton from Tennessee River Landings, 120 I. C. C. 51.

(x) Proposed increased rates on gravel, crushed stone, and sand between points in Oklahoma and points in Kansas, resulting from a proposal of carriers to restrict rates which are on a distance basis so that they will not apply where the haul is over more than two lines, found not justified. No justification is shown of record for maintenance between points in Kansas and points in Oklahoma of a basis of rates on these commodities higher than those applying intrastate in Kansas and Oklahoma, other than those prescribed as reasonable in Memphis Southwestern Investigation, 77 I. C. C. 473. Gravel Between Kansas and Oklahoma, 120 I. C. C. 523.

(y) Proposed increased rate on spelter from Blackwell, Okla., to Greencastle, Ind., by permitting the joint rate now in effect to expire by limitation, leaving in effect a higher combination of intermediates based on East St. Louis, Ill., found justified. Joint rate in effect to Greencastle is same as that in effect to Chicago, having been established on short notice under authority of rule 77 of Tariff Circular 18-A. Carriers showed that for many years the basis of rates from southwestern smelters to points east of the Indiana-Illinois State line was based on the East St. Louis combination and that the Chicago rate is depressed. Moreover, proposed rate compares favorably and is in line with rates from and to various other points for comparable distances. Spelter from Blackwell, 120 I. C. C. 576.

(z) Respondents proposed to increase rates on cement from Alabama, Tennessee and Georgia to destinations on the Tallulah Ry., and respondents C. & O. and its connections proposed to increase their rates on cement from Fordwick, Va., to destinations on the Elkin & Alleghany R. R. E. & A. is an independent short line extending northwest 15 miles to Veneer, N. C., from its junction at Elkin, N. C., with the Southern. Fordwick is a local point on the C. & O., 317 miles from Elkin. The Tallulah Falls is a short line extending north from its junction at Cornelia, Ga., with the Southern to Franklin, N. C., 57 miles. It is proposed to publish rates to all destinations on the E. & A., on a basis of 60 cents over the junction point. HELD, suspended schedules not justified. Cement rates from Southern Points, 122 I. C. C. 195.

(aa) Respondents proposed to increase the rates on grain and grain products, carloads, between points in Kansas and points in eastern Oklahoma points over interstate routes. The suspended schedules represent a proposed adjustment of rates on grain and grain products between points in Kansas and Oklahoma on the Rock Island, and points in Oklahoma on the Frisco, and a few short

line connections of the latter carrier. Since Jan. 15, 1923, specific rates on grain and grain products equivalent to the rates between Kansas City and the Oklahoma destinations have applied between the points here considered. In certain instances the rate from the point of origin in Kansas to Kansas City is higher than the rate from Kansas City to the Oklahoma destination. The effect of the suspended schedules is to cancel the joint through rates on grain moving from points of origin in Kansas and Oklahoma to Wichita and other milling points in Kansas, there manufactured into grain products and shipped to destinations in Oklahoma, and to substitute therefor a higher level of group rates based on a distance scale. As routing through Kansas City would be eliminated, combination rates much higher than the joint rates now in effect would apply on shipments moving through that point. HELD, suspended schedules not justified. Grain and Grain Products, 122 I. C. C. 301.

(bb) Respondent, Southern Ry., proposed to increase its local interstate rates on tanning extract, in carloads, from Lynchburg, Va., to Norfolk, Pinners Point, and Portsmouth, Va., and to increase its interstate rate on this commodity, in carloads, from Lynchburg and Charlottesville, Va., to the same ports on traffic for transshipment through the Panama canal to destinations on the Pacific coast. Pinners Point and Portsmouth are in the vicinity of Norfolk, and from Lynchburg and Charlottesville are accorded the same rates as those to the latter port. Lynchburg is on the main line of respondent, 64 miles northeast of Danville, Va., and 59 miles south west of Charlottesville. It is also served by the C. & O. and N. & W. Short line distance is over the N. & W., 204 miles. Shortest distance over respondents line is through North Carolina 271 miles. There is no movement of tanning extract from Lynchburg or Charlottesville to Norfolk proper. On Jan. 31, 1923, respondent established a rate of 19.5 cents to Norfolk. It states that this rate was intended to apply on export traffic only, but that through oversight, it was not so restricted and became applicable on export, local, and coastwise shipments. The proposed adjustment would result in a higher interstate rate over respondents line from Lynchburg to Norfolk proper than over the direct lines, but there is no movement to Norfolk proper. The rate from Charlottesville to Norfolk proper is 24 cents, and Lynchburg is intermediate to Charlottesville by way of respondents line to Norfolk. If the proposed rate of 28 cents from Lynchburg to Norfolk proper were established a violation of the fourth section would result. HELD, proposed rate from Lynchburg to Norfolk proper, Pinners Point proper, and Portsmouth proper has not been justified, but other proposed increased rates have been justified. Tanning Extract from Lynchburg, 122 I. C. C. 647.

(cc) Proposed rates on agricultural implements, from producing points in the Southeast to Mississippi and Ohio River crossings, including St. Louis and Mississippi Valley territory, found not justified. Proposed revision contemplates a much higher basis of rates from producing points to Mississippi Valley than is now in force from same producing points to points in the Southeast. With the exception of Florida peninsula, there is nothing to justify maintenance of different levels of rates between or within subterritories comprising southern territory, and as shippers at New Orleans compete with those at south Atlantic ports in distribution of agricultural implements in the Southeast, it is obvious that proposed adjustment will result in undue prejudice as between New Orleans' shippers on the one hand and those located at south Atlantic ports on the other. Agricultural Implements in Southeast, 122 I. C. C. 191.

(dd) Proposed increased rates on cement from Birmingham, Ala., and other southern cement-producing points, to destinations on the Tallulah Falls Ry., and from Fordwick, Va., to destinations on the Elkin & Alleghany R. R., found not justified. Proposed rates to stations on the Tallulah Falls are practically as high as Scale IV rates which constitute the highest rates prescribed in 48 I. C. C. 201; 52 I. C. C. 225; 69 I. C. C. 644, for application in western territory, and those proposed to stations on the Elkin & Alleghany are even higher. Moreover, rates proposed by both shippers and carriers in a pending proceeding for application in same territory are materially lower than those here in issue. Cement Rates from Southern Points, 122 I. C. C. 195.

(ee) Proposed rate changes, mainly increases, on grain and products, including flaxseed, between Minnesota, the Da-

kotas, Iowa. Wisconsin, and Illinois, principally North Dakota, and Minnesota to the large terminal markets, found not justified. While carriers showed that present rates are low and proposed rates not unduly high; and that unfavorable transportation conditions attend the movements from North Dakota and Minnesota, these conditions were not translated into terms of cost of service or a showing made that they are more burdensome than conditions attending the movement of other important traffic. Nor did carriers show that earnings under present rates are low, either intrinsically or by comparison with those on other commodities. On other hand, shippers' evidence as to relative earnings and cost of service warrants conclusion that present rates are by no means unremunerative, and that earnings thereunder compare favorably with those on other traffic and with earnings derived by other carriers in the western group. Grain and Products, 122 I. C. C. 235.

(ff) Proposal to increase rates on grain and grain products from points in South Dakota to Omaha, Nebr., in order that they may reflect the differentials which now obtain, Sioux City, Iowa, over Omaha, on traffic to the South and the Southwest, found not justified. Grain and Grain Products from South Dakota, 122 I. C. C. 393.

(gg) Proposed increased rates on anthracite coal from mines in Pennsylvania to Albany-Utica-Syracuse group in northern New York, found not justified. Generally carriers proposed to reduce spread in rates between short single-line routes from Wyoming region mines and more circuitous joint-line routes from Lehigh and Schuylkill regions south thereof by increasing rates from former and reducing those from latter. Wyoming region, however, is logical source of anthracite coal for delivery at points in Albany group and coal from mines south thereof over circuitous routes may well take somewhat higher rates than over direct routes from Wyoming region, and while some of proposed rates from Lehigh and Schuylkill mines have been prescribed herein as reasonable, routes were selected by carriers themselves and upon this record the commission is not prepared to find them uneconomical. Anthracite Coal Investigation, 122 I. C. C. 527.

(hh) Proposed increase in basis of rates on paving and roofing pitch, paving and roofing tar, coal tar, and oil tar from 70 to 80 per cent of sixth class in c. f. a. territory, the basis applicable on asphalt, found not justified. While a review of conclusions in 61 I. C. C. 719, wherein 80 per cent of sixth class was prescribed in official classification territory on these commodities justifies carriers' attempts to replace the pitch and tar rates on a parity with those on asphalt is so far as reasonableness of rates is concerned, such an adjustment would produce a disparity in rates between producers at Cincinnati, and St. Louis and Chicago in favor of competing plants at latter points, resulting in undue prejudice to Cincinnati producers. Pitch and Tar in C. F. A. Territory, 122 I. C. C. 573.

(ii) Proposed increased rates on tanning extract from Charlottesville and Lynchburg, Va., to Norfolk, Pinners Point, and Portsmouth, Va., for transshipment through Panama Canal to destinations on Pacific coast, found justified. Such rates are same as those over other lines between same points and compare favorably with rates to various other destinations for comparable distances. Tanning Extract from Lynchburg, 122 I. C. C. 647.

(jj) Proposed increased rates on lumber from Chicago, Ill., and adjacent points to destinations in Illinois and Wisconsin, found justified. Proposed adjustment is an endeavor of respondents to increase their rates from Chicago to level of corresponding rates now in effect over other carriers' lines, record showing that they are not unreasonable as compared with rates to other destinations for comparable distances. Moreover, protestant acquiesced in establishment of similar rates by other carriers and failure to protest such increases has created a situation as between intrastate and interstate rates that might unduly prefer users of the latter. Adjustment proposed will not only remove such possibility but will improve existing conditions. Lumber from Chicago, 122 I. C. C. 726.

(kk) Respondents proposed a general increase of about 20% in their interstate rates on milk and cream, carloads, and less carloads, in passenger and freight train service, between points in New England and from certain points in northern and eastern New York on the Rutland, D. & H. and G. & J. to points in New England. The present rates on milk and cream in New England and to New England from the points in northern and eastern New York which, for the purpose of this case, will be included in the New England group are those established in

New England Milk Case 40 I. C. C. 699, and subsequently increased 25% in 1918 and 20% in 1920 under the general increases in those years. It is unquestionably true that the car foot mile does not constitute an ideal single unit of measure for apportionment of a number of the individual accounts carrying expenses common to different services, but in an ascertainment of this kind it is not a question of selecting the most desirable basis for apportioning the various individual expenses, but of making use of those which are available or which it is practicable to obtain and which are reasonably satisfactory for the purpose. The divisions from rates on perishable traffic received by some of the New England roads do not afford a sound basis upon which to judge the reasonableness of the rates on milk throughout New England. The respondents in the present case contended that milk and cream are not products of agriculture, but the Commission is of the opinion that they are and that they come within the class of products with which the Hoch Smith resolution specifically deals. The effect upon the production of milk and cream in New England of a further increase in rates is difficult to predict. The increase of 20% sought by respondents may have a harmful effect and ultimately result in a decrease in production, although from the experience during the past 10 years in New England the conclusion may seem warranted that there will be little effect upon the total shipments. It is one of the last remnants of agricultural pursuits in some sections of New England and the showing presented in this case justifies protestants appeal for application of the congressional declaration contained in the Hoch Smith resolution that rates for the movement of agricultural commodities be reduced to the lowest lawful level consistent with the maintenance of adequate service. The Commission has held that the lowest possible lawful rates must allow something more than out of pocket expenses. HELD, respondents have shown that some increase in their present rates is justified, and rates for distances up to, but not including, 100 miles should be increased 20%, but for distances 100 miles and over rates equal to those now in effect under the distance scale of rates to New York City and Philadelphia should be established. The application of the scale as a general distance scale with the 20 mile block arrangement now in effect in New England, and the maintenance of rates on milk in freight cars moving in freight trains at not to exceed 75% of the rates on milk moving in passenger train service may be continued, there being no evidence of the necessity for or the desirability of changes in these respects. Milk and Cream between New England points, 126 I. C. C. 39.

(ll) Respondents proposed to increase their joint rates on newsprint paper and wall paper, blank, unfinished, in carloads, from Port Arthur, Fort Willim, West Fort, and Kenora, Ont., Can., to Albia, Centerville, Fort Madison, Mount Pleasant, Oskaloosa, Ottumwa and Washington, Ia. The destinations under consideration are in southeastern Iowa and are reached by direct short route over all lines, except that traffic over the Burlington moves through Galesburg, Monmouth, Burlington, Ottumwa and Oskaloosa when destined to Des Moines. All traffic moves through Minnesota Transfer, Minn., to Des Moines. The distance from Minnesota Transfer to Des Moines is 266 miles over the Rock Island and 593 miles over the Burlington. The distances to destinations other than Des Moines are proportionately greater over the Burlington than over the other and more direct lines. Present rate to Des Moines is 34c. To the intermediate points on the Burlington the rate is 36c, a departure from the fourth section. HELD, Burlington has justified the increased rates proposed except for the 37.5c rate to Fort Madison, which should be 36c. Other respondents have not justified the proposed increased rates. Newsprint and wall paper, 126 I. C. C. 166.

(mm) Respondents proposed to increase the interstate rates on lignite coal from mines in North Dakota to destinations in North Dakota, South Dakota and Minnesota. Previous report found in Lignite coal from North Dakota, 89 I. C. C. 726. It need only be said that the value of a commodity is only one of the elements to be considered in determining the reasonableness of the rate; that the transportation cost to the carrier is not less because of the low heat value of lignite; that due consideration must be given to the transportation conditions surrounding the handling of the traffic; and that the testimony indicates a substantial reduction in the territory in which lignite can be sold would increase its unit cost of production and diminish the volume of tonnage offered the carriers for transportation. The Commission can not, however, disregard the value of the service

to the shippers; that is, what rates the commodity can bear without curtailing the movement. HELD, reasonable rates would result from the application of the so-called conference scale modified by the subsequent general increases and reduction, and extended at the same rate of progression for distances over 400 miles, with the addition of 20c per ton for joint line hauls. Lignite coal from North Dakota, 126 I. C. C. 243.

(nn) Proposed increased interstate rates on milk and cream between New England points and from New York points to points in New England, in passenger and freight-train service, found not justified, except that rates for distances up to, but not including, 100 miles should be increased as proposed, but for distances 100 miles and over, rates equal to those now in effect under distance scale to New York City and Philadelphia prescribed in 45 I. C. C. 371, and 45 I. C. C. 412, respectively, should be established, with continued maintenance of rates on milk in freight cars moving in freight trains at not to exceed 75 per cent of corresponding rates when moving in passenger-train service. Milk and Cream Between New England Points, 126 I. C. C. 38.

(oo) Proposed increased rates on slate, crushed, from Esmont, Arvonia, Dutch Gap, and Rockfish, Va., to Mobile, New Orleans, and Vicksburg, found justified. Present rates were published to permit producers at Esmont to compete with producers at Tellico Plains, Tenn., and Fairmont, Ga., and yield earnings considerably less than rates found not unreasonable in 115 I. C. C. 605, from Whiteford, Md., and Slate Hill, Pa., distance considered. Rates are also low as compared with those on animal manure, coke, lumber, and other articles prescribed in various cases, and with those prescribed in 88 I. C. C. 543, on brick, a commodity of comparable value. Slate from Virginia Points, 126 I. C. C. 70.

(pp) Proposed increased class and commodity rates between certain points in Iowa and South Dakota and in Colorado and Utah, found not justified. Proposed rates would increase all class rates as well as commodity rates on grain and products and other articles. As there is a surplus of coarse grain in South Dakota and Iowa which must be moved, proposed rates would naturally greatly affect if not completely destroy this movement. Moreover, in 109 I. C. C. 27, a similar proposal was found not justified and protestants urge that no such readjustment as proposed should now be made in view of investigation proceedings now pending. Rates from Iowa and South Dakota, 126 I. C. C. 81.

(qq) Proposed increased rates on tobacco, unmanufactured, from points in central Kentucky, to St. Louis, Mo., and East St. Louis, Ill., found justified. Present rates are and have been for many years in violation of long-and-short-haul provision of section 4, and are lower than those found reasonable in 81 I. C. C. 184, from points in Ohio to St. Louis for comparable distances, whereas proposed rates would be relatively reasonable and would remove fourth-section departures now existing. Unmanufactured Tobacco from Kentucky, 126 I. C. C. 93.

(rr) Proposed increased rates on newsprint paper and wall paper, blank, unfinished, from Canadian points to destinations in Iowa, over lines of various carriers found not justified, except that increases proposed by the C., B. & Q., found justified to all destinations except Fort Madison. Distances to various destinations are greater over the Burlington than over other lines which now enjoy same rates as those proposed by that carrier, and record tends to show that proposed rates are reasonable and will remove existing fourth-section departures. Moreover, in 113 I. C. C. 343; 120 I. C. C. 251, joint rates on newsprint paper from Ontario, Canada, to various States, including Iowa, were found unreasonable. Newsprint and Wall Paper, 126 I. C. C. 166.

(ss) Proposed increased and reduced rates on fruits, melons, and vegetables, from points on the L. & N. south of Montgomery, Ala., in Alabama, Florida, Louisiana, and Mississippi to Memphis, Tenn., found not justified. Proposed rates considerably exceed present rates to Nashville, Tenn., from same points and while hauls to latter point are over a single line and those to Memphis over two lines, that should not make much difference considering the slight difference in distance in favor of Nashville when compared with length of haul. Moreover, movement to Memphis under rates proposed to be canceled is almost negligible as it is ordinarily supplied from points over short-line routes and no reason appears for requiring respondents to meet this competition. Fruits and Vegetables to Memphis, 126 I. C. C. 226.

(tt) Proposal of the L. & N. R. R. to

increase its single-line rates on Forest products, from Decatur, Ala., and related points to Nashville, Tenn., in order to place Decatur on same rate basis as Florence and Sheffield, Ala., found not justified. While proposed rates are low as compared with joint-line rates from points on other lines for comparable distances, are not high as compared with rates to Ohio River cities, and compare favorably with those prescribed in 104 I. C. C. 15 for joint-line hauls of comparable distance, such rates are higher than the distance scale of single-line rates on lumber prescribed for application between Meridian, Miss., and points on the Southern, Alabama Great Southern, and Mobile & Ohio railroads. Forest Products from Decatur, 126 I. C. C. 252.

(uu) Proposed increased rates on coarse grains from points in Texas to points in Mississippi and Alabama found not justified. Both present and proposed rates are made on basis of locals or proportionals to and from Memphis, Vicksburg, or other lower Mississippi River crossings under appropriate tariff provisions the rates so made through any of the gateways are generally applicable through all. Proposed increases would be brought about solely by increasing factors east of the Mississippi and proposed factors east of Vicksburg will equal or approximate present reshipping rates east of Memphis, although distances are only one-third or one-fourth as great. Carriers rely upon 81 I. C. C. 96 in which rates on coarse grain from Texas to the southeast were in issue, but that decision has no application to points here involved and contains no authority for proposed increases. Grain and Grain Products, 126 I. C. C. 454.

(vv) Proposed rates on hay between points in Texas and between those points and points in the Shreveport, La., group, based on a composite scale observing as minima the rates prescribed in 48 I. C. C. 312, or those under distance scale prescribed in 101 I. C. C. 116, whichever are higher, plus differentials when through Texas differential territory; using as maximum a rate now applicable as a maximum blanket rate between points in Texas common-point territory, found not justified. In 101 I. C. C. 116, commission stated that whatever rates would be ultimately prescribed between Texas points should be applied between Texas points and Shreveport, but because of loss involved respondents have been unwilling to extend this intrastate adjustment beyond 350 miles. The proposed rates are in nature of a compromise, are apparently satisfactory to no one, and to extent they exceed those constructed in accordance with distance scale prescribed in last cited case, would be unreasonable and many of them unduly prejudicial. Hay Between Points in Tex., La., and Ark., 126 I. C. C. 524.

(ww) Proposed increased rates on terne metal from Newark and Brills, N. J., to Buffalo, N. Y., and Buffalo rate points and other destinations in c. f. a. territory found justified under section 1 of the act, but not justified under section 3. Terne metal is now subject to same rates as tin, and this relationship will be disrupted if the terne-metal rates are advanced as proposed. Rates on tin plate and terne plate are the same practically everywhere, these commodities are used for precisely the same purpose, except that terne plate may not safely be used in making food containers, and competition exists between tin and terne metal in sufficient degree to make unlawful the maintenance of higher rates on terne metal than on tin. Moreover, the very cheapness of terne metal indicates that if there is to be any difference terne metal should reasonably have lower rates than tin. Former decision in 113 I. C. C. 487, modified. Federated Metals Corp. v. C. R. R. Co. of N. J., 126 I. C. C. 703.

(xx) Respondents proposed to change the commodity description applicable in connection with certain commodity rates maintained on stone, in carloads, from Champaign, Ill., to Ohio, Michigan, Indiana, New York, West Virginia and Pennsylvania. The rates named in the item are inapplicable on protestants shipments. HELD, since the proposed schedule does not effect a change in the rates on granite, discussion of the evidence pertaining to the propriety of these rates is unnecessary. HELD, schedules justified. Stone from Champaign, Ill., 128 I. C. C. 21.

(yy) Proposal to establish increased combination rates on grain and products from stations on Chicago & Eastern Illinois in Illinois and Indiana to destinations on St. Louis-San Francisco in Arkansas and to cancel present joint rates, found not justified. While combination basis is generally applied from Illinois and Indiana points to Arkansas destinations on the Frisco and proposed rates compare favorably with those to Arkansas destinations on other lines of

the Frisco, lower joint rates apply over lines other than the Frisco to northeastern Arkansas. Moreover, while proposed rates approximate those prescribed in 101 I. C. C. 116 for application between Oklahoma and Texas, no sufficient reason appears for judging proposed rates by any rates here instanced because about half of haul here considered is in Illinois where a much lower basis of rates applies than in the Southwest. Grain and Products to Arkansas, 128 I. C. C. 29.

(zz) Respondents proposed to increase their rates on grain and grain products, in carloads, from Illinois and Indiana to Arkansas. Origin points are on the C. & E. I. Destinations are on the former J. L. C. & E. now part of the Frisco. The increases would be brought about by canceling the present joint rates and applying local rates to East St. Louis, or Tebes, Ill., and proportional rates beyond. The proportionals are from 3.5 to 4.5c lower than the locals. The proposed rates would be 1.5c higher than the joint through rates previously published. The present rates have been in effect only since Oct. 25, 1926. The combination basis is generally applied on grain and grain products from points in Illinois and Indiana to destinations on the Frisco in Arkansas, the present rates representing apparently the only exception. The proposed rates compare favorably with the rates from these points of origin to destinations in northeastern Arkansas on other lines of the Frisco. From Illinois and Indiana points to destinations in Arkansas served by carriers other than the Frisco joint rates lower than the combinations prevail and to those destinations, the rates are lower than those proposed. The burden of justifying these increased rates rests upon respondents. They have not sustained it. HELD, suspended schedules not justified. Grain and grain products from Illinois, 128 I. C. C. 29.

(3a) Proposed increased rates on grain and products from Montana points on Great Northern Ry. to destinations on the Goldendale branch of Spokane, Portland & Seattle Ry., found not justified. The Goldendale branch points are part of a large destinations group. Respondents propose to cancel blanket rate to Goldendale branch points and to establish rates made by addition of arbitraries to the junction-point rate. No arbitraries now apply on traffic from Montana to this branch and in 66 I. C. C. 330, 336, it was stated that when blanket rates apply over an extensive area, fact that branch-line points lie within that blanket does not argue as strongly that there should be a branch-line differential as when rates are applied upon a graded basis, for in an extensive blanket a branch-line haul loses its significance unless it is much more expensive than main-line operations. Here, although operating conditions are more difficult and expensive than on main line, the markedly shorter total haul required with higher earnings, and fact that rates to other more distant branch lines will continue to be accorded the group basis, greatly offsets this showing. Grain from Montana, 128 I. C. C. 123.

(3b) Proposed increased rates on sugar from New Orleans and other Louisiana refining points to points in southern and eastern Texas, and from Sugarland and Texas City, Tex., to Shreveport and other Louisiana points and to Vicksburg, Miss., and other Mississippi River crossings south thereof, found not justified in so far as they exceed those that will result from application of maximum reasonable rates prescribed in Consolidated Southwestern Cases, 123 I. C. C. 203. Proposed rates are higher than those under distance scale prescribed in 77 I. C. C. 473 for application in same general territory and proposed rate to Houston without appropriate change in present ocean-and-rail rate from New York via New Orleans to Houston, would create an adjustment contrary to long-and-short-haul provision of section 4 of the act. Moreover, rates constructed on basis prescribed in Consolidated Southwestern Cases will provide reasonable, nonprejudicial, and nondiscriminatory rates between points involved. Sugar Between Louisiana and Texas Points, 128 I. C. C. 309.

(3c) Proposed increased rates on grain and products between Sioux City, Iowa, and points grouped therewith and A., T. & S. F. Ry., stations in Kansas, Oklahoma, and Colorado, to be effected by cancellation of joint rates, leaving existing higher combination rates in effect generally, found not justified. While respondents contend that proposed cancellation will not be detrimental to Sioux City shippers because lower combination of proportional rates will be available, such proportional rates apply only on shipments originating beyond

Sioux City proper and cancellation of joint rates would therefore impair position of shippers at other points in Sioux City group. Moreover, record indicates that existing Santa Fe basis on flour northbound is same as that maintained by other important originating lines and present rates on flour to Sioux City from Kansas points on the Santa Fe compare favorably with rates from same points to St. Louis, although distance to latter point is greater. Grain Between Sioux City Group and Kansas, 128 I. C. C. 434.

(3d) Proposed increase in interstate single-line rate on sand from Pleasant Lake, Ind., to Chicago switching district under purported authority of 118 I. C. C. 633, prescribing rates on sand, gravel, and other commodities from points within the district and within 150 miles of Chicago, found not justified. While proposed rate compares favorably with numerous rates to destinations in Indiana, Michigan, and Ohio, transportation and other conditions are not shown to be similar. However, in case cited, a differential over single-line rates was prescribed for connecting-line rates and rates based on that finding appear to be justified here. Sand from Pleasant Lake, 128 I. C. C. 439.

(3e) Respondent proposed to increase its single line rate on sand from Pleasant Lake, Ind., to the Chicago district from 80 to 96c. HELD, schedules not justified, but rate of 90c is justified, following Chicago Gravel Co. v. A. T. & S. F. Ry., 118 I. C. C. 633. Sand from Pleasant Lake, 128 I. C. C. 439.

(3f) Respondents proposed to increase the rates on ground iron ore, carloads, from East St. Louis, Ill., Chattanooga, Tenn., and certain other points in Tennessee and designated points in Virginia and Alabama to Beaumont, Galveston, Houston and Orange, Tex., and destinations taking the same rates. Ground iron ore is a manufactured article in that it has been dried and crushed and is used as a coloring ingredient in brick and metallic paint. Joint commodity rates, subject to a minimum of 15 long tons, are published on the commodity based on the then existing New Orleans combination. Respondents proposed to cancel these commodity rates, leaving applicable the higher commodity rates now published in another section of the tariff on paints and paint material, including ground iron ore. Under Consolidated Southwestern cases, 123 I. C. C. 203 the Commission authorized for application on dry paints, the class rates therein prescribed, and the maximum class C rates prescribed for application from Chattanooga are 66c to Galveston and Houston and 63c to Beaumont. HELD, proposed schedules not justified without prejudice to filing new schedules containing rates no higher than those authorized in Consolidated Southwestern Cases. Ground Iron Ore from Points in Virginia, Tennessee, Alabama, and East St. Louis, Ill., to Points in Texas, 129 I. C. C. 557.

(3g) In the original report, Fruits and Vegetables between Pacific Coast states, 104 I. C. C. 66, division 2 found the proposed rates on fruits and vegetables, in carloads, between points in California and points in Oregon, Washington, Idaho, Utah and Montana not justified. The record shows that the operating conditions in the territory here involved are no more difficult than from California to Arizona and New Mexico; that the traffic moves in regular manifest trains, generally to large consuming centers, and in much greater volume than from and to those states; that practically all equipment used in this traffic is used for traffic moving in the opposite direction; and that the return of empty equipment is negligible. The present rates, as modified by the general increases and reduction, have been maintained for many years. The base rate is that between California group 1 and the Portland group, 49.5c. HELD, schedules not justified. Fruits and vegetables between Pacific coast states, 129 I. C. C. 569.

(3h) Burlington and M. P., respondents, proposed to cancel the present commodity rates on baled straw, in carloads, from points on their lines in Illinois, taking Cairo, Thebes, or East St. Louis, Ill., rates, to destinations in Indiana and Ohio and to establish higher fifth class rates. Baled straw, in carloads, is rated fifth class in official classification, minimum 20,000 pounds, subject to rule 34. Except where specific commodity rates have been published to points at which strawboard mills are located, fifth class rates apply generally on baled straw within central territory. The record indicates that in some instances the car mile earnings yielded by the present rates are unduly low, but respondents have not justified the substantial increases which would result from the proposed cancellation and which in some instances ap-

pear unwarranted. HELD, suspended schedules not justified, without prejudice to filing of other schedules not inconsistent with the views herein expressed. Straw to Indiana and Ohio, 132 I. C. C. 85.

(3i) Upon contention that general increases of 1918 and 1920, and processes of readjustment since that time, have eventuated in greater increase on commodity involved relative to pre-war level of rates than on other commodities, in violation of section 3 of the act, FOUND: Similar contention was made and answered adversely in 58 I. C. C. 701, 706. California Growers' & Shippers' Protective League v. S. P., 129 I. C. C. 25, 40, 41.

(3j) Fact that spread between rates to more distant destinations increases instead of decreases in accordance with the general principle may be offset by fact that a higher level of rates is justified in a territory of relatively low traffic density. National Canners Asso. v. B. & O., 129 I. C. C. 269, 278.

(3k) Proposed increased rates on ground iron ore from points in Virginia, Tennessee, and Alabama, and East St. Louis, Ill., to specific points in Texas and destinations taking same rate, found not justified. Rates are not normal and necessity for depressed basis has passed. Proposed rates at minimum weight are higher than those prescribed in Consolidated Southwestern Cases, 123 I. C. C. 203, and rates and earnings thereunder are higher than those on the same and analogous commodities between same and various other points for comparable distances. Schedules ordered canceled, without prejudice to filing new schedules at rates and minima no higher than those prescribed in cited case. Ground Iron Ore to Texas Points, 129 I. C. C. 557.

(3l) Finding in original report, 104 I. C. C. 66, that proposed rates on fruits and vegetables between points in California and Oregon, Washington, Idaho, Utah, and Montana, involving both increases and reductions, had not been justified, affirmed. Circumstances and conditions under which commission prescribed or found not unreasonable higher rates on like traffic are too dissimilar in too many important respects to entitle such comparisons to much weight and evidence does not indicate that present rates are depressed by real or potential water competition or that they are not remunerative. Fruits and Vegetables Between Pacific Coast States, 129 I. C. C. 569.

(3m) Proposed increased rates on potatoes and vegetables from points in Nebraska, Colorado, Utah, New Mexico, Wyoming, Idaho, Montana, and Oregon, to destinations in Arkansas, Tennessee, and Kentucky, in purported compliance with findings in 120 I. C. C. 245, found not justified. Carriers propose to remove prejudices therein found to exist by increasing rates to Little Rock, Pine Bluff, Helena, Memphis, and points taking same rates, rather than by reducing the rates to southern Arkansas group. Proposed increases would both create and increase fourth-section violations. Furthermore, the reasonableness of present rate on potatoes is involved in several cases now pending, in which the need of a general revision of rates is indicated. Potatoes and Vegetables from Western Points, 129 I. C. C. 652.

§18. Circumstances and Conditions.

(2) Water Competition.
See Water Competition.

(a) Rates on lumber from points in Maine to destinations in New England, found reasonable in 43 I. C. C. 641, but reduced by carriers to allow lumber interests to compete with Pacific coast shipments via Panama Canal, were subsequently increased to former level. Upon contention that such increase was in violation of section 4 (2) of the act, FOUND: Purpose of section 4 (2) is to prevent carriers from increasing rates after water competition has been eliminated by reduced rates. Here, voluntary reductions was not to destroy competition but to preserve it, but since it has continued undiminished, restoration of rates to former basis does not fall within prohibition contained in that section. See 249 U. S. 557. Moreover, in 85 I. C. C. 270, commission stated it would not adjust rates from competing producing territories in order to equalize manufacturing costs. Woodstock Lbr. Co. v. B. & A., 129 I. C. C. 255.

V. DISCRIMINATION THROUGH ADVANCE.

§19. In general.

See Discrimination.

(a) Proposed rates on pig iron between points in c. f. a. territory, found justified, except that those from Chicago district to St. Joseph, Benton Harbor, and Bridgman, Mich., and to Goshen, North Manchester, Huntington, and Wabash, Ind., found unduly prejudicial and ordered canceled, and proposed removal of Logansport, Ind., from its present destination group on traffic from Toledo, found not justified. While generally a readjustment of such wide scope as here considered requires justification by rate comparisons or cost studies, and such meager evidence as offered by respondents would ordinarily be insufficient to justify such a readjustment, protestants are primarily interested in rate relationships, have offered little evidence bearing upon reasonableness per se of proposed rates, and proposed adjustment is an improvement over that now existing. Pig Iron in C. F. A. Territory, 126 I. C. C. 111.

(b) Proposed increased rates on terne metal from Newark and Brills, N. J., to Buffalo, N. Y., and Buffalo rate points and other destinations in c. f. a. territory found justified under section 1 of the act, but not justified under section 3. Terne metal is now subject to same rates as tin, and this relationship will be disrupted if the terne-metal rates are advanced as proposed. Rates on tin plate and terne plate are the same practically everywhere, these commodities are used for precisely same purposes, except that terne plate may not safely be used in making food containers, and competition exists between tin and terne metal in sufficient degree to make unlawful the maintenance of higher rates on terne metal than on tin. Moreover, the very cheapness of terne metal indicates that if there is to be any difference terne metal should reasonably have lower rates than tin. Former decision in 113 I. C. C. 487, modified. Federated Metals Corp. v. C. R. R. Co. of N. J., 126 I. C. C. 703.

(c) Respondents proposed to increase rates on furniture, in carloads, from Fort Smith, South Fort Smith and Van Buren, Ark., to Birmingham, Ala., from 82c to $1.24 in purported compliance with the order in Florence Chamber of Commerce v. L. & N. R. R., 122 I. C. C. 367. In that case the Commission found the rate on furniture, in carloads, of 124c from Fort Smith to Florence, Ala., and destinations in the Florence group unduly prejudicial to extent it exceeded the rate to Birmingham. HELD, rates from Fort Smith, Ark., to Florence, Sheffield and Tuscombia, Ala., unreasonable to extent they exceeded $1.04 and unduly prejudicial to extent they are less than 7c lower than the rates to Birmingham. HELD, suspended schedules not justified. Furniture to Birmingham, 132 I. C. C. 263.

VIII. TARIFFS AND PUBLICATION.

See Tariffs II.

§24. Construction.

(a) Commission suspended schedules proposing increased rates for interstate transportation of papermaker's clay and scrap or waste paper and provided that use of such rates be deferred on interstate traffic pending hearing and decision. Terms "interstate transportation" and "interstate traffic" technically do not comprehend import traffic, i.e., foreign commerce, and carriers, so construing them, charged increased rates on imported clay and waste paper. Increased rates so assessed found unreasonable to extent they exceed rates on this traffic in effect immediately prior to date when the increases were made effective. Various Commodities between New England Points, 113 I. C. C. 44.

AGENCY

See Bills of Lading §5a (a); Crimes §15; Tariffs §3 (2); Terminal Facilities §3½; Undercharges §2 (a).

(a) Shipment originated on nonfederally controlled line and moved to point on a line under Federal control, illegal charges being collected by director general who forwarded voucher covering his portion of overcharges to initial carrier, who failed to refund them to shipper. Contention by director general that payment of the voucher to initial carrier was payment to complainant inasmuch as complainant, by letter, conferred authority upon initial carrier to act as its agent, not accepted. Having filed an overcharge claim with initial line, the letter in question is considered only as a statement of basis of settlement which was then acceptable to complainant. Bowers & Co. v. Director General, 107 I. C. C. 305, 307.

II. PUBLICATION AND TARIFFS.

See Tariffs II.

§4. Obligation to File.

(a) Service over private tracks or plant facility tracks by a common carrier subject to the act is neither compelled nor prohibited under the act. To furnish it or withhold it is within the discretion of the carrier. In either event the statutory inhibition against unjust discrimination or undue prejudice must be observed. Moreover, where the defendants have elected to perform the service they should publish tariffs to cover it. American Fuel Co. v. A., T. & S. F. Ry., 123 I. C. C. 101, 112.

III. DISCRIMINATION.

See Discrimination.

§8. Particular Allowances.

(1). Cotton Compressing.

See Compress Companies and Charges; Facilities and Privileges.

(a) In original report, 98 I. C. C. 619, failure of carriers to absorb out of applicable rates the entire compress charge on cotton originating at and forwarded from Jonesboro, Pine Prairie, and Mamou, La., compressed at Alexandria, and reshipped to New Orleans, was not found unreasonable, it being shown that compression was

not "at the expense of the carrier" as provided by tariff. Upon further hearing, original report reversed, as under terms of the tariff carrier extended to shipper the protection of the through rate, not only in event that compression was "by and at the expense of the carrier," but also when, as here, after compression, it was redelivered to originating carrier, irrespective of whether compression was done by carrier or some other agency. In either instance the carrier would obtain entire haul from point of origin to destination, and transportation facilities accorded would be identical. Reparation awarded. Haas & Co. v. Director General, 123 I. C. C. 121.

(b) Carriers make allowances to shippers who, in lieu of switching, dray their cotton from uptown warehouses to ship side, which cotton carriers are under obligation to transport under transit arrangements. Upon contention of water-front warehouses that inasmuch as city-delivery and ship-side rates are to be equalized such allowance should be discontinued or allowance made for handling cotton from water-front warehouses to ship side, HELD: No reason appears for condemning reasonable allowances for drayage, such drayage being a substitute for rail transportation, but they must not be more than reasonable and must not be used as a cloak for unlawful preferences to shippers furnishing such substitute service. This applies equally to barging where barging is used as a substitute for switching. Rates on Cotton to Gulf Ports, 123 I. C. C. 685, 696.

(c) Hand or electric trucking of cotton, or movement by overhead trolley from warehouse or compress to the wharf, is not a substitute for rail transportation but is an intraplant movement just the same as the handling of commodities from the interior of a warehouse to the railroad car or dray and no allowances may lawfully be made therefor. Rates on Cotton to Gulf Ports, 123 I. C. C. 685, 696, 697.

(d) Upon contention of port interests that as many interior shippers of cotton are stockholders in interior compress companies, profits from carriers' compression allowance gives them an unreasonable and unlawful advantage over port shippers and compress companies, and that such companies render services to interior shippers either free or at less than reasonable charges, HELD: Since selection of compress point rests entirely with carriers, shippers, whether stockholders or not, can secure no favor or advantage not accorded any other shipper. If they direct carriers to compress their cotton at a point beyond the first compress point in route, they must not only bear compression charge but are assessed a higher rate on the uncompressed cotton. Prior reports 77 I. C. C. 388, 100 I. C. C. 159. Rates on Cotton to Gulf Ports, 123 I. C. C. 685, 700, 701.

§8. (2¼). Dunnage.

See Dunnage.

(a) Complaint alleging overcharges because of failure of carriers to make dunnage allowance on lumber shipments as provided in the tariff, dismissed for lack of sufficient proof. Evidence failed to show that allowance was not made on any specific shipment or that stakes or braces were used on all shipments. While carrier's records show that in a few instances allowance was made, they do not show whether it should have been allowed in instances where it was not. As the case has stood submitted for more than five years and record is still deficient, no sufficient reason appears for holding it open on the docket for a longer period. Parry & Co. v. B. M. Ry., 118 I. C. C. 193.

§8. (5). Spotting and Delivering Cars.

See Facilities and Privileges §12½; Spotting.

(a) Upon further hearing, based upon cost of performing the service, reasonable maximum allowances for service of spotting certain interstate shipments at complainants' plant at West Hammond, Ill., determined and reparation awarded. Previous reports, 60 I. C. C. 523 and 73 I. C. C. 100. United Chem. & Organic Products Co. v. Director General, 112 I. C. C. 687.

(b) Carriers make allowances to shippers who, in lieu of switching, dray their cotton from uptown warehouses to ship side, which cotton carriers are under obligation to transport under transit arrangements. Upon contention of water-front warehouses that inasmuch as city-delivery and ship-side rates are to be equalized such allowance should be discontinued or allowance made for handling cotton from water-front warehouses to ship side, HELD: No reason appears for condemning reasonable allowances for drayage, such drayage being a substitute for rail transportation, but they must not be more than reasonable and must not be used as a cloak for unlawful preferences

to shippers furnishing such substitute service. This applies equally to barging where barging is used as a substitute for switching. Rates on Cotton to Gulf Ports, 123 I. C. C. 685, 696.

(c) In Carnegie Steel Co. v. Director General, 96 I. C. C. 527, the Commission found that the delivery charge assessed on ex lake iron ore in carloads at complainants plant at Youngstown, O., was applicable and not unreasonable but that to charge complainant for a service in excess of the line haul service while furnishing a similar excess service free at the Youngstown and Haselton plants of its competitor, the Youngstown Sheet & Tube Co., constituted undue prejudice to complainant and undue preference of such competitor. It further found that the undue prejudice and preference should be removed by locating the points of interchange at the Youngstown and Haselton plants within a reasonable distance of the points of connection of the rails of the line haul carriers with the industry tracks; or, if that be impracticable, then it should be considered that constructive delivery has been made at the plant entrance and a reasonable charge for the haul thence to the point of actual delivery or interchange should be assessed. Whether or not a terminal charge should be established was intended to depend upon the amount of service rendered within the plant in reaching the point where delivery is finally made, whether that be termed the interchange point or the unloading point. It is well understood that the line haul service within a given district is fairly uniform but that the plant service required varies widely. HELD, previous finding affirmed. Carnegie Steel Co. v. Director General, 132 I. C. C. 689.

§8. (6) Staking and Bulk Heads.

(a) Complainant alleged charges assessed on piling and poles, in carloads, shipped since April 1, 1923 from points on the Mississippi Southern to interstate destinations have been and are unreasonable and unduly prejudicial in that defendants have failed to provide an allowance for the weight of stakes, strips, and bearing timbers used in binding the loads on open cars. Mississippi Southern is a short line owned by the Edward Hines Yellow Pine Trustees, one of complainants. These articles together with wire and nails to bind the load, are furnished and installed by and at the expense of the shipper. The cost of the material and labor for installing is estimated by complainants to be from $3 to $12 for the various kinds of loads. The material is usually removed and retained by the consignee and not used a second time. The shipper receives no compensation for it. Piling and poles take the lumber rates. Generally speaking a dunnage allowance of 500 pounds per car subject to the carload minimum is authorized on shipments of piling and poles when loaded in open cars and originating in official and western territories, but as a rule no allowance is authorized on this traffic when originating in southern territory. However, an allowance on piling and poles is authorized by a few carriers in the latter territory. HELD, defendants failure to provide an allowance for the weight of dunnage material on shipments of piling and poles in open cars is unreasonable and an allowance of 500 pounds per car should be established, reparation denied. Hines Yellow Pine Co., v. A. C. & Y. R. R., 132 I. C. C. 626.

§8 (7a). Trap Car Service.

See Trap Cars.

(a) The term trap or ferry, generally speaking, is applied to a car placed at an industry or commercial house having a private siding and there loaded by a shipper with less than carload shipments, and hauled by a carrier to its local freight or transfer station for handling and forwarding of contents; and also it applies to a car loaded with less than carload shipments which is hauled to and placed upon the private track of an industry or commercial house by the carrier from a local freight or transfer station. Columbia Mills v. D. L. & W. R. R., 118 I. C. C. 112, 117.

(b) Defendant is under no duty or obligation to "farm out" the work of and incident to receipt or delivery of less than carload freight handled in the usual way, and such traffic as is accorded the service of a trap or ferry car, received or delivered upon private sidings remote from the carriers own terminal facilities, is for obvious reasons loaded or unloaded by the consignors or consignees. Columbia Mills, Inc. v. D. L. & W. R. R., 118 I. C. C. 112, 117.

IV. LEGALITY OF ALLOWANCES.

§9. In General.

See Common Carrier; Legality of Rates.

(a) The delivery of goods to a car-

rier and the receipt of goods from a carrier are duties devolving upon the shipper, for which the carriers can not be compelled to pay. For carriers to undertake to make to shippers allowances based upon the performance by the shippers for themselves of services which they are legally bound to do for themselves is for the carriers to violate the act. Drayage absorptions of S. W. M. R. R., 113 I. C. C. 179, 184.

(b) The Commission has repeatedly applied the settled doctrine that a carrier has the right to complete a service included within its rates, and that when by action of a shipper it is deprived of opportunity to do so it can not be held to make compensation therefor. Columbia Mills, Inc. v. D. L. & W. R. R., 118 I. C. C. 112, 116.

(c) Section 15 (13) of the act, contemplates an allowance only to the "owner of property transported" and for a service rendered or instrumentality furnished in aid of the transportation within a carriers duty. Such an allowance is optional with the carrier, and the Commission is empowered to fix merely the maximum that may be paid. Columbia Mills, Inc. v. D. L. & W. R. R., 118 I. C. C. 112, 116.

(d) An allowance for transportation services rendered by shippers covered by section 15 (13) of the act, contemplates an allowance only to "owner of property transported" and for a service rendered or instrumentality furnished in aid of transportation within a carrier's duty. Such an allowance is optional with carrier and commission is empowered merely to fix the maximum that may be paid. See 61 I. C. C. 515, 517 and other cited cases. Cases in which commission may and may not make awards to owners of property transported are distinguished in 92 I. C. C. 270, 272, 273; affirmed in 102 I. C. C. 497. Columbia Mills v. D., L. & W., 118 I. C. C. 112, 116.

(e) A carrier has right to complete a service included within its rates but when by action of a shipper it is deprived of opportunity to do so it can not be held to make compensation therefor. Moreover, commission can not competently prescribe the compensation it is to pay where an agent, of its own volition and without request, intention, or desire performs a delivery service for carrier. Columbia Mills v. D., L. & W., 118 I. C. C. 112, 116, 118.

(f) Obligation is on switching line to pay mileage allowances on cars switched by it over its line unless line-haul carrier assumes them. Paragon Refining Co. v. A. & S., 118 I. C. C. 166, 168.

(g) Refusal of carriers to pay interest on complainant's investment in a privately owned or plant-facility track does not constitute a violation of the act. No such interest is paid to owners of other private lines in same district, and fact that carriers have purchased and low own certain branch lines which formerly had a similar status is not sufficient to bring this phase of the complaint within the purview of the laws administered by commission. American Fuel Co. v. A., T. & S. F., 123 I. C. C. 101, 113.

(h) The clause in section 1 (4) of the act providing "for reasonable compensation to those entitled thereto" has reference to compensation for common-carrier services rendered by shippers or interests of a private nature and not by other common carriers subject to the act. Minnesota-Atlantic Transit Co. v. C., St. P., M. & O., 123 I. C. C. 485, 491.

(i) Contract for compensation in excess of tariff rate for performing spotting service by special engine and crew is without consideration and illegal, in view of Interstate Commerce Act § 6(7), as amended, such service being covered by line haul charge under tariffs. Chesapeake & O. Ry. Co. v. Westinghouse, Church, Kerr & Co. Inc., 46 Sup. Ct. 220. Mellon, Director General of Railroads v. Same, 46 Sup. Ct. 220.

§10. Transportation Service Performed by Shipper.

See Transportation §1, §11.

(a) Failure or refusal of carrier to compensate complainant, out of line-haul rates, for interchange switching performed by latter on c. l. shipments between points within its industrial plant at Minetto, N. Y., and points of interchange at that place, found not to violate the act. Here complainant of its own volition elected to perform service which carrier formerly performed, and does not seek or desire its resumption, but seeks compensation only. The settled doctrine, however, is that carrier has right to complete service included within its rates and when deprived of that opportunity by action of shipper, it can not be required to pay compensation therefor. Moreover, allowances contemplated by

section 15 (13) are optional with carriers and commission is empowered to fix merely the maximum that may be paid. Columbia Mills v. D., L. & W., 118 I. C. C. 112.

(b) Failure or refusal of carrier to compensate complainant, out of line-haul rates, for services performed by latter in checking, weighing, loading and unloading l. c. l. shipments delivered to or forwarded from its industrial plant at Minetto, N. Y., in trap or ferry cars, found not to violate the act. Here shipper voluntarily elected to perform such services without request, intention, or desire of carrier, who expressed a preference to handle such shipments through its own terminals. It was carrier's privilege to perform these services itself and commission can not competently prescribe compensation it is to pay to a voluntary agent (here the complainant) for performing them. Columbia Mills v. D., L. & W., 118 I. C. C. 112.

(c) An allowance for transportation services rendered by shippers covered by section 15 (13) of the act, contemplates an allowance only to "owner of property transported" and for a service rendered or instrumentality furnished in aid of transportation within a carrier's duty. Such an allowance is optional with carrier and commission is empowered merely to fix the maximum that may be paid. See 61 I. C. C. 515, 517 and other cited cases. Cases in which commission may and may not make awards to owners of property transported are distinguished in 92 I. C. C. 270, 272, 273; affirmed in 102 I. C. C. 497. Columbia Mills v. D., L. & W., 118 I. C. C. 112, 116.

(d) A carrier has right to complete a service included within its rates but when by action of a shipper it is deprived of opportunity to do so it can not be held to make compensation therefor. Moreover, commission can not competently prescribe the compensation it is to pay where an agent, of its own volition and without request, intention or desire, performs a delivery service for carrier. Columbia Mills v. D., L. & W., 118 I. C. C. 112, 116, 118.

§12. What is not Transportation Service.

(2). Operation of Plant Facility.

See Common Carrier §9; Industrial Railroads; Tap Lines §4; Transportation III.

(a) Complainant alleged that it has been subjected to unreasonable transportation charges by reason of defendants failure or refusal to make it, complainant, proper allowances for services performed by it in moving carload shipments between points within its plant and the point of interchange with defendant, and in checking, weighing, loading and unloading less than carload shipments delivered to or forwarded from the plant in trap or ferry cars. For some years prior to 1914 defendant performed the interchange switching service. Apparently because of defendants train schedules, complainant found the service, performed principally by road haul engines, inconvenient and unsatisfactory. Also, in 1914 material additions to the plant tracks were planned and made. While the weight of the evidence is that to a greater or less extent the plant tracks are unsuitable for locomotives thereover, it is unnecessary operation of defendants more modern to review that question at length. Primarily and principally in the interest of a more satisfactory interchange service, supplemented perhaps by projected track extensions over which defendant was unwilling to undertake operations, complainant voluntarily and upon its own initiative took over the switch service, and has since continued to perform it, in connection with its intraplant switching. Defendant was thereupon relieved of any duty it may have owed complainant in that behalf. At no time since has complainant demanded or asked that defendant resume the service, except in emergencies; nor, it appears, did it prior to Feb. 1925, ask defendant for an allowance to cover the interchange switching. It does not now seek a resumption of the service by defendant, and apparently does not desire it. So far as a consignors or consignees own traffic is concerned the respective services of the carrier and the shipper—at least those of the latter—are in the general practice taken into account in the applicable line haul rates. HELD, defendants failure or refusal to compensate complainant, out of the line haul rates, for the services performed by the latter in switching carload shipments between points within its plant and the point of interchange with defendant, and in checking, weighing, loading, and unloading less carload shipments delivered to or forwarded from the plant in trap or ferry cars, not shown to violate any provision of the

act, complaint dismissed. Columbia Mills, Inc. v D. L. & W. R. R. 118 I. C. C. 112.

ALTERNATIVE RATES

I. ESTABLISHMENT AND REASONABLENESS.

See Released Rates.

(a) Shipments from Wilmington and Modesto, Calif., to Jacksonville, Fla., were routed by shipper and a joint through rate assessed. Governing tariff contained alternative rule providing for application of aggregate-of-intermediate rates when less than the through rate, and a lower combination, unrestricted as to routing, applied via Memphis. Upon contention that under rule 5 (b) of Tariff Circular 18-A such lower combination was applicable. HELD, Only application of rule 5 (b) is when "no joint rate applies," or "in the absence of a specified rate," and therefore had no application in the situation here presented. Moreover, had shipments moved via Memphis, an out-of-line haul of more than 1,000 miles would have resulted. Joint rate assessed found applicable. Rosser & Fitch v. Director General, 109 I. C. C. 724.

(b) Marine-engine parts from Hamilton, Ohio, to Oakland, Calif., were assessed class A rates. Governing tariff provided for alternative application of any lower aggregate of intermediates. A lower aggregate of intermediates was in effect, but one factor thereof was limited to specific kinds of machinery, marine-engine parts not being specifically named. Upon contention that marine-engine parts are embraced in description "Motors," or "Stationery engines," or both on which the lower commodity rate factor applied, HELD: While shipments as a whole constituted marine engines they were not shipped in complete units, each shipment consisting of marine-engine parts only. It follows, therefore, that the class A rates assessed were applicable. Moore Shipbuilding Co. v. C., I. & W., 118 I. C. C. 3.

(c) Schedules proposing alternative rates on railway-car material lower than present applicable rates but with higher c. l. minima (a) from Chicago and certain related points to St. Louis, Mo., and Mt. Vernon and East St. Louis, Ill., and (b) between Mt. Vernon, on the one hand, and East St. Louis and Belleville, Ill., and St. Louis, on other hand, found justified except where such schedules name rates on car wheels and axles which are lower than basis proposed between same points on other car material. Present rates are those applicable on articles generally in the iron and steel list. Carriers showed that usual practice is to maintain rates on car material on a basis lower than corresponding rates on iron and steel articles generally, that proposed rates are not unduly low, and that no undue prejudice or discrimination will result from their establishment. Railway Car Material, 118 I. C. C. 105.

(d) Full aggregates of intermediate rates were assessed under an alternative rule providing that if such rates made less than joint through rates they would be applied. Contemporaneously tariff carried the combination rule which provides a specific method for constructing through rates made on combination. Upon contention that lower rates constructed in accordance with that rule should have been assessed, FOUND: In 89 I. C. C. 356; 100 I. C. C. 219, it was stated that the product of intermediate rates treated by a rule which results in less than the aggregate is not the aggregate within meaning of the alternative rule. Therefore, it is the alternative rule which specifies what rate shall apply in place of the joint rate, and when that rule designates a lower aggregate of intermediates as displacing the joint rate, it means the full aggregate of intermediates and not the product of intermediate rates treated by the combination rule. Rates assailed were therefore legally assessed. Calif. Dressed Beef Co. v. A., T. & S. F. 128 I. C. C. 607, 609, 610.

(e) Joint commodity rate assessed on printing presses from Vancouver, British Columbia, to Orlando, Fla., found inapplicable to extent it exceeded lower combination of locals contemporaneously applicable under an alternative provision contained in tariff. Refund of overcharges directed. Duplex Printing Press Co. v. B. C. E., 128 I. C. C. 692.

(f) Fourth-class rate, minimum 30,000 pounds, on shipments of varnish weighing less than 33,000 pounds, found not unreasonable as compared with fifth-class rate, minimum 36,000 pounds, contemporaneously applicable on paint. Under an intermediate clause, a lower commodity rate on varnish, minimum

40,000 pounds, would have been applicable to shipments had not an alternative rule provided for application of rate and minimum producing lowest charge. Transportation qualities of paint and varnish are not shown to be similar and fourth-class rate was prescribed on paint, between the same points, in 123 I. C. C. 203. Peaslee-Gaulbert Co. v. S. Ry., 129 I. C. C. 611.

(g) Rates charged on cotton fabrics, l. c. l., from North Carolina points to Galveston, Tex., found inapplicable. Governing tariff stated that it was subject to western classification, "Except as otherwise provided," and provided for alternative application of rates in section 2 or 3, whichever were lower. No minimum weight was provided in connection with lower rates under section 3, and rates were there applicable to actual weight of shipments. However, since rule 15 of the western classification provided for assessment of separate loading and unloading charges on l. c. l. freight moving at c. l. rates, and rule 13 required a minimum charge of $15 per car, these rules must be considered in determining rates applicable to various shipments. Refund of overcharges directed on basis indicated. Southern Traffic & Audit Asso. v. I.-G. N., 129 I. C. C. 723.

ANALOGOUS COMMODITIES

See Classification §17.

ANTI-TRUST ACT

See Evidence §10.

(a) Provisions of section 10 of the Clayton anti-trust act found not to have been violated in purchase by New York Central lines of automatic train-stop or train-control apparatus of the General Railway Signal Co., no officer or employee of carrier being shown to have or hold any "substantial interest" in the Signal Company as that expression is used in section 10. Automatic Train-Control Devices, 112 I. C. C. 259, 267, 268.

(b) Under section 10 of the Clayton anti-trust act commission is simply required to furnish the Attorney General the evidence it secures when it believes such evidence shows a violation of the section together with its views or findings regarding the transaction involved. Automatic Train-Control Devices, 112 I. C. C. 259, 269.

ANY QUANTITY RATES

I. REASONABLENESS AND APPLICATION.

(a) Complainant attacked first class any quantity rate of 74.5c charged on nine cars of humidors shipped between June 30 and Aug. 24, 1923 from Swanton, O., to Chicago, Ill., as unreasonable. Humidors are receptacles ordinarily used for storing cigars and tobacco for the purpose of maintaining a proper percentage of moisture. Shipments moved N. Y. C., from Swanton, a local point on that line to Chicago thence C. J., to Union Stock Yards, 215 miles. Effective Aug. 25, 1923 commodity rate of 37.5 was published same as fourth class rate. Considering the weight density and value of humidors, it is a fair inference that the first class any quantity rating was intended primarily for application to less carload shipments, and that a lower rating for carloads was not provided because of the supposed absence of any carload movement. Although there are many exceptions, third class is generally the carload rating assigned to articles rated first class in less carloads. Third class rate was 50c. HELD, rate charged unreasonable to extent it exceeded 50c, reparation awarded. Swift & Company v. N. Y. C. R. R., 112 I. C. C. 554.

(b) Complainant attacked any quantity rates charged from April 1, 1922 to Feb. 14, 1924 on shipments of cotton denims from Greensboro, N. C., to Ullahoma, Tenn., as unjust, unreasonable, unduly prejudicial and in violation of section four. Shipments routed by consignor moving via Southern to Atlanta, Ga., and N. C. & St. L., beyond 573 miles. Short line is over Southern to Chattanooga, Tenn., and N. C. & St. L. and beyond 511 miles. Charged joint fourth class any quantity rate. On Feb. 14, 1924 a joint commodity rate of 67.5c was published. Class rate to Tullahoma of 93.5c exceeded the rate of 67.5c to Nashville, Tenn., a point beyond, this departure from the fourth section being protected by appropriate application. HELD, rate attacked unreasonable to extent it exceeded 75c prior to July 1, 1922 and 67.5c thereafter, reparation awarded. Tennessee Overall Co. v. Southern Ry., 112 I. C. C. 616.

(c) Complainant attacked commodity rate of $4 on dry goods, n. o. s. any

quantity, charged on a carload of cotton warp olive drab shirting, shipped from Chicago, Ill., to San Francisco, Calif., on June 19, 1924 as unjust and unreasonable. Prior to June 1, 1922 a rate of $5.355 was in effect on dry goods, n. o. s., which included the commodity in question, from Group D, including Chicago to San Francisco, reduced on that date to $4.82 and on Dec. 12, 1923 present rate was established. There was contemporaneously in effect a rate of $1.58 on dry goods in bales or otherwise including shirtings wholly of cotton, from Group D points. There was also in effect a rate of $2.33 on clothing, etc., in bales, or cases, shirts, not underwear, linen, cotton or woolen, boxed in carloads, minimum 20,000 pounds. HELD, rate attacked unreasonable to extent it exceeded $2.33 reparation awarded. Greenebaum Weil & Michels v. C. & N. W. Ry., 112 I. C. C. 655.

(d) Complainant attacked commodity rates on uncompressed cotton linters, carloads, from Texas, Louisiana west of the Mississippi river, Oklahoma, and Arkansas to numerous destinations in the United States as unreasonable, unjustly discriminatory and unduly prejudicial. With the exception of the subsequent reduction no evidence bearing on the unreasonableness of the rates was adduced. HELD, rates attacked not unreasonable or otherwise unlawful, complaint dismissed. Burton Dixie Corp. v. A. T. & S. F. Ry., 113 I. C. C. 384.

(e) Proposed increased all-rail rates on cotton fabrics, any quantity, from Monticello, Ark., to certain Atlantic seaboard cities, by cancellation of the present joint rates, making applicable the combinations on Memphis, found justified. Monticello is the only point in the Southwest from which there are joint all-rail rates on cotton fabrics to Atlantic seaboard cities, such rates having been established to meet rail-and-ocean rates through the Gulf ports from Texas and Oklahoma points to same destinations. It is the purpose of the all-rail lines to abandon traffic to the rail-and-ocean lines and if proposed cancellation is permitted, protestant will still have available the rail-and-ocean rates and will be on an absolute parity with Texas and Oklahoma points. Moreover, inadvertently created departures from long-and-short-haul rule of section 4 of the act will be corrected. Cotton Fabrics to Atlantic Ports, 112 I. C. C. 280.

(f) Any-quantity rates on cotton from stations south of Montgomery, Ala., concentrated and compressed at that point and reshipped to Mobile, Pensacola, and New Orleans, found not unreasonable under section 1 of the act. The transit service, voluntarily established by carriers, embraces a back haul from transit point, thus entailing a situation deprecated by the commission in former cases. While transit on cotton has been so long in effect and so widely accorded as to become practically an inherent incident in the transportation of that commodity, that fact does not lessen the application to it of the general observations that transit arrangements represent a departure from ordinary transportation service, involving as it does two separate and distinct local movements to and from the transit point with all the accompanying physical handling and the keeping of necessary records in connection therewith. Montgomery Cotton Exch. v. L. & N., 112 I. C. C. 325.

(g) Proposed increased rates on cotton, cotton linters, and regins, in any quantity, from stations south of Montgomery and Selma, Ala., concentrated and compressed at those points and reshipped to Mobile, Pensacola, and New Orleans, found not justified. The transit arrangement at Montgomery and Selma is of many years' standing, is a commercial necessity in handling the business, and should not be lightly disturbed. While necessity for back hauls may be regarded as a disability due to location of these transit points, and may properly be reflected in some difference in rate as compared with points from which no backhauls are necessary, the disturbance of relations to extent that would be produced by proposed rates is not warranted and would result in undue prejudice to points from which increases are proposed. Montgomery Cotton Exch. v. L. & N., 112 I. C. C. 325, 333, 335.

(h) First-class any-quantity rate charged on humidors from Swanton, Ohio, to Chicago, Ill., found unreasonable to extent it exceeded third class. First-class rating was intended for application to l. c. l. shipments and no rating was provided for carloads until after movement when carriers published a rating of fourth class in carloads for a limited period. Articles rated first class, l. c. l., are generally assigned a third-class rating in carloads and repara-

tion awarded to that basis. Swift & Co. v. N. Y. C. R. R. 112 I. C. C. 554.

(i) Any-quantity fourth-class rates on cotton denims from Greensboro, N. C., to Tullahoma, Tenn., found unreasonable as compared with lower rates contemporaneously in effect from numerous other cotton-denim manufacturing points to other destinations in the South for comparable distances, and to extent they exceeded joint commodity rate subsequently established which was equal to rate in effect to Nashville, a farther distant point. Reparation awarded. Tennessee Overall Co. v. S. Ry. 112 I. C. C. 616.

(j) Rate on dry goods, n. o. s. any quantity, applied on cottonwarp olive drab shirting found unreasonable to extent it exceeded lower rate contemporaneously in effect on clothing, etc., in bales or cases, and on shirts, not underwear, linen, cotton or woolen, boxed. Reasonable rate for future prescribed and reparation awarded. Greenebaum, Weil & Michels v. C. & N. W., 112 I. C. C. 655.

(k) Rates on uncompressed cotton linters from points in Texas, Louisiana west of the Mississippi River, Oklahoma, and Arkansas, to numerous destinations in United States and Canada, found not unreasonable or otherwise unlawful as compared with rates on cotton, any quantity, cottonseed hull fiber, and cotton motes. Complainant's position in assuming that any-quantity rates on cotton are proper basis for l. c. l. shipments only is untenable for that commodity generally moves in the Southwest on any-quantity rates. Carriers have regarded cotton motes and other mills waste as similar in transportation characteristics to hull fiber rather than to linters and record is not convincing to the contrary. Moreover, no specific attack is made on rates from and to particular points except those from a point located on the Kansas City, Mexico & Orient, a weak line whose rates are subject to special consideration. Burton-Dixie Corp. v. A., T. & S. F., 113 I. C. C. 384.

(l) First class rating and rates on bed sacks, any quantity, under southern classification, found not unreasonable or otherwise unlawful because in excess of second class rating and rates found reasonable on barrack bags in 85 I. C. C. 214 and 100 I. C. C. 402. Barrack bags are easily identified and widely used as shipping containers, whereas bed sacks are not commonly known or used and belong to the innumerable variety of textile articles covered by the generic term "dry goods, n. o. i. b. n." Separate classification descriptions and ratings for all or any considerable number of dry goods articles would complicate billing and packing and create many policing difficulties. Moreover, the existing grouping has been in effect without substantial modification for many years and commission is not persuaded that it should be disrupted. Former findings in 101 I. C. C. 687, affirmed. Triad Corp. v. C. of G. 113 I. C. C. 663.

(m) Complainant attacked any quantity rates charged on cotton from Geiger, Ala., to Rossville, Ga., as unjust, unreasonable and inapplicable. Shipments moved A. T. & N. to York, Ala., A. G. S. to Chattanooga, Tenn., and C. of Ga., to Rossville between July 1, 1922 and Oct. 6, 1924 and combination rate of 95.5c and 92.5c were collected. The tariff of the orginating line provided for reference to the combination rule, but the tariff naming the other factor did not. HELD, rates charged inapplicable, applicable rate was 75.5c, reparation awarded. Peerless Woolen Mills v A. T. & N. Ry., 115 I. C. C. 577.

(n) Complainant attacked commodity rates charged on two carload and numerous less carload shipments of furniture forwarded between June 7, 1922 and July 5, 1924 from Wisconsin to Chicago as inapplicable. Shipments moved either over the Northwestern or Soo Line. Complainants concede that no overcharge existed on the two carload shipments, nor on less carload shipments moving over the Northwestern prior to August 25, 1923. Complainants view of the tariff situation is that, although the rates were restricted to "carload, except as otherwise specified" the words "any quantity" wherever they appeared in the items, constituted an exception and made the rates applicable to either carload or less carload shipments. As long as the tariff items were specifically made applicable to shipment in any quantity, or until April 26, 1924, the carload classification rating could and should properly be used in determining the commodity rates applicable to less carload shipments. If defendant Northwestern has collected higher commodity

rates, based on the use of the less carload rating, overcharges have resulted. With the omission of the words "any quantity" from the items on April 26, 1924, the application of the rates was again controlled by the caption of the tariff and was thereafter limited to carload shipments. Defendant Northwestern will be expected to refund with interest any overcharges existing on shipments moving between Aug. 25 1923 and April 26, 1924 and defendant Soo Line on shipments moving between June 7, 1922 and July 5, 1924, complaint dismissed. Amber Furniture Co. v. C. & N. W. Ry., 115 I. C. C. 640.

(o) Complainant attacked any quantity rates charged on 453 bales of cotton shipped from certain Tennessee river landings between Florence, Ala., and Paducah, Ky., to New Orleans in Oct., and Nov. 1924 as unreasonable and unduly prejudicial and in violation of section 6. The St. Louis & Tennessee river Packet Co., gathered the shipments in varying numbers of bales from the different landings and carried them in its boats to Riverton, Tenn., where they were assembled and shipped out in nine cars over the Northern Alabama to Riverton Jct., Southern to Florence, NA to Birmingham, AGS to Meridian, Miss., and N. O. N. E. beyond. Complainants prepaid the shipments to the packet company through to New Orleans at a rate of 76c, shown in the bills of lading, which also showed routing over the NA from Riverton. At New Orleans the N. O. N. E. collected additional charges on the basis of rates ranging from $1.15 to $1.61 contending that the 76c rate was not applicable over the route of movement because of the nonconcurrence of the NA in the applicable tariff. The 76c rate was admittedly applicable over the packet company to Johnsonville or Danville, Tenn., and rail lines beyond. Rates applicable over route of movement was 35c to Riverton and 84c beyond. These shipments were through shipments, and the 128 bales not compressed in transit would have been entitled to the 76c rate if the NA had been shown as a concurring carrier in the packet tariff. In view of the nonconcurrence of that carrier, the rate applicable on all of the 453 bales was the combination rate of $1.19. If the packet company had advised complainants that the packet companys tariff did not, as it purported on its title page to do, apply via Riverton, the record indicates that complainants unquestionably would have directed rerouting via Danville or Johnsonville. HELD, shipments misrouting by packet company, reparation awarded basis of 76c. Florence Chamber of Commerce v. N. O. N. E. R. R., 118 I C. C. 228.

(p) Respondents proposed: first, a general revision in their any quantity and carload commodity rates on cotton linters from points in Arkansas and Louisana to Missouri, Mississippi, and Ohio river crossings, and points in so-called defined territories, including points in trunk line territory; and second, a general cancellation of their carload commodity rates minimum 30,000 pounds, on second cut linters and cottonseed hull fiber or shavings, not bleached or dyed, from Arkansas, Louisiana, Oklahoma and Texas to the same destination territory, substituting in lieu of the canceled rates the revised carload rates, minimum 20,000 pounds on cotton linters. The proposed changes would result in increases and reductions in rates on cotton linters and in heavy increases in every instance in rates on second cut linters and cottonseed hull fiber or shavings. No uniformity now obtains with respect to rates on linters from points in Arkansas and Louisiana to the destination territory under any of the present descriptions. From some points in these states to a large portion of the territory the any quantity uncompressed or flat rates over some lines are the same as the any quantity carriers privilege rates, but between other points on the same lines and between all points on other lines the any quantity uncompressed rates are normally higher by varying amounts, usually 12c, than the corresponding any quantity carriers privilege rates. In a great many instances there are also different rates on all four descriptions between the same points over competing lines. The any quantity compressed rates are usually 12c lower than the any quantity carriers privilege rates, and the uncompressed carload rates are also lower than such rates but higher than the any quantity compressed rates, although not by any fixed amounts. Unlike those from Arkansas and Louisiana, the rates on linters from Oklahoma and Texas are uniformly consistent, one with another and as between the several descriptions, and also the same rates apply between the same points over different routes. The

only discrepancy in these rates is in the differential as between the any quantity carriers privilege rates and the any quantity compressed rates. The suspended schedules do not propose any changes in rates on linters from Oklahoma and Texas but from points in Arkansas and Louisiana it is proposed to remove the inconsistencies in the present rates by establishing the same rates between the same points over all lines serving such points, and by further establishing any quantity compressed rates lower to all points by 18c from Arkansas and 12c from Louisiana than the any quantity carriers privilege rates, thereby conforming the rates from Arkansas with those from Oklahoma and those from Louisiana with those from Texas. Except at points in southern Arkansas and Louisiana where it is proposed to hold the Texas common point rates as maxima, the general procedure in revising the any quantity linter rates was to increase, where now lower, such rates over all lines to the level of the any quantity cotton rates, where such are published. While this part of respondents proposal is a step in the right direction to the extent that it would produce a more consistent rate structure than the existing one it must be condemned because of the new fourth section departures which would be created thereby. In addition to the rates on cotton linters, a complete line of carload commodity rates, minimum 30,000 pounds, is also maintained from and to the same points on uncompressed second cut linters and cottonseed hull fiber and shavings. These rates are about 40% from Arkansas and Oklahoma, 43% from Louisiana and 52% from Texas, of the contemporaneous rates carloads on uncompressed linters, minimum 20,000 pounds. The suspended schedules propose to cancel the carload commodity rates and tariff description on cottonseed hull fiber or shavings and second cut linters, minimum 30,000 pounds, and to amend the description in connection with the carload rates on linters, minimum 20,000 pounds to include cottonseed hull fiber or shavings, thereby increasing to the full revised linter basis the carload rates on cottonseed hull fiber and second cut linters. The transportation characteristics of linters and hull fiber and shavings differ in several respects from those of cotton. The former always move in uncompressed form in carloads at carload rates, are loaded and unloaded by shippers, and do not usually require transit, whereas cotton while moving in compressed form in carloads from concentration points moves at any quantity rates, is loaded and unloaded by or at the expense of the carriers and almost always requires transit. These respondents arbitrarily proposed to put the whole industry on a rate plane made to fit the highest grade commodity produced by protestants, and this, too, apparently without having given any consideration as to whether the traffic could bear such radical increases. Either they would kill the traffic and thus reduce existing revenues or else they would greatly increase them. HELD, proposed rates not justified. Cotton linters from southwest, 118 I. C. C. 419.

(q) Complainant alleged that official classification rating of first class, any quantity, on flat cotton twine is unreasonable and unduly prejudicial and a third class any quantity rating is asked. Flat cotton twine is a narrow flat cotton tape. It is used for tying bolts of cloth in bleacheries and dye houses, millinery boxes, bunches of asparagus and celery, and other articles or packages which would be subject to injury by abrasion if ordinary twisted twine were used. The movement is wholly in less car loads. In Sub. 1, complainant alleged that on round braided twine first class any quantity rating is unreasonable and unduly prejudicial. Complainant testifies that this commodity is used solely for tying purposes, largely by the meat packers for tying wrappers on hams and strips of bacon. The rating asked is one class lower than applies in western classification territory on ordinary cotton twine. HELD, rating attacked not unreasonable, unduly prejudicial or otherwise unlawful, complaint dismissed. Fall River Chamber of Commerce v. B. & O. R. R., 122 I. C. C. 100.

(r) First-class, any-quantity rating under official classification on "flat cotton twine" under official and western classifications on "round braided twine" found applicable and not unreasonable as compared with lower rating on ordinary twine. As between these commodities there is a marked disparity in favor of ordinary cotton twine both as to weight, density, and value, and while spread in rates between commodities involved and ordinary twine is rather pronounced, differences in their classification character-

istics and relatively large l. c. l. movement of ordinary twine indicates that lower rating on that commodity affords no basis for a finding that rating on flat and round braided twine is either unreasonable or unduly prejudicial. Fall River Chamber of Commerce v. B. & O., 122 I. C. C. 100.

(s) Respondents proposed to increase certain commodity rates on unmanufactured tobacco from points in central Kentucky to St. Louis, Mo., and East St. Louis, Ill. Unmanufactured tobacco, in hogsheads, minimum 20,000 pounds, subject to rule 34, is rated fourth class in official southern and western classifications. In official territory, it moves ordinarily on class rates, and in that part of southern territory under consideration, by exceptions to the classification, it moves at sixth class rates in the absence of specific commodity rates, The rates here considered, with unimportant exceptions, are specific commodity rates applying any quantity or loose in carloads, minimum 22,000 pounds. The rates from all the producing points under consideration except three apply only through Louisville. The rates from those three apply only through Cincinnati. Rates to St. Louis on this commodity are 42.5c from Cincinnati and 39.5c from Louisville, distances 340 and 275 miles. For many years rates on unmanufactured tobacco from central Kentucky to St. Louis have been in violation of the long and short haul clause of the fourth section. The schedules now suspended propose rates of 42.5c, which, for distances ranging from 350 to 400 miles and routes through Cincinnati would be relatively reasonable and would remove the fourth section departures now existing. HELD, suspended schedules justified. Unmanufactured tobacco from Kentucky, 126 I. C. C. 93.

(t) Complainant alleged that the any quantity ratings maintained on rugs manufactured from cloth or fabric, value released to not exceed $125 per 100 pounds, when shipped in carloads, and on carpets manufactured from cloth or fabric in carloads, and the resulting charges, have been, are and for the future will be unreasonable and unduly prejudicial. Rated first class any quantity. Complainants sought carload ratings of fourth class in official and southern and third class in western applicable on matting, mats, and rugs made of fibre, grass, or straw. During the period here concerned less than 25% of the movement to complainants was in carload quantities and it appears that at most not more than 50% of their shipments would move in carloads were separate carload and less carload ratings established with a reasonable spread between them. This being true with complainants, who are among the largest dealers in floor coverings in the country, it appears that the benefit, if any, of a reduction in the carload ratings would be limited, and that any increase in the less carload ratings would adversely affect the large majority of shippers. In view of the very substantial difference in the value of fabric and fibre rugs the Commission is not persuaded that the difference in the freight charges at first class and fourth class rates operates as an undue preference of the fibre rugs. HELD, ratings and charges attacked not unreasonable or otherwise unlawful, complaint dismissed. Carson Pirie Scott & Co., v. A. T. & S. F. Ry., 129 I. C. C. 446.

(u) Complainant alleged that commodity rates charged on shade cloth, carloads, from Chicago, Ill., to Atlanta, Ga., since May 29, 1924 were and are unreasonable. Charged $1.725 prior to April 15, 1925, $1.55 from that date to Oct. 12, 1925 and $1.405 subsequently. Alleged reasonable rate 81c. No joint rates apply and rates assailed were and are combinations on Ohio river. The ratings on shade cloth, any quantity in official and southern classifications are, rule 25 and third class. Rule 25 is defined in the classification as 15% below second but not less than third class. A spread of two classes is a normal spread between carload and less carload rates in the range of classes second to fifth, and, considering that the any quantity ratings were designed to cover a movement principally in less than carloads, the Commission is of opinion that a reasonable carload rate would lie between fourth and fifth class rates. Fourth and fifth class rates were $1.36 and $1.075. HELD, rate charged unreasonable to extent it exceeded 94c, reparation awarded. Western Shade Cloth Co., v. A. & W. P. R. R., 132 I. C. C. 118.

(v) Any quantity rates established to apply to a movement that is preponderately less than carload may well be unreasonable when applied to a regular carload movement. Western Shade Cloth Co., v. A. & W. P. Ry., 132 I. C. C. 118, 120.

(w) As in the case of less than car-

load commodity rates, there are probably few, if any, circumstances under which the Commission would be justified in requiring the maintenance or establishment of any quantity ratings. Western Shade Cloth Co., v. A. & W. P. Ry., 132 I. C. C. 118, 120.

(x) Complainant alleged that unreasonable rates were charged on numerous any quantity shipments of cotton, in bales, from Texas and Oklahoma to Galveston, Tex., for export. Original report, 92 I. C. C. 363. HELD, reparation awarded. Houston Cotton Exchange v. A. & S. R. R., 132 I. C. C. 615.

(y) Rates, rules, and regulations on cotton, any quantity, shipped uncompressed to be compressed by and at carrier's expense, from points in Pecos Valley of New Mexico on the Santa Fe to Texas Gulf ports and beyond, moving over that line via Pecos, Tex., with option of concentration at that point, thence over Texas & Pacific to Sweetwater, Tex., and Santa Fe beyond, found not unreasonable as compared with lower rate contemporaneously in effect over Santa Fe system's longer route via Clovis, N. Mex., and Sweetwater, with option of concentration at either Pecos, Tex., or Roswell, N. Mex.; or with rates from Texas stations on the T. & P., Fort Worth & Denver City, and Santa Fe for comparable hauls. Record fails to show that Santa Fe route is unreasonably long or results in wasteful transportation. See also 98 I. C. C. 183, 252. Smith-Wilson & Co., v. A., T. & S. F., 129 I. C. C. 65.

(z) First-class any-quantity ratings on fabric carpets and rugs in official, southern, and western territories, found not unreasonable nor unduly prejudicial as compared with lower ratings on fiber matting, mats, and rugs, nor with lower commodity rates on fabric carpets between points in New York, New England, and Texas. Lower commodity rates are shown to be forced by competitive conditions and in view of great difference in price between fabric and fiber rugs, evidence is not persuasive that lower rating on fiber rugs are unduly preferential of that commodity. Moreover, since commodities involved generally move in l. c. l. shipments, benefit derived from reduction in c. l. rating would be limited and an increase in l. c. l. rating would adversely affect large majority of shippers. Carson, Pirie, Scott & Co. v. A., T. & S. F., 129 I. C. C. 446.

APPEAL

See Courts II; Interstate Commerce Commission VII.

APPLICATION OF RATES

See Absorption of Charges I; Accounting II, §5; Basing Points and Lines I; Bills of Lading III; Class Rates I; Classification §3½, V; Commodity Rates I, II; Differentials II; Long and Short Hauls III; Minimums I; Proportional Rates I; Released Rates II; Through Routes and Joint Rates §18.

ARBITRATION

See Jurisdiction of Commission.

(a) Letter from Interstate Commerce Commission in answer to submission of controversy respecting liability for railroad's claim for car demurrage, stating that the car involved was subject to demurrage while waiting export license, and that it was shipper's duty to furnish such license, HELD not an arbitration award between parties, but merely an opinion concerning an abstract proposition of law, at most informal and advisory only, in view of Interstate Commerce Act Feb. 4, 1887 (24 Stat. 397), as amended (U. S. Comp. St. § 8563 et seq.). Davis, Director General of Railroads, v. Rochester Can Co., 221 N. Y. S. 666.

(b) Under Interstate Commerce Act Feb. 4, 1887 (24 Stat. 379), as amended (U. S. Comp St. § 8563 et seq.), Interstate Commerce Commission has no jurisdiction to determine disputed claims for money due from a shipper to a transportation company, either as a court or arbitrator, but such matters are left for determination by the courts. Davis Director General of Railroads, v. Rochester Can Co., 221 N. Y. S. 666.

(c) At common law and under statute, a natural person may at request of disputants arbitrate their differences; but such power cannot, even by consent, be conferred on a corporation, for it has no entity outside its appointed corporate powers, or those necessarily incident thereto. Davis, Director General of Railroads, v. Rochester Can Co., 221 N. Y. S. 666.

ASSIGNMENTS

See Loss and Damage §5¾.

ASSOCIATION

(a) Complaint filed by an association for and in behalf of its members failed to name one member as a party complainant. Such member filed an intervening petition but same was not received by commission until after expiration of statutory period of limitation. HELD: As to shipments on which reparation is claimed by this particular member, statute of limitations was not tolled by the complaint as filed by association. See 27 I. C. C. 302. South Carolina Cotton Mfrs. Asso. v. C., C. & O., 112 I. C. C. 683, 686.

(b) Complainant, an association, sought inclusion in reparation award of commission of those members who were parties to complaint, but who failed to appear at hearing to prove fact of shipment and payment and bearing of freight charges, and expressed a willingness to establish such facts by presentation of receipted freight bills or affidavits. HELD: Although commission has on numerous occasions permitted shippers to furnish proof by affidavit as to shipments moving subsequent to hearings, such permission has at all times been subject to objections of carriers, and while commission is not disposed to deny complainant members of the association who failed to appear an opportunity to do so, it does not feel justified, under the circumstances, in suggesting that carriers waive their right of cross-examination. Upon request therefore the case will be set for further hearing on the question of reparation. Jamestown Chamber of Commerce v. P. R. R., 120 I. C. C. 372, 377.

ASSORTING PACKAGES

See Additional Charges and Services; Proportional Rates IV.

ATTORNEY'S FEES

See Overcharges §6; Procedure Before Commission §9.

(a) Provision of Federal Control Act (Comp. St. 1918, Comp. St. Ann. Supp. 1918, § 3115¾a et seq.) that no defense shall be made in actions at law, or suits in equity, on ground that carrier is instrumentality of federal government authorizes imposition of costs and attorney's fees against Director General in action on reparation award, under Interstate Commerce Act, § 16 (Comp. St. § 8584). Empire Refining Co., v. Davis, Director General, 6 Fed. (2d) 305.

(b) Taxation of costs, including reasonable attorney's fees, under Interstate Commerce Act, § 16 (Comp. St. § 8584) in favor of plaintiff, suing to enforce award of Interstate Commerce Commission, should not be made until judgment becomes final. Empire Refining Co. v. Davis, Director General, 6 Fed. (2d) 305.

(c) Claim for attorney's fees, first set up in amendment to petition in action to enforce reparation award of Interstate Commerce Commission, does not set up new cause of action, barred by limitation. World Pub. Co. v. Davis, Agent; Tulsa Paper Co. v. Same. Democrat Printing Co. v. Same, 16 Fed. (2d) 130, 131.

(d) Taxation of costs and reasonable attorney's fees under Interstate Commerce Act, § 16 (Comp St. § 8584), in favor of plaintiff, suing to enforce reparation award of Interstate Commerce Commission, should not be made until judgment becomes final. World Pub. Co., v. Davis, Agent; Tulsa Paper Co. v. Same; Democrat Printing Co. v. Same, 16 Fed. (2d) 130.

(e) Wheat was shipped from Shelton, Neb., to Baker, Kan., and there unloaded into the consignee's elevator under a schedule giving him the privilege of shipping within a year to Atchison, Kan., without further charge. The next day he loaded a like quantity of wheat from his elevator, together with a small amount additional, and shipped it to Atchison; the only further charge being for such additional amount, which was paid. He recovered a judgment against the carrier for $47.02 because of a shortage in the delivery at Atchison, together with $50 as an attorney's fee allowed by the Kansas statute. It is HELD, that the shipment was interstate, and for that reason the Kansas statute did not apply, and the allowance of the attorney's fee was error. Harrington v. Missouri Pac. R. Co. (Kan., 1927) 254 Pac. 379.

(f) Under Interstate Commerce Act, §§ 8, 9, 22 (U. S. Comp. St. §§ 8572, 8573, 8595), considered together, attorneys' fees may be recovered as part of costs of general recovery for overcharge on freight-shipment. W. L. Shepherd

Lumber Co., v. Atlantic Coast Line R. Co., (Ala., 1927) 112 So. 323.

(g) Interstate Commerce Act, §8 providing for recovery of counsel fees from carriers, HELD to cover damage caused by charging unlawful rate or charge on lawful shipment of freight. Lothrop v. Spokane, P. & S. Ry. Co., 10 Fed. (2d.) 225. Same v. Oregon-Washington R. & Nav. Co., 10 Fed (2d) 225. Same v. Southern Pac. Co., 10 Fed (2d.) 225.

(h) Where plaintiff submitted testimony as to reasonableness of attorney's fees, and no counter testimony was presented, and defendants in neither arguments nor briefs questioned reasonableness of claim, court will allow attorney's fees as prayed. Lothrop v. Spokane, P. & S Ry. Co., 10 Fed. (2d.) 225. Same v. Oregon-Washington R. & Nav. Co., 10 Fed. (2d.) 225. Same v. Southern Pac. Co. 10 Fed. (2d.) 225.

AUCTION COMPANY

(a) Complainant brings in issue the propriety of defendant according to the Union Fruit Auction Co., the use of certain space in a warehouse owned by defendant located in its produce yards at Pittsburgh, for the unloading, displaying, and selling at auction by the Union Co., of carloads of fruit and vegetables arrived over defendants line, while refusing to accord like use of the same property to the Independent Company. Previous decisions Andrews Co. v. P. R. R., 38 I. C. C. 165 and Storage rules on fruits and vegetables, 95 I. C. C. 87. Defendant now handles approximately 95% of the fruits and vegetables consigned to Pittsburgh. About 10% of the carload shipments coming into the produce yards are sold at auction. The furnishing of facilities for the conduct of an auction has no relation to the transportation service which a carrier holds itself out to perform. A carrier is not required, as part of its transportation service, to furnish warehouse space to all shippers of fruits and vegetables for the unloading, sorting, displaying, auctioneering, and delivery of carload shipments, in less carload lots, to purchasers thereof. This is a trade service. Generally speaking, shippers are required to unload carload freight and it does not appear that, with the traffic here considered, there is any duty upon defendant to do more than furnish suitable delivery trucks for the unloading service. Even if it be conceded that, by the publication of the storage tariff defendant, in effect, made the warehouse a part of its terminal facilities it does not follow that the use of the premises in the transportation service could not properly be discontinued if defendants facilities were not thereby rendered inadequate to meet reasonable requirements. In the opinion of the commission the warehouse property leased has been, at least since the cancellation of the storage charges, the private property of defendant and not a part of its transportation facilities devoted, or necessary to be devoted, to public use. The general rule that a carrier is free to grant an exclusive lease of such property to anyone it elects, whether he is a shipper or not, is well settled. A carrier may not lease its property in such a manner as will result indirectly in a violation of some section of the act. HELD, the terms and conditions of defendants lease of parts of the warehouse to the Union Company, including the annual rental of $10,000 are not shown to be so favorable as to amount to a refund or remission of any portion of the published rates, nor is it established that the action of defendant in leasing said property to the Union Company pursuant to said lease while failing and refusing to accord like use of the same property to the Independent Company on like terms and conditions, results or will result in any violation of the act, complaint dismissed. Andrews Bros. Co. v. P. R. R., 123 I. C. C. 733.

(b) Carrier's action in leasing warehouse space and track facilities in its Pittsburgh produce yards to the Union Fruit Auction Co., for unloading, displaying, and selling at auction fruit and vegetables, while refusing to accord like use of same property to the Independent Fruit Auction Co., not shown to result in any violation of interstate commerce act or other statute administered by the commission. A carrier is free to grant an exclusive lease of such property to anyone it elects, whether shipper or not. See 199 U. S. 279, and other cited cases. This general rule is subject to exception, however, that carrier may not lease its property in such a manner as will result indirectly in a violation of some section of the act or related acts, for in such instances the commission has indirect authority over the lease. See 73 I. C. C.

673, 682. Prior proceedings 38 I. C. C. 165; 95 I. C. C. 87. Andrews Bros. Co. v. P. R. R., 123 I. C. C. 733.

(c) The furnishing of facilities for the conduct of an auction has no relation to the transportation service which a carrier holds itself out to perform. Andrews Bros. Co. v. P. R. R., 123 I. C. C. 733, 738.

(d) A carrier is not required, as part of its transportation service, to furnish warehouse space to all shippers of fruits and vegetables for unloading, sorting, displaying, auctioneering, and delivery of c. l. shipments in l. c. l. lots, to purchasers thereof. This is a trade service. Generally speaking, shippers are required to unload c. l. freight and it does not appear that there is any duty upon carrier to do more than furnish suitable delivery tracks for the unloading service. Andrews Bros. Co. v. P. R. R., 123 I. C. C. 733, 739.

(e) Following 123 I. C. C. 733, refusal of carriers to lease to complainant a section of a certain building owned by them at Alanta, Ga., for the sale of produce, while leasing similar sections to its competitors, found not discriminatory, unduly prejudicial, or otherwise in violation of the act. William-Thompson Co. v. A. & W. P., 126 I. C. C. 417.

(f) Contention of carrier that commission can not require it to establish an express terminal at Piers 20 and 21, New York, which have been regarded as its freight terminal not sustained. Evidence does not show that handling of express shipments through auction conducted on the piers differs in any respect from handling of freight shipments. Amer. Fruit & Veg. Shippers Asso. v. Amer. Ry. Exp. Co., 128 I. C. C. 651, 660.

AUTOMATIC TRAIN CONTROL

See Anti-Trust Act (a); Safety Appliances.

(a) Upon complaint alleging that New York Central R. R., in awarding its contract for installation of an automatic train-stop system upon its line to the General Railway Signal Co., subjects complainant, Sprague Safety Control & Signal Corp., to undue prejudice in violation of section 3 of the act, HELD: That section of the act does not apply to making of contracts by a carrier for purchase of equipment, and fact that equipment is apparatus for automatic train-stop or train-control devices which commission has authority, under section 26 of the act, to require a carrier to install in accordance with prescribed specifications and requirements, does not extend applicability of prohibitions of section 3 to matters connected with selection or purchase of such equipment. Automatic Train-Control Devices, 112 I. C. C. 259, 260.

(b) Upon complaint alleging that section 26 of the act and commission's specifications and requirements are being violated by New York Central R. R., because of latter's failure to include speed control in its installation of an automatic train-stop system and its employment of a forestalling device in connection with that system, HELD: Allegation has no basis under provisions of the commission's orders. Selection and installation of a plain automatic-stop device without speed control is permissible and always has been. Carriers are given a choice as between a plain automatic stop and an automatic stop with automatic speed control and these features may be included separately or in combination. The use of a forestalling feature is also permitted, and there are no restrictions, in so far as traffic or operating conditions are concerned; so that a carrier whose line is one of heavy traffic density may install a device without speed control. Automatic Train-Control Devices, 112 I. C. C. 259, 261, 262.

(c) Upon contention that automatic train-stop or train-control specifications of commission which provide that "The apparatus shall be so constructed as to conform to established clearances for equipment and structures" means that train-control equipment installed on tracks and locomotives shall not encroach upon standard clearances established and approved for rolling stock and tracks, HELD: Commission's requirements do not set up any standard clearances, that being left to judgment of operating officials or carriers. Although requirement mentions established clearances, it does not mean that such clearances may not be changed in connection with installation of an automatic train-control device. All that it means is that, whatever clearances are established, train-

control device shall conform to them. Automatic Train-Control Devices, 112 I. C. C. 259, 263, 264.

(d) It can not be found that the automatic train-stop or train-control system of the intermittent inductive type of the General Railway Signal Co., does not comply with commission's requirements with respect to clearances and operation. These may be demonstrated only after the device is installed and in operation. The same is true with respect to requirement that apparatus shall be so constructed that it will, so far as possible, perform its intended function if a break, cross, or ground occurs in electric circuits. Automatic Train-Control Devices, 112 I. C. C. 259, 263, 266.

AVERAGE DEMURRAGE PLAN

See Demurrage §13.

BACK HAUL

See Evidence §5½; Facilities and Privileges §7.

BAGGAGE CAR SERVICE

See Expedited Service.

(a) Proposed increased rates on newspapers shipped in baggage cars on passenger trains between points in trunk-line and C. F. A. territories, found justified. While there are no previous decisions with respect to this class of traffic to guide commission in determining reasonable rates, facts that none of the general rate increases have been applied to this traffic, that proposed rate represents but a small increase over rate in effect in 1900, in comparison with large increases in operating costs since that year, and that local and out-of-town retail prices of newspapers have been advanced generally since that time by different amounts, indicate that newspapers have not borne their relative share of increases in revenue and increased costs of transportation. Newspapers in Baggage Cars, 104 I. C. C. 527.

(b) Characteristics surrounding transportation of newspapers in baggage cars are so varied as to weights and revenue per shipment, length of hauls, volume of tonnage, and methods of handling and diffusion, that it is impracticable to attempt to determine reasonableness of a flat charge by allocations of costs of transportation. Newspapers in Baggage Cars, 104 I. C. C. 527, 533.

(c) Baggage-car service in transporting newspapers is superior to express service. Newspapers in Baggage Cars, 104 I. C. C. 527, 535.

(d) The usual service required for milk and cream in baggage cars is so unlike usual service accorded newspapers in same kind of equipment, as to make a comparison of rates charged for the two kinds of services lacking in probative value. Newspapers in Baggage Cars, 104 I. C. C. 527, 536.

(e) In an endeavor to show unreasonableness in rates on newspapers in baggage cars publishers offered extensive studies of revenue from newspapers with revenue derived from the Government for carriage of closed-pouch mail. FOUND, Incidents of this traffic in handling and in methods of computing charges are so different from any other traffic that any comparison with rates for railway-mail service are valueless. Newspapers in Baggage Cars, 104 I. C. C. 527, 536, 537.

(f) Baggage-car service for newspapers is different from any other freight or passenger service rendered by railroads in several important characteristics, and for this reason many ordinary tests used in determining reasonable rates for transportation services, such as comparisons with rates on other commodities for corresponding distances, can not be employed. Newspapers in Baggage Cars, 104 I. C. C. 527, 537.

(g) Respondents endeavored to affect the excess baggage charge when the excess baggage is checked in the regular baggage service instead of being carried in special baggage cars, when special baggage cars have been engaged. The present schedules need clarification. Rule 11, in connection with the baggage tariff therein referred to, clearly permits the checking of 150 pounds of baggage in regular service (1) by each of the 25 passengers traveling in regular service, to whom a special baggage car is furnished without charge above the 25 adult fares; (2) by each of the 25 passengers traveling in private passenger cars, who are charged 8⅓ fares for the special baggage car, in addition to the 25 adult fares, minimum $42 plus the surcharge, charged for the private passenger car, equipped with sleeping cars; and (3) by each of the 10 passengers traveling in regular service on 10 of the 18⅓ fares charged for a special baggage car. Rule 7 on the other hand is not clear. Whatever may be said as to the purchaser of the 25 adult tickets, for use in regular service, to whom a special baggage car

is furnished without further charge, certainly the owner of a private passenger car, equipped with sleeping berths, who pays 8⅓ fares, minimum $30, for each special baggage car, in addition to 25 adult fares, minimum $42 plus the surcharge, for his private passenger car, is not being accorded a free movement of baggage car within the meaning of that rule. HELD, respondents present schedules, construed together do not warrant denial of the baggage checking privileges granted by rule 11. HELD, respondents general tariff provisions governing the transportation of private or chartered passenger cars and special baggage cars should be clarified. Schedules not justified. Baggage from and between southern points, 112 I. C. C. 717.

(h) Complainant attacked rates charged on cream after Dec. 22, 1922, to Sioux City Ia., from stations Winthrop, Minn., to Leola and LeBeau, S. D., on M. & St. L., moving over that line to Hanley Falls, Minn., and G. N., beyond as unreasonable and unduly prejudicial. M. & St. L. does not reach Sioux City but shipments of cream which it originates may move in connection with G. N., at Watertown, S. D., or by dray transfer at Hanley Falls, Minn.; in connection with C., St. P., M. & O., at St. James, Minn.; with C., M. & St. P., by dray transfer at Bradley and Mellete, S. D.; with Rock Island at Watertown and with Northwestern at Northville, S. D., and Watertown all of which either reach Sioux City by their own lines or by their connections. Milk and cream are generally handled in baggage service, the bulk of movement being single line hauls. M. & St. L. and some other roads have by contract permitted the express company to handle all of this traffic over their lines. Others permit the express company to handle only the interline traffic. As a general rule interline traffic is handled by the express company. The G. N., however, handles both its local and interline traffic. In 15 I. C. C. 109, the Commission prescribed a distance scale, for the movement of cream by express or in baggage cars. This scale, subject to the general increases and reductions applies over the routes via Watertown, except in connection with the G. N. The express company and the G. N. apply their local rates based on the Beatrice scale on shipments moving via Hanley Falls. The combination rate via Hanley Falls is considerably higher than the continuance mileage rates via the other junctions. HELD, rates unreasonable to extent they exceed, plus a drayage charge of 6c per can, minimum 15c, rates ranging for 25 miles 45c on ten gallon can, 40c on eight gallon can, 31c on five gallon can to 340 miles 83, 75 and 68c respectively, reparation awarded. Hanford Produce Co. v. Amer. Ry. Exp. Co., 113 I. C. C. 523.

(i) Complainant attacked rates on milk and cream in cans, from New Mexico to Wichita, Kan., as unreasonable to extent they exceed rates on milk and cream from Texas to Wichita and that certain rates from New Mexico to Wichita are violative of fourth section. Distances range from 430 to 775 miles. Express rates between Texas and Kansas, including Wichita, are, with a few exceptions on the Beatrice scale, which applies throughout the middle western states on interstate traffic. The record is not sufficient to establish the unreasonableness of the rates attacked. When it is considered that the intermountain scale and the Beatrice scale apply over extensive territories, in which traffic, operating, and transportation conditions vary, the unreasonableness of one scale in a particular portion of the territory in which it applies is not established by a showing that it is higher than the other scale in a contiguous portion of the territory in which the latter scale applies. HELD, rates attacked not unreasonable, complaint dismissed. Wichita Chamber of Commerce v. American Ry. Express Co., 115 I. C. C. 729.

(j) Complainant alleged that the rates charged for movement of cream shipped since Aug. 12, 1923 in 10 gallon cans, in baggage cars in passenger train service, from North Dakota and South Dakota over two lines of railroad to Aberdeen, S. D., were and are unjust, unreasonable and unduly prejudicial. The applicable rates charged were, and the present rates are, made up of combinations of the single line interstate distance rates of the carriers for the distance to and from the respective junction points. Additional drayage charges were and are accrued for the transfer between depots at some of those junctions. HELD, rates assailed were not and are not unduly prejudicial but are unreasonable to the extent they exceed a distance scale ranging from 57c per 10 gallon can for 80 miles to 77c for 265 miles, with the addition of drayage

charges, where drayage is necessary in order to transfer shipments between separate passenger depots of the defendant carriers at those junction points, of 6c per can, minimum charge 15c, for distances of 0.5 mile and under, and 8c per can minimum charge 20c for distances over 0.5 mile, reparation awarded. Beatrice Creamery Co., v. C. M. & St. P. Ry., 129 I. C. C. 375.

BARGE SERVICE

See Allowances §8 (5) (b); Through Routes and Joint Rates §11 (2) (aa), §13 (5m); Water Carriers §6½.

(a) Tug and barge company, accepting business from public generally, except where financial responsibility of customer was not satisfactory or service involved undue hazard, HELD a "public carrier." State v. Washington Tug & Barge Co., (Wash., 1926) 250 Pac. 49.

(b) Complainant alleged that the refusal of the carriers, all of which connect with the barge line at Dubuque, Ia., to join with the barge line in through routes and joint rates between the Twin Cities, Fargo, N. D., and points on their lines in Indiana, Illinois, Missouri and Iowa is unreasonable. The basis of rates sought by the barge line is similar to that which has been followed in establishing rail-barge and rail-barge-rail rates on the lower river, namely, to make them lower than the all rail rates between the same points by differentials equivalent to 20% of the all rail rates between Dubuque and the Twin Cities. The barge lines port to port rates are, in general, 80% of the all rail rates. A water carrier of its character must be able to secure traffic to and from interior points if it is to prosper, and in the case of the barge line, with its slow and inferior service, such traffic can not be secured without resort to differential rates. The record justifies the conclusion that the establishment of rail-barge and rail-barge-rail rates in connection with the barge line between Dubuque and Twin Cities is desirable in the public interest. Taking account of the fact that the barge haul under the proposed rates is shorter than that which the barge line generally performs in connection with rail-barge routes on the lower Mississippi and of the general level of the all rail rates on which they would be based, the Commission is of the opinion that the so-called 20% basis of differentials would here be improper and that the Commission would not be justified in approving differentials greater in amounts than 15% of the all rail Dubuque-Twin Cities rates. HELD, upon consideration of the evidence relating to divisions the Commission is of the opinion that the first class rate prorate basis affords the only fair and practicable method of dividing the joint rates here under consideration. Use of a factor for the barge line based on 80% of the all rail rates seems equitable under all the circumstances for the purpose of fixing divisions, even though the differential has been based on a different percentage. Inland Waterways Corp., v. C. G. W. R. R., 129 I. C. C. 521.

(c) In prescribing reasonable joint rates over new through routes the Commission is warranted in prescribing rates which are relatively reasonable measured by the rates in effect over existing through routes between the same points. Furthermore, in prescribing such reasonable rates over a barge-rail route they may properly be made somewhat lower than the rates in effect over the competitive all-rail routes, provided the shrink is borne by the barge line. Inland Waterways Corp. v. C. G. W. R. R., 129 I. C. C. 521, 531.

(d) Rates on cotton and linters for export or coastwise movement from points west of Mississippi River to Mobile, Ala., by rail to Alabama ports on Warrior River and barge beyond, found not unduly prejudicial as compared with rail-and-barge rates contemporaneously in effect from same points to New Orleans via Memphis, Tenn., or Vicksburg, Miss. Evidence submitted fails to show similar transportation costs over route sought via Cordova, Ala., or that traffic would move over that route if established. However, certain carriers have agreed and will be excepted to publish rail-and-barge rates from western Tennessee, western Kentucky, and Mississippi through Cordova or some other Warrior River port to Mobile, based on principles laid down in 77 I. C. C. 317; 100 I. C. C. 491. Mobile Chamber of Commerce v. A. & V., 129 I. C. C. 103.

(e) Through routes and joint rail-barge and rail-barge-rail rates between St. Paul and Minneapolis, Minn., and Fargo, N. Dak., and points in Illinois, Indiana, Iowa, and Missouri, in con-

nection with barge line between Dubuque, Iowa, and St. Paul and Minneapolis, found desirable in the public interest, such joint rates to be constructed by subtracting from contemporaneous all-rail rates between same points differentials equivalent to 15 per cent of contemporaneous all-rail rates between Dubuque and Twin Cities, and divisions thereof to be arrived at by rate prorate basis, using as factors contemporaneous first-class rail rate between Dubuque or Twin Cities and the interior point and contemporaneous first-class barge rate between Dubuque and Twin Cities. Inland Waterways Corp. v. C. G. W., 129 I. C. C. 521.

(f) A water carrier of barge-line character must be able to secure traffic to and from interior points if it is to prosper, and in case of a barge line, with its slow and inferior service, such traffic can not be secured without resort to differential rates. Inland Waterways Corp. v. C. G. W., 129 I. C. C. 521, 527, 528.

(g) In prescribing reasonable rates over a barge-rail route they may properly be made somewhat lower than rates in effect over the competitive all-rail routes, provided the shrink is borne by the barge line. See 92 I. C. C. 528, 546, 547. Inland Waterways Corp. v. C. G. W., 129 I. C. C. 521, 531.

I. APPLICATION.

See Application of Rates.

§1. In General.

(a) Contention that so-called combination rule applies only by its own terms at junction points, and not at a basing or rate-breaking point, not sustained. As the term "junction point" is used in tariffs here involved, it must be construed to include such well-established rate-breaking points as Mississippi River crossings, which is in keeping with long recognized and universal practice followed by carriers of breaking rates at these points. North Packing & Provision Co. v. Director General, 104 I. C. C. 607, 613.

(b) For many years the prevailing basis for rate making to points south of the Ohio river has been the combination on crossings. In 100 I. C. C. 513 the Commission found that through class rates lower than the combination rates to and from the boundary line should be established between official and southern territories. Birmingham Traffic Bureau v. Director General, 115 I. C. C. 33, 37.

(c) For many years the present method of making through rates upon the combination of local or proportional rates to and from the Mississippi river has been the generally prevailing basis. In a number of cases the Commission has approved this method of rate construction. Nebraska Tire & Rubber Co. v. B. & O. R. R., 115 I. C. C. 99, 102.

(d) The general basis of making rates from points in c. f. a. territory to Carolina destinations is by combination, either on Ohio River crossings or on the Virginia cities. Fairfield Paper Co. v. A. C. L., 115 I. C. C. 43, 44.

(e) Meridian, Miss., and Mobile, Ala., are border-line points between Mississippi Valley and southeastern territories and are considered Mississippi Valley points for rate-making purposes. Teague Hardware Co. v. C., B. & Q., 118 I. C. C. 221.

(f) When practicable rates through important grain markets should break into definitely known inbound and outbound components. Minnesota-Dakota Transit Millers v. A. A. R. R., 118 I. C. C. 585, 595.

(g) Complainant alleged that combination rates charged on iron and steel rails and other articles, including reinforcement concrete bars, from Huntington, W. Va., to Kentucky, Tennessee, and Virginia were and are unreasonable and unduly prejudicial. Huntington, on the south bank of the Ohio river, is served by the C. & O. and B. & O. The ship-

ments were tendered unrouted. About one half moved C. & O. to Covington, Ky., just south of Cincinnati, 161 miles, thence L. & N. or Southern. Remainder moved C. & O. to Winchester, 120 miles, or Lexington 138 miles, thence L. & N. or Southern. To some of the destinations joint rates are published, but the rates on rails generally are based upon the Cincinnati or Winchester combinations whichever are lower. A commodity rate of $3.28 is published to Winchester and class N by exception beyond. The combination basis on rails has been in force since 1889 from Huntington and other points in central territory to the destinations in southern territory. Joint commodity rates are maintained on reinforcement concrete bars to points on the eastern Kentucky division. Complainant seeks joint maximum rates on iron and steel rails of $4.80 to points on the Southern and L. & N. except eastern Kentucky division, and Bristol, to which points rates of $4.45 and $4.40, respectively, are sought. On reinforcement concrete bars, it seeks distance rates not in excess of those prescribed in Jones & Laughlin Steel Corp. v. B. & O. R. R., 96 I. C. C. 682. Effective March 15, 1926 rates on reinforcement concrete bars from Huntington to Louisville and Lexington were reduced to 22.5c per 100 pounds. HELD, rates attacked not unduly prejudicial but unreasonable to extent they exceed $4.40 per long ton plus factors 10 miles and under 20 120c per long ton, up to 180 miles of 400c per long ton; via Elkhorn City; rates attacked on iron and steel rails unreasonable to extent they exceeded $2.50 per long ton plus the same factors beyond Winchester; on reinforcement concrete bars unreasonable to extent they exceeded 22.5c per 100 pounds to Winchester plus rates ranging from 10c per 100 20 miles and less to 25c for 200 miles, reparation awarded. West Virginia Rail Co., v. C. & O. Ry., 128 I. C. C. 153.

II. ESTABLISHMENT.

§2. In General.

(a) The basing-point system of rate making has become obsolete, due to practical elimination of interior waterway competition out of which it largely arose, and because of changed railroad competitive situation and changes in the fourth section of the act and its administration. Southern Class Rate Investigation, 109 I. C. C. 300, 314.

(b) Rates through important grain markets should break into definitely known inbound and outbound components. This is the general method of constructing through rates on grain and grain products. The commission has also repeatedly expressed the view that through rates should normally be lower than the combination of local rates to and from any intermediate point; but obviously where through rates are made up, as they generally are in the case of grain and grain products, of factors to and from an intermediate market, this result can not be secured unless one of the factors is made lower than the corresponding local rate, or unless both are so made. In the case of grain and grain products rates the custom has been to make the outbound factor, but not the inbound factor, a proportional rate lower than the local. Grain and Grain Products, 122 I. C. C. 235, 270.

(c) Complainant attacked rates on lumber and other forest products in carloads, from points on the Indian Creek Valley Ry. to interstate destinations in trunk line and central territories have been and are unreasonable, unjustly discriminatory and unduly prejudicial. Indian Creek Valley connects at Indian Creek, Pa., with the main line of the B. & O. and extends northward through Indian Head to Jones Hill, Pa., 19 miles. Road is now controlled by the B. & O. Through rates from points on the Indian Creek Valley are made by adding a differential of $1.39 to the blanket rates from Group 3 on shipments destined to trunk line and central territories. The Commission finds nothing of record in this case which warrants a differential on lumber and lumber products from points on the Indian Creek Valley to trunk line or central territories. HELD, rates attacked unreasonable and unduly prejudicial to extent they exceed Group 3 rates, reparation awarded. Indian Creek Valley Lumber Co. v. B. & O. R. R., 126 I. C. C. 161.

(d) In passing upon the allegation of undue prejudice the fundamental issue, as the Commission has stated in many previous cases is whether carriers which have equalized rates on lumber and lumber products to certain destinations from all their main line and branch line points, which are located within a producing territory of some extent, may, without being guilty of undue prejudice, refuse to extend similar blanket rates to producing points within such territory which are

located on other branch lines which they control. Indian Creek Valley Lumber Co. v. B. & O. R. R., 126 I. C. C. 161, 165.

III. REASONABLENESS.

See Discrimination; Reasonableness of Rates.

§3. In General.

(a) In 92 I. C. C. 722, division 1, found that the class rates from western trunk line, central, and trunk line territories and rates on various commodities, in carloads, from points in the same territories and from Ohio river crossings and New Orleans, La., to Virginia, Minn., were not unreasonable or unduly prejudicial and dismissed the complaint. Virginia is served from Duluth by four railroads, distances over those lines from Duluth are by D. M. & N. 73 miles, D. W. & P. 78 miles, D. & I. R. 92 miles, and G. N. 136 miles. With few exceptions, class and commodity rates from all points in western trunk line, central, and trunk line territories to Virginia are made by using the combination on Duluth. The factors from Duluth to Virginia are the Minnesota intrastate class rates for 73 miles, also applicable on interstate traffic. It is recognized that the much pleaded factor of depressing water competition does exist at Duluth and that it has been met by the rail carriers. HELD, previous report affirmed, complaint dismissed. Virginia Chamber of Commerce v. A. A. R. R., 118 I. C. C. 195.

(b) Fact that commission may not have found the combination basis of charges between points east and west of Mississippi River unreasonable in certain past cases dealing with various commodities is not conclusive as to a particular commodity where the issue concerns measure of charges, the method of their construction being incidental. Russellville Compress Co. v. G., M. & N., 120 I. C. C. 481, 485.

(c) Complainant attacked commodity rate charged on casing head gasoline, carloads, from Delaware, Okla., to Los Angeles, Avon and Martinez, Calif., from August 25, 1920 to March 28, 1922 as unreasonable and unduly prejudicial. Delaware is 20 miles south of Coffeyville, Kas., and shipments moved Union Traction to Coffeyville and connecting lines beyond. Applicable rates were combinations on Coffeyville. Blanket rates apply generally from the midcontinent oil field. It is to the basis of those rates, which were 94.5c prior to August 26, 1920 and $1.26 thereafter, the complainant seeks reparation. Subsequent to the movement the Union Traction Co., became party to the blanket rate. HELD, rates attacked unreasonable to extent they exceeded those subsequently established. Reparation awarded. Henderson Co., v. A. T. & S. F. Ry., 128 I. C. C. 59.

(d) Upon contention that a combination of three locals is an unreasonable basis for making of rates, and in conflict with views expressed in Southern Class Rate Investigation, 100 I. C. C. 513, 661, FOUND: This depends upon whether local rates making up the combination are normal or depressed. Duplex Printing Press Co., v. B. C. E., 128 I. C. C. 692, 693.

I. CONTROL AND REGULATION.

See Control and Regulation.

§1. Jurisdiction of Commission.

See Jurisdiction of Commission.

(a) Group rates are largely result of voluntary action by carriers serving the group points in disregarding, for competitive reasons, the element of distance, and commission can not compel them to disregard distance unless in their rate adjustments they commit some violation of the act. Louisville Cement Co. v. S. Ry., 104 I. C. C. 456, 458.

II. ESTABLISHMENT OF GROUP RATES.

See Legality of Rates.

§2. In General.

(a) Group rates are largely result of voluntary action by carriers serving

group points in disregarding, for competitive reasons, the element of distance, and commission can not compel them to disregard distance unless in their rate adjustments they commit some violation of the act. Louisville Cement Co. v. S. Ry., 104 I. C. C. 456, 458.

(b) Commission has frequently approved maintenance of a group adjustment when it appears on the whole to be reasonable and not unduly preferential or prejudicial. Class and Commodity Rates between Western Points, 104 I. C. C. 578, 586.

(c) The fixing of groups necessarily requires that consideration be given to locations of points to be grouped, their transportation and commercial relationships, and the rail routes. Midcontinent Oil Rates, 1925, 112 I. C. C. 421, 448.

(d) Groups long maintained are presumably fair and will not be disrupted unless substantial justice clearly requires it. Indiana State Chamber of Commerce v. A. A. R. R., 115 I. C. C. 650, 657.

(e) The commission has frequently approved the group or blanket system of rate making, particularly when applied to limited areas containing natural resources, and where a rate basis is sought which would disrupt an existing adjustment, a comprehensive record should be developed. Standard Lbr. Co. v. A. C. L., 118 I. C. C. 703, 706.

(f) In the creation of large groups distances must, to a certain extent, be disregarded. Hanna Furnace Co. v. N. Y. C., 123 I. C. C. 627, 630.

(g) Complainant alleged that the commodity rates on lumber, shingles, posts and siding, carloads, from Idaho, Montana, Oregon and Washington to Gordon, Irwin, Merriman and Eli, Neb., were and are unreasonable. Destinations are on the C. & N. W. in the northwestern part of Nebraska. The line of that carrier enters Nebraska west of Crawford which is a connecting point with the Burlington. The Northwestern receives most of its lumber shipments from the above groups at Crawford, but some are delivered to it by the U. P. at Orin, Wyo. The fact that the territory on the Northwestern between the Colorado common point group and the Missouri river group is as extensive as the similar territories on the Burlington and U. P. does not establish the unreasonableness of the rates on the Northwestern. HELD, rates from Groups 1, 2 and 3 to Gordon, Irwin, Merriman and Eli, were, are, and for future will be unreasonable to extent they exceeded on shingles 70c, 58c on lumber from Group 1, 71 and 59c to Irwin, 72 and 60c to Merriman, and 73 and 61c to Eli and from Groups 2 and 3 66.5 and 54.5c to Gordon, 67.5c and 55.5c to Irwin, 68.5 and 56.5c to Merriman and 69.5 and 57.5c to Eli, proper relationship to be maintained between the competing origin groups in the territory covered by this complaint, reparation awarded. Walrath & Sherwood Lumber Co. v. C. & N. W. Ry., 126 I. C. C. 97.

(h) The Commission has often expressed the view that all groupings are more or less arbitrary; that group lines generally have the appearance of injustice to some point just across the line, but once established, groups should not be lightly or unnecessarily disturbed. Such grouping, however, should be established in such a manner as not to jeopardize unduly the right of shippers just across the line, or in close proximity thereto, to just and reasonable rates. Shelton Gasoline Corp. v. W. F. R. & F. W. R. R., 126 I. C. C. 125, 129.

(i) An extensive group or blanket adjustment necessarily disregards, to some extent, differences in distance and other elements which go to make up cost of service, and when arbitraries over group rates for comparatively short branch-line hauls are proposed the essential issue to be determined is not so much the reasonableness per se of the through rates which would result, as the propriety of the proposed arbitraries in the light of the extensive group adjustment voluntarily maintained by the carriers. Grain from Montana, 128 I. C. C. 123, 124, 125.

(j) Grouping is but one of the various elements to be considered in passing upon the reasonableness of rates to or from a given point. Iroquois Pulp & Paper Co., v. A. A. R. R., 128 I. C. C. 187, 191.

§3. Justification.

(a) Group rates are largely result of voluntary action by carriers serving group points in disregarding, for competitive reasons, the element of distance, and commission can not compel them to disregard distance unless in their rate adjustments they commit some violation of the act. Louisville Cement Co. v. S. Ry., 104 I. C. C. 456, 458.

(b) There is perhaps greater warrant for the group or blanket system of rate making when applied to areas con-

taining natural resources than in any other case. Chicago Gravel Co. v. A. T. & S. F. Ry., 118 I. C. C. 633, 645.

(c) It does not follow that average distances over all routes should not be considered in determining propriety of an adjustment which involves general level of rates to a considerable territory as well as relationship between destination groups. While each group is entitled to benefit of its short-line distance, it would be unfair to base rates upon that distance alone. See also 46 I. C. C. 66. Indiana State Chamber of Commerce v. A. A. R. R., 115 I. C. C. 650, 654.

(d) Groups long maintained are presumably fair and will not be disrupted unless substantial justice clearly requires it. Indiana State Chamber of Commerce v. A. A. R. R., 115 I. C. C. 650, 657.

(e) All groupings are more or less arbitrary, group lines generally having appearance of injustice to some point just across the line, but once established, groups should not be lightly or unnecessarily disturbed. Such groupings, however, should be established in such a manner as not to jeopardize unduly the right of shippers just across the line or in close proximity thereto to just and reasonable rates. Transcontinental Oil Co. v. B. & O., 118 I. C. C. 518, 521.

(f) There is perhaps greater warrant for the group or blanket system of rate making when applied to areas containing natural resources than in any other case. See 33 I. C. C. 33. Groups long maintained are presumably fair and are not to be disrupted unless substantial justice clearly requires it. Dissatisfied producers deprived of benefit of their proximity to a common market must show that they are actually injured by an unjust and unlawful discrimination. See 40 I. C. C. 311. Chicago Gravel Co. v. A., T. & S. F., 118 I. C. C. 633, 645, 646.

(g) The commission has frequently approved the group or blanket system of rate making, particularly when applied to limited areas containing natural resources, and where a rate basis is sought which would disrupt an existing adjustment, a comprehensive record should be developed Standard Lbr. Co. v. A. C. L., 118 I. C. C. 703, 706.

(h) All grouping for rate purposes is necessarily more or less arbitrary. Group lines generally have the appearance of injustice to some point just across the line. Yet the line must be drawn somewhere or the grouping abandoned. Once established, groups should not be lightly or unnecessarily disturbed. Black Servant Coal Co. v. I. C. R. R., 120 I. C. C. 604, 606.

(i) The Commission has recognized the practice of group adjustments under special circumstances as proper. The practice of embracing many points within the same group or zone has been so generally adopted by the carriers and so frequently recognized as proper by this Commission that its general propriety can hardly be challenged. The application of a common rate to a number of points in the same general territory effects an equality or opportunity which is usually most desirable. Humble Oil & Refining Co. v. B. S. L. & W. Ry., 126 I. C. C. 717, 722.

§4. Public Benefit.

See Evidence §44½.

(a) The Commission has frequently approved the group or blanket system of rate making, particularly when applied to limited areas containing natural resources. Where a rate basis is sought which would disrupt an existing adjustment a comprehensive record should be developed. Standard Lumber Co. v. A. C. L. R. R., 118 I. C. C. 703, 705.

(bc) Group adjustments are of advantage to the public and long-established groups should not be lightly or unnecessarily disturbed. Hanna Furnace Co. v. N. Y. C., 123 I. C. C. 627, 630.

(d) Complainant attacked commodity carload rates charged on bituminous coal from Illinois, Indiana and western Kentucky to points in Iowa generally; also from Illinois and western Kentucky to Hannibal, Mo., as unreasonable and unduly prejudicial. These are the first cases in which the general adjustment of coal rates to Iowa points has been considered primarily from the standpoint of the consumer. Previous cases have embraced only individual rates, or were considered chiefly from the standpoint of the operators, who are interested more in the rate relationships at points of origin than in the measure of the rates. THE RATES IN GENERAL. Rates on coal in the territory embraced in these proceedings, as elsewhere in the country, are generally published to apply from and to rather large groups. By far the most important origin group, so far as Iowa destinations are concerned, is the

southern Illinois group. This is now considered as the basic group. The rates from the other groups on lump coal are generally related to the basic group according to certain fixed differentials. The existing differentials are not directly attacked. In many instances the differential basis is not applied on fine coal. Due to carrier and commercial competition and other economic forces, distance has in the past been largely disregarded by the carriers in fixing rates on coal. For, regardless of the various motives which may have led to the establishment of the rate structure under discussion, it is obvious that in determining its reasonableness distance is a factor of major importance. This is none the less true by reason of the group adjustment. The difficulty with such an adjustment is to determine the proper distances to be used. RATES ON FINE COAL. To most of the important Iowa points, the rates on fine coal are lower than those on lump coal. Fine coal is of considerably less value than lump coal. It loads heavier, the average per car in this territory being about 49 or 50 tons while the average for lump coal is probably 44 or 45 tons. Due to the heavier loading of fine coal the charges per car are in many instances greater than those on lump coal notwithstanding the difference in rates. The maintenance of lower rates on fine than on lump coal is quite general in western trunk line territory. To most Illinois and many Wisconsin points however, the rates on fine coal are the same as those on lump coal. Dubuque alone of the more important Iowa destinations has the same rates on fine as on lump coal. Fine coal constitutes a large percentage of the coal shipped to this point. The rates to Dubuque appear to be in line with the rates on lump coal to the other river cities, and the record contains no satisfactory explanation of the failure to accord to it similar treatment with respect to fine coal. RATES TO MISSISSIPPI RIVER CITIES. Burlington, Davenport, Dubuque and other Mississippi river cities seek rates relatively on the same basis as is applied to Chicago. RATES TO INTERIOR EASTERN IOWA. Cedar Rapids, Waterloo, Ottumwa, and other interior cities in eastern Iowa complain that the rates they pay are relatively higher than those to the upper river cities. The latter are affected by the highly competitive rates to Chicago, which, by observance of the long and short haul rule, are blanketed west almost to the Mississippi river. As the traffic density is much greater in Illinois than in Iowa there is ground for urging a higher basis of rates to interior Iowa than to Illinois points. However the coal traffic from the producing points in question is heavier in eastern Iowa than in western Iowa and heavier to the larger cities, like Cedar Rapids, than to small communities. From an operating and traffic density standpoint no reason appears for relatively higher rates to Iowa than to Wisconsin and Minnesota points, but the rates to the Wisconsin and Minnesota points are affected by lake competition to a much greater extent than the rates to Iowa points. RATES TO SIOUX CITY. While the principal movement to Sioux City is over the routes through northern Illinois, the shortest of which is about 717 miles, much if not most of the coal is produced at points from which there are routes through St. Louis that are over 100 miles shorter, but not open to the public. The distance over the shortest open route through St. Louis is about 682 miles. RATES TO COUNCIL BLUFFS. To Council Bluffs the rates, made on basis of proportionals to East St. Louis and local rates beyond, are relatively higher than those to Kansas City. It is not necessary for the carriers from Illinois, Indiana, and Kentucky to maintain as low rates to Council Bluffs to meet competition as they do to Kansas City. RATES TO LINWOOD AND BUFFALO. To Linwood and Buffalo, Iowa, situated 7 and 9 miles southwest of Davenport, the rates on coal at the time of the hearing were slightly higher than those to Davenport. HELD, excepting on fine coal to Dubuque, the attacked rates to the Mississippi river cities and to Linwood, Mason City, Council Bluffs, and Sioux City, rate on fine coal from southern Illinois group to Cedar Rapids, not unreasonable or otherwise unlawful, and to Buffalo not unreasonable. Attacked rates on fine coal to Dubuque unreasonable to extent they exceed rates 17c less than rates on lump coal. HELD, rates from southern Illinois group unreasonable to extent they exceed $2.79 on lump and $2.60 on fine to Ottumwa, $3.04 on lump to Cedar Rapids, $3.15 on lump and $2.96 on fine to Des Moines, $3.15 on lump and $2.96 on fine to Waterloo, and $3.56 on lump and $3.37 on fine to Fort Dodge, other groups to be related on present fixed differentials. Iowa R. R. Commis-

sioners v. A. & S. R. R., 128 I. C. C. 293.

§5. Custom.

See Customs; Evidence §19½.

(a) The commission has recognized the practice of group adjustments under special circumstances as proper. See 36 I. C. C. 109 and other cited cases. Humble Oil & Rfg. Co. v. B., S. L. & W. Ry., 126 I. C. C. 717, 722.

(b) An extensive group or blanket adjustment necessarily disregards, to some extent, differences in distance and other elements which go to make up cost of service, and when arbitraries over group rates for comparatively short branch line hauls are proposed the essential issue to be determined is not so much the reasonableness per se of the through rates which would result, as the propriety of the proposed arbitraries in the light of the extensive group adjustment voluntarily maintained by the carriers. Grain from Montana, 128 I. C. C. 123, 124.

III. EXTENSION OF ZONE.

§6. In General.

See Basing Points and Lines §2 (d).

(a) Proposals of carriers and shippers embodying changes in oil-rate groups of the mid-continent field in Kansas, Missouri, Oklahoma, Arkansas, Louisiana, and Texas on traffic to and beyond Kansas City and St. Louis, disapproved. No important group changes should be made unless supported by the strongest reasons requiring removal of unlawful situations. Group rearrangement here proposed by shippers is designed basically to serve interests of Oklahoma and Texas but consideration must be given to interests of all who would be affected and their proposal would not serve best interests of the mid-continent refineries as a whole. Carrier's proposal is subject to somewhat the same comment, their effort having been to regroup and realign rates in a manner which would reflect transportation element to a somewhat greater extent than at present. Mid-continent Oil Rates, 1925, 112 I. C. C. 421.

§8. Proximity to Established Group.

(a) Complainant atttacked commodity rate of $4.62 per ton on phosphate rock, carloads, from Florida producing points served by the ACL and SAL to Roanoke, Ala., as unreasonable and unduly prejudicial. Respondents proposed to restore the rate of $4.62 formerly in effect. Rock loads heavily, moves in great volume and loss and damage claims are negligible. Roanoke is on the AB & A and C of Ga. 24 miles west of La Grange, Ga., over the line of the former carrier and 38 miles north of Opelika over the latter. Roanoke is located within the boundary lines of respondents group 5, and it took the same rate as other points in this group for about 10 years prior to the reduction of April 18, 1925. Since the latter date the rate to Roanoke has been $4.39 which is that applicable to points in group 4. It satisfactorily appears from the evidence that the attacked and the proposed rate of $4.62 was not and would not be unreasonable in and of itself. However, circumstances and conditions have brought about a group adjustment of rates in the territory under consideration and Roanoke is entitled to its proper place in such adjustment. It is clear that Roanoke properly belongs in group 4. HELD, suspended schedules not justified, complaint dismissed. Phosphate Rock from Florida, 115 I. C. C. 229.

(b) All groupings are more or less arbitrary; that group lines generally have the appearance of injustice to some point just across the line, but once established, groups should not be lightly or unnecessarily disturbed. Such grouping should be established in such a manner as not to jeopardize unduly the right of shippers just across the line, or in close proximity thereto, to just and reasonable rates. Transcontinental Oil Co. v. B. & O. R. R., 118 I. C. C. 518, 521.

(c) Complainant attacked commodity rates on bituminous coal, carloads, from Elkville, Ill., to Missouri, Iowa, Kansas, Arkansas, Colorado, Montana, Nebraska, Oklahoma, South Dakota and Wyoming as unreasonable and unduly prejudicial to extent they exceeded rates from the Du Quoin group. Elkville is 6.9 miles south of Du Quoin, Ill., on the I. C. For many years certain of the mines have been included in the Du Quoin group. There is actual or potential competition between complainant and the operators at Du Quoin, Dowell and other points where mines are now in operation, but com-

plainant has been able to dispose of its coal only at destinations taking the Du Quoin group rates from Elkville. It is clear that Elkville should be included in the Du Quoin group rather than the Southern Illinois group on this traffic. HELD, rates attacked unreasonable and unduly prejudicial to extent they exceed rates from points in the Du Quoin group. Black Servant Coal Co. v. I. C. R. R., 120 I. C. C. 604.

(d) Complainant attacked rates charged on grain and grain products, in carloads, from Memphis, Tenn., Cairo, Ill., St. Louis, Mo., Louisville, Ky., Evansville, Ind., Cincinnati, O., and points taking the same rates to Florence, Sheffield and Tuscumbia, Ala., as unjust, unreasonable and unduly prejudicial. Florence, Sheffield and Tuscumbia form one business community. They are located on the Tennessee River, an average distance of 154 miles east of Memphis and are served by the Southern and L. & N. Florence jobbers are in competition with jobbers at Memphis, Tenn., and Corinth, Miss., for the trade in the surrounding territory. The jobbers at Memphis and Corinth have a much lower basis of rates on grain and grain products from the Ohio and Mississippi River crossings than is maintained to Florence, which together with the outbound rates enable the Memphis and Corinth jobbers to deliver goods at practically all points in the common trade territory at a less aggregate rate than Florence jobbers must pay. Memphis and Corinth are both border points in the so-called Mississippi Valley territory, Corinth being 94 miles east of Memphis and Florence is about 60 miles east of Corinth and in southeastern territory. The rates to Florence are blanketed to all common points on the Memphis division of the Southern Ry. as far east as Chattanooga, Tenn., except from Cincinnati. Except on rare occasions when a carload sale is made, flour and grain products are shipped to Florence in carloads and then distributed in less carload quantities in the trade territory. The commission has frequently said that the rates prescribed to the Mississippi Valley were not designed as standards of reasonable maximum rates, but primarily to bring the rates in harmony with the fourth section, and at the same time return to the carriers substantially the same revenue as earned under the adjustment theretofore maintained. The reshipping rates to Memphis and Corinth also reflect competition of the west side lines to Memphis. They are merely the proportions the southern carriers receive from the river points of the through rates from Kansas City, Mo. The rates to the Mississippi Valley points are therefore not a proper basis by which to measure the rates to Florence. HELD, rates attacked on grain and grain products, in carloads, to Florence, Sheffield and Tuscumbia, Ala., are for future unreasonable to extent they exceed 16 cents from Memphis, Tenn., 22 cents from Cairo, Ill., Evansville and Mt. Vernon, Ind., and Louisville, Ky., and 25 cents from Cincinnati, O., and St. Louis, Mo., on traffic originating beyond; and 18, 24, 25, 25, 25, 28 and 27 cents on traffic originating at those points. HELD, further rates attacked unduly prejudicial to Florence, Sheffield and Tuscumbia to extent they exceed by more than 2 cents the rates applied on like traffic to Corinth. Florence Chamber of Commerce v. I. C. R. R., 122 I. C. C. 653.

(e) Where two territories in which rate levels and classifications vary widely, lie contiguous for long distances no plan of through rates can avoid some anomalous situations. Groups constitute a practical way of avoiding many of the difficulties and where this method is impracticable without undue sacrifice of revenue, the situation may be met, either by appropriate fourth-section relief or by establishment of rates over certain of the higher-rated routes that conform to the fourth section but do not in all cases meet the rates of ower-rated routes to and from relatively unimportant competitive points. Southern Class Rate Investigation, 128 I. C. C. 567, 577.

§9. Grading Rates.

See Distance Rates.

(a) When points distributed over an extensive area are grouped and a blanket rate applied to or from all such points, the fact that points lying within that blanket are on a branch line does not argue as strongly that there should be a branch line differential as when the rates are applied upon a graded basis. The question of whether or not there should be such a differential in connection with blanket rates depends in a large measure upon how extensive the blanket is. In an extensive blanket a branch line haul of 30 miles loses its significance unless it is made to appear that the branch line operation is much more expensive than

main line operations from remoter parts of the blanket. Grain from Montana, 128 I. C. C. 123, 127.

§10. Differentials.

See Advanced Rates §2½ (e); Differentals.

(a) Rates on baled hay from Arizona points to Mississippi River crossings, Memphis and south thereof, found unduly prejudicial to extent they exceeded contemporaneous rates from El Paso to same crossings by more than 6 cents from Thatcher group, 10 cents from Phoenix group, and 13 cents from Yuma group. Arizona Hay Traffic Asso. v. A. E., 107 I. C. C. 591, 599.

(b) Complainant attacked commodity rates on newsprint paper, carloads, from Espanola, Ont., to destinations in Wisconsin, Minnesota, Illinois, Missouri and Iowa, and to Omaha, Neb., as unjust and unreasonable, unjustly discriminatory and unduly prejudicial. Espanola is north of Georgian Bay, on the Canadian Pacific Ry., 137 miles east of Sault Ste Marie, Ont., and 98 miles west of Sturgeon Falls, Ont. Newsprint paper moves from Espanola to the destinations here considered over the C. P., either to the west through the Soo to Sault Ste Marie, Mich., and D. S. S. & A., or Soo Line and Sudbury, Ont., and thence south and west through Toronto, Ont., to Detroit, Mich., and connecting lines beyond. The origin and extent of the eastern rate blanket are set forth in 38 I. C. C. 120. With certain exceptions the rates from all points within this extensive area to any given point in the destination territory are the same and the short line workable route is through the Detroit gateway. Joint rates apply to prorating territory and rates to the other points are made on the lowest combinations, basing usually on Chicago, Milwaukee or Mississippi river points. Western differential basis was established pursuant to 66 I. C. C. 571, 73 I. C .C. 113. The rates from Espanola are not constructed upon a uniform basis. To all points in prorating territory Espanola is treated as an eastern mill and takes the eastern blanket rates. These are joint rates that apply only through the Detroit gateway, except that to Milwaukee, Chicago and Joliet, Ill., they apply through the Soo gateway. To other destination points the rates apply through the Soo gateway but they are not related to the eastern or western adjustment. To many important points they are joint rates, either specifically published or applicable under intermediate rules, and to the remaining points are combination rates basing on Soo Mich., or Minneapolis, Minn. Complainant asks for rates to all points 4c higher than the rates from the Soo. From the eastern blanket to prorating territory the distances favor Espanola by from 281 to 439 miles, but the rates are the same. To the western adjustment the rates from Espanola to all destinations range from 9 to 22.5c, and average about 17.5c higher than the rates from the Soo for a uniform excess in distance of 137 miles. The record furnishes no justification for the disparities with respect to Espanola. The average distance from Espanola to prorating territory is 703 miles. This is less by 361 miles than the average from the eastern blanket, but only 183 miles greater than the average from western mill points. The shortest average distance from any point in the eastern blanket is 825 miles, and from any western mill point, 287 miles. From the evidence of record it appears that Espanola lies well within the range of the western differential adjustment to the entire destination territory, and that from a transportation standpoint it is related to that adjustment in much greater degree than it is to the eastern blanket. HELD, rates attacked, in so far as the transportation takes place within the United States, unreasonable and unduly prejudicial to extent said rates exceed by more than 4c the rates from Sault Ste Marie, Ont., to the same destinations. Spanish River Pulp & Paper Mills v. A. & W. Ry., 113 I. C. C. 343.

(c) Complainant attacked commodity rates on printing paper, wrapping paper and paperboards, carloads, from Maine, New Hampshire, Vermont and Massachusetts to Baltimore and Washington as unjust and unreasonable, unduly prejudicial of mills on the Maine Central in the so-called Brunswick group and on the B. & M. Points of origin are located on the lines of the Maine Central, Boston & Maine, and New Haven. The rates on paper within trunk line territory and from New England to trunk line territory have long been in a chaotic condition. With some exceptions, sixth class rates or commodity rates equivalent thereto apply on paper from New England to trunk line territory, the rates being blanketed from and to extensive

origin and destination groups. The trunk line group which includes Baltimore extends as far west as Pittsburgh. In 98 I. C. C. 339, the Commission found the rates on newsprint to Washington were unreasonable to extent they exceeded the rates to Baltimore by more than 2 c. HELD, rates attacked to Baltimore not unreasonable but to Washington are unreasonable to extent they exceed rates to Baltimore by more than 2 c, reparation awarded. New England Paper & Pulp Traffic Asso. v. M. C. R. R., 113 I. C. C. 353.

(d) Group rates on fuel oil and other low-grade petroleum products from points in midcontinent field of Missouri, Kansas, Oklahoma, Arkansas, Louisiana, and Texas, to destinations in western trunk-line territory, Illinois, Indiana, and northern peninsula of Michigan, found unreasonable to extent they exceed 80 per cent of contemporaneous rates on gasoline between same points, fractions of a cent to be resolved to the nearest half cent. Midcontinent Oil Rates, 1925, 112 I. C. C. 421, 474.

(e) If the differential is to be preserved the increase in the rates from the nearer distant points while generally the same in amount must be greater in percentage than the increases from the farther distant points and consequently greater in percentage than rates on other commodities not on a group or differential basis. Chicago Gravel Co. v. A. T. & S. F. Ry., 118 I. C. C. 633, 642.

(f) A differential adjustment represents a combination of the group and distance method of making rates. Chicago Gravel Co. v. A. T. & S. F. Ry., 118 I. C. C. 633, 642.

(g) Rates on spelter by-products from points in c. f. a. territory, and from western termini points, not including Pittsburgh, to Trenton, N. J., found not unreasonable or otherwise unlawful. Trenton takes rates 2 cents higher than to Philadelphia, Palmerton, and Phillipsburg, this basis being in accordance with the general group adjustment between c. f. a. and eastern trunk-line territories which has obtained for many years. In the adjustment of class and commodity rates from Pittsburgh and points west thereof, Philadelphia, Palmerton, and Phillipsburg are located in Philadelphia group, to which rates are generally based on a differential of 2 cents under New York group, in which Trenton is located, and commission has hitherto refused to disturb this adjustment. See 23 I. C. C. 195, 198; 23 I. C. C. 684, 686. Lissberger & Co. v. P. R. R., 115 I. C. C. 521.

(h) It is the common practice of jobbers and manufacturers to make allowances in prices, and thus reduce their profits, where necessary to meet the prices of competitors enjoying freight rates on lower bases. A shippers enforced absorption of an unjustified difference in freight rates in the sale of his products results in undue prejudice to him. The undue prejudice is more pronounced when a rate maladjustment precludes him from doing business in which he might engage if rates were equitably related. Consolidated Southwestern cases, 123 I. C. C. 203, 211.

(i) Group rate on coal from Dante and Clinchfield, Va., points on the C., C. & O., in the Clinchfield Group 1, to Lambert Point, Va., for transshipment, found unduly prejudicial to extent it exceeds rate contemporaneously in effect from Carbo and St. Paul, Va., competing points located in the Clinch Valley district 2, to same destination for transshipment. The spread in rates between the two groups makes it impossible for mines in Clinchfield Group to successfully compete with those in Clinch Valley district and deprives them of opportunity to market coal in large consuming regions beyond Lambert Point. Moreover, Dante and Clinchfield are located near the center of the Clinch Valley district 2 but were not included therein, due to exclusion by the Norfolk & Western of all mines not located on its own rails when the group boundaries were drawn. The resulting group has thus become unnatural and distorted and its continuance can not be sanctioned by commission. Nonprejudicial rate relationship prescribed for future. Clinchfield Coal Corp. v. C., C. & O., 122 I. C. C. 37.

(j) In original report, Ogden Grain Exchange v. A. E. R. R., 126 I. C. C. 255, the Commission found that certain rates on grain and grain products, carloads, from Idaho, Montana, Oregon, Utah, Wyoming and Colorado to north Pacific coast and California terminals were not unreasonable except from and to the points shown in the report. Rates on the same commodities from the same points of origin to interior California, the Imperial Valley, and Arizona were found unreasonable. Present rates on

flour from this origin territory to California destinations, except the Imperial Valley, are generally 5c higher than the rates on wheat. To the Imperial Valley and Arizona the differential is generally 7c or greater. HELD, original report modified to reflect this differential in the rates to the territories mentioned. Ogden Grain Exchange v. A. E. R. R., 128 I. C. C. 490.

(k) Original decision and modifications, Southern Class Rate Investigation, 100 I. C. C. 513, 109 I. C. C. 300 and 113 I. C. C. 200. RATES VIA OHIO RIVER CROSSINGS. There are circumstances bearing upon the rates between central territory and the Carolinas via the Virginia cities which do not affect the rates between central territory and southern territory generally via Ohio river crossings. The cumulative effect of the proposed changes in the amounts and in the method of applying the differentials would be to increase materially the through rates which were prescribed. The Commission has shown that recognition must be given to the more favorable transportation conditions and the lower class rate level in official territory, and that rates over routes partly through official territory which are lower than rates for the same distances wholly within southern territory are not necessarily unduly prejudicial or preferential. In previous reports the Commission has repeatedly stated that where two territories in which rate levels and classifications vary widely lie contiguous for long distances, no plan of through rates can avoid some anomalous situations. That such situations would arise under the findings the Commission knew. Nothing in the petition is persuasive that groups do not constitute a practical way of avoiding many of the difficulties, or that where this method is impracticable without undue sacrifice of revenue, the situation may not be met, either by appropriate fourth section relief or by the establishment of rates over certain of the higher rated routes that conform to the fourth section but do not in all cases meet the rates of lower rated routes to and from relatively unimportant competitive points. Nothing presented justifies material changes in the bases heretofore prescribed for application to traffic via Ohio river gateways. Finding 17 will be amended to provide that in constructing through rates to and from points in southern territory the contemporaneous rates between the points in official territory and the gateway on the route in question may be observed as minima. Appendix Q will be revised by making the differential scales apply according to the haul in southern territory in each particular case and by prescribing two additional scales, both somewhat higher than scale 1, the first to apply to and from points within 30 miles of the gateways, and the second to and from points more than 30 miles but not more than 100 miles therefrom. Southern Class Rate Investigation, 128 I. C. C. 567.

(l) Complainant alleged commodity rates charged on lumber and forest products taking the same rates, in carloads, from Brunswick, Ga., to destinations shown in Agent Glenns eastern lumber tariff No. 7, I. C. C. A. 471 were and are unreasonable and unduly prejudicial to Brunswick and unduly preferential of Bainbridge and Savannah, Ga., and other points of origin. The evidence deals, for the most part, with the origin relationship which seems to be the real cause of complaint. Brunswick is served by the Southern and the A. B. & C. and is and since July 20, 1924 has been in what is called the lower Georgia main line group, which includes a part of Florida and all that part of Georgia south of Atlanta, Athens, Augusta and Savannah, except a small portion along the coast south of Savannah called the eastern Georgia or Allenhurst group. Bainbridge and Jacksonville, Fla., are also in the lower Georgia main line group. Under the present relationship the rates from Savannah are 2.5c under Brunswick to all the points. Under the former relationship the rates from Brunswick were 3.5c under the rates from Bainbridge to all of those points except New York, where the difference in favor of Brunswick was 4c and Pittsburgh and Buffalo where there was no difference. Bainbridge is about 160 miles farther than Brunswick from the Virginia gateways, through which traffic from Brunswick ordinarily moves. HELD, rates assailed not unreasonable or unjustly discriminatory but for future will be unduly prejudicial to extent they exceed by more than 1c the rates from Savannah to the same destinations, reparation denied. Brunswick Traffic Bureau v. A. C. L. R. R., 132 I. C. C. 621.

(m) Combination rates on structural steel from Indiana Harbor, Ind., a Group D point to Blythe, Calif., a Group 1 point, based on transcontinental factor from Group D to Group 3, plus a branch-line arbitrary to Group 1, found not unreasonable. Facts that other branch-line points were on the main-line basis and that Blythe was subsequently accorded the Group 3, or main-line basis, do not warrant a conclusion that the rate charged was in excess of a maximum reasonable rate. Illinois Steel Bridge Co. v. A., T. & S. F., 129 I. C. C. 87.

IV. REASONABLENESS.

§10½. In General.

See Advanced Rates §5 (2) (s); §9½ (f), §17 (m); Percentage Rates; Reasonableness of Rates.

(a) Rate on corn and oats from certain Nebraska Group G points to Portland, Oregon, found unreasonable to extent it exceeded lower rate contemporaneously in effect from other points in same group, which lower rate was established from points here involved subsequent to movement. Reparation awarded. See also 64 I. C. C. 461. Albers Bros. Milling Co. v. Director General, 104 I. C. C. 330.

(b) Rates on coal from Ohio and Crescent districts to certain points in Lower Peninsula of Michigan and to Elkhart, Ind., found not unreasonable or otherwise unlawful as compared with rates to Toledo, Detroit, and Jackson. Spreads between assailed and compared rates are not sufficiently out of line to warrant finding of undue prejudice and complainant's case, built entirely on distance, fails to take into consideration different conditions which render compared rates unacceptable as the foundation upon which to construct rates on a distance basis. Radical changes are sought in group adjustment which has existed for many years with commission's approval. However, evidence adduced deals with only a relatively small portion thereof and record fails to indicate how proposed changes will react on the group adjustment as a whole. Kalamazoo Chamber of Commerce v. C. & O., 107 I. C. C. 291.

(c) Complainants bring in issue the lawfulness under Sections 1, 2 and 3 of the act, of the rates on petroleum products in carloads, from Missouri, Kansas, Oklahoma, Arkansas, Louisiana, and Texas to western trunk line territory and to Illinois, Indiana taking Chicago rates, and Upper Peninsula of Michigan. The primary issue is that of origin relationships, although the questions of the reasonableness of the rates to particular destinations and of relationships of destination points are within the scope of the complaints. OUTLINE OF RATE STRUCTURE, OIL DEVELOPMENT PRODUCTION, ETC. The territory of origin is for the most part divided into rate groups. The more important groups are Group 1, Kansas City, Mo., Atchison and Leavenworth, Kan., and St. Joseph; Group 2, embracing all other refining or shipping points in Kansas and also Joplin, Mo.; Group 3 extending across the state of Oklahoma and embracing all shipping points in that state, except Devol, which is in the extreme southwestern portion of the shipping area; the Burkburnett or north Texas group in northern Texas; the Ranger group in Texas immediately south and west of the north Texas group; the south Texas group, embracing Houston, Beaumont, Port Arthur, and other points in that vicinity the New Orleans-Baton Rouge group in Louisiana; and the Shreveport-El Dorado group in Louisiana and Arkansas. There are in addition San Antonio and nearby points in Texas, Alexandria, La., and Fort Smith, Ark., which are of somewhat less importance as refining centers or points than are the groups just enumerated. First important case was 36 I. C. C. 109, Midcontinent Oil rates. The competitive conditions have resulted in practically but two origin blankets on traffic to St. Louis and Chicago, the rates from Kansas, Oklahoma, Arkansas and Louisiana being the same, and those from the north Texas, Ranger, and south Texas groups 2.5c higher. There are two natural gateways through which the traffic from the southwest moves, namely, Kansas City and St. Louis, and the rates to points beyond are related to the rates to those gateways. Except to some points east of the Mississippi River, however, St. Louis is not a gateway for traffic originating at Kansas City, from which point the routes generally radiate to the different destinations. The foregoing indicates the close rate relationships which exist between the origin groups. A possible exception is in the instance of the rates from Kansas City, or group 1. The rates from this group

are lower by varying amounts, depending upon the destination, than those from the nearest midcontinent group, Group 2, and are actually the lowest, although relatively the highest, rates here under consideration. Apparently they have never borne a definite or fixed relationship to the midcontinent adjustment and have never been passed upon by the Commission. Prices of gasoline are uniformly quoted on the Tulsa, Okla., Group 3 basis. That is, regardless of the point of shipment, the delivered price quoted is that obtaining at Tulsa plus the freight from Tulsa. Group 3 is regarded as the base group in this adjustment, and the rates from other groups are generally viewed in their relation to the rates from that group. Another element which has an influence upon the level of the rates which the rail carriers may maintain from this territory is that of pipe line competition. All important crude oil sources in the southwest are served by pipe lines which extend to Kansas City, St. Louis and Chicago. These pipe lines serve refineries at or in the vicinity of the points named, and the carriers must take into account the competition of these refineries, located near the market, which draw their crude oil in at less than the cost of rail transportation, and maintain rates which will enable the refineries located in the producing area to ship by rail and meet that competition. Petroleum products move in tank cars furnished by the shippers and on which the carriers pay a mileage allowance of 1.5 c. for the loaded and empty movement. The empty movement averages at least 100%. The arrangement simplifies the matter of furnishing or obtaining adequate equipment and appears to be mutually advantageous to both the shippers and the carriers. 15584 and 15585. It is readily apparent, that the adjustment of oil rates is not constructed upon a basis which takes into full account the relative transportation conditions. These complainants, although much of their evidence consists of comparisons of rates and distances from this territory in their relation to each other, do not contend that distance is the only guiding element, but would recognize advantages or disadvantages of location as reflected by differences in average distances in relating the groups one to another. The substitution of the 4.5 c increase on petroleum and its products in 1918 in lieu of the 25% increase generally applied to other traffic, has resulted in rates today which generally are lower than they would have been under the 25% increase. THE PROPOSED GROUP CHANGES. The territories of origin and destination here dealt with are, respectively, important refining and consuming areas. Western trunk line territory is to a large extent dependent upon oil produced in the southwest, and in turn the refineries in the latter territory are in keen competition for this business. The interests of all concerned require that rates be so adjusted that the producing interests throughout this origin territory may within reasonable limits have access to this outlet. The business is highly competitive and the comparatively narrow margin of profit limits the amount of rate disadvantage which may be absorbed and still permit distribution at a profit. There are features of the competitive situation, both from the commercial and the transportation standpoints, which are peculiar to the petroleum traffic. All parties to these proceedings recognize that reasonable groupings of the origin territory are proper if indeed not necessary. There are refineries scattered practically throughout the midcontinent field. Scarcely an important group change could be made without harmful effects upon some shipping point. With a few exceptions, the present groupings have been in effect for some time and an important commerce has been built up thereunder. While changes in the groups might result in some technical improvement in the rate adjustment there are many factors pointing to the desirability of leaving the present groupings unchanged. HELD, present groupings not unlawful and should not be changed. FUEL OIL. In the Midcontinent case the Commission prescribed reasonable maximum rates on fuel oil and other low grade oils to St. Louis and Chicago based on a differential of 5 c under the refined oil rates, and same suggestions to other destinations, this differential now being 6.5 c. Fuel oil differs from gasoline in the two important transportation respects of value and weight, in addition to the differences in commercial influences. The value of fuel oil is not more than one-fourth that of gasoline. The respective estimated weights used for the assessment of transportation charges are 7.4 and 6.6 pounds per gallon. It is proper that the rates on fuel oil should be lower than those on gasoline. It is desirable that a minimum difference between the rates on fuel and refined oils

should be adopted in order to bring about an adjustment of rates which will remove this source of complaint. A percentage relationship would produce a slightly increasing difference in rates and in charges per car as the rate on gasoline increases. HELD, a maximum basis of 80% of the rates on refined oil commends itself more than any basis suggested. HELD, rates attacked on gasoline and other so-called refined oils now taking the same rates, carloads, are as a whole not in excess of reasonable maximum rates, but said rates are unduly prejudicial as between the various origin groups and also as between the various destination points. HELD, rates for future to typical points are those set out below. Rates from group 2 to St. Joseph, Mo., unreasonable and unduly prejudicial to extent they exceed rates to Kansas City, Mo. Rates on fuel oil unreasonable to extent they exceed 80% of rates on refined oil. No change in existing rates to North Dakota and South Dakota, Minnesota beyond St. Paul and in northern group of Michigan. From Group 3 to Kansas City 27 c, Des Moines 33c, Cedar Rapids 35.5 c, Fort Dodge, 36.5 c, Mason City 38 c, Omaha 33 c, Lincoln 33 c, Sioux City 36 c, Sioux Falls 40 c, St. Louis, Mo. 32 c, Keokuk 33.5 c, Dubuque 38 c, Peoria 36 c, Chicago 39 c, Milwaukee 42 c, Wausau 46 c, St. Paul 42 c, Duluth 47 c, rates from the other groups varying differences under or over group 3. Midcontinent oil rates, 1925, 112 I. C. C. 421.

(d) In 96 I. C. C. 485 complainant attacked commodity rates on petroleum products, carloads from Tulsa, Okla., and grouped points to Indiana as unreasonable. In 96 I. C. C. 485 reasonable rates were prescribed. HELD, in view of the substantial similarity of the transportation conditions, in Indiana and Illinois, there is no warrant for the maintenance of higher rates to points in western Indiana than to Chicago and other Illinois points taking the same rates. The Commission is of the view that other factors warrant higher rates on the average to Indiana destination than to Chicago, distances considered. HELD, rates attacked unreasonable to extent they exceed 39 c, 41 c, 43 c, 45 and 45.5 c, to Indiana destinations west to east, fuel oil rates to be 80% of refined oil basis. Indiana State Chamber of Commerce v. A. T. & S. F. Ry., 112 I. C. C. 481.

(e) Complainant attacked commodity rates on coal, carloads from mines in the southwestern producing district of Kansas, Missouri, Arkansas and Oklahome to Lincoln and Havelock, Neb., as unjust, unreasonable and unduly prejudicial to extent they exceed the rates to Omaha, Neb., by more than 20 c per ton prior to July 1, 1922, and 18 c per ton thereafter, and for future to extent they might exceed the rates to Omaha. In 101 I. C. C. 759, division 2 found the attacked rates not unreasonable but unduly prejudicial to extent they exceed the rates to Omaha. In 89 I. C. C. 73, the Commission found rates on coal from these southwestern mines to Omaha and other Missouri river cities unreasonable and prescribed reasonable maximum rates. All routes named in the tariffs apply through Kansas City, Mo. From Kansas City the direct routes to Lincoln and Omaha are the Burlington and M. P., distances about 200 miles to both cities over either route. Havelock is on the Rock Island and Burlington about 5 miles east of Lincoln. Over the present authorized routes the average distance to Lincoln from all mines on all lines is from 10 to 31 miles shorter than to Omaha, and over the shortest practicable routes the average distance to Lincoln would be shortened by 44 miles. HELD, attacked rates to Lincoln and Havelock unreasonable to extent they exceed the rates to Omaha. Fourth section order granted relief to Rock Island. Lincoln Chamber of Commerce v. A. C. R. R., 113 I. C. C. 161.

(f) Complainant attacked commodity rates charged on fresh meats, and packing house products, carload and less carload, from Pueblo, Colo., to New Mexico as unreasonable, discriminatory, and, as compared with rates on like traffic from El Paso and Fort Worth, Tex., Oklahoma City, Okla., Wichita, Kan., and Cactus, Ariz., to the same destinations, unduly prejudicial and preferential. Complainant seeks the establishment to New Mexico points of rates on fresh meats and packing house products on basis of the scale now in effect in Arkansas, Oklahoma, Texas and New Mexico, 1716 scale, originally prescribed in 22 I. C. C. 160, and modified by the subsequent general increases and general reduction. Defendants offer to establish the scales provided in 81 I. C. C. 115 and 100 I. C. C. 4, the latter being about 20% higher than the 1716 scale. The movement from Pueblo is over a line of difficult operating conditions. HELD, rates attacked unreasonable to extent they exceed rates ranging

on fresh meats 47 c carload and 71 c less carload for 160 miles, packing house products 39.5 c carloads and 52 c less carload to 158 c on carloads and 240 c less carloads on fresh meat and 131 c carload and 171 c less carloads on packing house products for 1,000 miles, reparation awarded. Nuckolls Packing Co. v. A. T. & S. F. Ry., 113 I. C. C. 229.

(g) Complainant attacked commodity rates on newsprint paper, carloads, from Merrill, Wis., and other producing points in Wisconsin and Minnesota to Keokuk, Ia., since Jan. 13, 1922, as unreasonable and unduly prejudicial as compared with rates to Peoria and Chicago, Ill., Fort Madison and Burlington, Ia. Origin relationships were prescribed in 66 I. C. C. 571. Merrill is in the Fox River group. Keokuk, Ft. Madison and Burlington are on the Mississippi River. Keokuk is 171 miles north of St. Louis, 24 miles south of Ft. Madison and 43 miles south of Burlington. Keokuk was in the St. Louis group and Ft. Madison and Burlington in the Peoria group, rate to St. Louis 22.5 c and to Peoria 20.5 c. HELD, rates attacked not unreasonable but unduly prejudicial to extent rates to Keokuk exceed the rates to Ft. Madison, reparation denied. Keokuk Shippers Asso. v. B. Ry. of Chicago, 113 I. C. C. 286.

(h) Group rates on gasoline and other so-called refined oils now taking the same rates from points in the mid-continent field of Missouri, Kansas, Oklahoma, Arkansas, Louisiana, and Texas, to destinations in western trunk-line territory, Illinois, Indiana, and northern peninsula of Michigan, as a whole, found not in excess of reasonable maximum rates, but said rates are unduly prejudicial or preferential as between various origin groups and also as between various destination points. Reasonable and non-prejudicial rates or bases of rates prescribed. Midcontinent Oil Rates, 1925, 112 I. C. C. 421.

(i) Speaking generally, rate groups under section 15a should be designated having two tests in mind, (a) the practicability of determining the rate of return of the carriers constituting the group, and (b) the suitability of the territory for grouping for rate-making same rate group. Revenues in Western District, 113 I. C. C. 3, 27.

(j) If carriers in certain portions of any rate group designated under section 15a of the act are in a more prosperous condition than those in remainder, this fact may be considered in determining relative levels in different portions of same rate group. Revenues in Western District, 113 I. C. C. 3, 27.

(k) Complainant attacked commodity rates on articles in the uniform brick list from Johnsonburg, Pa., group to Atlantic Seaboard cities as unreasonable and unduly prejudicial as compared with rates from the Clearfield, Pa., group. The rates on brick to Atlantic seaboard cities and grouped points from the Clearfield, Johnsonburg and other producing groups in western Pennsylvania are made differentially under Pittsburgh, Pa. The Clearfield group takes a differential of 20c, Johnsonburg, Brookville and Johnstown groups 10c and Connellsville group 5c. Rate from Pittsburgh to New York is $4.20, Boston is 40c over, to Philadelphia and Baltimore 40 and 60c under New York. Prior to Nov. 1, 1918 the Johnsonburg group took the same rates as the Clearfield group and since that date it has taken the same rates as the Brookville group. HELD, rates attacked are properly aligned with the rates from other producing points, rates attacked not unreasonable or unduly prejudicial. Complaint dismissed. Alumina Shale Brick Co. v. B. & O. R. R., 113 I. C. C. 496.

(l) Rates on peaches and grapes from producing points in California to Hibbing, South Hibbing, Ely, Aurora, Virginia, Eveleth, Chisholm, and Gilbert, Minn., found unreasonable to the extent they exceeded lower blanket rate contemporaneously in effect to Duluth. Reasonable rate prescribed for future and reparation awarded. Hansen-Peterson Co. v. A. T. & S. F., 113 I. C. C. 575.

(m) Rates on bituminous coal from points in the Brazil-Clinton, Linton-Sullivan, Princeton, and Booneville groups in Indiana, to Hoopeston, Ill., found unreasonable as compared with rates from other Indiana and Illinois mines for comparable distances, rates from the Brazil-Clinton and Linton-Sullivan groups particularly being too high when tested by the Holmes & Hallowell scale prescribed in 69 I. C. C. 11, for application in a higher-rated territory. Reasonable rates prescribed for future and reparation awarded. Iliff-Bruff Chemical Co. v. C. & E. I., 113 I. C. C. 606.

(n) Rates to two competing points or groups may be within the range of reasonableness, and thus not in violation of section I of the act, but may be, nevertheless, improperly related and result in undue prejudice in violation of section 3. In such case commission may, where warranted by the record, prescribe specific rates to one or both of the competing points in order to remove undue prejudice. Ridenour-Baker Mercantile Co. v. A., T. & S. F., 113 I. C. C. 629, 634.

(o) Complainant attacked commodity rate of $4.92 charged on numerous cars of slack coal between June 1 and Sept 20, 1923, from Colorado on the D. & S. L., to Superior, Neb., as unreasonable to extent it exceeded $4.30. Complainants shipments originated at Milner, Haybro, McGregor and Mount Harris, points in Routt County in the Oak Hills district. Shipments moved D. & S. L., to Denver, Burlington beyond 617 miles. Rates on coal from producing points in Colorado and Wyoming are generally made the same as or with relation to rates from the Walsenburg group. HELD, rate attacked not unreasonable, complaint dismissed. Nebraska Cement Co. v. C. B. & Q. R. R., 113 I. C. C. 729.

(p) Complainant attacked commodity rate charged on various cars of crushed stone shipped from Marble Cliff, O., to Cairo, W. Va., from May to Sept. 1924 as unreasonable and unduly prejudicial to extent it exceeded $1.44. Marble Cliff is a local station on the Pennsylvania just outside of Columbus, O. Cairo is on the main line of the B. & O., 29 miles east of Parkersburg, W. Va., shipments moving through Wheeling, W. Va., about 298 mlies. Charged $2.25. The rate applicable is a group rate and group rates are in effect to Cairo on classes and other commodities from points in central territory. HELD, rate attacked not unreasonable or otherwise unlawful, complaint dismissed. West Virginia State Road Commission v. Penn. R. R., 113 I. C. C. 740.

(q) Complainant attacked commodity rates on coal, bituminous, carloads, from coal mining districts in Ohio and from the so-called Inner Crescent region, embracing certain portions of Pennsylvania, Maryland, West Virginia, Tennessee, Virginia and Kentucky to all points in Indiana as unjust, unreasonable and unduly prejudicial. Although complainant insists that grouping of destinations has been based on considerations affecting coal producers and carriers without due regard to the interests of the consumer, examination of previous reports will show that the latter have not been lost sight of. HELD, rates attacked not unreasonable or unduly prejudicial, complaint dismissed. Indiana State Chamber of Commerce v. A. A. R. R., 115 I. C. C. 650.

(r) Complainant attacked commodity rates charged on 35 cars of muriate of potash shipped between July 1, 1920 and Feb. 1, 1921 from Salduro, Utah to Chicago Heights, Ill., as unreasonable. Salduro is on the W. P., 113 miles west of Salt Lake City, Utah. The applicable 61.5c combination is based on East Fort Madison, Ill. The applicable 84.5c and 74.5c combinations are based upon East St. Louis, Ill., and that of 69c upon Savanna, Ill., The shipments required no special equipment. Loss and damage claims on this commodity are negligible. Complainant contends that Chicago Heights, a group D point should have taken the same rates as St. Louis, a Group E point. Prior to Feb. 28, 1920, a rate of 75c applied on both grades of potash to both groups. On that date a rate of 62.5c to both groups was established on low grade potash. On Feb. 29, 1920, rates of 60c in high grade and 50c on low grade were established to group E. After these shipments moved the rates on high grade potash to Groups D and E and on low grade potash to group D were reduced to the level of the rate on low grade potash to Group E. HELD, rates charged inapplicable, not unreasonable, complaint dismissed. Armour Fertilizer Works v. W. P. R. R., 115 I. C. C. 684.

(s) Complainant attacked commodity rates charged on cars of coal to Hutchinson and Wichita, Kas., from western Arkansas and eastern Oklahoma, Oct. 1, 1922, to Oct. 25, 1924, as unjust and unreasonable. The great majority of the shipments upon which reparation is sought moved M. P., and Midland Valley principally from Arkansas with occasional participation by other defendant lines; and the rates attacked are those published by the Rock Island, the Midland Valley and the M. P. The rates attacked bear favorable comparison in general with rates from the originating groups to points in Kansas, and from

Murphysboro, Ill., to Missouri and Arkansas. Some of the lines serving certain of the important groups of origin are not made parties and a readjustment along the lines proposed, upon unconfirmed and incomplete distance bases, would also make no provision for many of the producing points and might undesirably disrupt the present groups. HELD, rates attacked not unreasonable, complaint dismissed. Bunte v. C. R. I. & P. Ry., 118 I. C. C. 66.

(t) Complainant attacked commodity rates charged on gasoline, carloads, from Texas and Oklahoma to Bradford, Pa., as unreasonable and in violation of the fourth section. Bradford is 78 miles southeast of Buffalo, 98 miles southwest of Rochester, N. Y., and 208 miles northeast of Pittsburgh, served by the B. R. & P., Pennsylvania and Erie. Applicable rates were 71.5c prior to May, 1924, and 70c thereafter, corresponding rates to Buffalo were 65.5c and 64c, from Oklahoma, 67c to Bradford and 60.5c to Buffalo. Bradford is in trunk line territory and rates thereto from Texas and Oklahoma are and have been for many years on the Rochester basis. The Buffalo rate applies to points west of the line dividing central and trunk line territories. HELD, rates attacked not unreasonable. complaint dismissed. Kendall Refining Co. v. A. & V. Ry., 118 I. C. C. 689.

(u) Rates on bituminous coal from mining districts in Ohio and from the so-called Inner Crescent regions, to all points in Indiana found not unreasonable or unduly prejudicial as compared with rates from same origin points to destinations in western Ohio, the southern peninsula of Michigan, and in Illinois; nor does grouping of Indiana destinations result in undue prejudice to certain localities and undue preference of others. The history and propriety of general adjustment of coal rates from the Inner and Outer Crescents and in Ohio were exhaustively considered in various cases and were found not unreasonable or otherwise unlawful. Moreover the groups have been long maintained and evidence of record does not warrant a disturbance of the present adjustment. Indiana State Chamber of Commerce v. A. A. R. R., 115 I. C. C. 650.

(v) Rates on bituminous coal from Spadra and Greenwood groups in western Arkansas, and Oolagah and McAlester groups in eastern Oklahoma, to Wichita and Hutchinson, Kans., found not unreasonable as compared with those from same territories to Kansas City, Mo.-Kans., prescribed in 89 I. C. C. 73; 113 I. C. C. 161. Rates assailed compare favorably, distance and earnings considered, with those in same general region; from origin groups to Kansas points and from Illinois points to Missouri and Arkansas; also with single-line and joint-line intrastate scales in Kansas, Missouri, Oklahoma, and Arkansas. Moreover, while rates are apparently not related throughout as they should be, a readjustment to basis sought would make no provision for many producing points and might disrupt present groups. Bunte v. C., R. I. & P., 118 I. C. C. 66.

(w) Complainant attacked commodity rates on bituminous coal, in carloads, from origin groups in Arkansas and Oklahoma to Topeka and Lawrence, Kas., as unreasonable, unjustly discriminatory and unduly prejudicial. The record indicates that the maintenance of rates to Kansas City, Leavenworth, Atchison and St. Joseph from the Arkansas-Oklahoma and Spadra groups lower than rates from the same groups to Lawrence and Topeka affects the complainants only indirectly. The record indicates that the present rates are too high. HELD, rates attacked on lump and slack coal from the Arkansas-Oklahoma group and the Spadra, Ark., group to Lawrence are unreasonable to extent they exceed $2.80 per ton on lump and $2.40 per ton on slack from the Arkansas-Oklahoma group and $3.05 on lump coal and $2.40 on slack coal from the Spadra group. Rates on slack coal from the same points of origin to Topeka not unreasonable but rates on lump coal from the said points of origin to Topeka unreasonable to extent they exceed $2.95 from the Arkansas-Oklahoma group and $3.20 from the Spadra group. Reparation awarded. Albert Silk Coal Co. v. A. T. & S. F. Ry., 120 I. C. C. 69.

(x) Case was reopened for further hearing solely for the purpose of developing the facts with respect to the lease of the C. C. & O. by the L. & N. and the A. C. L., and the effect thereof upon the rate situation. Complainant attacked rates on coal from Appalachia and Dante districts, Va., to North and South Carolina, Georgia and Florida. HELD, rates attacked to Jacksonville and to points in Florida basing on Jacksonville unduly prejudicial to extent the rate from the Appalachia and Dante districts to Jack-

sonville exceeds the rate from the Harlan County district group 4 to Jacksonville, and other rates attacked not unduly prejudicial. Virginia Coal Operators Asso. v. A. & R. R. R., 120 I. C. C. 283.

(y) Complainant attacked commodity rates on lumber and forest products taking the same rates, in carloads, from Virginia, North Carolina, South Carolina, Georgia and Florida and in Alabama east of the L. & N., Southeast, to Jersey City, Weehawken, Bayonne, Perth Amboy, Newark, Harrison, Trenton and New Brunswick, N. J. as unreasonable. The instant proceeding is one of destination relationship, complainant contending they do not reflect the proper spread under the rates to New York. It is not unusual for a general adjustment such as that resulting from 85 I. C. C. 270, to include increases as well as reductions in rates. The fact that the spread in the rates to Jersey City and Trenton under New York is less than that formerly existing does not demonstrate that the rates attacked are unreasonable nor is there other evidence of record which would justify such a finding. HELD, rates attacked not unreasonable except that rates for D. L. & W. and Erie deliveries at Newark and Harrison and for Erie delivery at Weehawken are unreasonable to extent they exceed the rates prescribed in 85 I. C. C. 270. New Jersey Lumbermens Com. v. A. C. L. R. R., 120 I. C. C. 329.

(z) Sixth-class rates and minimum weights on spelter from Trenton, N. J., to Atlanta, Birmingham, and Chattanooga, and points grouped therewith, found unreasonable as compared with lower commodity rates taking a higher minimum contemporaneously in effect from spelter-producing points in eastern Pennsylvania relatively close to Trenton, to same destinations; also with those from and to various other points for comparable distances. Reasonable rates and minimum weights prescribed for future. Federated Metals Corp. v. P. R. R., 120 I. C. C. 181.

(aa) In considering group rates, distance alone is not controlling, for the very nature of such rates usually involves some disregard for distance. Virginia Coal Operators' Asso. v. A. & R., 120 I. C. C. 283, 292.

(bb) Rates on bituminous coal from Elkville, Ill., to destinations in Missouri, Iowa, Kansas, Arkansas, Colorado, Montana, Nebraska, Oklahoma, South Dakota, and Wyoming, found unreasonable and unduly prejudicial to extent they exceed corresponding rates from Dowell, Ill., and other points in so-called DuQuoin group. Except for slightly greater distance, transportation and other conditions from Elkville are substantially similar to those applying from DuQuoin group, and Elkville should be included therein rather than in the southern Illinois group. Reasonable and nonprejudicial rates prescribed for the future. Black Servant Coal Co. v. I. C., 120 I. C. C. 604.

(cc) Complainant attacked commodity carload rate of $3.83 on phosphate rock, from Brewster, Fla., to Pelham, Ga., as unreasonable. Pelham is in southwestern Georgia on the A. C. L., and Brewster is on that line 12 miles from Bartow, Fla., distance 342 miles from Pelham. Rock loads heavily and moves in great volume. Loss and damage claims are negligible. Rates on rock are grouped, both from the producing sections and to the principal southeastern consuming points. $3.83 is applicable from Group 2 and a rate of $2.93 is applicable from Group 1. It should be borne in mind that by far the greater portion of the haul is in Florida, where there is a lack of through or overhead traffic and a generally lighter traffic density and higher rate level than in the case of hauls through the territory north of that state. HELD, rate attacked not unreasonable, complaint dismissed. Pelham Phosphate Co. v. A. C. L. R. R., 122 I. C. C. 509.

(dd) Complainant attacked commodity rates on grain and grain products, in carloads, from all points in Utah and from points on the O. S. L. and U. I. C., in Idaho, Montana, Oregon and Wyoming to Utah, Colorado, Nebraska, Kansas, Oklahoma, Texas, Minnesota, Iowa, Missouri, Arkansas, Louisiana, Wisconsin, Illinois, Indiana, Kentucky, Tennessee, Mississippi and Alabama as unjust and unreasonable and unduly prejudicial as compared with rates from California, Colorado, Montana, Oregon and Washington and in violation of section four. RATES TO MISSOURI RIVER EAST AND SOUTHWEST. From points west of a line drawn from Duluth, Minn., through Minneapolis, Minn., Omaha and Kansas City in general the rates on grain to the east are based on combinations to and from one or more of the markets named. Wheat from the west through

Omaha the outbound proportional rates from that point are 13.5 cents to St. Louis, Mo., 15.5 cents to Peoria, Ill., 16.5 cents to Minneapolis, and 17.5 cents to Duluth and Chicago. This differential relationship of markets does not apply on traffic from the territory west of Colorado common points. From the north Pacific coast terminals and from a considerable territory in Washington and Oregon the rates on wheat are blanketed both as to points of origin and as to points of destination. The universal application of transit privileges in connection with the rates on grain has resulted from the policy of equalizing various mills, whether located near points of production or in the consuming territories. The great preponderance of the tonnage handled by defendants in the intermountain territory finds neither origin nor destination therein, but is simply handled through in what is practically an unbroken movement. On these long hauls there is a minimum of terminal expense incurred within the borders of Idaho, Utah, Wyoming and Colorado. The intermountain states are entitled to receive some benefit, and do benefit from the enormous volume of traffic which passes through them on its way to and beyond their borders, but the volume of traffic contributed by the intermountain territory does not entitle it to all of the benefit claimed from this situation. HELD, rates on grain to points in Colorado are not unreasonable or otherwise unlawful, except that to Colorado common points the rates from the following points in Utah are unreasonable to extent they exceed 41.5 cents on wheat and 37.5 cents on coarse grains from Utah common points, and from Morgan, Cisco, Green River and Price; 49.5 cents and 44.5 cents, respectively, from Delta; 54 and 48.5 cents from Milford; and 54.5 cents and 49 cents from Wendover. The rates on grain and grain products, carloads, from Colorado common points to Texas, Oklahoma, Arkansas, Louisiana and Mississippi are unreasonable to extent they exceed certain specified rates to specific destinations. To other points in the states named to which rates are attacked in the complaint the carriers will be expected to make such changes in the rates as may be necessary to place them on a basis consistent with the rates herein prescribed. The rates on grain from Colorado common points to other destinations here considered are not unreasonable. The rates on grain and grain products, in carloads, from Utah, Idaho and Oregon to all destinations to which rates are attacked, except to Utah and Colorado, will be unduly prejudicial to extent they exceed the rates from Denver by more than named differentials. Rates on flour to Colorado common points from the rest of the origin to destinations, and from the whole of that territory, including Colorado common points, to the entire destination territory, are unreasonable to extent they exceed the rates on wheat. Rates to Utah and Colorado on the Rio Grande not unjust or unreasonable. Ogden Grain Exchange v. A. & S. Ry., 122 I. C. C. 691.

(ee) Complainant attacked charges collected on 300 cars of fertilizer shipped from Philadelphia to destinations on Long Island, N. Y., from Jan. 19 to Aug. 1, 1924, as unreasonable. Shipments moved to Long Island groups A, B, C, and D for average distances of 117, 123, 140 and 185 miles, charged 18.5, 21, 22, and 25 cents. On Dec. 6, 1924 these rates were reduced to 16.5 cents, 19, 20 and 22.5 cents. The commodity rates from Baltimore were 3.5 cents less than the sixth class rates. The rates charged were the same as the sixth class rates. HELD, rates attacked unreasonable to extent they exceeded the subsequent published rates, reparation awarded. Tunnell & Co. v. Pennsylvania R. R. 123 I. C. C. 581.

(ff) Complainant alleged that commodity rates on salt, in carloads, from Kansas, Michigan and Ohio to Mason City, Ia., were unreasonable. Charged 31 cents minimum 80,000 pounds from the Kansas group; 29 cents minimum 37,500 pounds from the Michigan group and 31 cents minimum 37,500 pounds from the Ohio groups. Reparation is asked to the basis of the commodity rates of 25.5 cents from the Kansas field, 26 cents from the eastern Michigan and Ohio fields and 24.5 cents across lake from Ludington and Manistee, Mich., minimum 45,000 pounds. In Salt from C. F. A. to Western Trunk Line destinations, 74 I. C. C. 409, the commission explained at some length that the proposal to reduce the 29 cent rate from the Michigan group to Des Moines and Harvard, Ia., to 25.65 cents without likewise reducing the rate of 29 cents to Mason City was obviously unjustifiable. HELD, rates attacked unreasonable to extent

they exceeded those established May 23, 1925, reparation awarded. Decker & Sons v. U. P. R. R., 123 I. C. C. 621.

(gg) Fifth-class rates assessed on petroleum products from Bayonne and Tremley Point, N. J., to Fresh Pond, N. Y., all Group A points, found unreasonable as compared with commodity rates from various refining points to destinations in eastern trunk-line and New England territories; as compared with commodity rates contemporaneously in effect from Point Breeze, a Philadelphia group point, to Fresh Pond, established in compliance with commission's findings in Transcontinental Oil Co., 89 I. C. C. 738; and to extent it exceeded lower rate subsequently made effective to all Group A points, some of which involve a materially longer haul than to Fresh Pond. Reparation awarded. Transcontinental Oil Co. v. C. R. R. Co. of N. J., 122 I. C. C. 61.

(hh) Group rate on phosphate rock from Brewster, Fla., to Pelham, Ga., found not unreasonable as compared with lower group rate to Valdosta and Blackshear, Ga. In a group adjustment, such as that under consideration, there must be dividing lines, and where one point is located on or near this dividing line and another point just across that line in a higher rated group there will be a difference in rates. Along the border lines between groups the comparative situation is necessarily more acute than in case of average difference between points in two adjoining groups. Moreover, on phosphate rock from Brewster to Pelham, the greater portion of the haul is in Florida, where there is a lack of through or overhead traffic and a generally lighter traffic density and higher rate level than in case of hauls through territory north of that State. Pelham Phosphate Co. v. A. C. L., 122 I. C. C. 509.

(ii) Ordinarily where rates are made on a group basis, rates from an origin group to a destination are the same over all routes from the group. Mere fact that a route is a joint-line haul does not in itself warrant a rate higher than is reasonable for a single-line haul. Anthracite Coal Investigation, 122 I. C. C. 527, 535.

(jj) Carriers participating in circuitous routes under similar circumstances and conditions may reasonably expect to charge higher rates than over the short route, but extent of such circuity which would justify a difference in rates may depend upon methods of construction. Where grouping is extensively employed at both origin and destination, and where reasons of sound public policy exist for treating rates and routes collectively rather than individually, substantial differences in distance over routes whose use public convenience and necessity require may reasonably be disregarded; but fact that rates are to be applicable over all such routes must be given due weight in fixing their level. Anthracite Coal Investigation, 122 I. C. C. 527, 536.

(kk) Upon reconsideration, former report 115 I. C. C. 667, modified so as to provide that rates on rosin and turpentine, and articles taking same rates from producing points in southwestern group to Kansas City, Mo., are and will be unreasonable to extent rates on rosin and turpentine exceed those approved in 87 I. C. C. 740; 89 I. C. C. 634; and to destinations in c. f. a., territory, unreasonable and unduly prejudicial to extent they exceed maximum reasonable and nonprejudicial rates prescribed in original report. Turpentine & Rosin Producers Asso. v. A. & V., 122 I. C. C. 549.

(ll) The Houston—Galveston group embraces a strip of territory extending along the Gulf coast for approximately 100 miles, and takes in such ports of call as Galveston, Houston, Beaumont, Port Arthur, and Orange. Consolidated Southwestern Cases, 123 I. C. C. 203, 336, 337.

(mm) Rates on pig iron from Buffalo, N. Y., and Punxsutawney and Du Bois, Pa., to destinations in New England, found not unduly prejudicial to Buffalo or unduly preferential of Punxsutawney and Du Bois. While complainants contend that their business has decreased because their competitors, situated a greater average distance from same general market, pay the same rates, record indicates that complainant's shipments have increased for several years. While Buffalo has a longer haul at same rate on traffic to New York, Du Bois, and Punxsutawney have a longer haul at same rate on traffic to New England. Moreover three points named are and always have been grouped as to pig-iron rates to New England destinations and New York rate points and no reason appears for disturbing this adjustment. Hanna Furnace Co. v. N. Y. C., 123 I. C. C. 627.

(nn) In the creation of large groups distances must, to a certain extent, be

disregarded. Hanna Furnace Co. v. N. Y. C., 123 I. C. C. 627, 630.

(oo) Complainant alleged that the rates on grain and grain products, carloads, from points on the O. S. L. in Oregon, Idaho, Montana, Utah and Wyoming, from points in Utah on the Bamberger Electric, the D. & R. G. W., L. A. & S. L., S. P., U. P., U. I. C., and W. P., and from points on the main line of the Rio Grande in Colorado west of and including Salida, to points in Arizona and California, and to Portland and Astoria, Oreg., and Seattle, Wash., as unjust and unreasonable, unduly prejudicial of complainant in that the rates on the same commodities from California, Colorado, Idaho, Kansas, Minnesota, Montana, Nebraska, Oklahoma and Texas are unduly preferential of competitors in those states, and in violation of section four. Rates on the same commodities from many of the same points of origin to eastern destinations were recently prescribed in Ogden Grain Exchange, v. A. & S. Ry., 122 I. C. C. 691. RATES TO CALIFORNIA. From all points on the O. S. L., Los Angeles and San Francisco take the same rates. Rates to Los Angeles established by the U. P. were duplicated by the S. P. and W. P. to San Francisco and points grouped therewith. Rates to interior California points are generally based on combinations over San Francisco, Stockton, Los Angeles or Colton. Where joint rates are in effect, generally speaking they do not exceed the transcontinental westbound rates. The transcontinental rates apply to practically all points in California. The rates from points farther east to California are widely blanketed. From Kansas the rate to San Francisco extends back through California, Arizona, and New Mexico to Albuquerque, N. M., on the Santa Fe, a distance of more than 1,100 miles. The same is true of points on the S. P. west of Deming, N. M., and points on the S. P., W. P., and U. P. west of Utah. The same rates, namely 68c on wheat and 75c on flour, apply from Kansas, Nebraska, Missouri river cities, Oklahoma and Texas. The same rate applies to California from Kansas City as from Amarillo, Tex. RATES TO OREGON. From the Missouri river and Kansas a blanket rate of 68c and from Colorado common points a rate of 59c apply to Portland and Seattle. Certain definite relationships now exist from the origin territory to the north Pacific terminals. In all cases the rates on wheat to Tacoma and Seattle are 3c higher and to Astoria 5c higher than to Portland, although from the origin territory Seattle is about 180 miles and Astoria about 100 miles more distant than Portland. The relationship has resulted in part at least from the Columbia Basin case, 59 I. C. C. 321, 62 I. C. C. 633. RATES FROM MONTANA. Complainant shows that the rates attacked are higher, distance considered, to both California and the Pacific northwest than those from Montana to the same destinations. HELD, attacked rates to north Pacific coast and California terminals are not unreasonable except that from and to certain points specific rates are prescribed. The Commission shall expect the carriers to continue in the new rates the general relationships now existing between the rates on this traffic to Portland on the one hand and other north Pacific coast points on the other. HELD, from all points of origin to destinations in interior California, the Imperial Valley, and Arizona the rates attacked are unreasonable to extent they exceed rates indicated. Ogden Grain Exchange v. A. E. R. R., 126 I. C. C. 255.

(pp) In considering the reasonableness of group rates, distances and ton mile earnings between selected points can not be regarded as controlling. The reasonableness of such rates must be judged by average conditions. Humble Oil & Refining Co. v. B. S. L. & W. Ry., 126 I. C. C. 717, 720.

(qq) Rates on bituminous coal from mines in Pennsylvania and West Virginia to points in the Warren district in Pennsylvania, which is included in the Buffalo, N. Y., rate group, found not unreasonable or unduly prejudicial as compared with those from same points to Buffalo rate group as a whole. Buffalo group adjustment is not maintained solely with respect to Pittsburgh district and any reduction in rates to Warren district would require similar reductions throughout a large portion of the group. Rates are not out of line with those for similar hauls from other Pennsylvania groups to points in the east and in view of delicacy of coal-rate adjustment in this territory and long-continued maintenance of the Buffalo group, evidence is not sufficient to require a disruption of that group. National Petroleum Asso. v. B. & O., 126 I. C. C. 11.

(rr) Rates on lumber and related articles from points in coast, Spokane, and Oregon groups (Group 1, 2, and 3)

to Gordon, Irwin, Merriman, and Eli, Nebr., found unreasonable to extent they exceeded rates based on distance scale prescribed in 104 I. C. C. 695, for application in same general territory. Carriers required to preserve the existing competitive relationships between the various groups as pointed out in 78 I. C. C. 746, in publication of rates in conformity with that scale. Reasonable rates prescribed for future and reparation awarded. Walrath & Sherwood Lbr. Co. v. C. & N. W., 126 I. C. C. 97.

(ss) Rate on wrapping paper from Bastrop, La., to Dallas and Wichita Falls, Tex., found not unreasonable as compared with rates to Dallas from Kansas City, St. Louis, and Chicago for comparable distances, or with lower rate contemporaneously in effect from Elizabeth, La., to Dallas subsequently established over route of movement. Latter rate was not applicable via Bastrop, whereas rate assailed applied from Bastrop, New Orleans, and other Louisiana points grouped therewith to all Texas common points, and record contains no evidence of improper grouping. Dallas Paper Co. v. A. & L. M. Ry., 126 I. C. C. 739.

(tt) Rates on casing-head gasoline from Delaware, Okla., to Los Angeles, Avon, and Martinez, Calif., found unreasonable to extent they exceeded blanket rates contemporaneously in effect between same points. Blanket rates apply generally from mid-continent oil field to California, but combination rate was assessed due to failure of one participating carrier to become a party to blanket rate until subsequent to movement. Reparation awarded. Henderson Co. v. A., T. & S. F., 128 I. C. C. 59.

(uu) Proposed revision of rates on coal from mines in southern Illinois, western Kentucky, and the Birmingham district of Alabama, to destinations in Mississippi Valley, in purported compliance with findings in 109 I. C. C. 740, found justified as to destinations west of the Mississippi River, but not east thereof, except as to that portion covered by the zoning plan described in the report, provided that if slight changes in rates are necessary to comply with findings as to rates within the respective zones, such changes are authorized. However, investigation reveals the fact that no change can be made in adjustment of proposed rates in eastern part of Mississippi Valley territory which would not involve changes at other points and thus produce conflicts with section 4 of the act. Coal from Illinois, Kentucky and Alabama 128 I. C. C. 113.

(vv) An extensive group or blanket adjustment necessarily disregards, to some extent, differences in distance and other elements which go to make up cost of service, and when arbitraries over group rates for comparatively short branch-line hauls are proposed the essential issue to be determined is not so much the reasonableness per se of the through rates which would result, as the propriety of the proposed arbitraries in the light of the extensive group adjustment voluntarily maintained by the carriers. Grain from Montana, 128 I. C. C. 123, 124, 125.

(ww) It is unfair to consider only the shortest possible routes in measuring an established group rate which applies from points on a number of originating carriers and over various routes. Iowa R. R. Commissioners v. A. & S., 128 I. C. C. 293, 298.

(xx) All grouping for rate purposes is necessarily more or less arbitrary. Group lines generally have the appearance of injustice to some point just across the line. Yet the line must be drawn somewhere or the grouping abandoned. Once established, groups should not be lightly or unnecessarily disturbed. Sand from Pleasant Lake, 128 I. C. C. 439, 440.

(yy) While commission has often approved blanket rates covering substantial areas, such approval has been contingent upon presentation of adequate reasons therefore, and it has heretofore stated that in making a blanket adjustment, burden rests upon carriers to provide rates that shall not be unreasonable. In establishing rates on commodities moving in large volume from port cities to inland points of consumption a certain amount of latitude should be permitted in blanketing those rates, but to justify a blanket the lengths of the hauls from its edge to points within ought to bear a reasonable relation to entire haul. See 33 I. C. C. 33. International Paper Co. v. B. & M., 128 I. C. C. 466, 469.

(zz) Upon further argument, findings in former report in No. 15061, 107 I. C. C. 245, that rates on articles in uniform brick list from Danville, Ill., to points in Wisconsin, Michigan, Minnesota, and North Dakota were not unreasonable but unduly prejudicial, affirmed, but finding that the Wabash Valley group should be

divided into two subgroups in making rates to destination territory involved, modified so as to include Danville in the Wabash Valley group in accordance with findings in 68 I. C. C. 213. While evidence supports finding in original report that rates were not unreasonable, the relative adjustment complained of, under which differences in rates of Danville over competing Illinois points are greater than differences in distances warrant, clearly subjects Danville to undue prejudice and disadvantage. Nonprejudicial relationships of rates prescribed for future. Western Brick Co. v. N. Y. C., 128 I. C. C. 479.

(3a) Complainant attacked commodity rates on grain and grain products, in carloads, from Oklahoma to destinations in Louisiana, Mississippi, Tennessee, Alabama, Georgia, Florida, North Carolina and South Carolina as unreasonable and in violation of section four. The general basis of rates on grain and grain products from points west of the Mississippi river to southern territory is the combination to and from Mississippi or Ohio river crossings. Under this basis the through rates from the producing territory north of Oklahoma are equalized via the different gateways, but from Oklahoma there is no such equalization, the lowest combination in the great majority of instances making on Memphis, Tenn. The rates to Memphis are to a considerable extent grouped from a large part of Oklahoma, the present group rates being 31.5c on wheat and flour and 28.5c on corn. As a general rule, the rates from points located on lines which do not reach Memphis are on a higher basis, and in some instances on a combination over the junction point. They are also on a higher basis from points on all lines in the extreme western portion of the state. The trend of the recent decisions has clearly been against combination rates between territories. As a rule, in the case of these combination through rates on grain and grain products the factors which apply from the primary markets are proportionals which are lower than the corresponding local rates. In some measure, therefore, the principle is recognized that through rates should be lower than the combination of intermediate local rates. In view of the long continuance of the present method of constructing interterritorial rates and the support which the Commission has given to that method in prior decisions, the Commission is not prepared on the limited record in this case to find that it ought to be discontinued from a single state in the grain producing territory west of the Mississippi river. RATES TO WESTERN LOUISIANA. Local and joint rates on grain and grain products are in effect generally from Oklahoma to points in Louisiana on and west of the Mississippi river. HELD rates attacked on grain and grain products in caroads from points in Oklahoma to destinations in Louisiana west of the Mississippi river, including points on the west bank thereof, and to Mississippi river crossings in Mississippi and Louisiana on the east bank thereof are, and for the future will be, unjust and unreasonable to the extent they exceed on wheat and flour the column 20 rates, and on coarse grain rates the column 17½ rates, as set forth in Appendix 13 to the report in the Consolidated Southwestern cases. Oklahoma Millers League v. A. & M. R. R., 128 I. C. C. 523.

(3b) Fifth-class rates on green salted hides from various points to Ludlow, Pa., a Rochester group point, found not unreasonable as compared with lower rate contemporaneously in effect to Buffalo group points, or with rates between various other points for comparable distances. While complainant sought extension of Buffalo group rates to include Ludlow and contended that rates on green salted hides to other points were lower than the normal basis generally applicable on other traffic, it was not shown that hides are entitled to preferential rates, that class basis in not proper, or that disturbance of relative adjustment by extending Buffalo group rates to include Ludlow would be proper solution of question involved, as inconsistency between class rates arises from fact that rates within c. f. a. and trunkline territories are characterized by groups which were in effect long before establishment of c. f. a. scale. Curtis Leather Co. v. P. R. R., 128 I. C. C. 627.

(3c) Complainant attacked commodity rate charged on 49 cars of pine lumber shipped between July 5 and Sept. 11, 1922 from Bend, Ore., Sand Point, Coer d'Alene and Potlatch, Ida., and Missoula, Mont., to Bayport, Minn., as unreasonable and unduly prejudicial. Points of origin with the exception of Bend, are in the Spokane group. Bend takes an arbitrary over the Spokane group rates. The distances

from Spokane to St. Paul and Bayport are 1,504 miles, and 1,522 miles, and from Bend, 1,927 and 1,944 miles. Bayport, formerly South Stillwater, is 18 miles east of St. Paul and about 8 miles off the main lines of the N. P., the delivering carrier. The movement from the main line junction points to complainants plant involves a switching service. The mere fact that the rates assailed exceeded the rates to St. Paul has little probative force, as evidence of unreasonableness. The subsequent increase in the rates to St. Paul would seem to indicate that those rates were out of line. HELD, rates attacked not unreasonable or unduly prejudicial, complaint dismissed. Andersen Lumber Co. v. N. P. Ry., 128 I. C. C. 633.

(3d) Rate on fresh peaches from Palisade, Colo., to Syracuse, N. Y., found not unreasonable or otherwise unlawful as compared with those from Georgia points to Syracuse or from California points. Distance considered, rate attacked is on a relatively lower basis than those from Georgia, and as it is blanketed from Colorado to the Pacific coast, the alleged violation of long-and-short-haul provision of section 4 is without merit. Caruso, Rinella, Battaglia Co. v. D. & R. G. W., 128 I. C. C. 687.

(3e) Combination rate on printing presses from Vancouver, British Columbia, to Orlando, Fla., a point taking Group K rates, found not unreasonable as compared with Group A rates contemporaneously maintained from Pacific coast terminals to New York. Earnings under latter rates as well as those under rates from various producing points to Orlando, compare favorably with those under rates assailed for comparable distances. Duplex Printing Press Co. v. B. C. E., 128 I. C. C. 692.

(3f) Complainant alleged rates on canned goods, in straight or mixed carloads, from Mobile, Ala., to Georgia, Mississippi, Tennessee, Kentucky, Ohio Illinois and Missouri are unreasonable. The rates under attack were the result of a revision of rates by defendants on July 1, 1923 following fourth section order 7836 under which they were required to revise their rates on canned goods and certain other commodities from and through the Ohio river crossings so that the rates to destinations in southeastern territory should not exceed those to more distant destinations in Mississippi valley territory. The Mississippi valley lines elected to publish rates to Mississippi valley points no higher than those which they had originally proposed and which were superseded by the rates approved in Mississippi valley case 64 I. C. C. 306, less the general reduction of 10%. On this basis, the rate from St. Louis to Memphis was 42c and this rate was used as the key of the revision in the Mississippi valley which became effective July 1, 1923. HELD, rates assailed in so far as they apply on fruits, vegetables, and fish, including shrimp, in packages straight or mixed carloads, are for the future unreasonable to extent they exceed class 7 rates approved in Southern Class Rate Investigation, 113 I. C. C. 200 from and to the points in question. Mobile Chamber of Commerce v. A. & V. Ry., 129 I. C. C. 147.

(3g) Complainant alleged combination rates charged on six cars of potatoes shipped during June 1924 from points on the Washington & Vandemere in North Carolina to Youngstown, O., is unreasonable, unduly prejudicial and in violation of section four. Charged commodity and class rates composed of 42.5c to Richmond or Petersburg, Va., and 74.9c beyond. The origin points here involved are known as rate group 25, Washington and nearby points as rate group 20, and Warsaw, N. C., and nearby points as rate group 21. On Jan. 15, 1925 the rates from Groups 20 and 21 to Youngstown were made the same as those to Cleveland, but from Group 25 the rate remains as when the shipments moved, while the through commodity rate to Cleveland is 83c. HELD, rate assailed unduly prejudicial and unreasonable to extent it exceeded 83c, reparation awarded. Frank v. A. C. L. R. R., 132 I. C. C. 258.

(3h) In 122 I. C. C. 527, the Commission found the adjustment of rates then existing on prepared sizes of anthracite coal, in carloads, from the Wyoming, Lehigh and Schuylkill regions in Pennsylvania to Albany, Troy, Mechanicville, Utica, Syracuse, Geneva, Hornell, N. Y., over one or more routes to be unreasonable and unduly prejudicial. The L. V. states that competition of the mines served by it with mines in the same regions now paying the rate of $2.65 demands that the same rate be established from the mines which it serves. HELD, publication approved. Rates, charges, regulations and practices governing transportation of anthracite coal, 132 I. C. C. 419.

(3i) Complainant alleged carload rates, commodity, charged on two cars of potatoes, in barrels, shipped from Mount Olive and Bethel, N. C., to Lehighton, Pa., on June 19, 1924 and June 23, 1926, were and are unreasonable, unjustly discriminatory, and unduly prejudicial. Shipments moved over A. C. L. to Richmond, Va., R. F. & P. to Potomac Yard, Va., Pennsylvania to Tomhicken, Pa., and L. V. beyond, charged 87 and 84c. The record shows that Phillipsburg, 42 miles east of Lehighton, is in a large destination group extending from Hagerstown, Md., on the west to New York, on the east, and including Wilmington, Del., and Philadelphia, Pa. This group will be referred to as the Philadelphia group. Lehighton, Allentown and Mahoney City, Pa., take the Pittsburgh rates. The rates are to these groups, to Philadelphia group 68 and 60c, Pittsburgh 87 and 84c, and Pottsville group 78 and 75c. At the time of movement the applicable rate from Mount Olive to Lehighton was unrestricted. Over the route of movement the latter point is intermediate to Phillipsburg. Effective May 20, 1926 the rate to Phillipsburg was restricted to apply over routes other than by way of Tomhicken and the L. V. HELD, rates assailed were, are, and for future, will be unreasonable and unduly prejudicial to extent they exceed 78c from Mount Olive and 75c from Bethel, reparation awarded. Freeby v. A. C. L. R. R., 132 I. C. C. 602.

§11. Reasonableness of Group.

See Reasonableness of Rates.

(a) The fixing of groups necessarily requires that consideration be given to locations of points to be grouped, their transportation and commercial relationships, and the rail routes. Midcontinent Oil Rates, 1925, 112 I. C. C. 421, 448.

(b) Generally speaking, class rates for longer distances in trunk-line territory are not on a mileage basis, but are grouped, and some of these rate groups are quite extensive. Cardiff Green Marble Co. v. M. & P., 113 I. C. C. 655, 657.

(c) Groups long maintained are presumably fair and are not to be disrupted unless substantial justice clearly requires it. Indiana State Chamber of Commerce v. A. A. R. R., 115 I. C. C. 650, 657.

(d) Complainant attacked commodity rates charged on pig iron, carloads, from Buffalo and Charlotte, N. Y., and Punxsatawney and Du Bois, Pa., to Connecticutt, Massachusetts, New Hampshire, Rhode Island and Vermont as unduly prejudicial to Buffalo and unduly preferential of Charlotte, Du Bois, Punxsatawney and competitors there. Present rates are $4.91 from Buffalo, Du Bois and Punxsatawney, and $3.65 from Charlotte. Complainants rely largely on the fact that the average distance from their plants in Buffalo to New England is less than the average distance from Du Bois and Punxsatawney. Here we have rates applying from Buffalo, Du Bois and Punxsatawney to a destination group extending 200 miles north and south and 214 miles east and west which have been in effect for 25 years. Obviously, in the creation of such a group adjustment distances must, to a certain extent, be disregarded. HELD, rates assailed not unduly prejudicial, complaint dismissed. Hanna Furnace Co. v. N. Y. C. R. R., 123 I. C. C. 627.

(e) Complainant alleged that the rates on bituminous coal, carloads, from Pennsylvania and West Virginia to destinations in the Warren, Pa., district are unreasonable, unjustly discriminatory and unduly prejudicial. The rates assailed are grouped as to origin and destination points. The Warren district is in northwestern Pennsylvania and within the Buffalo, N. Y., rate group, of which it forms part of the southern boundary. The Pennsylvania is the only defendant that serves the Warren district direct from the coal fields. Other originating carriers are the B. & L. E., B. R. & P. and P. & L. E. The Pennsylvania is the short line. Over that carrier the average distance from the Pittsburgh group to Warren and the Warren district is 210.3 miles, and 210.2 miles. The adjustment under which the Warren district is included in the Buffalo rate group has been in force over 25 years. The rate from the Pittsburgh district to the Buffalo group is $2.24. To Oil City, Pa., and Titusville, points on the Pennsylvania immediately south of the Buffalo group, the respective rates are $1.84 and $1.99. The interstate routes are more or less circuitous and in most instances materially longer than the intrastate routes. In view of the well recognized delicacy of the coal rate adjustment in this territory and the long continued maintenance of the Buffalo Group, the Commission is of opinion that the evidence is not suffi-

cient to require a disruption of that group as contended for by complainants. HELD, interstate rates not unreasonable or unduly prejudicial, complaint dismissed. National Petroleum Asso. v. B. & O. R. R., 126 I. C. C. 11.

(f) The Commission has often said that groups of long standing should not be disrupted unless the party seeking such action is actually damaged by discrimination resulting from the group adjustment, and unless substantial justice requires it. National Petroleum Asso. v. B. & O. R. R., 126 I. C. C. 11, 16.

(g) Commission has consistently declined to disrupt rate groupings of long standing unless preference and prejudice involved resulted in substantial injury to complaining shippers or localities. Carriers have not been required to depart from principle that every shipper or community is entitled to advantages of its location, but where carriers have voluntarily departed therefrom and such departure has not caused substantial injury, commission has not interfered, and even where injury is shown, preference or prejudice may be justified by competition. See 95 I. C. C. 539, 565, 567. However, where it is shown that extensive grouping or port equalization, voluntarily maintained by same carriers without justification by competition, has disregarded substantial differences in distance and resulted in injury to shippers or localities, it has been found unlawful and reasonable rates prescribed. See 57 I. C. C. 554; 59 I. C. C. 321. Galveston Commercial Asso. v. G., H. & S. A., 128 I. C. C. 349, 387, 388.

(h) In Western Brick Co. v. N. Y. C. R. R., 107 I. C. C. 245, division 1 found the rates on articles in the uniform brick list, in carloads, from Danville, Ill., to interstate points in Wisconsin, Michigan, Minnesota and North Dakota as not unreasonable but unduly prejudicial as compared with rates from a number of Illinois points and nonprejudicial relationship of rates was prescribed for the future. Respondents, in purported compliance with the order in that case, proposed a revision of the rates there dealt with and other related rates from various producing groups chiefly in Illinois and Indiana, and including a few points in Missouri and Iowa, to interstate destinations. The Commission is persuaded from a study of the original record and of the further evidence now before it that the integrity of the Wabash Valley group as fixed in the General Brick case should be preserved, and the conclusions in the original report in this case are accordingly modified. The evidence supports the finding in the original report that the assailed rates from Danville were not and are not unreasonable. HELD, rates from Danville not unreasonable but for the future unduly prejudicial to extent they exceed certain differentials over Chicago to the destinations involved. The rates proposed to destinations in Wisconsin and Minnesota are not unreasonably high. The Commission fails to find warrant in the record for greater increases to Michigan destinations than to Wisconsin destinations. Respondents have not justified the proposed increase in the spread between the rates to St. Paul on the one hand and Duluth on the other. The Commission can not determine whether or not St. Louis should have a differential of less than 50c over Chicago to the Twin Cities and grouped points but it is of the view that the difference should not exceed this amount and, accordingly, that the present and proposed differential of 70c is excessive and out of line with other present and proposed differential relationships. As the rates from Iowa points are not before the Commission in these proceedings it can express no opinion as to this situation. other than to say that the present adjustments may be presumed to represent respondent's views as to the proper competitive relationships to be maintained between the rates from Iowa and from Illinois, and that respondents should give consideration to the question of the relationship to be observed between the rates from these producing points in connection with such revised adjustment as may be proposed from Illinois points. HELD, schedules not justified without prejudice to the filing of new schedules in conformity with the findings herein. Western Brick Co., v. N. Y. C. R. R., 128 I. C. C. 479.

§12. Reasonableness of Individual Rate.

See Reasonableness of Rates.

(a) Upon further hearing, former report, 93 I. C. C. 593, reversed, and rate on rough staves and headings from Bonita, La., to Louisville, Ky., found unreasonable to extent it exceeded lower group rate contemporaneously maintained from a large number of stations to which Bonita is closely related, the lower rate being established by carriers from Bonita,

subsequent to movement. Reparation awarded. Louisville Cooperage Co. v. L. & N., 112 I. C. C. 228.

(b) Rates on potatoes from Pocomoke, Md., and various points on eastern shore of Virginia to Jacksonville, Fla., found unreasonable, as compared with rates from various origin points to same destinations for comparable distances, and to extent they exceeded lower group rate contemporaneously in effect from New York. Origin points here under consideration are usually located in New York group, and carrier subsequently established such rates therefrom. Reparation awarded. Hulsey-Bessent Co. v. P. R. R., 112 I. C. C. 317.

(c) Rate on crude sulphur from Freeport, Tex., to Elyria, Ohio, located in Detroit-Cleveland group, found unreasonable to extent it exceeded lower rate contemporaneously in effect to other points in that group, which lower rate was subsequently established to Elyria. Reparation awarded. Stauffer Chemical Co. of Tex. v. H. & B. V., 112 I. C. C. 495.

(d) Complainant attacked commodity rates on bananas, carloads, and bananas and coconuts, mixed carloads, from New Orleans, La., to San Antonio, Tex., as unreasonable. This traffic usually moves from New Orleans to San Antonio over lines of the S. P., and G. H. & S. A.; distance 592 miles, applicable rate was the Texas common point rate of $1.215 prior to and $1.095 on and after Jan. 1, 1922. Bananas are shipped in ventilated refrigerator cars and, with the exception of the summer months, do not require icing. They reach New Orleans in carload lots, and expeditious service to interior points is necessary. HELD, rate attacked unreasonable to extent it exceeded 97.5c on and after Sept. 15, 1923, reparation awarded. Gugenheim Goldsmith Co. v. G. H. & S. A. Ry., 113 I. C. C. 459.

(e) Complainant attacked commodity rates charged on soft coal, carloads, shipped since July 1, 1922, from Clinton, Coal Bluff, Latta, Midland, Seifert, Riley, Paxton, Sullivan, Petersburg, Lincoln City, Oakland City, and Enos, Ind., to Hoopeston, Ill., and that present rates are, unreasonable, unjustly discriminatory and unduly prejudicial. Hoopeston is located about 24 miles north of Danville, Ill., on the C. & E. I., between Evansville, Ind., and Chicago, Ill., and on the east and west line of the Nickel Plate, between Peoria, Ill., and Frankfort, Ind. Indiana mines are for rate making purpose divided into four main groups generally known as the Brazil-Clinton, Linton-Sullivan, Princeton and Booneville groups. Clinton and Coal Bluffs are in the Brazil-Clinton group; Latta, Midland, Seifert, Riley, Paxton, and Sullivan in the Linton-Sullivan group; Petersburg and Oakland City in the Princeton group; and Enos and Lincoln City in the Booneville group. The rates to Hoopeston are to some extent graded according to distance from these respective groups, but the record is not clear as to whether they have been adjusted on the basis of fixed differentials between the groups. Although the Indiana mines are grouped, all of the carriers serving the respective groups do not maintain, and apparently have not in the past maintained, uniform rates from each group to Hoopeston. HELD, rates attacked for future unreasonable to extent they exceed $1 per ton from Clinton and Coal Bluff, Ind.; $1.20 per ton from Latta, Midland, Seifert, Riley, Paxton and Sullivan, Ind.; $1.40 per ton from Petersburg and Oakland City, Ind.; $1.55 from Enos and Lincoln City, Ind., reparation awarded. Iliff Bruff Chemical Co. v. C. & E. I. Ry., 113 I. C. C. 606.

(f) Complainant attacked commodity rates on bituminous coal, carloads, from points in Southern Illinois and Western Kentucky to destinations in southeastern Missouri and northeastern Arkansas as unreasonable. Destinations are on the Frisco, Southwestern and M. P. Shipments originated at mines in southern Illinois and western Kentucky, of which the Herrin and Murphysboro groups on the M. P., the Southern Illinois, Belleville and west Kentucky groups on the I. C., and the Marion groups on the C. & E. I., are representative. They moved at joint rates over various routes to Thebes, Ill., thence over the Thebes bridge across the Mississippi river, and the rails of the three delivering carriers to the 23 destinations. Wyatt, Mo., on the Southwestern is the farthest destination point. In 62 I. C. C. 686, the Commission found rates on coal, carloads, from western Kentucky to points in southeastern Missouri and northeastern Arkansas unduly prejudicial to extent they exceed by more than 25c the rates from the Southern Illinois group. Rates from western Kentucky to these destinations are

now published on that basis in practically all instances, and any reduction in rates from southern Illinois would automatically result in rate reduction from western Kentucky. HELD, rates attacked from southern Illinois unreasonable to extent they exceed to Oran $1.44, Morley, Vanduser and Tanner $1.57, Sikeston $1.63, Dexter and Essex, $1.75, Libourn $1.93, Deventer and Wyatt $1.99, Kennett $2.05, and Piggott, $2.11, rates from western Kentucky unreasonable to extent they exceeded the above rates plus 25c, reparation awarded. Scott County Milling Co. v. Butler County R. R. Co., 113 I. C. C. 675.

(g) Complainant attacked commodity rates charged on dried fruits, carloads, shipped during the periods Oct. 14, 1918, to Feb., 4, 1920, and Sept. 15, 1921, to Sept. 10, 1923, from California to Ogden and Salt Lake City, Utah, as unreasonable and unduly prejudicial. The dried fruits under consideration are rated fourth class, in boxes and in sacks in carloads in western classification. They take alternative commodity rates based on 40,000 and 60,000 pound minima. HELD, rates attacked on dried fruit in boxes minimum 40,000 from Group 1 point prior to Nov. 25, 1923, were reasonable to extent they exceeded 75c, 94c and 84.5c, minimum 60,000 during the periods Oct. 14, 1918, to Feb 4, 1920, Sept. 15, 1921, to Dec. 31, 1921, and Jan. 1, 1922, to Nov. 25, 1923, and from group 3 point prior to March 20, 1924, unreasonable to extent they exceeded the combination of the established basing class of commodity rates from said group 3 points to Group 1 point, plus the rates above prescribed. Reparation awarded. Anderson Taylor Co. v. A. T. & S. F. Ry., 115 I. C. C. 313.

(h) Complainant attacked commodity rates on stone, in carloads, from Carthage, Mo., to Wichita, Kans., as unjust, unreasonable and unduly prejudicial, also that rates on stone from Bedford, Ind., to Wichita, are unreasonable. No. 17124. The rate from Carthage to Wichita is 11 c, short single line distance is about 192 miles over the Frisco, over the M. P., 223 miles. The rate applies on stone, rough or sawed, not further finished. The rate on other stone, cut planed, or polished is 12.5c. Defendants evidence indicates that the rate attacked compares favorably with the rates on rough or finished stone from Carthage to destinations in eastern and southern Kansas for similar hauls. HELD, rate attacked not unreasonable or unduly prejudicial, complaint dismissed. No. 17124-1. The rate from the Bedford district applies on stone, rough, sawed, or dressed, but not figured, lettered or polished. The 39c rate is 0.5c less than the combination rate on St. Louis. Rates from points east of the Mississippi river to destinations west thereof are generally made on the combination of locals, except where this basis has been broken down by water competition. The combination basis has received the approval of the Commission except in a few cases. Bedford stone is unique in character and very desirable. Defendants regard it somewhat as a luxury. The traffic is increasing materially in volume year by year. It is shipped freely throughout the country, apparently regardless of freight charges and notwithstanding the many sources of stone and other building materials nearer the points of consumption. HELD, rate attacked not unreasonable or otherwise unlawful complaint dismissed. Cuthbert Stone Co. v. St. L., S. F. Ry., 118 I. C. C. 69.

(i) Group rate on phosphate rock from producing points in Florida to Roanoke, Ala., found not unreasonable as compared with rate from Florida to other grouped points in same general territory or with rate subsequently established when the Roanoke rate was reduced for purpose of placing that point on a parity with points in the Atlanta-La Grange group. Phosphate Rock from Florida, 115 I. C. C. 229.

(j) Rates on oak staves and oak headings from Mississippi and Louisiana to California destinations found not unreasonable or otherwise unlawful as compared with contemporaneous rates on rough and dressed lumber. Staves and lumber do not constitute such "like traffic" that a different charge for their contemporaneous transportation is violative of section 2 of the act. See 50 I. C. C. 229. While equal rates are maintained on these commodities to various destinations a history of cooperage stock and lumber rates shows that no rigid rate relationship has been maintained between them. Therefore lumber rates are not determinative of reasonableness of rates on cooperage stock. Moreover, assailed rates compare favorably with those found reasonable by commission on various commodities for comparable

trans-continental hauls. Chess-Wymond Co. v. A. & V., 115 I. C. C. 703.

(k) Complainant attacked commodity rates higher on anthracite coal from Pennsylvania to northern New York over joint line route than maintained over single routes. Original report 101 I. C. C. 363, and 104 I. C. C. 514. The principal destinations to which changes are proposed are on the N .Y. C. along the Hudson River from Weehawken, N. J., to Troy, N. Y., thence west to Utica, N. Y., and Syracuse to a point about 50 miles west of Syracuse, thence south along the N. Y. C. to Furnace Run, Pa. The same rates that apply to the principal points also apply over one or more routes to Geneva and Hornell, N. Y., and other points. The present single line and joint line rates to Albany, Utica and Syracuse are generally $2.65 and $3.02, espectively, and the proposed rates $2.75 and $2.88. Generally respondents propose to reduce the spread of 37 cents now existing between the rates at common points in the destination territory over the single line routes on the one hand and joint line routes on the other by increasing the single line rates 10 cents and decreasing the joint line rates 14 cents, resulting in a spread of 13 cents. It is important to the consuming public that access be had to the greatest possible number of mines, especially in times of emergency. Where, as here, however, the distances over a number of the routes are unduly circuitous, fairness demands that such routes be disregarded in determining upon a basis for fixing reasonable rates for application over routes which are not unduly circuitous. Practically all originating carriers in the Wyoming region participating in the longer routes from those mines to the Albany-Utica-Syracuse group also participate in shorter routes. For competitive reasons it is highly desirable that the rate paid by a retail dealer on one route be as nearly as may be the same as the rate paid by a dealer on another route at the same point. Ordinarily carriers participating in routes of substantial circuity under substantially similar circumstances and conditions may reasonably expect to charge higher rates than apply over the short route. Where, as here, grouping is so extensively employed at both origin and destination, and where so many reasons of sound public policy exist for treating the rates and routes collectively rather than individually, substantial differences in distance over routes whose use public convenience and necessity require may reasonably be disregarded; but the fact that the rates are to be applicable over all such routes must be given due weight in fixing their level. HELD, proposed increased rates not justified. HELD, existing rates over one or more routes unjust, unreasonable and unduly prejudicial and preferential in the relation of such rates to each other. Just and reasonable rates for the future over one or more routes will be $2.65 per ton from all points in the Wyoming region on the line of each carrier serving such region, except the C. R. R. of N. J., L. V. and Pennsylvania, over all single line routes, and also over the shortest tariff route to each destination, determined by averaging the distances from all mines in the Wyoming region on each carrier to each destination; and $2.88 from all points in the Wyoming, Lehigh and Schuykill regions on the line of each carrier serving any of those regions, over all routes over which a rate of $2.88 per ton is proposed in the suspended schedules, other than those over which a rate lower than $2.88 will apply under the conclusions herein. HELD, except where inconsistent with the preceding findings, the proposed reduced rates have been justified. Rochester, N. Y., asks that the joint line rates and the single line rate of the Pennsylvania to that point be reduced to the level of the single line rates of the L. V. and Erie. HELD, rate of $3.15 to Rochester except over certain routes unreasonable to extent they exceed $3.02. Rate of $2.77 on pea and smaller sizes to Rochester except over certain routes unreasonable to extent it exceeds $2.65. RATES TO CARTHAGE AND CLAYTON. HELD, rates on prepared sizes and pea and smaller sizes to Carthage and Clayton from the same mines and over the same routes from and over which a rate of $3.28 now applies on prepared sizes to Watertown, including also the route of the N. Y. C., through Glenfield, N. Y., are unreasonable to extent they exceed $3.28 and $2.77 per ton to Carthage and $3.41 and $2.88 to Clayton. Anthracite Coal Investigation, 122 I. C. C. 527.

(l) Ordinarily where rates are made on a group basis the rates from an origin group to a destination are the same over all routes from the group. The mere fact that a route is a joint line haul

does not in itself warrant a rate higher than is reasonable for a single haul. Anthracite Coal Investigation, 122 I. C. C. 527, 535.

(m) Complainant attacked rates charged on green salted cattle hides, carloads, from Indianapolis and Indiana Harbor, Ind., St. Louis, St. Joseph, and Kansas City, Mo., Waukegan, East St. Louis, Chicago, Ill., Milwaukee, Wis., Wichita, Kas., Ottumwa and Sioux City, and South St. Paul, Minn., to Ludlow, Pa., were and are unreasonable to extent they exceeded the rates to Buffalo, N. Y. Ludlow, a local point on the Pennsylvania, 85 miles southeast of Erie, Pa., and 20 miles southeast of Warren, Pa., is in the Rochester, N. Y., group, and near its western boundary on east bound traffic, except that on traffic from certain points on the Pennsylvania near the eastern boundary of central territory it is in the Buffalo group. The average distance by the shortest workable routes from Chicago to all destinations in the Rochester group is a fraction over 580 miles. The short line distances to Ludlow and Rochester are 520 and 591 miles, respectively. Rates from Chicago to the Rochester group are 74% of the Chicago-New York rates. Green salted cattle hides move at the fifth class rates east of Chicago. The fifth class rate from Chicago to New York is 56.5c, making the rate to Ludlow 42c. Buffalo and Salamanca, N. Y., are located near the eastern border of the Buffalo group. The short line distances from Chicago are 523 miles to Buffalo and 528 miles to Salamanca, and the average distance to all destinations in the Buffalo group is 500 miles. Green salted hides move in box cars, claims for loss and damage are negligible. HELD, rates attacked not unreasonable, complaint dismissed. Curtis Leather Co., v. Pennsylvania R. R., 128 I. C. C. 627.

§12½. Relativity of Group Rate.

See Relative Rates.

(a) Rates on bituminous coal from points in the Brazil-Clinton, Linton-Sullivan, Princeton, and Booneville groups in Indiana, to Hoopeston. Ill., found unreasonable as compared with rates from other Indiana and Illinois mines for comparable distances, rates from Brazil-Clinton and Linton-Sullivan groups particularly being too high when tested by the Holmes & Hallowell scale prescribed in 69 I. C. C. 11, for application in a higher-rated territory. Reasonable rates prescribed for future and reparation awarded. Iliff-Bruff Chemical Co. v. C. & E. I., 113 I. C. C. 606.

(b) Rates to two competing points or groups may be within the range of reasonableness, and thus not in violation of section 1 of the act, but may be, nevertheless, improperly related and result in undue prejudice in violation of section 3. In such a case commission may, where warranted by the record, prescribe specific rates to one or both of the competing points in order to remove undue prejudice. Ridenour-Baker Mercantile Co. v. A., T. & S. F., 113 I. C. C. 629, 634.

(c) Rate on crushed stone from Marble Cliff, Ohio, to Cairo, W. Va., found not unreasonable or otherwise unlawful as compared with lower rates contemporaneously in effect to Parkersburg and other West Virginia points. The Cairo rate is a group rate, similar group rates being in effect to that point on classes and other commodities from c. f. a. points. The lower rates are depressed, having been established by carriers to meet keen competition with sand and gravel dredged from the rivers and brought in by water. West Virginia State Road Commission v. P. R. R., 113 I. C. C. 740.

(d) It does not follow that the average distances over all routes should not be considered in determining the propriety of an adjustment which involves the general level of rates to a considerable territory as well as the relationship between destination groups. While each group is entitled to the benefit of its short line distance, it would be unfair to base rates upon that distance alone. Indiana State Chamber of Commerce v. A. A. R. R., 115 I. C. C. 650, 654.

(e) Rates on dried fruits, in sacks, from points in groups 1 and 3 in California, to Ogden and Salt Lake City, Utah, found not unreasonable as compared with rates contemporaneously in effect to Denver, Colo., and Butte, Mont., but rates on dried fruits, in boxes, to and from same points, found unreasonable to extent they exceeded lower rates voluntarily established by carriers subsequent to movements here involved. Reparation awarded. Anderson-Taylor Co. v. A., T. & S. F., 115 I. C. C. 313.

(f) Applicable combination rates on muriate of potash from Salduro, Utah, to Chicago Heights, Ill., a Group D point, found not unreasonable as compared with lower rates contemporaneously in effect to St. Louis, Mo., a Group E point. Complainant showed that same rates applied to both groups on a number of commodities and that prior to and subsequent to movement equal rates applied to both groups on potash. Carriers, on the other hand, contend that rates established were depressed and were made to meet competition with imported fertilizer materials from Atlantic ports, and showed that on a number of commodities the rates between Salt Lake City and Chicago are higher than those to or from St. Louis. Armour Fertilizer Works v. W. P. R. R., 115 I. C. C. 684.

(g) Rates on bituminous coal from Spadra and Greenwood groups in western Arkansas, and Oolagah and McAlester groups in eastern Oklahoma, to Wichita and Hutchinson, Kans., found not unreasonable as compared with those from same territories to Kansas City, Mo.-Kans., prescribed in 89 I. C. C. 73; 113 I. C. C. 161. Rates assailed compare favorably, distance and earnings considered, with those in same general region; from origin groups to Kansas points and from Illinois points to Missouri and Arkansas; also with single-line and joint-line intrastate scales in Kansas, Missouri, Oklahoma, and Arkansas. Moreover, while rates are apparently not related throughout as they should be, a readjustment to basis sought would make no provision for many producing points and might disrupt present groups. Bunte v. C., R. I. & P., 118 I. C. C. 66.

(h) Combination rates on gasoline from Texas and Oklahoma points to Bradford, Pa., found not unreasonable as compared with lower rates to Buffalo, N. Y. Although Bradford is directly intermediate to Buffalo over the Buffalo, Rochester and Pittsburgh, the average distance to Bradford over all routes is a few miles in excess of that to Buffalo. Beyond river crossings specific rates are published to destinations in c. f. a. territory in which Buffalo is located, while rates to destinations in trunk-line territory are made on basing points, Bradford taking the Rochester base rate. Carriers show that rates to Rochester group have always been higher than those to Buffalo group and that adjustment is one of long standing which should not be disturbed. Kendall Refining Co. v. A. & V., 118 I. C. C. 689.

(i) The various issues include, either as unreasonable or as otherwise unlawful, the interstate and intrastate rates within and between the four southwestern states, namely, Oklahoma, Texas, Arkansas, and Louisiana west of the Mississippi River, and further include, with some limitations and exceptions, the rates between them and designated Mississippi and Missouri River gateways and all points in the states to the north, northeast and east of the said southwestern states. The Southwest will mean Arkansas, Oklahoma, Louisiana, west of the Mississippi River, and Texas common point territory. The latter territory embraces all of Texas except the western and southwestern portions of the state, which constitute the differential territory. Southern Missouri will mean that part of the state lying south of the Missouri River, but not including Kansas City or St. Louis. Kansas and southern Missouri will be called Kansas-Missouri territory. Crossing on the Missouri River, Kansas City to St. Joseph, Mo., will be referred to as Missouri River cities. St. Louis, Mo., Cairo, Ill., Memphis, Tenn., Vicksburg, Miss., and New Orleans, La. will be termed southwestern gateways The balance of the country embraced will be treated as defined territories; the area north of Kansas-Missouri territory and the Missouri River cities and west of the Indiana-Illinois boundary line, western defined territories; the area east thereof, to and including the Buffalo-Pittsburgh line and north of the Ohio River, as eastern defined territories; the area east of the Buffalo-Pittsburgh territory and north of the Potomac River as trunk line territory; and the territory south of the two last named groups and east of the Mississippi River as southeastern defined territories. Rates applying from north Atlantic ports and from trunk line and eastern defined territories through north Atlantic ports via ocean to south Atlantic or Gulf ports and thence by rail to destinations in the southwest or Kansas-Missouri territory will be termed Ocean rail rates. THE COMMERCIAL SITUATION. The traffic covered by these cases consists principally of manufactured goods, largely of the higher grades. It includes groceries, hardware, furniture, iron and steel articles, and hundreds of other commodities in more or less general use. These

articles move from points of manufacture to points within and without the southwestern territory, principally in carloads. The interior southwest is not primarily a manufacturing center, but is developing along that line. There are manufacturers of brooms, cotton and burlap bags, fertilizer, packing house products, sulphuric acid, cotton piece goods, furniture, vinegar, glassware, and other commodities, as well as millers and petroleum refiners. In so far as goods consumed in that territory and in Kansas-Missouri territory are concerned, while there is some direct movement from points of manufacture to points of consumption, the principal movement is in carloads on commodity rates to jobbing points, from which the goods are distributed in less carload quantities on class rates to retailers or consumers. Owing to the small development of manufacturing in the southwest most of the commodities originate at points in other territories, principally the western, eastern, and southeastern defined territories and trunk line territory. Therefore, while naturally not every jobber or jobbing town competes directly with every other, there is general competition in the distribution of commodities throughout the territory. The relationships of the inbound and outbound rates entering into the competitive distribution in surrounding districts and in the territory as a whole are of commercial importance. To some extent there is competition between jobbers and manufacturers. There is keen rivalry between towns in the southwest for the location of new industries to meet the increased needs of the growing population. Until there is brought about a fairly uniform adjustment which will afford substantially equal rates for equal services and rates properly apportioned as between long hauls and short hauls, complaints of discrimination and prejudice will continue to arise. Moreover, aside from the strictly commercial phases of the situation, in so far as practicable all rates, intrastate and interstate, should contribute in fair proportion to the revenues of the carriers. Therefore, in a general territory where traffic and operating conditions are substantially similar the rates for given distances should be substantially the same. The relative inbound carload rates on many articles are of primary concern. On others the outbound rates, principally less carload, are of most importance. Usually both are important. The record discloses mutual competition under inequitable rate conditions between points in Oklahoma, Arkansas, western Louisiana, Texas, Kansas, and southern Missouri. As between cities in each state there are areas in which the efforts to obtain business overlaps, or in which, under rates appropriately related to the respective transportation services, the activities of rival manufacturers and jobbers would overlap. Where there is no movement of particular commodities or no active competition between commercial interests it is often because the freight rate situation prevents it. In other words, the opportunity to do business is sometimes foreclosed by freight rates. TRANSPORTATION CONDITIONS. Speaking, generally, the entire area consists of substantially level prairie country, without unusual operating difficulties, although some mountain operation is encountered in western Arkansas, eastern Oklahoma and southern Missouri. The freight revenue per mile of road in all of the southwestern states other than Louisiana is approximately equal to that of Nebraska. The density of traffic, as revealed by the revenue ton miles per mile of road, is only approximately 20% less than that in Iowa. This record abundantly supports the conclusion that transportation conditions throughout the southwest are substantially similar; and on the average they appear to be not greatly less favorable than those in Kansas Missouri territory or in Nebraska. DESCRIPTION OF THE RATE STRUCTURE. ALL RAIL CLASS RATES. In general, the class rates in the southwest, in Kansas Missouri territory, and between the latter territory and Oklahoma and Arkansas have been and are constructed on distance scales. OCEAN RAIL RATES. Through one factor ocean rail class rates, subject to the western classification, are generally applicable from points in trunk line territory east of the Buffalo Pittsburgh line, other than points in northern New York and northern New England, to the southwest and Kansas Missouri territory via steamship lines from north Atlantic ports to south Atlantic ports and Gulf ports and thence by rail. To Texas such rates are maintained only via Gulf ports. To Louisiana the adjustment is similar to that on Texas traffic, except that to the northern portion of the state, including Monroe and

Shreveport, though one factor rates also apply via south Atlantic ports. Via ocean and rail routes, Oklahoma, with the exception of a few points in the eastern part, is blanketed. Rates from north Atlantic ports are generally the same as from interior points in trunk line territory. Such rates apply both via Gulf and south Atlantic port routes. Practically all ocean rail traffic to Oklahoma moves via south Atlantic ports. Speaking generally, most of the ocean rail rates other than the combinations on Gulf ports were originally related differentially to the all rail rates. This relationship has now partially disappeared, but to a considerable extent the ocean rail rates are still influenced by the all rail rates. The latter being generally combinations on St. Louis, the ocean rail rates generally grade up from the northeast to the southwest, rather than directly from east to west in accordance with the principal south Atlantic port routes through Memphis, or from south to north in accordance with the lines from Gulf ports. As a result the present rate structure via the Gulf ports abounds in fourth section departures. COMMODITY RATES. Little carload traffic moving in material volume to, from, and between points in the South west and Kansas-Missouri territory, either all rail or ocean and rail is subject to class rates. Commodity rates between Kansas, Oklahoma and Texas, on the one hand, and the gateways, Missouri River cities, defined territories, and trunk line territory, on the other, are constructed substantially in the same manner as described with respect to class rates, except that on a number of commodities lower rates apply from St. Louis to certain points in northeast Texas, including Dallas and Fort Worth, than to the remainder of Texas common point territory. All rail rates from the defined territories to the same area are usually made differentially with relation to the rates from St. Louis, although in many instances combinations upon lower Mississippi River crossings result in lower rates. Distance commodity rates for single line and joint line application are generally applicable on numerous articles in carloads between Shreveport and Texas, and intrastate in Texas, Oklahoma, and Kansas. ALL RAIL CLASS RATES. THE SCALES. A very large percentage of the carload traffic in the southwest and between that territory and other territories moves on commodity rates. There is very little movement on the carload class rates, except in instances where particular articles have, by exceptions to the classification, been placed in classes lower than those in which they are rated in the western classification. Practically all articles in less carload quantities in the territory under consideration are found in the first four classes, and practically all such traffic, moves on class rates, although on a few articles, such as cotton piece goods, candy, chewing gum, and others, commodity rates or classification exceptions, resulting in lower ratings than are found in the western classification, apply. Considering the southwestern territory as a whole, it appears that practically all the intrastate rates and many of the interstate rates have been materially increased in recent years, apart from the general changes of 1918 and 1920. SPECIFIC CLASS RATES TO AND FROM GATEWAYS AND MISSOURI RIVER CITIES. It is clear that, from a tonnage and revenue standpoint, the St. Louis rates are many times more important than those to or from any of the other gateways. Rates from all the defined territories, except on and west of the Missouri River on traffic to Oklahoma, excluding such important points as Chicago, St. Paul, Minn., Pittsburgh, Pa., Cincinnati, O., and numerous others, are based differentially over the St. Louis rates. Comparatively few rates base over any other gateway. Next in probable order of importance from a tonnage and revenue standpoint are the Missouri River cities, followed by New Orleans, Memphis, and Vicksburg in the order named. The record indicates clearly that wide disparities exist in connection with the specific class rates between the gateways and points in the southwestern and Kansas-Missouri territories. ALL RAIL CLASS RATES TO AND FROM DEFINED TERRITORIES. These rates are generally made differentially over the rates to and from St. Louis. The factors east of the Mississippi River are generally the local rates. Those west of the river are also generally local rates, except to Kansas City and other Missouri River points to which lower proportional rates apply. Between points in Kansas-Missouri territory and the southwest and points in trunk line territory the rates are generally combinations of locals or of locals and proportionals on the gateways or on Chicago. From southeastern defined

territories to the southwest the rates are made differentially over St. Louis. As in the case of the rates between the gateways and points in the southwestern and Kansas-Missouri territories, wide disparities exist in the rates to and from the defined territories. CARLOAD CLASS RATES. The carload class rates in the southwest are materially higher than those in official, southern and western trunk line territories. CLASS PERCENTAGE RELATIONSHIPS. No uniform class percentages apply in connection with the specific rates between Missouri River cities and southwestern gateways, on the one hand, and points in Oklahoma and Texas, on the other. The first four classes in the western classification embrace primarily less carload traffic, practically all of which traffic is within those classes. Some freight in carloads also is so rated, principally fourth class. Owing to the high class percentages obtaining in the southwestern and Kansas-Missouri territories in connection with the carload classes, comparatively little carload traffic moves on class rates except in those instances where articles have been given by classification exceptions ratings lower than those in the classification itself. A similar situation appears to exist in southern territory, but in official territory and in the area north of the Kansas-Missouri territory and west of the Indiana-Illinois to and including the Colorado common points a much greater percentage of carload traffic moves on class rates. Uniform class percentages apply throughout central and New England territories, and those in the remainder of official territory are not widely divergent. The commission is persuaded that the interests neither of the public nor of the carriers are served by maintaining carload class rates on such high bases that they are rarely used, making it necessary to follow the practice which has prevailed for many years in the southwest of establishing commodity rates on practically all commodities which move in carloads in material volume. It is due to this practice that many of the discrepancies in rates which are the subjects of complaint have arisen. Existing widespread dissatisfaction with the complexity of tariffs in the southwest is discussed in a later section of this report. Much of this complexity arises out of the prevalence of commodity rates and the failure to adjust them on a basis which would fairly relate the various points which compete with one another. In the circumstances, the commission is of the opinion that it should follow the principle that carload class rates should be prescribed which are capable of moving many of the carload commodities, as is the case today in official and western trunk line territories, thus making it possible to eliminate from the tariffs thousands of commodity rates. COMMODITIES. The carload commodity rates speaking generally, differ widely as to levels in different parts of the southwest, and should uniform, commodity distance scales, or group rates based on uniform scales, be established throughout that territory on almost any basis, radical increases and reductions would of necessity result. It has been pointed out that, except where marked differences in traffic density, population per square mile and per mile of railroad, and so forth, point to the propriety of different rate levels, the territory here considered is homogeneous, both in respect of transportation and of marketing conditions, that a uniform scheme of rate making, based largely upon distance, and according to each community the advantage or disadvantage of its location, affords the only real remedy for the existing unlawful rate inequalities. It follows, also, that the prescription of such a basis will remove any undue prejudice and preference that exist, and from that reason it will not be necessary to discuss in detail the various instances disclosed. AGRICULTURAL IMPLEMENTS OTHER THAN HAND. Agricultural implements other than hand, in carloads move in large volume from manufacturing points in the defined territories and from St. Louis to points in Kansas-Missouri territory and the southwest. Agricultural implements, farm wagons, and most other articles contained in the commodity descriptions of such traffic to, from, and between points in western territory are generally rated class A, minimum 24,000 pounds for a 36 ft. car, with graduated minima for cars of larger sizes. A competitive situation exists as between the carload rates from the gateways and defined territories, particularly the western territories, to the jobbing points, from those jobbing points to destinations in Kansas-Missouri territory and the southwest, and from the gateways and defined territories direct to nonjobbing destinations in those territories. AGRICULTURAL IMPLEMENTS, HAND. Hand agricultural im-

plements move in limited quantities in carloads from St. Louis and from manufacturing points in defined territories to jobbing points at which wholesale hardware houses are located in the Kansas-Missouri and southwestern territories. They are rated class A minimum 24,000 pounds for 36 ft. car, with graduated minima. The class rates herein prescribed are reasonable for application on hand implements in carloads, and existing commodity rates may be canceled and the class rates applied. If, however, commodity rates are retained from one or more sources of supply or to one or more jobbing points in Kansas-Missouri territory or the southwest lower than the class basis, similar commodity rates, subject to the same commodity description and representing the same percentage proportions of the class basis, and to be applied to or from other sources of supply or jobbing points as the case may be, to avoid undue prejudice or preference. AMMUNITION, SMALL ARMS. Ammunition for small arms, including blank or loaded cartridges, is rated fourth class, minimum 30,000 pounds. While the fourth class rates hereinafter found reasonable for application to and from Oklahoma and Texas are in most instances somewhat lower than the present fourth class rates, those rates to Oklahoma will generally be higher than the present commodity rates on ammunition. There is nothing in this record to indicate that the fourth class rates herein prescribed would be unreasonable for application to ammunition in carloads. BAGGING AND TIES. This description embraces coarse hemp or jute bagging and iron or steel ties or buckles used in baling cotton. These articles are used in large volume throughout the southwest, but only to a very limited extent in Kansas-Missouri territory. Consequently, the rates to and from the latter territory, or the relationship between the rates to or from that territory and those to or from Oklahoma, need not be considered. Rating is fifth class, but commodity rates much below the class basis are general. It is clear that the Oklahoma rates from all the four principal sources of supply are materially higher than the corresponding rates to, from, and between Texas, Arkansas and western Louisiana points, interstate and intrastate, and that Oklahoma users of these commodities suffer undue disadvantage and prejudice as a result. The delivered cost of bagging and ties being an important element in the cost of baling cotton, the relationships between the rates on bagging and ties at each gin point from the important sources of supply and to the gin points from each such source of supply are of importance. The competition between the respective sources of supply is keen practically throughout the southwest. BAGS AND BAGGING. These articles are principally of burlap, gunny or cotton. Generally, however, the same commodity rates apply from and to points in Kansas-Missouri territory and the southwest on all these commodities and in nearly all cases are considerably below the fifth class basis. Bags are used by various industries, such as flour and feed mills, which operate throughout Kansas-Missouri territory and the southwest, and cotton oil mills, which are located at numerous points throughout the latter territory. Keen competition exists as between the respective sources of supply above described, and as between destination points throughout Kansas-Missouri territory and the southwest. BARRELS AND KEGS. Barrels and kegs move in carloads from St. Louis, Kansas City, Dallas, Texarkana and certain other points to various destinations in the Kansas-Missouri and southwestern territories at which vinegar factories, lime kilns, packing houses, and other concerns using such containers for the shipment of their products are located. Rated slack barrels third class and tight barrels and kegs fourth class. However, from and to points where carload movement exists commodity rates far below the class basis are generally in effect. The rates from all producing points to all consuming points in the southwest should be constructed upon the same distance scale of rates, or made upon a group basis under which rates to and from each group will be substantially the same as the average rate which would apply under a uniform scale applied from and to each point. BEVERAGES. These commodities are rated fifth class in the western classification. Where actual or potential movement exists, however, commodity rates materially less than the class basis are in effect throughout the southwest and to a somewhat less extent in Kansas-Missouri territory. Beverages generally load in excess of the minimum weight, although not as heavily as do canned goods. They are of much less value than many articles subject to canned goods rates. The

competition between the respective sources of supply, and to a less extent between destination points, indicates that a uniform adjustment of rates based on distance should apply throughout the southwest to avoid undue prejudice and preference. BRICK. Complainant attacked the rates on all commodities from and to the points covered by the complaints. Practically no evidence was introduced with respect as to brick except in 14416 which attacked the rates on brick of all kinds from Fort Smith and Little Rock to Texas as unreasonable and unduly prejudicial. Brick rates in this territory were prescribed in 107 I. C. C. 681. Enameled brick is rated class B in western classification. At the time of the hearings, from Little Rock and Fort Smith a blanket rate of 31.5 cents applied to Texas common points. This rate has since been reduced to 29.5 cents. There is no showing that Little Rock and Fort Smith manufacturers compete directly with manufacturers in Texas; and, while the attacked rates are alleged to violate section 3, they are not shown to be unduly prejudicial or preferential. In view of the lack of evidence with respect to rates on enameled brick other than those from Fort Smith and Little Rock to Texas, the commission will do no more than prescribe reasonable rates from those two points to Texas destinations. BROOMCORN. Broomcorn is rated third class in the western classification. Exceptions to the classification, applicable generally throughout the southwest, provide class A rates. However, the movement is generally on commodity rates which, especially for the longer hauls, are materially lower than the class A rates. The relatively high rates for short hauls and relatively low rates for long hauls to the Missouri river cities and gateways result in undue prejudice to broom factories in the southwest, depriving them of the natural advantage of their location in proximity to broomcorn producing points. The disadvantageous effect upon concentrating points in the southwest is less marked, because storage in transit is permitted at such points, under which provision broomcorn may be brought thereinto and later reshipped to the Missouri cities, the gateways, and defined territories on the through rates from points of origin to those of destination. Therefore, wherever the southwestern concentrating points are in direct line of transit they suffer no disadvantage from the relatively higher short haul rates into such points, but where the concentrating points are not in direct line of movement to the markets the high short haul rates and low long haul rates result in undue disadvantage to southwestern concentrating points. Rates on butter, eggs, and dressed and live poultry between points in the southwest and between points in that territory and the Missouri river cities, the gateways, and defined territories are embraced in these cases. BUTTER, EGGS AND DRESSED POULTRY. These commodities move in comparatively large volume from origins in the southwestern states to the gateways and to the eastern defined territories and trunk line territory, the movement of eggs being much greater than that of butter and dressed poultry combined. Butter, eggs and dressed poultry are rated third class. But for many years commodity rates on each of these products, lower than third class, have been quite generally in effect from Texas, Arkansas, and Oklahoma points, particularly to St. Louis and Chicago territories and to the southwestern gateways on traffic destined east thereof. The Commission finds nothing to change its view that the rates on dairy products should be higher than on fresh meats and fruits and vegetables. LIVE POULTRY. Live poultry moves largely in private cars specially constructed for its transportation, and a caretaker accompanies each shipment. It is rated second class. Rates on live poultry should be higher than on dressed poultry. CANNED GOODS. All these articles are rated fifth class, in western classification but differ widely in value and use. From all the gateways, Missouri river cities, and defined territories to the southwest and to Kansas-Missouri territory commodity rates materially lower than the class basis are generally applicable, while the movement from southwestern canneries to other territories, is also on commodity rates, often lower than the southbound rates. To assess rates on the necessary articles as high as are warranted on condiments, table sauces, olives and other table luxuries will result in rates too high on the former. On the other hand, to apply to the high grade articles rates which are proper for the staple articles would result in rates lower than such high grade traffic should

bear. COFFEE. Both green and roasted coffee are rated fifth class in the western classification, but commodity rates generally apply from the gateways and defined territories to destination in the southwest and Kansas-Missouri territory which are materially below the class basis. Green coffee is usually shipped in bags, and roasted coffee, ground, in fiber or tin cans, boxed. The rates on roasted coffee have usually been higher than on green coffee. No reason appears why this relative adjustment should not be continued. COTTON PIECE GOODS. Cotton piece goods, are cotton goods in the original piece, not including finished articles ready for use, and usually include, as well, shade cloth, cotton rope, twine, and yarn. Most of the articles in the cotton piece goods list are rated first class, any quantity Throughout western trunk line territory a classification exception of third class applies, while from the defined territories and gateways to southwestern destinations commodity rates materially less than the class basis apply. Nominally the northbound rates from the southwestern mills to the gateways and defined territories are in issue in these cases, but evidently the complainants did not have those rates primarily in mind. The existing northbound rates are not unreasonably high. There is nothing of record to show that the maintenance of rates northbound to meet special conditions than apply southbound results in undue prejudice or preference. FERTILIZER. Fertilizers are generally rated class E in the western classification, minimum 30,000 pounds, although some are rated higher. While rates in the southwest should be somewhat higher than in southern territory, there should be a reasonable relationship between the two territories, in which in many respects conditions are similar. Fertilizer, because of its beneficial effect on the land and its very immediate and great effect on traffic, should be kept on as low a level of rates as transportation will warrant. In the interest of uniformity and to avoid future complaints of undue prejudice or preference, it is recommended that the rates hereinafter found reasonable for interstate application be also applied on intrastate traffic. Although in southern territory nitrate of soda is included in the fertilizer list, in the southwest it generally takes rates on interstate traffic which are higher than on fertilizer. There is nothing of record to change the view of the Commission that rates on nitrate of soda in the southwest may well be somewhat higher than those on other fertilizer. FRUITS, MELONS AND VEGETABLES, DOMESTIC. In the western classification melons, potatoes, cabbages, and such dry vegetables without tops as onions, beets, carrots, and turnips, are rated class C. Apples, pears, and such fresh vegetables as beans, peas, corn in the husk, and carrots, beets, and similar vegetables with tops are rated fifth class. Light loading fruits are rated third and fourth class. In the southwest most vegetables rated fifth class and some rated fourth class are by exceptions reduced to class C. In addition there are many commodity rates which are lower than the class rates available either under the classification proper or under exceptions. On fruits, melons and vegetables, rated class C the class rates herein prescribed are maximum reasonable rates. Rates on other fruits and vegetables are hereinafter provided. The establishment of such class and commodity rates from and to points in the southwest will remove existing undue prejudice as between such points. There is, however, nothing of record to indicate that undue prejudice will result from the maintenance of relatively lower rates from southwestern producing points to the gateways and defined territories beyond than are generally applied throughout the southwest, or are applied on southbound traffic from the same gateways. Such rates may therefore be maintained or established, provided they are not exceeded at intermediate points on the direct routes and are not lower than are reasonably necessary to meet the competition at such gateways and markets from other producing regions. FRUITS DRIED. Dried fruits are rated fourth class. By exceptions apples and peaches are rated class C on traffic to and from western Louisiana. Dried fruits other than apples and peaches are by exception rated class A to and from Arkansas and western Louisiana. To most points in the southwest and in Kansas Missouri territory commodity rates lower than the class rates, whether obtained by the western classification or by exceptions, apply from the gateways, Missouri river cities and defined territories. For dried fruits other than peaches, apples and apricots, the fourth class rates herein-

after prescribed will be maximum reasonable rates, but for application on the three fruits named other rates are hereinafter provided. FURNITURE. The present rate adjustment on this commodity is in a chaotic condition, some rates being relatively far higher than others. There is nothing of record to show that the loading of furniture is materially in excess of the minimum. The Commission will at this time merely prescribe a readjustment of the furniture rates within the territory embraced, will correct the prevalent undue prejudice and preference which it finds to exist, the level of the readjusted rates not to exceed those hereinafter prescribed, without prejudice to such findings as may be reached in 18323. GLASS BOTTLES AND JARS. These commodities are manufactured in eastern Oklahoma, eastern Kansas, western Arkansas and western Louisiana. They are rated fifth class. The rates from southwestern manufacturing points to the gateways are lower, distance for distance, than those from manufacturing points in the defined territories, notwithstanding that the carriers have uniformly contended, and the Commission has generally found, that rates between points in the southwest may because of less favorable transportation conditions, be materially higher. Active competition as between the respective manufacturers of these commodities is shown to exist. There is also competition as between destination points. The Commission is of the opinion that the rates between all points in the southwest should be on the same basis, except that the rates from southwestern manufacturing points to the Mississippi river gateways may be lower, provided that they are not relatively lower than those from manufacturing points in the eastern and southeastern defined territories to the same points. All relief from the provisions of the fourth section will be denied; and such rates as defendants may maintain to the gateways or Missouri river cities, lower than the rates herein prescribed to other points in the southwest and Kansas-Missouri territory, distance for distance, must be maintained as maxima at intermediate points on the direct line. IRON AND STEEL ARTICLES. The principal movement is from the gateways and defined territories, particularly from St. Louis, Chicago, and Pittsburgh territories, from points in Ohio, and from the Birmingham district in Alabama. Butts, hinges and a number of similar articles are rated fourth class, the door hangers are rated fifth class, in the western classification. These articles move in comparatively small volume, usually from the defined territories. On this record there is no showing of sufficient movement of these articles to warrant the maintenance of commodity rates lower than the class basis prescribed. The defendants are therefore authorized to cancel the existing commodity rates on hinges, butts, door hangers, and similar articles and to apply the class rates hereinafter prescribed; but if lower commodity rates are maintained to one or more jobbing points in the southwest, proportionately lower rates should be maintained to all other jobbing points. From a transportation standpoint there appear to be comparatively small differences between most of the staple articles ordinarily considered as in the merchant, structural, and wire commodity lists. A number of articles, such as bars and plates, appear in both the merchant and structural lists. From a tariff standpoint it is simpler to have one scale than three. The chaotic condition of the present rates on iron and steel articles, and the wide spread undue prejudice and preference now existing, may be effectually corrected only by establishment of rates based on distance scales devised so as properly to apportion the charges for long and short hauls, thus affording to each manufacturing and jobbing point the rates to which it is entitled by its location and removing the artificial advantages and disadvantages which result from the present rates. Such scales should average somewhat higher than the rates prescribed in the Memphis Southwestern case. JUNK AND SCRAP IRON. In the western classification junk and scrap iron are rated class C and D respectively, but commodity rates much lower than class rates apply generally throughout the southwest and from that territory to Missouri river cities, the gateways, and defined territories. To correct the existing disparities and remove existing undue prejudice and preference a uniform basis of rates should be established between points in the southwest. The Commission is of the opinion that it should prescribe a general basis of rates throughout the southwest not materially different from the rates prescribed in the Memphis Southwestern

case. There is, however, nothing of record to show that undue prejudice and preference should result from the maintenance of somewhat lower rates from southwestern points to the gateways than are applied locally between points in the territory, provided that such rates are necessary to enable the marketing of junk and scrap iron produced in the southwest at the important markets on, north, and east of the Mississippi river, and provided that such lower rates are necessary to meet the competition of similar commodities from other territories reaching the same markets. MATCHES. The principal movement of matches covered by these proceedings is in carloads from the defined territories to jobbers at the gateways Missouri river cities, and at the larger cities in Kansas-Missouri territory and the southwest, and thence in less than carloads to consuming points. The rating in the western classification is fourth class, and carload commodity rates less than the class basis apply to points in central, southern, and western Oklahoma, in western Oklahoma, in western Louisiana and in Texas. To the remainder of the southwest, to most of Kansas-Missouri territory and to the Missouri river cities the fourth class rates apply. The fourth class rates hereinafter prescribed will be maximum reasonable rates for the transportation of matches, in carloads, to, from and between points in the southwest, and will constitute an adjustment free from undue prejudice or preference as between points in the southwest, and as between points in that territory, on the one hand, and points in Kansas-Missouri territory, on the other. Such rates will, however, result in undue prejudice to points in Arkansas and western Louisiana, to the undue preference of Memphis, Vicksburg, Natchez and New Orleans to the extent that rates to the latter points are maintained below the fourth class rates prescribed in Southern Class Rate Investigation, and to all jobbing points in the southwest will be excessive as compared with the present rates to Missouri river cities. PAINTS. In the western classification dry paints are rated class C; stain paints in oil, and putty fifth class; and varnishes, fourth class; local movement between points in the southwest or Kansas-Missouri territory or between the two territories other than from the gateways. The class rates hereinafter prescribed for application to and from points in the southwest will provide maximum reasonable rates for the transportation of these commodities and will remove the existing rate disparities and undue prejudice and preference as between southwestern points. But the conditions shown clearly warrant the conclusion that the present rates to Little Rock, Fort Smith, Shreveport, Alexandria, and other Arkansas and western Louisiana points are excessive as compared with the rates from the same points to Memphis and New Orleans, and that the present rates to Oklahoma points, such as Tulsa, Muskogee, and Oklahoma City, are excessive as compared with the rates to Kansas City, Coffeyville, Springfield, Joplin and various other points in Kansas-Missouri territory. In so far as the establishment of the class rates herein approved will result in higher rates to Oklahoma, Arkansas, and western Louisiana points than are now in effect, such increased rates will, without appropriate readjustments to the preferred points, increase the undue prejudice and preference now existing. PAPER. Paper of various kinds, including newsprint, wrapping, writing, and box board, are embraced in these proceedings. These articles are rated fifth class. Commodity rates materially less than the class basis are, however, general from and to points of movement. No attempt will be made to prescribe a general basis of rates thereon. The Commission can do no more than to find the rates from St. Louis, the Missouri River cities, Kansas-Missouri territory, and western and eastern defined territories via all rail routes unduly prejudicial to points in northeast Texas, such as Dallas, Fort Worth, and Paris, and unduly preferential of Oklahoma City, Shreveport, and Houston, and the rates from trunk line territory via ocean rail routes to northeast Texas points unduly prejudicial to such points, to the undue preference of Shreveport. For the future, rates to northeast Texas points via all rail routes should not exceed the contemporaneous rates to Shreveport by more than the fifth class differences resulting from the findings hereinafter made, and rates via Texas gulf port routes to northeast Texas points should not exceed rates constructed by deducting from the contemporaneous rates to Shreveport the fifth class differences resulting from the findings hereinafter made. The establishment of rates on these bases will apparently remove the

existing undue prejudice with respect to Oklahoma City, Houston and other destinations. HELD, further, that where the fifth class rates herein prescribed from, to, or between points in the southwest are lower than the existing rates on paper rated fifth class in the western classification, such fifth class rates should in the future be observed as maxima. Nothing in this report should be understood as authorizing an increase of any existing rates on paper up to the new fifth class basis where now lower. ROOFING AND PAVING MATERIALS. Practically all of these commodities are rated fifth class. Commodity rates far lower than the class basis have been applicable for many years throughout Kansas-Missouri territory and the southwest. Obviously in a general proceeding of this nature, where rates on practically all articles other than a few socalled basic commodities are in issue, the Commission should, in fixing the level of rates on any one article have reasonable regard for the relative transportation conditions of the respective articles and prescribe rates on each commodity fairly related to those prescribed on others with similar characteristics. HELD, rates based on distance must be established and maintained from the various sources of supply to the various southwestern jobbing points, in order to correct and avoid undue prejudice, and it is further of opinion that such rates should be somewhat higher than the Memphis Southwestern commodity scale. SOAP. Soap moves from Missouri river cities, the gateways and defined territories into Kansas-Missouri territory and the southwest and, to a less extent between points in those territories. Rating is fifth class. The labor of computing specific point to point rates on a strict distance basis in so large an area as the Southwest is great. If some one basis is used, the labor once performed may be utilized for other commodities. Without more uniformity in rates, the much desired tariff simplicity can not be attained. If the rates on substantially all of the commodities to and from the southwest are constructed in the same manner, simple tariffs may be expected, but without such uniformity the present confused tariff situation will continue. Rates should be slightly higher and constructed in harmony with those prescribed in this proceeding for the transportation of other commodities between the same points, and that rates to and from the defined territories in harmony therewith should also be prescribed and applied, such rates to be constructed by the same methods as are prescribed for class and commodity rates. SIRUP AND MOLASSES. The principal sources of supply of the sirup and molasses consumed in the southwest and in Kansas Missouri territory are St. Louis and points in various western defined territories, particularly points in Iowa, New Orleans, and other points in Louisiana, and south Texas points, such as Sugarland. They are rated fifth class. From practically all producing points to the Missouri river cities and all jobbing points in the southwest and Kansas-Missouri territory commodity rates much lower than the class rates apply. Sugar frequently moves in mixed carloads with sirup and molasses. The rates on the three commodities may be the same. STARCH. Starch moves principally from the gateways and defined territories, particularly western defined territories, to practically all jobbing points throughout the southwest and Kansas-Missouri territory at which wholesale grocery jobbing houses are located. This commodity is rated fifth class in the western classification, but commodity rates lower than the class basis are in effect from the gateways and points beyond. HELD, the fifth class rates herein prescribed are maximum reasonable rates for the transportation of starch in carloads, but that, in their relation to the commodity adjustments, such rates will be unduly prejudicial to points in Oklahoma to the undue preference of Kansas City; will be unduly prejudicial to points in Arkansas and western Louisiana and unduly preferential of New Orleans, Memphis, Vicksburg and Natchez: and, if the rates to and from the southwest are readjusted on the fifth class basis and the rates to and from Kansas-Missouri territory are related thereto in the manner herein found proper for fifth class rates, such rates to points in Kansas Missouri territory will be unduly prejudicial to such points and unduly preferential of Kansas City. STONEWARE. Stoneware is rated class B. The principal movement is from the defined territories, although there appears to be some local movement from manufacturing points in the southwest. Macomb and Monmouth, Ill., are important manufacturing points. Commodity rates materially lower than the class basis apply from the gateways and defined territories to practically all

points in the southwest. Speaking generally, the class rates apply to points in Kansas-Missouri territory and to Missouri river cities. The class rates hereinafter prescribed will be maximum reasonable rates for application throughout the southwest, and between that territory and the Missouri river cities, the gateways and defined territories. If rates to Texas lower than the maximum rates prescribed are maintained, rates from the same points of origin to points in Oklahoma, Arkansas and western Louisiana should be established proportionately lower than the maximum prescribed for application to such points. STOVES. Stoves, other than electric, are rated fifth class. In view of the relatively lower fourth and fifth class rates herein prescribed, the class rates herein prescribed for application to the transportation of stoves and articles taking the same rates will be maximum reasonable rates. SUGAR. Sugar is rated fifth class, but from and to points of movement commodity rates materially less than the fifth class rates are in effect. Sugar is one of the most important items in the grocery list. HELD, rates from Louisiana producing points to points in Texas other than the Houston-Galveston group are unreasonable; that the rates from Louisiana and trunk line territory via all rail routes, and the rates from trunk line territory via ocean rail routes, to the northeast Texas cities, in their relations to the rates from the same producing points to Shreveport, Lake Charles, Texarkana, Oklahoma City, Hugo, Durant, Ardmore and Altus are unduly prejudicial to northeast Texas points. It is the view of the Commission that the only practicable way in which the undue prejudice and preference found to exist may be satisfactorily corrected, the establishment of reasonable rates in lieu of those found unreasonable be accomplished, and the correction of the chaotic condition of sugar rates is through the establishment of all rail rates on a distance scale basis, or on grouped basis founded upon a distance scale, such scale properly to apportion the rates for the long and the short hauls, and of ocean rail rates from trunk line territory, based primarily upon the service performed, which will be fairly related to the all rail rates, thus affording from each producing point to each jobbing point rates which are fairly related, distance and transportation service considered. If grouping of origins is adopted, the group rates should be so constructed as to result in substantially the same average rates as if the scale were applied from each producing point separately. In determining such average rates, the river crossing arbitraries elsewhere approved should be used from points on the east bank of the Mississippi river, and the scale rates, without arbitraries, used from origins on and west of that river. Reasonable regard should also be given to the relative amount of tonnage moving from, or likely to move from, each producing point. This statement is not intended to require the application in the first instance of a traffic test to determine the relative movement from each point, but only to provide that an average, fair in accordance with known facts, be applied, rather than the use of the distances from the most distant points. SULPHURIC ACID. Sulphuric acid is rated fifth class, but the principal movement is on commodity rates which are far lower than, sometimes less than one fourth of, the class rates. The rates on shipments in tank cars are usually lower than on shipments in packages. It is apparent that the existing rates are made with little regard to distance or transportation conditions, and are the outgrowth of competition between carriers, each, with the exception of carriers serving Harrys, endeavoring to enable manufacturing points on its line to reach as many destinations as possible in competition with producing points off its line. Such an adjustment denies to some producing points their natural advantages of location with respect to particular markets, and unduly prefers other points by enabling them to reach on unduly favorable rates markets naturally tributary to the nearer points. It also results in gross inequalities as between the respective industries using sulphuric acid in their business and in undue prejudice to the users paying relatively higher rates and undue preference of those paying relatively lower rates. HELD, that maximum reasonable rates for the transportation of sulphuric acid in tank cars or in drums, carloads, to points in the southwest would be rates averaging substantially the same as the column 20 rates. In view, however, of the peculiar situation existing with respect to this commodity and of the fact that groupings somewhat different than those pre-

scribed in this proceeding for other commodities may more satisfactorily meet the situation with respect to this commodity, no order prescribing maximum reasonable rates on movements in tank cars or drums will be entered, but the carriers will be expected promptly to revise their rates to all points in the southwest to a basis which will approximate the column 20 rates herein prescribed. TIN ARTICLES. These articles are rated fourth class. On all the articles here considered, other than cans, drums, and articles grouped therewith, the Commission is of the opinion that the column 55 rates (fourth class) herein prescribed will be reasonable and unprejudicial as between the respective points of origin and destination. There is no evidence of record justifying an increase in the minimum weight, and accordingly in connection with such rates the present minimum of 18,000 pounds for a 36 ft. car, subject to rule 34 should be maintained. Other rates and minimum weights are hereinafter provided for application to tin cans. VINEGAR. This commodity is rated fifth class, but from practically all points of production to destinations in the southwest commodity rates much lower than the class basis apply, or the class D rates are applicable by exception. HELD, rates based on a scale somewhat higher than the Memphis-Southwestern single line scale should be prescribed and applied. WELL BORING OUTFITS AND OIL WELL SUPPLIES. They move from the gateways and defined territories to southwestern points and between the latter points. Rating is class A minimum 36,000 pounds. Except as indicated in the following paragraph, the class A rates hereinafter prescribed will constitute maximum reasonable rates for the transportation of these commodities from and to points in the southwest, and, so far as the record indicates, will remove all existing undue prejudice and preference. One of the commodities involved in the oil well supply commodity list is rig irons. In Parkersburg Rig & Reel Co. v. C. R. I. & P. Ry., 95 I. C. C. 181, 107 I. C. C. 182, rates on rig irons approximately 85% of the rates on oil well supplies were prescribed from Parkersburg, W. Va., and other points to destinations in Arkansas, Louisiana and to other points. Following that case, the rates on rig iron in straight carloads should be about 15% lower than the rates on oil well supplies. Rates substantially on that basis are hereinafter prescribed. WOODENWARE. The principal movement is from defined territories and St. Louis to the larger jobbing points. This commodity is rated fourth class. Generally speaking, the movement to the Missouri river cities and to points in Kansas and Oklahoma, other than those in the southern and western portions of the latter state, is on the class rates. To southern and western Oklahoma and to Texas commodity rates lower than the class rates apply. Establishment of the fourth class rates hereinafter prescribed will result in reasonable rates for the transportation of woodenware, in carloads, from and to points in the southwest free from undue prejudice, but such rates will be excessive as compared with the present rates to Kansas City, Memphis and New Orleans, unless the latter are appropriately readjusted, all of which last named points compete directly with jobbing points in the southwest. GENERAL DISCUSSION AND CONCLUSIONS. TEXAS COMMON POINT AND HOUSTON GALVESTON GROUP ADJUSTMENTS. The Texas common point area has existed for many years. Apparently, it arose primarily from two causes: (1) the fact that from the eastern defined territories and trunk line territory there are all rail routes into Texas through various gateways, including the Missouri river cities on the north, St. Louis on the northeast, Memphis and Vicksburg on the east, and New Orleans on the southeast; and (2) competition between ocean rail traffic from trunk line territory through Gulf ports with all rail traffic from the gateways and the eastern and western defined territories. The circuitous routes desiring to maintain the same rates as the direct routes and confronted with the necessity of observing the rates of the direct line as maxima at intermediate points on their respective routes or of obtaining fourth section relief, apparently chose the former alternative. It is clear that competition between carriers and shippers by ocean rail routes from trunk line territory and carriers and shippers by rail from the eastern and western defined territories was the principal cause of the creation of the blanket. Undoubtedly, competition exists between the respective routes and between the shippers located in the various territories of origin, but it does not follow that the desire of the carriers to com-

pete with one another may properly deprive the north Texas cities of their advantage of shorter routes from the gateways, Memphis and north, than exist to south Texas. Certainly, the desire of carriers can not be permitted to deprive the north Texas cities of rates reasonable for the service performed. Stated otherwise, the rates should not be kept above a reasonable basis in order to permit routes from the various directions to reach all points in Texas on a parity any more than should rates to all points in Indiana, Ohio, or any other state be made the same from all points competing for trade in such states in disregard of the service performed and of the natural advantages of the different cities concerned. The Houston-Galveston group is a strip of territory along the Gulf coast for about 100 miles, embracing Galveston, Houston, Beaumont, Port Arthur, and Orange, all ports of call. The traffic naturally tributary to the ocean lines is, of course, the traffic between trunk line territory and the Texas ports and points contiguous thereto. To permit the rail lines from St. Louis, Chicago, Pittsburgh and Cleveland and other points to maintain rates so low as to deprive such water carriers of the traffic naturally theirs is not in accord with the spirit of section 500. HELD, rates to and from the Houston Galveston group, lower than are warranted by the distances to and from such group points in their relations to the corresponding rates to and from Oklahoma and northeast Texas points, are unduly prejudicial to such Oklahoma and north Texas points and unduly preferential of the Houston Galveston group. Rates should be constructed based upon the relative distances to north Texas cities and Oklahoma, on the one hand, and Houston Galveston group on the other. OKLAHOMA VERSUS SURROUNDING STATES ON TRAFFIC TO OR FROM MISSOURI RIVER CITIES GATEWAYS AND DEFINED TERRITORIES. The class rates, and nearly all the commodity rates, between Missouri river cities, the gateways, and western defined territories, on the one hand, and points in Okahoma, on the other, are higher, distance for distance, than the rates between the first indicated points and points in eastern Kansas and southwestern Missouri. There is nothing of record to show that transportation conditions in central and southern Kansas are superior to those in the southwest. It does, however, appear that in many respects the northeastern portion of Kansas has conditions superior to those in the remainder of Kansas or in the southwest. The density of traffic is greater in most of southern Missouri than in the southeast, but on the average there appears to be little difference between the extreme southern portion of Missouri and the southwest. To apply the same level of rates through Kansas Missouri territory as in the southwest would ignore the fact that transportation conditions are more favorable in northeastern Kansas and in most of southern Missouri than in the southwest. Further, to apply in the area bordering on the Missouri and Mississippi rivers rates which would be reasonable for the southwest would result in serious "humps" at those rivers and places cities and towns in that area under serious handicaps in competing with the Missouri river cities, St. Louis and points north and east of the rivers. The Commission concludes that in central and western Kansas and in the extreme southern portion of Missouri the same level of rates should apply as in the southwest, but that in northeastern Kansas and in all of southern Missouri, except a strip in close proximity to the southern border, rates on a somewhat lower level should be prescribed. OKLAHOMA VERSUS KANSAS MISSOURI TERRITORY LOCALS. Practically all class rates, and most commodity rates, between points in Kansas are materially lower than the rates between Kansas points and Oklahoma. The class rates between southern Missouri and Oklahoma are substantially the same as the intrastate rates in southeastern Missouri, but between points in that part of southern Missouri lying west and north of the Frisco main line, St. Louis to Springfield, the class rates are generally on a basis materially lower than the southern Missouri Oklahoma rates. OKLAHOMA AND TEXAS INTERSTATE AND SHREVEPORT TEXAS RATES. While intrastate rates in Texas are not wholly on a blanket basis, nevertheless the common point system is still strongly reflected therein. On most commodities the rates are graded only for comparatively short distances and for all greater distances are blanketed. Rates from Oklahoma to Texas are unduly prejudicial to extent they exceed rates from Shreveport to Texas. LOCAL SOUTHWESTERN RATES VERSUS RATES

TO AND FROM MISSOURI RIVER GATEWAYS AND DEFINED TERRITORIES. The rates between Oklahoma and Arkansas, between Oklahoma and Texas, between Arkansas and Texas, between western Louisiana and Texas, and between western Louisiana and Oklahoma are on most commodities relatively higher than the rates between those states and the Missouri river cities, the gateways and defined territories. Finding No. 27. ARKANSAS INTRASTATE RATES. Between points in Arkansas the class rates and the rates on about 35 important commodities are based on the Memphis-Southwestern scale. Such class and commodity rates are in almost all cases materially lower, distance for distance, than the rates between Arkansas and Texas or between Arkansas and Oklahoma. WESTERN LOUISIANA INTRASTATE RATES. The situation with respect to western Louisiana intrastate rates, their relation to Texas-Louisiana and Oklahoma-Louisiana interstate rates is similar to that described with respect to the Oklahoma-Texas, Oklahoma-Arkansas and Texas-Arkansas adjustments. OCEAN RAIL RATES. Over Gulf routes via New Orleans, Beaumont, Galveston, and Houston through rates are generally applicable from all of trunk line territory, and to some extent from points in Virginia, to the entire southwest, including Texas differential territory, except that to Arkansas such through rates apply only from a strip of territory along the seacoast about 100 miles wide. Combination rates apply to Arkansas from the remainder of the territory ordinarily covered by through ocean rail rates, it apparently being the policy of the ocean rail lines to concede such traffic to the all rail lines on the theory that the ocean rail rates that would be needed to attract the traffic would be lower than they are willing to apply. From practically of all trunk line territory to points in Kansas-Missouri territory and to the Missouri river cities there are also through rates via Gulf routes, but they apply only via the Southern Pacific steamship line through New Orleans and Galveston. Via south Atlantic ports there are through one factor rates to the Missouri river cities, to Kansas-Missouri territory, and to all of the southwest, except Texas and the southern portion of Louisiana. To the excepted area much higher combination rates apply. As in the case of the Gulf routes, the rates to Oklahoma and Louisiana generally apply from all of trunk line territory, while to Arkansas they apply only from the north Atlantic ports and from a small strip of territory adjacent to the coast. It is generally accepted that where water hauls are long the ratio of water miles to rail miles may properly be greater than where the hauls are comparatively short. Generally speaking, terminal services are relatively more expensive in connection with water service than with rail service. On the other hand, what are termed line haul expenses of ocean carriers are relatively low for long hauls. The Commission is convinced that, considering the long rail hauls from the south Atlantic rail ports, the Gulf port routes are the more economical to practically all points in the southwest, with the possible exception of northeastern Arkansas. Certainly to Shreveport, the Gulf port routes represent less expensive service than do the south Atlantic ports or all rail routes. The general basis for constructing through rates over Gulf routes to Texas common point territory has been by addition of differentials to the rates from St. Louis to that territory. But departures from the general basis are the rule rather than the exception, due to the existence of numerous lower combinations on the Gulf ports. SOUTHWESTERN TARIFFS COMPLICATED AND UNSATISFACTORY—NONCONCURRENCE TARIFFS. HELD, nonconcurrence tariffs are unlawful and such tariffs containing rates from, to or between points embraced in these proceedings should be canceled at the time the rates are made effective pursuant to the findings herein; and the reasonable and nonprejudicial ocean rail rates between points in trunk line territory or in eastern defined territory, on the one hand, and Gulf ports and interior points in the Southwest and Kansas-Missouri territory over Gulf and south Atlantic port routes, on the other, should be published as joint through rates in accordance with the provisions of section 6 of the act and the tariff rules promulgated pursuant to that act. COMPREHENSIVE SYSTEM OF RATES BASED ON DISTANCE ONLY WAY TO CORRECT WIDESPREAD UNDUE PREJUDICE AND PREFERENCE AND BRING ORDER OUT OF SOUTHWESTERN CHAOS. Measure of the distance scale prescribed shown later. JOINT LINE VERSUS SINGLE LINE RATES—COMPUTATION OF DISTANCES. In

applying the distance rates and the distance arbitraries hereinafter provided for short or weak lines and to Texas and Oklahoma differential territories, the shortest route over which carload traffic can be moved without transfer of lading should be used; and that no differentials, arbitraries, or distance additions for joint line hauls should be provided, but that the absence of such additions and the short line method of computing distances prescribed should be given weight in determining the level of the base distance scale of scales. CONSTRUCTION OF THE SOUTHWESTERN SCALE. HELD, the maximum reasonable first class (column 100) scale to be used as a basis for the construction of interstate rates on standard lines between points in the southwest and between points in that part of Kansas-Missouri territory west and south of the line described in note 1 of finding 3, is and for the future will be, the distance scale of rates entitled "southwestern scale" set forth in appendix 18 herein; and that maximum reasonable first class (column 100) interstate rates on standard lines between points in the southwest and between points in that part of Kansas-Missouri territory west and south of the line described over routes lying wholly within the southwest or passing in part through Tennessee, Mississippi, or Louisiana east of the Mississippi river, are, and for the future will be, rates determined by the said distance "southwestern scale" applied in accordance with the provisions of finding 15 herein, SHORT AND WEAK LINES. Interstate rates to, from, and between points on the Fort Smith & Western Ry. are the column 100 rates plus arbitraries set forth in Appendix 18, such arbitraries to accrue to the Ft. S. & W. TEXAS AND OKLAHOMA DIFFERENTIAL TERRITORIES. The transportation and traffic conditions in Texas differential territory and in northwestern Oklahoma warrant higher rates than in Texas common territory or the remainder of the southwest. Reasonable differentials will be those shown in appendix 18. MISSISSIPPI RIVER BRIDGE ARBITRARIES AND CROSSING ALLOWANCES. HELD, in constructing maximum reasonable first class (column 100) rates between points in the Southwest, in Texas and Oklahoma differential territories, and in that part of Kansas-Missouri territory on and west of the line described in note 2 of finding 3, on the one hand, and Memphis, Vicksburg, Natchez, Angola, Baton Rouge, Harahan and New Orleans, on the other, there may be added 4c in the case of Memphis and 6c in case of the other east bank crossings named. RATES BETWEEN POINTS IN KANSAS-MISSOURI TERRITORY AND BETWEEN THAT TERRITORY AND THE SOUTHWEST. Same as southwest. RATES TO AND FROM MISSOURI RIVER CITIES GATEWAYS AND DEFINED TERRITORIES. While the record with respect to transportation conditions outside of the southwest and Kansas Missouri territory is far from complete, it is clear that such conditions in the entire area east of the Missouri river and north of the Ohio river are materially more favorable and warrant lower rate levels than in Kansas-Missouri territory or the southwest. Lower rates in southern territory than in the southwest are also warranted, but, speaking generally, the Commission sees no reason for material differences in rate levels as between southern territory and that part of Kansas-Missouri territory for which the Kansas-Missouri scale is herein prescribed. CLASSIFICATION AND EXCEPTIONS THERETO—CLASS PERCENTAGES—SIMPLIFICATION OF TARIFFS—BASES FOR COMMODITY RATES. Uniform class percentages throughout the southwest should be prescribed, and the same percentages should be used to, from, and between points in Kansas-Missouri territory. While a scale of 10 classes, with most carload traffic carried in but six, would not in opinion of the Commission constitute a sufficiently flexible basis to provide for all the commodities here under consideration, the Commission believes that much greater use should be made of the carload classes than has heretofore been the practice in the southwest, and that the class percentages to be adopted should be devised with that desideratum in mind. It is desirable that the rates on practically all the commodities embraced in these proceedings be revised in harmony with the specific class and commodity rates herein prescribed. Stated otherwise, the rates on most of the commodities for which no specific rates are provided, exclusive of commodities recognized as basic in character, such as products of mines and the like should be placed on the revised class rates prescribed, should be made subject to the commodity basis applicable to the most nearly analogous article, or an

additional basis should be provided therefor and be determined in the same manner as the bases provided in finding 24. Speaking generally, the application of the maximum reasonable class and commodity rates herein prescribed will make unnecessary the maintenance of further classification exceptions, but on carload traffic not specifically discussed in this report nothing here said should be construed as authority to cancel existing classification exceptions unless reasonable rates are provided for such commodities in harmony with the carload rates herein prescribed on other articles. FOURTH SECTION. Fourth section applications denied. IOWA CASE. Complainant asked that defendants be required to establish between Iowa and Texas points the same rates as apply to and from St. Louis, thus placing Iowa in the same rate territory on traffic to and from Texas as on traffic to and from Kansas-Missouri territory and Oklahoma. In practically all cases the distances from Iowa to Texas are greater than those from St. Louis to Texas. HELD, the establishment of the maximum reasonable through rates between the defined territories and Texas herein prescribed will afford rates between Iowa and Texas which are fairly related to the rates to and from St. Louis, the Missouri river cities and points in defined territories. Complaint dismissed. ROME CASE. Maximum reasonable rates via south Atlantic ports are herein prescribed both from Albany and Rome. Complaint dismissed. To the same extent that the desire of the defendants in the past to secure traffic from one another has been largely responsible for the present unsatisfactory conditions, they will now have it in their power, through uniform adherence to the bases herein prescribed, to perpetuate an adjustment which will be free from undue prejudice and preference. Neither the record nor the issues in the instant proceedings are sufficiently broad to warrant prescription of reasonable rates between the Missouri and Mississippi river cities and points in western trunk line official and southern territories, or the relationship which the rates from or to such river cities should bear to the rates from or to points within the Southwest and Kansas-Missouri territory. This fact, however, should not prevent the removal of the undue prejudice and preference found to exist within the area here directly involved or the correction of the chaotic rate and tariff situation existing therein. It is possible that many of the undue differences as between points within that area and contiguous competitive points will be corrected as a result of the pending proceedings. The bases of rates herein prescribed or approved are intended to supersede all adjustments heretofore prescribed by the Commission with reference to all or any of the rates in issue. The Commission will for the present leave to the appropriate state commissions and the carriers the matter of adjusting the interstate rates or bases which will harmonize with the rates prescribed or approved herein and will remove the undue prejudice and preference. Appendix 13 column 100 rates range from 33c to 362c; column 85, that percentage of column 100; column 70, that percentage, column 65, 60, 55, 50, 45, 41, 38, 35, 32½, 30, 27½, 25, 22½, 20, 17½, 16, their respective percentage of the column 100 rates. Class percentages shown in appendix 16 are 1st, 100%, second 85%, third 70%, fourth 55%, fifth 38%, class A 45%, class B 32½%, class C 27½%, class D 22½%, and class E 17½%. Appendix 18 shows southwestern scale 36c for 5 miles to 318c for 1500 miles. Kansas-Missouri scale ranging from 33c for 5 miles to 296c for 1500 miles. Differentials from Texas and Oklahoma differential territory ranging from 7c for 5 miles to 64c for 1560 miles. Differentials for Fort Smith & Western Ry. ranging from 5c for 5 miles to 25c for 500 miles. The Commodity rates apply on agricultural implements column 41, bagging and ties 25, bags and bagging 35, barrels and kegs, 41, beverages 35, brick, enameled 20, broom corn 41, butter and eggs 60, canned goods, condensed milk, vegetables, etc. 35, other canned goods 38, cans, drums, etc. 50 and 65, green coffee, 35, cotton fabrics 70, fertilizer, 16, dried fruits, 38, fruits and vegetables rated class C, 27½, rated fifth class 35, rated higher than fifth except berries 50, berries, 65, new furniture 60, glass bottles, jars, etc. 38, grape juice, 41, iron and steel articles 32½, scrap iron 17½, junk 32½, dressed poultry 60, live poultry 65, roofing materials 25, soap 35, soda nitrate of, 17½, starch 32½, sulphuric acid in carboys 38, sugar 30, sirup and molasses 30, vinegar 35, well boring outfits, oil well supplies, general 45, rig irons 38. Consolidated Southwestern cases, 123 I. C. C. 203.

(j) Rates on lumber and related articles from points in coast, Spokane, and Oregon groups (Groups 1, 2, and 3) to Gordon, Irwin, Merriman, and Eli, Nebr., found unreasonable to extent they exceeded rates based on distance scale prescribed in 104 I. C. C. 695, for application in same general territory. Carriers required to preserve the existing competitive relationships between the various groups as pointed out in 78 I. C. C. 746, in publication of rates in conformity with that scale. Reasonable rates prescribed for future and reparation awarded. Walrath & Sherwood Lbr. Co. v. C. & N. W., 126 I. C. C. 97.

(k) Complainants alleged that the rates on bituminous coal, carloads, from Illinois and Indiana are unreasonable and unduly prejudicial as compared with those from western Kentucky and in the socalled Inner and Outer Crescents in Pennsylvania, Maryland, Virginia, West Virginia, eastern Kentucky, and Tennessee to Chicago switching district. The Illinois and Indiana coals are generally competitive with the western Kentucky coals and to a considerable extent with Crescent coals in general. However, the Crescent coals have better heating qualities and leave less ash. Many industrial concerns that could use the various coals interchangeable find that considering rates, prices, heating qualities, and the cost of handling at the furnaces, it is more economical to use Crescent coals. The rates from the various groups of Illinois mines are differentially related to each other, and are in purported compliance with the Illinois Coal Cases, 1920, 62 I. C. C. 741, 64 I. C. C. 751. The rates from the various groups of Indiana mines are also differentially related to each other, but have not been fixed by the Commission. They are closely, if not differentially, related to the rates from the Illinois groups and are kept more or less in line with them. The rates from the western Kentucky group are differentially related to the rates north of the Ohio river. The rates from the Crescents are not differentially related to those from the Illinois, Indiana, or western Kentucky groups. Traffic from the Illinois and Indiana mines involves comparatively little assembling service due to the fact that the mines are located on or near the main line. Transportation to Chicago is performed over practically level terrain under very favorable conditions, and on lines of heavy traffic density. There are certain conditions that tend to keep the rates to Chicago at or below a reasonable maximum level. Chicago is the greatest coal market in the country and producers in all the districts directly or indirectly concerned in these cases seek to sell there. All rail and rail and lake carriers converging from different directions individually strive to participate in the traffic to the greatest extent possible. The rates attacked are not high compared with those on coal prescribed or approved by the Commission from many points in the Illinois, Indiana, Ohio and Crescent districts to destinations in central and western trunk line territories for hauls of similar length. Delivery expenses at Chicago are unusually heavy. The rates on lake cargo coal were in the nature of proportional rates to the ports for a part of the through movement to cross lake destinations, and for that reason, and because of its more favorable transportation characteristics, the rates on lake cargo coal had always been lower than the rates on socalled commercial coal destined to the lake cities proper. The rates here attacked are local rates and there is no return loading similar to the return loading of iron ore such as was disclosed in Lake Cargo Coal Cases, 126 I. C. C. 309. The rates from the western Kentucky group are 25c higher than those from the southern most groups in Illinois and Indiana, namely, the southern Illinois and Evansville groups, which are accorded common rates. The determination of what may be called the rate making distances from the various groups is a matter of great difficulty. The parties undertook to show average short line distances over one or more tariff routes from each group, average distances over all tariff routes, weighted average distances based on actual movements during certain periods, and distances from the nearest and most remote points in each group. These distances from any given group vary widely and, if distance is to be a controlling factor, much depends upon which distance is used. The principal short line and weighted average distances should be given primary consideration. It should also be stated that in seeking to determine the differences in distances from two or more original groups a great deal depends on the destination. As the Illinois and Indiana groups are all definately related to each other and the reationships are not here questioned, it seems that the most logical way to ap-

proach the matter of the propriety of the differentials against the western Kentucky groups from the standpoint of distance is to consider this group, particularly in its relation to the nearest important competing group, which is the southern Illinois group. A detailed study of the record is convincing that a mile of transportation between the western Kentucky mines and the Ohio river costs considerably more than a mile of transportation between the Illinois and Indiana mines and Chicago. However, on long haul traffic to the northwest this fact becomes of less relative importance as the lengths of the hauls increase. The same may also be said with respect to differences in distance. Over reasonable and practicable routes western Kentucky is at least 35 miles greater distance than southern Illinois on traffic to Chicago and about 129 miles on traffic to the northwest. The difference in distance to Chicago over the I. C., often said to be the controlling and rate making line, is about 88 miles. Altogether it appears that although a large volume of Crescent coal is sold in Chicago in competition with Illinois and Indiana coal the greater portion is not competitive. HELD, interstate rates to the Chicago switching district from the Danville, Brazil-Clinton, and Linton-Sullivan groups are unreasonable to extent they exceed $1.35, $1.55 and $1.65 per ton, respectively. HELD, further, interstate rates not otherwise unreasonable but relationship western Kentucky over Southern Illinois should be 35c per ton instead of 25c per ton. Illinois Indiana Coal Cases, 128 I. C. C. 265.

(l) Southern carriers, respondents, proposed a revision of the rates on lime, in carloads, from Alabama, Georgia, Kentucky, Tennessee and Virginia to southern territory. The present adjustment of rates on lime between points in southern territory is the result of the publication from time to time of specific point to point rates, made without regard to distance, to allow producers to meet the competition of other producers. The present adjustment was established before the present provisions of section 4 of the act were enacted. There has never been any general revision of the lime rates in the south, with the result that the rates are not uniform. There are many fourth section departures and there are numerous discriminations, because the rates from the various producing points are not properly related. The proposed revision was undertaken for the purpose of removing fourth section departures, of eliminating inequalities between producers, and of providing a uniform basis of rates to apply on lime between points in the south. Generally speaking, the proposed rates subject to the minimum of 30,000 pounds result in increases of the present rates; those subject to minimum of 50,000 pounds result, in most instances, in reductions in the present rates. HELD, proposed rates justified. Respondents will be expected to publish rates from the Martinsburg, W. Va., group to southern territory; from producing points in southern territory to Braithwaite, La., and to destinations in Louisiana territory west of the Mississippi river. Lime between southern points, 129 I. C. C. 635.

(m) The fact that these, like the rates assailed, are fifth class rates applying from lower percentage rate groups is no justification for the differences in the measure of the rates. In such situations the shipper is concerned only with the rates from the particular producing points and not with the question of whether such rates appear reasonable when applied to an extensive group containing many points from which there would be no movement. Jeffrey Dewitt Insulator Co. v. B. & O. R. R., 132 I. C. C. 423, 426.

V. DISCRIMINATION.

See Discrimination.

§13. In General.

(a) Complainant attacked through rates charged on 213 cars of lumber shipped from Foster, Oreg., to Colorado, Iowa, Kansas, Missouri, Nebraska, Utah and Wyoming between Aug. 1922 and March, 1923, as unduly prejudicial as compared with the rates from the coast group, including Independence, Oreg., and other points in Oregon and Washington, to the same destinations. Foster is on the Valley & Siletz R. R., 7.2 miles from Crisp, Oreg., and 18.8 miles from Independence, Oreg., connections with the S. P. The rates applicable were 1 c higher than from Independence and other points in the coast group. Complainant states that when the shipments moved it was in keen competition with various named lumber companies at Corvallis, Albany, Dallas, Portland and Salem, Oreg., and points in Washington, such as Tacoma and Seattle, and that in order

to sell its products it was obliged to base its quotations on the coast group rates and to absorb the difference between that basis and the higher basis exacted by defendants. In consequence of the order in 81 I. C. C. 505, rates were established from Foster on the coast group basis on Nov. 17, 1923. It is shown on this record that the rates from the coast group were the proximate cause of the injury which complainant sustained prior to the establishment of the coast group rate from Foster. HELD, rates attacked unduly prejudicial to Foster, reparation awarded on basis of coast group rates. Foster Lumber Co., v. V. & S. R. R., 112 I. C. C. 651.

(b) Group rates on gasoline and other so-called refined oils now taking the same rates from points in the midcontinent field of Missouri, Kansas, Oklahoma, Arkansas, Louisiana, and Texas, to destinations in western trunk-line territory, Illinois, Indiana, and northern peninsula of Michigan, as a whole, found not in excess of reasonable maximum rates, but said rates are unduly prejudicial or preferential as between various origin groups and also as between various destination points. Reasonable and nonprejudicial rates or bases of rates prescribed. Midcontinent Oil Rates, 1925, 112 I. C. C. 421.

(c) Rates on gasoline and other so-called refined oils from midcontinent Group 2 points to St. Joseph, Mo., found unreasonable and unduly prejudicial to extent they exceed rates contemporaneously maintained from same points of origin to Kansas City, Mo. Reasonable and nonprejudicial basis of rates prescribed. Midcontinent Oil Rates, 1925, 112 I. C. C. 421, 473, 474.

(d) Upon further consideration, original report 96 I. C. C. 485, modified and rates on gasoline from Tulsa and grouped points in Oklahoma to destinations in Indiana found unreasonable and unduly prejudicial as compared with rates from same origin points to Chicago and other Illinois destinations. In view of substantial similarity of transportation conditions in Indiana and Illinois, there is no warrant for maintenance of higher rates to points in western Indiana than to Chicago and other Illinois points taking same rates. Concurrently, rates on fuel oil and other products taking same rates from same origins to same destinations found unreasonable to extent they exceeded 80 per cent of the contemporaneous rates on gasoline. Reasonable and nonprejudicial rates prescribed for future. Indiana State Chamber of Commerce v. A., T. & S. F., 112 I. C. C. 481.

(e) Rates on lumber from Foster, Oreg., located on the Valley & Siletz R. R., to destinations in Colorado, Iowa, Kansas, Missouri, Nebraska, Utah, and Wyoming, found unduly prejudicial to Fostoria and unduly preferential of Independence, Oreg., and other competing points in Oregon and Washington accorded the coast group basis of rates. Reparation awarded. Foster Lbr. Co. v. V. & S., 112 I. C. C. 651.

(f) Rates to two competing points or groups may be within the range of reasonableness, and thus not in violation of section 1 of the act, but may be, nevertheless, improperly related and result in undue prejudice in violation of section 3. In such a case commission may, where warranted by the record, prescribe specific rates to one or both of the competing points in order to remove undue prejudice. Ridenour-Baker Mercantile Co. v. A., T. & S. F., 113 I. C. C. 629, 634.

(g) Complainant attacked commodity rates on potatoes, carloads, from points on the A. C. L., in North Carolina, South Carolina and Virginia, to Kalamazoo, Jackson, Battle Creek, and Sturgis, Mich., as unreasonable and unduly prejudicial as compared with the rates to Grand Rapids, Mich. Respondents proposed increased and reduced rates on potatoes, carloads, from North and South Carolina on the A. C. L. to these and other destinations in central territory. There are and have been in effect for a great many years a limited number of joint commodity rates on potatoes from North Carolina points to the larger consuming points in central territory for which there is no established basis. A general revision of the rates is now proposed, under which numerous fourth section departures existing in the present rates would be removed and relationships with rates from points in Virginia and in the vicinity of Charleston, S. C., would be observed. The present rates must be revised. Fourth section departures in the present rates are proposed to be removed by increases in the joint commodity rates in effect to the large consuming points and reductions to intermediate points and by increases in the rates to a level higher than that from intermediate Virginia cities. In the pro-

posal to maintain the same rate from all of the points of origin to Cincinnati and other Ohio river crossings, and maintain rates substantially higher from the southern than from the northern points of origin, to points north of those crossings, due consideration is not given to the differences in the distances. HELD, rates attacked unduly prejudicial to extent they exceed rates to Grand Rapids and unreasonable to extent they exceed distance rates ranging from 48c for 750 miles to 68c for 1,250 miles, reparation denied. Taylor Produce Co. v. A. C. L. R. R., 115 I. C. C. 633.

(h) Complainant attacked commodity rates on rosin and rosin dross, turpentine and pine oil, carloads, from Louisiana and Texas producing points to destinations in central and western trunk line territories, as unreasonable and unduly prejudicial as compared with rates from southeastern and Mississippi valley territories in Alabama, Florida, Georgia, Mississippi and Louisiana east of the Mississippi river; and that defendants failure to establish and maintain reasonable joint rates and through routes for this traffic is unlawful. Evidence in support of the complaint is predicated upon 87 I. C. C. 740, and 89 I. C. C. 634, that adjustment becoming effective August 20, 1924. Rosin is shipped in wooden barrels, is not inflammable, is not subject to deterioration from exposure, and requires only a low class of equipment. Claims for damages are rare. To some extent it comes in competition with greases and inedible oils produced in packing houses at Kansas City, Mo., and other points. It is used extensively in the manufacture of soap. Turpentine from the southwestern group is shipped almost entirely in tank cars. It is not subject to the regulations for the transportation of dangerous articles, and the risk of transportation is said to be no greater than any other liquid shipped in the same manner. HELD, rates attacked to central territory unreasonable to extent they exceed on rosin 35c to St. Louis, turpentine 55c, specific rates named to specific destinations. To Kansas City unreasonable to extent they exceed 36c on rosin and 56c on turpentine, rates to western trunk line territory should be revised in harmony with the rates to Kansas City and St. Louis, reparation denied. Turpentine & Rosin Producers Asso. v. A. & V. Ry., 115 I. C. C. 667.

(i) Complainant attacked rates on cereal beverages, carloads, from St. Louis, Mo., to Atlanta, Ga., two years prior to July, 1, 1925, as unreasonable, unduly prejudicial and unduly preferential of Montgomery, Ala., and Augusta, Macon and Savannah, Ga., and in violation of section four. The rates to the southeast are and have been for many years maintained on a group basis. Such a basis always results in prejudice to the nearest point in the group but it does not necessarily follow that the prejudice is due. It must appear that the nearest point is injured by the adjustment. Macon and Augusta now take the same rates as Atlanta; Montgomery and Savannah take lower rates. Atlanta is not intermediate to Montgomery over the direct routes. HELD, rate attacked not unreasonable or unduly prejudicial, complaint dismissed. Bradley & Woertz v. I. C. R. R., 118 I. C. C. 233.

(jk) Group lines generally have the appearance of injustice to some point just across the border, but having been established they should not be lightly or unnecessarily disturbed. Anderson-Taylor Co. v. A., T. & S. F., 115 I. C. C. 313, 320.

(l) Under group basis of rates the nearest point in the group is always prejudiced but it does not necessarily follow that prejudice is undue. It must appear that nearest point is injured by adjustment. Bradley & Woertz v. I. C., 118 I. C. C. 233, 235.

(m) Groups long maintained are presumably fair and are not to be disrupted unless substantial justice clearly requires it. Dissatisfied producers deprived of benefit of their proximity to a common market must show that they are actually injured by an unjust and unlawful discrimination. See 40 I. C. C. 311. Chicago Gravel Co. v. A., T. & S. F., 118 I. C. C. 633, 645, 646.

(n) Complainant attacked commodity rates charged on potatoes and vegetables, carloads, from Colorado, Idaho, Montana, Nebraska, Wyoming and Utah to Arkansas and Louisiana as unjustly discriminatory and unduly prejudicial of Little Rock, Pine Bluff and Helena, Ark., and Memphis, Tenn. From Colorado to this territory of destination the rates on potatoes and on other vegetables are the same. From the other states the rates on other vegetables are higher than on potatoes, but when there is a difference

it is uniform and applies alike to all of the destinations here considered. With a few unimportant exceptions the rates on potatoes in carloads to the north half of Arkansas and to Memphis are 76 cents from Colorado, Nebraska and Wyoming and 87 cents from Utah, Idaho and Montana. To destinations south, including complaining points in Louisiana, the rates are 88 cents and 100 cents. HELD, attacked rates not unduly discriminatory but are unduly prejudicial to extent they exceed to Little Rock, Pine Bluff, Helena and Memphis by more than 8 cents from Colorado, Nebraska and Wyoming, from which the rate is now 88 cents, and 7 cents from the points in Utah, Idaho and Montana, from which the rate is now 100 cents. Arkansas Jobbers & Mfrs. Asso. v. C., R. I. & P. Ry., 120 I. C. C. 245.

(o) In a group adjustment there must be dividing lines, and, naturally, where one point is located on or near this dividing line and another point just across that line in a higher rated group there will be a difference in rates. Along the border lines between groups the comparative situation is necessarily more acute than in the case of the average distance between the points in two adjoining groups. No group adjustment can effect exact justice in rate making, and the small disadvantages to one point or another incident to such adjustments do not constitute the undue prejudice made unlawful by section 3. In all cases of blanket or group rates there is of necessity more or less disregard for distance and varying degrees of inequality, but such inequalities are not necessarily unreasonable or unjust when the situation is viewed from every standpoint and all the circumstances and conditions are taken into account. In the absence of proof of tangible injury to complainants or of positive evidence that rates are unjustly discriminatory or unduly prejudicial a group adjustment should not be disturbed. Pelham Phosphate Co. v. A. C. L. R. R., 122 I. C. C. 509, 511.

(p) Group rate on coal from Dante and Clinchfield, Va., points on the C., C. & O., in the Clinchfield, Group 1, to Lambert Point, Va., for transshipment, found unduly prejudicial to extent it exceeds rate contemporaneously in effect from Carbo and St. Paul, Va., competing points located in the Clinch Valley district 2, to same destination for transshipment. The spread in rates between the two groups makes it impossible for mines in Clinchfield Group to successfully compete with those in Clinch Valley district and deprives them of opportunity to market coal in large consuming regions beyond Lambert Point. Moreover, Dante and Clinchfield are located near the center of the Clinch Valley district 2 but were not included therein, due to exclusion by the Norfolk & Western of all mines not located on its own rails when the group boundaries were drawn. The resulting group has thus become unnatural and distorted and its continuance can not be sanctioned by commission. Nonprejudicial rate relationship prescribed for future. Clinchfield Coal Corp. v. C., C. & O., 122 I. C. C. 37.

(q) As to all-rail traffic from Oklahoma, Arkansas, western Louisiana, Kansas-Missouri territory, Missouri River cities, Mississippi River gateways, and defined territories in Texas, and from Texas to Oklahoma, Arkansas, and western Louisiana, the Texas common-point rates on various articles found to result in undue prejudice to northeast Texas cities and in undue preference of other Texas points to the south and west, including the Houston-Galveston group. Consolidated Southwestern Cases, 123 I. C. C. 203, 342.

(r) Rates on pig iron from Buffalo, N. Y., and Punxsutawney and Du Bois, Pa., to destinations in New England, found not unduly prejudicial to Buffalo or unduly preferential of Punxsutawney and Du Bois. While complainants contend that their business has decreased because their competitors, situated a greater average distance from same general market, pay the same rates, record indicates that complainants' shipments have increased for several years. While Buffalo has a longer haul at same rate on traffic to New York, Du Bois and Punxsutawney have a longer haul at same rate on traffic to New England. Moreover three points named are and always have been grouped as to pig-iron rates to New England destinations and New York rate points and no reason appears for disturbing this adjustment. Hanna Furnace Co. v. N. Y. C., 123 I. C. C. 627.

(s) In grouping stations under a common rate the carriers must avoid undue preference and prejudice. The boundaries of a group should not be so drawn as to include certain producing points and exclude other points similarly

situated and circumstanced. Rates from Iowa and South Dakota, 126 I. C. C. 81, 86.

(t) Complainant attacked commodity rate of 45.5c charged on nine shipments of newsprint paper, carloads, from New Orleans, La., to El Dorado, Ark., subsequent to Oct. 13, 1924 also on shipments pendente lite, as unreasonable and unduly prejudicial. El Dorado is about 132 miles south of Little Rock, Ark., and 55 miles north of Ruston, La., on the Rock Island. It is also served by the M. P., E. L. D. & W., and L. W. & P. B. Prior to Oct. 5, 1924 when an import commodity rate of 45.5c was established, a fifth class rate of 74.5c applied. For a number of years an import commodity rate of 45.5c has applied from New Orleans to about 20 destinations in Missouri, Kansas, Oklahoma and Arkansas. This rate, which was not and is not published as a group rate, has been extended from time to time to apply to other destinations. It now applies to various destinations in different parts of a large territory, extending from El Dorado on the south to Kansas City and beyond on the north. HELD, rate attacked not unreasonable but for future unduly prejudicial to extent it exceeds the rate to Shreveport by more than 7c, reparation denied. El Dorado Chamber of Commerce v. C. R. I. & P. Ry., 126 I. C. C. 443.

(u) Complainant attacked rates on furniture, carloads, from St. Louis, Mo., and points in defined territories to Paris, Tex., were and are as compared with rates to Texarkana, Tex., unduly prejudicial. Paris is 91 miles west of Texarkana and 15 miles south of the Oklahoma-Texas state line. Prior to Dec. 12, 1925 the rate on furniture, in carloads, from St. Louis to Paris was $1.295 the rate to Texas common point territory. On that date a rate of $1.23 became effective. The rate to Texarkana is 82c, distance 493.4 miles. Distance St. Louis to Paris is 585 miles over the Frisco. Some readjustment is necessary. HELD, rates attacked unduly prejudicial to extent they exceed the rates which will result from Consolidated Southwestern cases, 123 I. C. C. 203. Reparation denied. Rodgers Wade Furniture Co. v. A. C. & Y. Ry., 126 I. C. C. 460.

(v) Complainant alleged that the combination rates on lumber and other forest products, in carloads, from points in the Puget Sound district of Washington to Montana, North Dakota, South Dakota and Minnesota are unreasonable, unjustly discriminatory and unduly prejudicial as compared with the joint rates from points from which the so-called coast group basis applies to the same destinations. Intervenor alleged that the combination rates from Elk River, Ida., to these destinations are likewise unlawful to the extent they exceed the Spokane basis of rates. The rates attacked apply from points on the N. P. to destinations on the G. N. and Milwaukee and from points on the Milwaukee to destinations on the G. N. and N. P. The combination rates attacked, made up of the locals of each carrier, range from 2.5c to 8.5c higher than those on the coast group basis, for single line hauls, from and to points in the same origin and destination territories. HELD, rates attacked not unreasonable but unduly prejudicial to extent they exceed rates from coast group. Rates attacked from Elk River not unreasonable or unduly prejudicial except those to points east of the Montana Dakota-state line, unduly prejudicial to extent they exceed the Spokane rates to the first points west of Minneapolis and St. Paul, Minn., and to Brach and Buford, N. D., 2.5c higher than Spokane, rates between the above destinations to be graded. Pacific States Lumber Co. v. G. N. Ry., 126 I. C. C. 471.

(w) Complainant attacked rates on zinc ore and concentrates, in carloads, from mines in the so-called Joplin-Miami or Tri-State field of southwest Missouri, southeast Kansas, and northeast Oklahoma to Cleveland, Lockland, Canton and Niles, O., Newcastle, Pa., and Clarksburg and Meadowbrook, W. Va., as unjust and unreasonable; and to De Pue, La Salle, and Peru, Ill., Grasselli and Terre Haute, Ind., Moundsville, W. Va., and Langeloth and Donora, Pa., as unjust, unreasonable and unduly prejudicial. In the western classification zinc ore and concentrates are rated classes D and C, respectively, but there is little movement, if any, under class rates. The same commodity rates generally apply on the ore and the concentrates. The traffic is desirable from a transportation standpoint, as it moves throughout the year and loads to the capacity of the cars used, and claims for loss are negligible. It is usually shipped in box cars but, not being subject to damage by the elements, may be transported in open top cars in times of car shortage. The Joplin-Miami district extends, generally speaking, from Waco, Mo., southward to Miami, Okla., and has been

the principal source of supply for concentrates for over 40 years. As the carriers spur tracks do not reach the mines, wagon hauls are necessary to move the concentrates to the railroad cars from the bins into which they are dumped after being mined, crushed and washed. Joint or local commodity rates are maintained on concentrates from the Joplin-Miami field to St. Louis, Mo., to consuming points in Illinois and to Grasselli, Ind. Complainants attack is primarily directed against initial factors, the rates to East St. Louis. The rates attacked are subnormal in the sense that they are as low as or lower than the rates in effect prior to August 26, 1920 whereas freight rates generally are from 12.5 to 36% higher than the rates in effect prior to that date. The removal of the general increase of 1920 was made by the carriers at the solicitation of shippers because of the condition of the industry, but it is not contended that the present economic condition of the industry requires a further reduction in these rates. On the other hand, the record shows a large increase in the value of concentrates since the general increase was removed, and defendants assert that it should now be restored. The Commission need not consider whether the general increase should be restored in these cases; but it can not materially reduce the carriers revenues from commodities which are able to bear the present rates, if it is to accord relief to agriculture and other industries in distress, as contemplated by the Hoch-Smith resolution. HELD, rates from Group 1 and short line points not unreasonable or otherwise unlawful, except that rates to De Pue, La Salle and Peru, Ill., are unduly prejudicial to those points and unduly preferential of Danville, Ill., to extent they exceed rates to Danville; that rates to Terre Haute, Ind., unduly prejudicial to that point and unduly preferential of Danville, Hillsboro and East St. Louis, to extent they exceed the rates to Danville, and exceed rates to East St. Louis and Hillsboro by more than 3.5c per 100 pounds; that rates to Grasselli, Ind., unduly preferential of Danville to extent they exceed the rate to Danville by more than 3c per 100 pounds, reparation denied. United Zinc Smelting Corp. v. B. & O. R. R., 126 I. C. C. 677.

(x) Rates on bituminous coal from mines in Pennsylvania and West Virginia to points in Warren district in Pennsylvania, which is included in the Buffalo, N. Y., rate group, found not unreasonable or unduly prejudicial as compared with those from same points to Buffalo rate group as a whole. Buffalo group adjustment is not maintained solely with respect to Pittsburgh district and any reduction in rates to Warren district would require similar reductions throughout a large portion of the group. Rates are not out of line with those for similar hauls from other Pennsylvania groups to points in the east and in view of delicacy of coal-rate adjustment in this territory and long-continued maintenance of the Buffalo group, evidence is not sufficient to require a disruption of that group. National Petroleum Asso. v. B. & O. 126 I. C. C. 11.

(y) Groups of long standing should not be disrupted unless the party seeking such action is actually damaged by discrimination resulting from the group adjustment, and unless substantial justice requires it. National Petroleum Asso. v. B. & O., 126 I. C. C. 11, 16.

(z) In grouping stations under a common rate, carriers must avoid undue preference and prejudice. The boundaries of a group should not be so drawn as to include certain producing points and exclude other points similarly situated and circumstanced. See 77 I. C. C. 607, 610. Rates from Iowa and South Dakota, 126 I. C. C. 81, 86.

(aa) Rates on lumber and products from points in Pennsylvania on the Indian Creek Valley Ry., to destinations in trunk-line and c. f. a. territories, found unreasonable and unduly prejudicial as compared with those contemporaneously in effect from Baltimore to various New York destinations for comparable distances, and to extent they exceeded those contemporaneously maintained from Group 3 points to same destinations. Latter rates are not depressed since they compare favorably with those from adjacent groups, and nothing of record warrants a differential from points on the Indian Creek Valley Ry. over Group 3 rates. Reasonable and nonprejudicial rates prescribed for future and reparation awarded. Indian Creek Valley Lbr. Co. v. B. & O. 126 I. C. C. 161.

(bb) Upon complaint seeking reduction in rate on grain from Aberdeen and contiguous territory in South Dakota within westbound transcontinental Group F, to points in Montana, Idaho, Washington, and Oregon, so as to permit complainants to transit grain at Aberdeen which now moves to Minneapolis and Sioux City from various points in Group

F for transit, thence reforwarded to north Pacific coast points at same rate as applies from Aberdeen, HELD: Record establishes that existing adjustment is a benefit rather than a disadvantage to South Dakota shippers and is advisable in view of investigations of terminal elevators at Minneapolis. Moreover, present group adjustment has been in effect for many years and to accord this particular section of Group F a lower rate than applies from remainder of that group would result in undue preference to shippers in that territory and eventually lead to demands for similar reductions from points generally in the group. Aberdeen Commercial Club v. C. P. R. R. 126 I. C. C. 498.

(cc) Showing that only 45 of 99 coal mines similarly situated on particular railroad in West Virginia enjoyed favorable blanket rates to the West HELD to sustain finding of undue prejudice by Interstate Commerce Commission. Virginian Ry. Co., v. United States. United States v. Virginian Ry. Co. 47 Sup. Ct. 222.

(dd) Relationship between rates on bituminous coal to points in Chicago switching district from Illinois and Indiana groups, on the one hand, and the Inner Crescent and Outer Crescent districts in Pennsylvania, Maryland, Virginia, West Virginia, eastern Kentucky, and Tennessee, on the other, found not unduly prejudicial to the Illinois-Indiana groups. Although a large volume of Crescent coal is sold in Chicago in competition with Illinois and Indiana coal, the greater portion is not competitive. Moreover, while rates from Illinois and Indiana mines have been subjected to greater percentage increase, the Crescent mines have been increased much more in cents per ton. Illinois Indiana Coal Cases, 128 I. C. C. 265, 282, 283.

(ee) The Commission has consistently declined to disrupt rate groupings, particularly where they have existed for many years, unless it was shown that the preference or prejudice which they involved resulted in substantial injury to complaining shippers or localities. The finding in such cases, where this has not been shown, has been that the preference or prejudice is not undue. In other words, the Commission has not taken the initiative in requiring carriers to depart from the principle that every shipper or community is entitled to the advantages of its location but where carriers have voluntarily departed therefrom and such departure has not caused substantial injury to any prejudiced party, it has not undertaken to interfere; and even where injury is shown, the preference or prejudice may, within limits, be justified by competition. But where it is shown that extensive grouping or port equalization, voluntarily maintained by the same carriers, without justification by competition, has disregarded substantial differences in distance and has resulted in substantial injury to shippers or localities, the Commission has found such grouping or port equalization to be unlawful, and in the latter class of cases have prescribed reasonable rate differences. Galveston Commercial Asso. v. G. H. & S. A. Ry., 128 I. C. C. 349, 387.

(ff) Commission has consistently declined to disrupt rate groupings of long standing unless preference and prejudice involved resulted in substantial injury to complaining shippers or localities. Carriers have not been required to depart from principle that every shipper or community is entitled to advantages of its location, but where carriers have voluntarily departed therefrom and such departure has not caused substantial injury, commission has not interfered; and even where injury is shown, preference or prejudice may be justified by competition. See 95 I. C. C. 539, 565, 567. However, where it is shown that extensive grouping or port equalization, voluntarily maintained by same carriers, without justification by competition, has disregarded substantial differences in distance and resulted in injury to shippers or localities, it has been found unlawful and reasonable rates prescribed. See 57 I. C. C. 554; 59 I. C. C. 321. Galveston Commercial Asso. v. G. H. & S. A. 128 I. C. C. 349, 387, 388.

(gg) Complainant alleged rates on scrap metals, in carloads, from Beaumont, Galveston and Houston, Tex., to St. Louis, Mo., were and are unreasonable, unduly prejudicial, from July 8, 1924 to April 26, 1926. The rate under consideration is the Texas common point group rate of 65.5c. HELD, rates assailed were not, are not, and will not be in excess of reasonable rates but were unduly prejudicial to extent they exceed those applicable from points in western Louisiana to St. Louis, and establishment of the rates prescribed in Consolidated Southwestern Cases, 123 I. C. C.

203 will correct the adjustment. Reparation denied, complaint dismissed. Southern Iron & Metal Co. v. B. S. L. & W. R. R., 132 I. C. C. 617.

(hh) Oregon and Washington points: Combination rates on lumber and other forest products from, to destinations on Minneapolis, St. Paul, and Sault Ste. Marie, in Minnesota, Montana, North Dakota, and South Dakota, found not unreasonable nor discriminatory but maintenance of lower joint rates from other points generally in the coast group to same destinations found unduly prejudicial. Undue prejudice ordered removed. West Coast Lumberman's Asso. v. C., M. & St. P., 129 I. C. C. 363.

VII. EVIDENCE.

§15½. In General.

See Evidence; Through Routes and Joint Rates §13½(u).

(a) Distance is not a controlling element in fixing group rates. Alexander Grocery Co. v. B., S. L. & W., 104 I. C. C. 155, 159.

(b) Where rates are blanketed over large areas there must be some hauls which are materially longer than others, or which are attended by more difficult and more costly operating conditions. Group rates must be judged by average conditions. Lumber from Pacific Points, 109 I. C. C. 104, 142.

(c) The fixing of groups necessarily requires that consideration be given to the locations of the points to be grouped, their transportation and commercial relationships, and the rail routes. Midcontinent oil rates, 1925, 112 I. C. C. 421, 448.

(d) All grouping for rate purposes is necessarily more or less arbitrary. Group lines generally have the appearance of injustice to some point just across the line. Yet the line must be drawn somewhere or the grouping abandoned. Once established, groups should not be lightly or unnecessarily disturbed. Keokuk Shippers Asso., v. Belt Ry. of Chicago, 113 I. C. C. 286, 288.

(e) If carriers in certain portions of any rate group designated under section 15a of the act are in a more prosperous condition than those in remainder, this fact may be considered in determining relative levels in different portions of same rate group. Revenues in Western District, 113 I. C. C. 3, 27.

(f) The commission is required under section 15a of the act only to adjust rates by rate groups to produce as nearly as may be a fair return for carriers as a whole in such rate groups. But it is evident that the principal purpose of that section was to afford the public adequate transportation service, and this end would clearly not be as adequately served by general increases throughout such a large rate group as the western district, applying alike to weak and strong lines, as by increases confined so far as possible to areas where rates appear to be on the lowest level and where the weakest roads are located. Revenues in Western District, 113 I. C. C. 3, 29, 30.

(g) A showing that one carrier is earning less than what the commission has fixed under section 15a of the act as a fair return to carriers as a whole with which it is grouped for rate-making purposes, is entitled to little or no weight in determining propriety of the rate level on two commodities. Various Commodities between New England Points, 113 I. C. C. 44, 47.

(h) The element of distance is disregarded to a greater or less extent in the establishment of group rates, and likewise is not necessarily controlling in determining the reasonableness of such rates, but where a system of group rates exists it may be a very important factor in determining the question as to the group in which a particular point belongs. Phosphate rock from Florida, 115 I. C. C. 229, 235.

(i) The element of distance is disregarded to a greater or less extent in establishment of group rates and likewise is not necessarily controlling in determining reasonableness of such rates, but where a system of group rates exists it may be a very important factor in determining the question as to the group in which a particular point belongs. Phosphate Rock from Florida, 115 I. C. C. 229, 235.

(j) It does not follow that average distances over all routes should not be considered in determining propriety of an adjustment which involves general level of rates to a considerable territory as well as relationship between destination groups. While each group is entitled to benefit of its short-line distance, it would be unfair to base rates upon that distance

alone. See also 46 I. C. C. 66. Indiana State Chamber of Commerce v. A. A. R. R., 115 I. C. C. 650, 654.

(k) In considering group rates, distance alone is not controlling, for the very nature of such rates usually involves some disregard for distance. Virginia Coal Operators Asso. v. A. & R. R. R., 120 I. C. C. 283, 292.

(l) Whether a group basis, a distance basis, or some other basis is proper, distance is necessarily an important consideration in determining the proper rate relationship between territories where there is no material difference in transportation conditions. Como Chemical Co. v. A., T. & S. F. Ry., 120 I. C. C. 517, 519.

(mn) Comparison of rates based upon distance alone have little probative value when rates compared are group rates, in the establishment of which the element of distance must to an extent be subordinated to other considerations. Cherry Co. v. C., M. & St. P., 123 I. C. C. 59, 61.

(o) The Houston-Galveston group is a strip of territory extending along the Gulf coast for approximately 100 miles, embracing Galveston, Houston, Beaumont, Port Arthur, and Orange, all ports of call. Consolidated Southwestern Cases, 123 I. C. C. 203, 336, 337.

(p) In considering the reasonableness of group rates, comparisons of rates and distances between selected points can not be regarded as controlling. Dallas Paper Co. v. A. & L. M. R. R., 126 I. C. C. 739, 740.

(q) Fact that territory on the Chicago & North Western between the Colorado common-point group and the Missouri River group is not as extensive as the similar territories on the C., B. & Q., and Union Pacific, does not establish the unreasonableness of rates on the North Western. Walrath & Sherwood Lbr. Co. v. C. & N. W., 126 I. C. C. 97, 100.

(r) Reasonableness of group rates must be judged by average conditions. Aberdeen Commercial Club v. C. P. R. R. 126 I. C. C. 498, 506.

(s) Complainant selected a point on the rim of an origin group and sought to have certain rates adjudged unreasonable without consideration of the whole group adjustment. HELD: In considering reasonableness of group rates, distances and ton-mile earnings between selected points can not be regarded as controlling but reasonableness of such rates must be judged by average conditions. See 83 I. C. C. 591. Humble Oil & Refining Co. v. B., S. L. & W., 126 I. C. C. 717, 720.

(t) In all rate-zoning plans there is inherent a greater or less degree of unfairness in the measure of rates as between points in adjacent zones and perhaps even as to points within the same group. Coal from Illinois, Kentucky, and Alabama, 128 I. C. C. 113, 116.

(u) Grouping is but one of the various elements to be considered in passing upon reasonableness of rates to or from a given point. Iroquois Pulp & Paper Co. v. A. A. R. R., 128 I. C. C. 187, 191.

(v) Rates from various eastern points to Dallas and Fort Worth, Tex., are same as those to Deming, N. Mex., a farther distant point, as well as to Los Angeles and other California ports. Rates not higher than rates to the coast necessarily are maintained to Deming in order to avoid unauthorized fourth-section departures; rates to Deming are for same reason observed as maximum at interior points such as Texas common points. Similar blanket applications frequently occur with respect to transcontinental rates and such rates are not necessarily determinative of reasonableness of rates to intermediate points. Nor does it follow that rates to Deming should be scaled back to intermediate points, particularly where showing is not sufficient to warrant such an adjustment. Apex Co. v. A. & V., 129 I. C. C. 283, 287, 288.

(w) Rate on bituminous coal from Castle Gate group mines in Utah to Seattle, Wash., and other north Pacific coast ports for transshipment beyond by water to Alaska or foreign countries, found not unreasonably low or otherwise unlawful. Complainant contends that since rate assailed is lower than rates prescribed in 80 I. C. C. 383; 89 I. C. C. 666, between same points, the rate relationship between the mines established by prescribed rates has been disturbed and burden is upon carriers to justify the reduced rate. However, rate assailed applies only for transshipment beyond by water and was not considered in those cases, nor is there anything to indicate that it is not remunerative or impairs other rate structures. Washington Coal Producers Asso. v. U. P., 129 I. C. C. 499.

§16. Burden of Proof.

See Burden of Proof; Evidence I.

(a) Proposal to increase class and commodity rates on grain and products and other commodities between certain Iowa and South Dakota points and points in Colorado and Utah by eliminating some origin points from Missouri River rate group and placing them in a higher-rated group, found not justified. While proposed rates compare favorably, distance considered, with rates shown in comparison, there is no showing as to whether origin points or destination from and to which comparative rates apply are group points, or as to other circumstances or conditions surrounding transportation under such rates. Neither is extent of proposed increases shown, other than rates on grain and products between Iowa points and western destinations, the burden being upon respondents to justify all increases proposed in suspended schedules. Grain and Products from Iowa and South Dakota, 109 I. C. C. 27.

(b) In considering group rates, distance alone is not controlling, for the very nature of such rates usually involves some disregard for distance. Virginia Coal Operators' Asso. v. A. & R., 120 I. C. C. 283, 292.

(c) Complainant attacked commodity rate of $4.54 per ton charged since Dec. 20, 1922 on numerous carloads of anthracite coal in prepared sizes, from points in the anthracite region of Pennsylvania to West Roxbury as unreasonable, unduly prejudicial and in violation of section four to extent it exceeds the rate of $4.16 contemporaneously applicable from the same points to Boston, Mass. HELD, rate to West Roxbury not unreasonable or unduly prejudicial. Rate to Boston between Oct. 2, 1922 and Oct. 9, 1923 was $4.22. During the same period defendant maintained rates of $4.48 to Roxbury and Boylston St. and $4.73 to Forest Hills. Effective Oct. 9, 1923 and for competitive reasons only as defendant says, the rates to the three destinations were reduced to $4.22 the present rate.. Complainant introduced no evidence to show that the earnings under the rates charged were unreasonable and they have named as defendant only the New Haven. The record falls far short of establishing that the rates charged were excessive and unreasonable for the transportation service rendered. Such evidence as is presented points toward undue prejudice rather than other elements of unlawfulness, but it is quite general in character and affords no basis for an award of reparation. HELD, rates attacked not unreasonable, complaint dismissed. Whittemores Sons v. N. Y. N. H. & H. R. R., 122 I. C. C. 451.

(d) While the Commission has often approved blanket rates covering substantial areas, such approval has been contingent upon the presentation of adequate reasons therefor, and it has heretofore stated that in making a blanket adjustment the burden rests upon the carriers to provide rates that shall not be unreasonable. In establishing rates on commodities moving in large volume from port cities to inland points of consumption a certain amount of latitude should be permitted in the blanketing of those rates, but to justify a blanket the lengths of the hauls from its edge to points within ought to bear a reasonable relation to the entire haul. International Paper Co. v. B. & M. R. R., 128 I. C. C. 466, 469.

§18. Comparisons.

See Comparative Rates; Evidence §12, §13; Relative Rates.

(a) The reasonableness of a group rate may not be measured by distance from the nearest point in the group. Furniture from Southern Points, 112 I. C. C. 302, 305.

(b) Distance is only one of the elements to be considered in measuring reasonableness of rates. Furniture from Southern Points, 112 I. C. C. 302, 307.

(c) The grouping of points makes distance comparisons of little value in determining the measure of a rate. Rates from Iowa and South Dakota, 126 I. C. C. 81, 83.

(d) Circumstances may justify an exception to the general rule that in fixing group rates it is unfair and improper to single out destinations near the edge of the group and compare them with the rates to the group as a whole. Walrath & Sherwood Lbr. Co. v. C. & N. W., 126 I. C. C. 97, 100, 101.

(e) Complainant selected a point on the rim of an origin group and sought to have certain rates adjudged unreasonable without consideration of the whole group adjustment. HELD: In considering reasonableness of group

rates, distances and ton-mile earnings between selected points can not be regarded as controlling but reasonableness of such rates must be judged by average conditions. See 83 I. C. C. 591. Humble Oil & Rfg. Co. v. B., S. L. & W. Ry., 126 I. C. C. 717, 720.

(f) In considering the reasonableness of group rates, comparisons of rates and distances between selected points can not be regarded as controlling. Dallas Paper Co. v. A. & L. M. Ry. 126 I. C. C. 739, 741.

(g) It is unfair to consider only the shortest possible routes in measuring an established group rate which applies from points on a number of originating carriers and over various routes. Iowa R. R. Commissioners v. A. & S., 128 I. C. C. 293, 298.

§19. Competition.

See Competition.

(a) Complainant attacked commodity rates charged on porcelain insulators, carloads, from Macomb, Ill., to Galveston and Houston, Tex., as unreasonable, unduly prejudicial and in violation of section four. The rates generally to the Houston-Galveston group and intermediate points in southwestern territory are now under consideration in 13535 and cases consolidated therewith. No finding as to undue prejudice can be made until it is determined whether water competition warrants the maintenance of lower rates from Pittsburgh and other eastern points than from or to intermediate points. HELD, rate attacked not unreasonable or unduly prejudicial, complaint dismissed. Illinois Electric Porcelain Co. v. A., T. & S. F. Ry., 120 I. C. C. 621.

(b) Conditions and circumstances peculiar to transportation of petroleum oil and its products are so unique as to force carriers to abandon most of the customarily employed elements or factors in establishing rates. Pipe-line competition among refiners and producers and water competition are elements chiefly responsible not only for subnormal or depressed rates, but have combined to force the forming of large origin and destination groups. This method has long been practiced in the Southwest, where competition is keen and where pipe lines are numerous. In order to share in the traffic carriers have been forced to establish depressed rates over wide blankets and this has brought about a disregard of the distance factor so commonly used in making rates under normal conditions. Humble Oil & Rfg. Co. v. B., S. L. & W. Ry., 126 I. C. C. 717, 721, 722.

§19¼. Prior Decision of Commission.

See Previous Decision of Commission.

(a) Upon further hearing, destination groupings and applicable rates prescribed in former report, 78 I. C. C. 746, on lumber and other forest products from points in north Pacific coast group to points in Southwest, readjusted. Original report modified and reparation denied. West Coast Lumbermen's Asso., v. A. & S., 104 I. C. C. 695.

(b) Following Miami Copper Co., 93 I. C. C. 221; 104 I. C. C. 467, rates on fuel oil from Burkburnett and Wichita Falls, Tex., and Beckett, Okla., found not unreasonable, discriminatory, or unduly prejudicial as compared with rates contemporaneously in effect from other points in same origin groups or with lower rate subsequently established. Globe Light & Power Co. v. A. E. R. R., 109 I. C. C. 405.

(c) Complainant attacked commodity rates charged on potatoes, carloads, from Minnesota, Wisconsin and North Dakota to C. F. A. and trunk line territory as unreasonable. Previous decisions on these potato rates are in 61 I. C. C. 680 and 74 I. C. C. 448. It is the view of the commission that the specific manner provided for the removal of the prejudice found to exist in the previous case was tantamount to stating a reasonable basis on and after the date of the finding Dec. 12, 1922, and rates charged in excess of those prescribed were unreasonable. HELD, rates attacked not unreasonable except that on shipments moving from Dec. 12, 1922, to June 1, 1923, unreasonable to extent they exceeded rates prescribed in 74 I. C. C. 448, reparation awarded. Beggs & Co. v. B. & O. R. R., 120 I. C. C. 115.

(d) In 102 I. C. C. 540, division 2 found the rates on salt, in carloads, from Anse La Butte, Avery, Salt Mine, Weeks Island and Jefferson Island, La., to points in Mississippi, and from Baldwin, La., to Jackson, Miss., unreasonable and unduly prejudicial and prescribed a distance scale of reasonable maximum rates from and to those points and permitted the

addition to the rates under that scale of 50 cents per ton in making rates to local points on the M. C., C. & G., and G. M. & N. With few exceptions the present rates from Louisiana mines to Mississippi destinations are joint rates based on the Mississippi River combination, composed of a proportional rate of $1.825 to the river and the local rates beyond. It would seem, therefore, that if the initial rate in the scale applying to the nearest Mississippi destination is on the proper level, and the grading in the scale for the hauls in the Mississippi Valley properly reflects the additional service in the latter territory, the fact that the total haul to one destination may reflect a greater percentage in southwestern territory than the total haul to another destination is immaterial. Apparently reductions would result to all, or practically all, points in Mississippi. The number of increases is insignificant compared with the number of reductions. The commission does not consider this a general readustment such as those in which it has for that reason denied reparation in other cases. HELD, original report affirmed except (1) that McLain will be eliminated as a point to which the prescribed distance scale will apply as maximum, and (2) that a differential of 60 cents instead of 50 cents per ton may be added to the distance scale in making rates to points on the M. C., C. & G., and G. M. & N., and N. O. G. N., and (3) fourth section relief granted to extent of 50% circuity. Mississippi Railroad Commission v. A. & V. Ry., 120 I. C. C. 569.

(e) In 112 I. C. C. 7 the commission prescribed reasonable maximum rates on lime, in carloads, based on a distance scale from Sandusky, Woodville and Carey, O., to destinations in central territory and stated that "in applying that scale existing groups of producing points, including the Sandusky, Carey and Woodville groups, should be continued and distances computed in the manner specified in Atlas Portland Cement Co. case, as modified by supplemental order." Although the Woodville, Sandusky and Carey groups are referred to in the record and elsewhere as separate entities such designation is misleading, for to a great majority of destinations in central territory the rates from all three groups are the same, the exceptions being chiefly nearby points in Ohio and Michigan. From the inception of the proceeding it seems to have been generally assumed by the Ohio shippers that the present parity of rates from the Woodville, Sandusky and Carey groups would be continued at whatever level of rates should be prescribed as reasonable. The unanimous desire on the part of the Ohio lime producers for a continuance of their present parity of rates is a valid reason for its retention, and the commission is unable to find that the use of a single group would unduly prejudice other shippers or would be inconsistent with the application of the distance scale previously prescribed. HELD, Sandusky, Carey and Woodville should be considered as a single group in computing the rates based on the distance scale prescribed not less than 100 miles from the nearest point in the group. Washington Building Lime Co. v. A. & B. B. R. R., 122 I. C. C. 105.

(f) Proposed revision of rates on coal from mines in southern Illinois, western Kentucky, and the Birmingham district of Alabama, to destinations in Mississippi Valley, in purported compliance with findings in 109 I. C. C. 740, found justified as to destinations west of the Mississippi River, but not east thereof, except as to that portion covered by the zoning plan described in the report, provided that if slight changes in rates are necessary to comply with findings as to rates within the respective zones, such changes are authorized. However, investigation reveals the fact that no change can be made in adjustment of proposed rates in eastern part of Mississippi Valley territory which would not involve changes at other points and thus produce conflicts with section 4 of the act. Coal from Illinois, Kentucky, and Alabama, 128 I. C. C. 113.

(g) Respondents proposed to establish rates on coal from mines in Alabama, western Kentucky and southern Illinois to destinations in the Mississippi valley, southeastern Arkansas, southeastern Texas and Louisiana west of the Mississippi river, in purported compliance with the decision in Alabama Mining Institute v. I. C. R. R. Co., 109 I. C. C. 740. In the original case, the Commission prescribed a differential of 5c per ton on coal in favor of the Alabama mines for each 25 miles or major fraction thereof in which the average distance from the western Kentucky-southern Illinois mines exceeded the distance

from certain mines in the Birmingham district of Alabama. The principal protestant withdrew its protest against the proposed rates to points west of the Mississippi river. The suspended schedules to points west of the Mississippi river will be allowed to become effective. It appears that the efforts of the carriers in attempting to comply with the original decision show that differentials based on a mileage scale in this particular territory with its network of lines radiating from the competing coal fields will not work out exactly as contemplated, owing to the provision of the fourth section. A zoning plan would at least possess the advantage of eliminating some of the fourth section difficulties which confronted the carriers in their attempt to comply with the findings in the original case and such a plan, therefore, as to perhaps one half of the destination territory will be presented herein. In prescribing this plan the Commission has followed quite closely the differential basis formerly recommended although slight increases in the differentials have resulted at certain points and slight reductions at others. It is believed, however, that an average of the differential basis as originally prescribed has been preserved. HELD, carriers have justified the suspended schedules in that part of Mississippi valley territory lying east of the I. C. running from Jackson, Tenn., to Jackson, Miss., and east of the G. & S. I. running from Jackson through Hattiesburg to Gulfport; provided, that if slight changes in the rates at certain points in this region are necessary in order to permit a proper compliance with the findings as to the rates within the respective zones hereinafter described such changes are hereby authorized. Three zones are prescribed and rates from Alabama are unduly prejudicial to the extent they exceed rates less than from western Kentucky-southern Illinois mines 35c in groups 1 and 2, 40c in zone 3 and 45c in zone 4. Coal from Illinois, Kentucky and Alabama, 128 I. C. C. 113.

(h) Upon further hearing present rates on crushed stone from Buffalo and Linwood, Iowa, to points in northern Illinois, found in many instances not in accord with findings in original report 89 I. C. C. 110, wherein reasonable and nonprejudicial rates were prescribed to 10 so-called key points and carriers were left to work out a schedule of properly related rates to all other destinations. As intention of original report was to prescribe rates that would eliminate disparity in rates from Iowa quarries and not to sanction blanketing of Key-point rates all the way back to Buffalo and Linwood or to next intermediate key point as has been done, to avoid further misunderstanding, carriers will be expected to publish rates in accordance with rates prescribed to points shown in appendix hereto and, to points not named in appendix, rate to nearest point named therein by shortest workable route. Such rates are in accord with original findings and will be reasonable for future. Dolese Bros. Co. v. A., T. & S. F., 128 I. C. C. 471.

(i) Upon further argument, findings in former report in No. 15061, 107 I. C. C. 245, that rates on articles in uniform brick list from Danville, Ill., to points in Wisconsin, Michigan, Minnesota, and North Dakota were not unreasonable but unduly prejudicial, affirmed, but finding that the Wabash Valley group should be divided into two sub groups in making rates to destination territory involved, modified so as to include Danville in the Wabash Valley group in accordance with findings in 68 I. C. C. 213. While evidence supports finding in original report that rates were not unreasonable, the relative adjustment complained of, under which differences in rates of Danville over competing Illinois points are greater than differences in distances warrant, clearly subjects Danville to undue prejudice and disadvantage. Nonprejudicial relationship of rates prescribed for future. Western Brick Co. v. N. Y. C., 128 I. C. C. 479.

(j) Combination rates on grain and products from Oklahoma points to destinations in southeastern and Carolina territories found unreasonable to extent that factors east of Memphis, Tenn., exceed rates based on and approximating the class 12 rates prescribed in Southern Class Rate Investigation 113 I. C. C. 200, and to extent that factors west of Memphis from all points exceed present group rates, computed as provided in Consolidated Southwestern Cases 123 I. C. C. 203, up to 610 miles and from points at greater distance from Memphis those graded up 1.5 cents on wheat and flour and made less by 10 per cent on coarse grains, for each 50 miles. Factors east of Memphis constructed as above should apply not only on Oklahoma traffic but also from other western States from

which through rates are equalized via the various gateways. Reasonable joint through rates prescribed for future. Oklahoma Millers' League v. A. & M., 128 I. C. C. 523.

(k) Rate on box shooks from Bend, Ore., to Port Arthur, Tex., found not unreasonable as compared with lower rate prescribed in 78 I. C. C. 746 on lumber products, including box shooks from the North Pacific Coast group, including Bend, to group points including Port Arthur, established subsequent to movement herein. Upon further hearing in 104 I. C. C. 695, reparation was denied upon the theory that where, as here, readjustment of rates is required throughout an extensive territory involving both increases and reductions and affecting shippers at many points, substantial justice would not be advanced by awarding reparation. Moreover, issues and contentions similar to those here presented were advanced in 100 I. C. C. 319, in which reparation was denied. Shelvin-Hixon Co. v. O.-W. R. & N., 128 I. C. C. 565.

§19½. Reparation.

See Reparation.

(a) Complainant attacked commodity rates on sugar and requested reparation on sugar, carloads, eastbound from Utah and Idaho. Reparation only is sought. Charged 93c to Texas common points and 96c and $1.145 to other grouped destinations in Missouri, Arkansas and Oklahoma. To Texas common points reparation is sought to basis of 87c which was established March 1, 1922, and to other destinations on basis ranging from 77c to 85c. The rate contended for by complainants is only 1c higher than the rate established June 25, 1918, following G. O. 28. Any undue prejudice which may have existed in the past has been removed and proof of damage due to the alleged violations of section 3 and 4 are lacking. HELD, rates attacked not unreasonable, complaint dismissed. To Minnesota, Wisconsin, South Dakota, Iowa and Michigan rates charged ranged from 76.5c to $1.07 and the basis upon which reparation is sought ranged from 77c to $1.04 prior to July 1, 1922, and these bases reduced 10% thereafter. HELD, reparation denied, complaint dismissed. Utah Idaho Sugar Co. v. C. R. I. & P. Ry., 118 I. C. C. 256.

(b) In 62 I. C. C. 147 the Commission found the rates on slack barrel staves, in carloads, from Crowder, Miss., to interstate destinations were not unreasonable, but were unduly prejudicial to the extent they exceeded the group rates from Batesville and Charleston, Miss., to the same destinations. HELD, complainant has not shown with reasonable certainty that it was compelled to forego profits solely because its freight rates from Crowder exceeded the rates available to its competitor at Charleston on like traffic, nor that the Charleston rates were the only or proximate cause of the injury alleged, complaint dismissed. Hollingshead Co. v. Director General, 120 I. C. C. 55.

VIII. REGROUPING.

See Evidence §66.

§20. In General.

(a) Proposals of carriers and shippers embodying changes in oil-rate groups of the midcontinent field in Kansas, Missouri, Oklahoma, Arkansas, Louisiana, and Texas on traffic to and beyond Kansas City and St. Louis, disapproved. No important group changes should be made unless supported by the strongest reasons requiring removal of unlawful situations. Group rearrangement here proposed by shippers is designed basically to serve interests of Oklahoma and Texas, but consideration must be given to interests of all who would be affected and their proposal would not serve best interests of the midcontinent refineries as a whole. Carrier's proposal is subject to somewhat the same comment, their effort having been to regroup and realign rates in a manner which would reflect transportation element to a somewhat greater extent than at present. Midcontinent Oil Rates, 1925, 112 I. C. C. 421.

(b) In previous cases the Commission has pointed out that group lines generally have the appearance of injustice to some point just across the border, but having been established they should not be lightly or unnecessarily disturbed. Anderson Taylor Co. v. A. T. & S. F. Ry., 115 I. C C. 313, 320.

(c) Group rates, when once established, should not be lightly or unnecessarily disturbed. Transcontinental Oil Co. v. B. & O., 118 I. C. C. 518, 521.

(d) Groups long maintained are presumably fair and are not to be disrupted unless substantial justice clearly requires it. Dissatisfied producers deprived of

the benefit of their proximity to a common market must show that they are actually injured by an unjust and unlawful discrimination. See 40 I. C. C. 311. Chicago Gravel Co. v. A., T. & S. F., 118 I. C. C. 633, 645, 646.

(e) Respondents proposed to change from Group 7, the Missouri river rate group to Group 8, stations on the C. M. & St. P. north of Sioux City, Ia., on the line through Elk Point, S. D., and Hawarden, Ia., to and including Calliope, Iowa; stations on the C. & N. W. north of Wren, Ia., to and including Hawarden, east of Sargents Bluff, Ia., to and including Correctionville, Ia., and Battle Creek. Danbury, Ricketts and Berne, Ia.; and stations on the I. C. north of Onawa, Ia., to and including Correctionville, Ia. It would result in increased rates on all classes and increased commodity rates on grain, grain products and other articles, between the stations affected by this change in boundary and Colorado common points, Utah common points, and other points in the west. The changed grouping would result in the application to or from Iowa stations thus excluded from the Missouri river group of combination rates on grain and grain products, made up of the local Iowa interstate distance rate to the nearest Missouri river rate point and the Missouri river rate beyond, subject to the Mississippi rate as a maximum. Except in cases where this maximum would apply the proposed change means that the present rate to or from the excluded stations in Iowa would be increased by the amount of the local Iowa distance rate to the nearest Missouri river rate point. HELD, proposed schedules not justified. Rates from Iowa and South Dakota, 126 I. C. C. 81.

(f) Complainant alleged that rates on corn, oats, barley, rye, speltz, and the food products of these grains, in carloads, from Aberdeen, S. D., and certain contiguous territory via direct routes to points in Montana, Idaho, Washington and Oregon were and are unreasonable. The origin territory embraces a more or less rectangular section extending from the North Dakota-South Dakota state line to a line running east and west through Mitchell, S. D., the eastern boundary extending somewhat west of Watertown, S. D., and including the Milwaukee stations of Summitt and Oldham, S. D., and the western boundary extending just west of Glenham, Pierre and Belvidere, S. D. It is within westbound transcontinental group F. Rate attacked is 59c, applicable from all of Group F and G territory. Minneapolis and Sioux City are large terminal markets. Under defendants tariffs coarse grain may be shipped from various points in Group F, accorded transit at those markets and the same or substituted tonnage forwarded to north Pacific coast points at the 59c rate. There are no grain marketing facilities in South Dakota, except the local country elevators, and complainants desire to establish a terminal market at Aberdeen. From the origin territory described a rate of 54.5c is sought, restricted in its application to the most direct routes. The present group adjustment has been in effect for many years and conforms to the westbound transcontinental grouping of rates on classes and other commodities generally. Rates are similarly grouped in the transcontinental adjustment to California. Necessarily distance has not been given consideration in large groups of this character. The present grouping is not shown to be improper or unreasonable. It appears that to carve out this particular section from group F and accord to it a lower rate than applies from the remainder of that group would result in fourth section departures. The record strongly indicates that the establishment of the basis asked would result in undue preference to shippers in that territory and eventually lead to demands for a similar reduction from points generally in groups F and G, which in turn would result in reductions from other groups. HELD, rates attacked not unreasonable, complaint dismissed. Aberdeen Commercial Club v. C. P. R. R., 126 I. C. C. 498.

(g) Groups of long standing should not be disrupted unless the party seeking such action is actually damaged by discrimination resulting from the group adjustment, and unless substantial justice requires it. National Petroleum Asso. v. B. & O. 126 I. C. C. 11, 16.

(h) Commission has consistently declined to disrupt rate groupings of long standing unless preference and prejudice involved resulted in substantial injury to complaining shippers or localities. Carriers have not been required to depart from principle that every shipper or community is entitled to advantages of its location, but where carriers have voluntarily departed therefrom and such departure has not caused substantial in-

jury, commission has not interfered; and even where injury is shown, preference or prejudice may be justified by competition. See 95 I. C. C. 539, 565, 567. However, where it is shown that extensive grouping or port equalization, voluntarily maintained by same carriers, without justification by competition, has disregarded substantial differences in distance and resulted in injury to shippers or localities, it has been found unlawful and reasonable rates prescribed. See 57 I. C. C. 554; 59 I. C. C. 321. Galveston Commercial Asso. v. G., H. & S. A., 128 I. C. C. 349, 387, 388.

IX. ADVANCED RATES.

See Advanced Rates.

§21. In General.

(a) Proposed increased rate on phosphate rock from points in Florida to Roanoke, Ala., by restoring group 5 rate previously in effect, found not justified. Roanoke at present enjoys rate applicable to points in group 4, which reduction was made for purpose of placing that point on a parity with points in the Atlanta-La Grange group. Moreover, distance to Roanoke is less than that to most points in group 4, and while element of distance is disregarded to a greater or less extent in establishment of group rates and is not necessarily controlling in determining reasonableness of such rates, it may be a very important factor where a system of group rates exists, in determining the group in which a particular point belongs, and it is clear that Roanoke properly belongs in group 4. Phosphate Rock from Florida, 115 I. C. C. 229.

(b) Respondents proposed to increase certain rates and make certain changes in the tariff descriptions and carload minimum, on rock salt, in bulk, in carloads, from New York state to points in trunk line territory, New England, western territory and Canada. UNIFORM DESCRIPTION AND CARLOAD MINIMUM. In 92 I. C. C. 388 the commission prescribed a uniform description for salt, and uniform minimum of 45,000 pounds through the United States. There is uncontradicted evidence in this record that salt in bulk generally and ordinarily is loaded to the capacity of the car furnished without regard to the established minimum; and that the establishment of the uniform minimum would not result in any general reduction in the average loading of either bulk or package salt. The commodity rates from producing points to large consuming points should be made in consideration of the volume of movement, average loading, and other transportation conditions, whatever they may be, and when this is done there will be no occasion for disrupting the uniformity in the description and minimum. The uniform minimum should be applied in this territory. RATES FROM NEW YORK POINTS. Respondents propose to place all salt rates on a uniform level to New York City, Philadelphia, Pa., and Baltimore, Md. The rates on salt from New York producing points to these principal destinations groups are and have been on a higher level than those prescribed by the commission in central and western trunk line territories. In view of the low value of salt, especially in relation to the average freight rate, the heavy average loading, the large volume of movement through out the year, the substantial length of average hauls, and the negligible susceptibility to loss and damage, the commodity rates on salt to these large eastern seaboard consuming cities ordinarily might be expected to yield less revenue than the average for all freight. The rate for the future on common salt from New York producing group to the New York-Baltimore group should not exceed 18 cents. Rate for future to Asbury Park and Barnegat, N. J., should not exceed 20 cents. To Atlantic City, N. J., not to exceed 21 cents, to Cape Charles, Va., not to exceed 23.5 cents, to Boston, Providence, R. I., and Portland, 22 cents, to Rutland, and other interior points known as the Springfield group, 19.5 cents, to Burlington, Vt., 21 cents, to Berlin, N. H., same as to Boston, to Bangor, Me., 27.5 cents, to Washington, D. C., 19.5 cents, to Virginia cities to be adjusted with relation to Cape Charles; to Scranton and Wilkesbarre, Pa., 12.5 cents from Ithaca district and 15.5 cents from Warsaw, district, to Tyrone, Pa., 15.5 cents; to Johnsonburg, Pa., 13 cents; to Luke and Piedmont, W. Va., 19.5 cents; to Covington, Va., 23 cents; to Niagara Falls, Ont., 10 cents. Eastern Salt Cases, 122 I. C. C. 21.

(c) Respondents proposed to increase their class rates between Portland and Astoria, Ore., and Aberdeen, Hoquiam, Chehalis, Plumpia, Tacoma, and Seattle, Wash., on the one hand, and stations in Oregon and Washington along the Columbia river from Portland to and includ-

ing Jordan, Ore., and Roosevelt, Wash., on the O. W. R. R. & N. and S. P. & S. on the other. Except as changed by subsequent general increases and reductions, class rates in Washington and Oregon generally are on the basis prescribed in Portland Chamber of Commerce v. O. R. R. & B. Co., 21 I. C. C. 640. The increases now proposed place these class rates on the same basis as now obtains generally between Portland and other distributing points in Oregon and Washington north of Portland, on the one hand, and all other points in Oregon and Washington, on the other, for hauls that involve similar distances. The record makes it clear that the present class rates between Portland and the other distributing points, on the one hand, and the Columbia river points, on the other, long have been on a depressed basis. HELD, proposed schedules justified. Class rates between Oregon and Washington, 128 I. C. C. 108.

(d) Respondents, G. N. and S. P. & S., proposed to increase their rates on grain and grain products, carloads, from Montana on the G. N. to destinations in Washington on the Goldendale branch of the S. P. & S. The Goldendale branch extends northeastward from Lyle, Wash., a point on the main line of the S. P. & S. 85 miles east of Portland, Ore., to Goldendale, Wash., 41.6 miles. At present, stations on the mine line of the S. P. & S. and its Goldendale branch take the same rates as Portland on grain and its products moving from points of origin on the G. N. in Montana. Respondents now propose to cancel the application of the blanket rate to destinations on the Goldendale branch on grain from Montana and to establish in lieu thereof rates made by the addition of arbitraries to the junction point rate. These arbitraries range from 7.5c at Klickitat, Wash., 13.4 miles from Lyle to 10.5c at Goldendale, the terminus of the branch. Grain rates from Montana to Washington and Oregon points are so extensively blanketed at both ends, and the hauls are so long, that the short branch line movement here considered loses much of its significance. Although the branch line haul here is somewhat longer than 30 miles, and operating conditions are more difficult, and therefore more expensive, than on the main line, the markedly shorter total haul required with consequent higher earnings, and the fact that rates to other more distant branch lines will continue to be accorded the group basis, in great measure offsets this showing. HELD, schedules not justified. Grain from Montana, 128 I. C. C. 123.

(e) Respondents proposed increased rates on sugar, in carloads, from New Orleans and other Louisiana refining points to southern and eastern Texas, and from Sugarland and Texas City, Tex., to Shreveport and other Louisiana points and to Vicksburg, Miss., and other Mississippi river crossings south thereof. The rates from Louisiana to Texas are grouped as to points of origin and destination. The Louisiana origin group consists of New Orleans and approximately 40 points within 100 miles west and northwest thereof. There are three Texas groups of destination, the greater part of common point territory, the so-called Houston Galveston group, in southeastern Texas, and a long narrow group lying immediately north of the Houston Galveston group and immediately west of the Louisiana Texas boundary, known as east Texas group. To Houston Galveston group rate is now 29c, to common point territory 67c and no one rate applies to east Texas group, usually combination bases. Respondents propose to increase the rate to Houston Galveston group to 47.5c. To east Texas group which now base on Houston Galveston group they propose to increase the rates to combinations made by use of the new 47.5c to Houston Galveston group, except that where such combinations would exceed the common point rate of 67c the latter basis is proposed. No changes are proposed to be made in rates to points to which the 67c common point rate now applies, or to points in the east Texas group to which the present rates are combinations on western Louisiana points. They propose to increase the rate from Sugarland to Shreveport to 44.5c. Increases are also proposed from Sugarland and Texas City to other points in Louisiana, to Lake Charles from 38.5c to 44.5c, to Monroe from 33.5c to 48c, and to Ruston from 41.5c to 48c. Complainant attacked all rail rates on sugar from New Orleans and river and rail rates from that point to Arkansas as unreasonable and unduly prejudicial. The rates attacked are based upon the 9702 scale, except that to the southern third of Arkansas lower through rates, based on locals to and from northern Louisiana points, apply. The river and rail rates from New Orleans to the Ar-

kansas points are usually, and perhaps uniformly, equal to the all rail rates from and to the points, minus 20% of the all rail local rates between the ports via which the river rail shipments move, but from interior Louisiana points combination rates apply and greatly exceed the all rail rates. Complainant attacked 30.5c rate on refined sugar from Sugarland to Shreveport, and 26c rate from New Orleans to Shreveport as unduly prejudicial. HELD, proposed increased rates not justified in so far as they exceed those that will result from the application of column 30 rates from and to the same points applied as provided in Consolidated Southwestern cases, likewise column 30 rates to be applied to rates under attack. Sugar between Louisiana and Texas points, 128 I. C. C. 309.

I. REASONABLENESS OF RATES.

§1. In General.

See Basing Points and Lines §2 (d); Reasonableness of Rates.

(a) Sixth-class rates on empty steel shells from Penniman, Va., situated on a short branch line of C. & O., to Carnegie, Pa., and Canton, Ohio, found unreasonable to extent they exceeded lower commodity rate contemporaneously maintained from Williamsburg, Va., a mainline point to same destinations, which lower rate was established from Penniman subsequent to movements here involved. Reparation awarded. Hyman-Michaels Co. v. C. & O., 104 I. C. C. 749.

(b) Rates on crushed stone from Columbia, S. C., to Wilford, Edwards, and Dean Siding, N. C., destinations on the Washington & Vandemere, a short-line carrier under same management and control as Atlantic Coast Line, found not unreasonable as compared with single-line distance rates from same point of origin to same and other destinations, or with rates between numerous other points for application over two or more lines for approximately equal distances. Raleigh Freight Traffic Bureau v. A. C. L., 107 I. C. C. 156.

(c) Rates on lumber and forest products taking same rates, prescribed in original report, 85 I. C. C. 270, from points on short lines in southern territory to destinations in trunk-line and New England territories found not unreasonable as a whole; but such rates from points on the Atlanta & St. Andrews Bay Ry., found unduly prejudicial to extent they exceeded rates contemporaneously applied from Dothan by more than 3 cents from points north of Cottondale and 4 cents from Cottondale and points south thereof. Nonprejudicial basis of rates prescribed. North Carolina Pine Asso. v. A. C. L., 107 I. C. C. 190.

(d) Based upon light traffic density and unfavorable operating and financial conditions, certain independent short lines in southern territory granted authority to continue to charge lower rates on lumber and other forest products to trunk-line and New England territories from junction points with trunk-line connections than from intermediate points on their lines; provided rates from such intermediate stations shall in no case exceed lowest combination, and further provided that differences between rates from more distant junction points on the one hand, and intermediate points on short lines on the other, shall not be increased. North Carolina Pine Asso. v. A. C. L., 107 I. C. C. 190.

(e) Rates on bar iron from Knoxville, Tenn., to stations on Ohio & Kentucky Ry., a short-line carrier, found unreasonable as compared with rates from Pittsburgh and other points to same destinations, with rates between other points for comparable distances, and to extent they exceeded lower rate subsequently established. Reparation awarded. Knoxville Iron Co. v. L. & N., 107 I. C. C. 627, 633, 634.

(f) Rates on yellow-pine piling from Lumberton and Ansley, Miss., to Bamfield, Mich., situated on a branch of the Detroit & Mackinac Ry., found unreasonable to extent they exceeded lower blanket rate contemporaneously maintained to all main-line and most branch-line points of the Detroit & Mackinac, which lower rate was subsequently established to Comins, to which Bamfield is intermediate, subject to rule 77 of Tariff Circular 18-A. Reasonable rate for future prescribed and reparation awarded. Edward Hines Yellow Pine Trustees v. C., S. & M. R. R., 109 I. C. C. 387.

(g) Combination rates assessed on forest products and naval stores from Barth, Kiln, and Loretta, local points on the Mississippi Southern R. R., a short, line carrier, to interstate destinations, and on coal from interstate points to above-named stations, found not unreasonable as compared with lower blanket rates contemporaneously maintained from and to Lumberton, the junction point, and adjacent points in Mississippi Valley territory, which lower rates were subsequently established as through rates from and to Kiln, Barth, and Loretta. Reparation denied for any undue prejudice which may have existed in the past, no such proof of damage as is required to sustain an award of reparation under such a finding having been furnished. Hines Yellow Pine Trustees v. A. C. & Y. Ry., 109 I. C. C. 453.

(h) Rates on pulp wood from Minnesota points to Wisconsin Dam and Kings, Wis., points served exclusively by Marinette, Tomahawk & Western Ry.; when routed from Duluth or Missabe Junction over the Soo line via Bradley, Wis., thence over the Marinette, found unreasonable because of factor from Duluth or Missabe Junction to destinations. Reparation awarded and a reasonable proportional rate, which takes into consideration the financial condition of the Marinette and fact that movement requires a haul over two lines, prescribed for future. Tomahawk Kraft Paper Co. v. C. & N. W., 109 I. C. C. 517.

(i) Complainant attacked commodity rate charged on barrel staves and headings, carloads, from Camden, Ala., to Pensacola, Fla., as unreasonable and unduly prejudicial. Camden is on a branch of the L. & N., which extends 16 miles from Camden Junction, Ala. Traffic from Camden to Pensacola moves over the Camden branch 16 miles to Camden junction, thence over Selma branch to Flomaton, 64 miles, thence main line of L. & N., to Pensacola, 43 miles, total distance 123 miles. Generally the rates on lumber in southeastern territory apply on rough cooperage stock, including barrel staves and headings. Rate charged commodity of 11.5 c. The standard scale of defendant on lumber, staves and headings generally applied between points on its line is 16 c. for 123 miles, and based on such scale, the rates instanced by complainants are less than the normal basis in the southern territory. HELD, rate attacked not unreasonable or unduly prejudicial, complaint dismissed. Pensacola Cooperage Co. v. L. & N. Ry., 112 I. C. C. 401.

(j) Rate on coal, moving via a single line from Earlington and Morton, Ky., to a branch line point, found not unreasonable or otherwise unlawful as compared with rates to other points. In some instances involving joint-line hauls, shipments to Shawneetown must be switched into local trains which operate a greater expense than main line trains handling through shipments, and rates to alleged preferred points are shown to be depressed to meet competitive conditions not prevalent at Shawneetown. Evidence of complainant, consisting wholly of a showing of lower rates to the alleged preferred points, is not persuasive; on other hand, rate comparisons submitted by carriers, coupled with those prescribed by commission for comparable distances, demonstrate that the assailed rate is not unreasonably high. Clayton v. L. & N., 113 I. C. C. 747.

(k) Sixth-class rate on lumber from Masten and Laquin, Pa., situated on the Susquehanna & New York R. R., to destinations in New England, found not unreasonable as compared with lower commodity rate contemporaneously applicable from points on other short lines located in same general origin territory. Formerly equal rates applied from points on all these short lines, but due to general increases under the Fifteen Per Cent Case, 45 I. C. C. 303, this equalization was disrupted and subsequently restored. However, disruption of rate adjustment caused by general advances and subsequent establishment of rate sought afford no basis for award of reparation. Moreover, commission has recognized that lumber is rated sixth class in official

classification and generally moves intraterritorially on class rates. Central Pennsylvania Lbr. Co. v. S. & N. Y., 120 I. C. C. 239.

(l) Carrier in defending reasonableness of petroleum rates to destinations on the Missouri & North Arkansas Ry., stressed the poor financial condition of above-named road. HELD: That rate herein found reasonable as maximum includes the usual arbitrary for that carrier, because of its poor financial status. Bear State Oil Co. v. A., T. & S. F., 120 I. C. C. 301, 303, 304.

(m) Rates on cottonseed products from Tiptonville, Tenn., to northern and eastern destinations found not unreasonable but unduly prejudicial to extent they exceeded or may exceed lower rates contemporaneously maintained from Tyersburg, Tenn., a main-line competing point. Reparation awarded and undue prejudice ordered removed. Gannaway & Rice v. I. C., 120 I. C. C. 400.

(n) Sixth-class rate on textile machinery from Tallassee, Ala., located on the Birmingham & S. E. Ry., to Natchez, Miss., found not unreasonable as compared with lower rate prescribed for like distances in Southern Class Rate Investigation, 100 I. C. C. 513. In cited case the Birmingham & S. E. was designated as a weak line entitled to special-rate treatment, and it was found that joint rates between weak and standard lines should be somewhat higher than that prescribed for latter. The general class-rate revision can not properly be used as measure of reasonableness on shipments moving prior thereto. Moreover, general practice in southern territory is to apply to through movements the local rates of short lines to junction points plus standard-line rates beyond. The rate here charged compares favorably with numerous rates applicable from points in Alabama, Mississippi, and Tennessee for comparable distances, involving joint-line hauls, including one "relief" line. Cotton Mills Products Co. v. A. & V., 120 I. C. C. 473.

(o) Upon reargument, differentials which may be added to rates on salt under scale prescribed in original report, 102 I. C. C. 540, from Louisiana mines to local points on certain Mississippi short-line carriers, increased from 50 to 60 cents per net ton, and equidistant clause of fourth section of the act not required to be observed by these short lines in meeting more distant junction-point rates. Mississippi R. R. Comm. v. A. & V., 120 I. C. C. 569.

(p) Line-haul rate, plus switching charge, on crushed stone from points on Chicago, North Shore & Milwaukee Ry., within the Racine, Wis., switching limits, to Chicago and other Illinois points, found not unreasonable as compared with rates on other articles moving between numerous points in same territory for comparable distances, or with rates on gravel from Fontana, Wis., a similarly situated short-line point, to Chicago. Carriers show that sand and gravel rates are depressed, due to competitive conditions, and cite decisions in which higher rates have been prescribed in various sections of the country. Assailed rates do not appear unreasonable, and also apply from a group including North Milwaukee and Waukesha, Wis., competing points, to Chicago. Moreover, in 118 I. C. C. 633, present rate from Racine to Chicago, which does not include absorption of switching charges, was found not unreasonable. Racine Crushed Stone Co. v. C., M. & St. P., 120 I. C. C. 717.

(q) Upon further hearing, former reports, 83 I. C. C. 737, 96 I. C. C. 124, affirmed and rates on coal from mines on Greenbrier & Eastern R. R., to interstate destinations found unreasonable and unduly prejudicial to extent they exceeded district rates contemporaneously maintained from competing branch-line points in New River district. Reparation awarded. Nelson Fuel Co. v. C. & O., 120 I. C. C. 723.

(r) Complainant attacked combination rate charged on 7 cars of coal shipped in Feb., Mar., and April, 1924, from Straven and Aldrich, Ala., to Pensacola, Fla., as unreasonable. Points of origin are located on a branch of the Southern between Birmingham and Wilton, Ala. The distance from Straven to Pensacola via Birmingham and L. & N., is 303 miles, via Calera and L. & N. 245 miles, and via Kimbrough and Muscle Shoals 258 miles, from Aldrich over these routes 312, 236 and 249 miles. Shipments moved Southern to Birmingham thence L. & N. to Pensacola. Three from Straven were routed by the shipper over the Southern to Birmingham and L. & N. beyond. Remainder were tendered with no specific routing other than L. & N. Charged $2.59, composed of 79 cents to Birmingham and $1.80 beyond. Contemporaneously there was in effect a joint rate of

$1.80 from these points of origin to Pensacola over the Muscle Shoals. But due to a temporary cessation of operation that route could not be used. On April 30, 1924 defendants established a joint rate of $1.80 applicable from points in Alabama on the Southern, south and west of Birmingham, including Straven and Aldrich to Pensacola. HELD, rates attacked not unreasonable, complaint dismissed. Pensacola Gas Co. v. L. & N. R. R., 122 I. C. C. 326.

(s) Certain so-called short lines accorded arbitraries over rates prescribed for standard lines on sand, gravel, crushed stone, and slag, for uniform application from Montgomery, Ala., and Chattanooga, Tenn., to destinations in Georgia and Mississippi, between points in Georgia, and between points in Georgia and other points in southern territory, except Florida. Rates on Chert, Clay, Sand, and Gravel, 122 I. C. C. 133.

(t) Proposed increased rates on cement from Birmingham, Ala., and other southern cement-producing points, to destinations on the Tallulah Falls Ry., and from Fordwick, Va., to destinations on the Elkin & Alleghany R. R., found not justified. Proposed rates to stations on the Tallulah Falls are practically as high as Scale IV rates which constitute the highest rates prescribed in 48 I. C. C. 201; 52 I. C. C. 225; 69 I. C. C. 644, for application in western territory, and those proposed to stations on the Elkin & Alleghany are even higher. Moreover, rates proposed by both shippers and carriers in a pending proceeding for application in same territory are materially lower than those here in issue. Cement Rates from Southern Points, 122 I. C. C. 195.

(u) Short line, in seeking a common-carrier status, contended that it was organized in the hope that upon completion of construction it would be purchased by another railroad, and that such an agreement was entered into. HELD: That a discussion of this phase of the case would serve no useful purpose for reason that such an agreement, if in fact entered into, is properly cognizable by the courts and not by the commission. American Fuel Co. v. A., T. & S. F., 123 I. C. C. 101, 109.

(v) Combination rates to and from points on short lines run counter to theory that the financial necessities of weak lines should be met by liberal divisions of joint rates, because when rates are so constructed the trunk lines earn more for their hauls to and from junctions with short, weak lines than they would earn to and from same junctions on traffic to and from other trunk lines. Consolidated Southwestern Cases, 123 I. C. C. 203, 388.

(w) Rates to and from points on short lines should not be made by combining local rates to and from junctions with other lines. Combination rates of this character put the territory local to weak or short lines at an even greater disadvantage than that under which such points of necessity labor, and tend to hamper development of such roads and of industries and towns located thereon. Also, such combination rates run counter to theory that financial necessities of weak lines should be met by liberal divisions of joint rates, because when rates are so constructed trunk lines earn more for their hauls to and from junctions with short, weak lines than they would earn to and from same junctions on traffic to and from other trunk lines. Consolidated Southwestern Cases, 123 I. C. C. 203, 388.

(x) Combination rates on gluten feed from Rody, Ind., to Oneonta, Hobart, Stamford, Grand Gorge, and Bloomsville, N. Y., points on the Ulster & Delaware R. R., found unreasonable to extent that rate to Oneonta, the junction point of the Delaware & Hudson and Ulster & Delaware, exceeded lower joint rates contemporaneously in effect via other routes a number of which involve greater hauls than over route of movement, and to extent that rates to points beyond exceeded the joint rates to Oneonta plus the locals of the Ulster & Delaware. Reparation awarded. American Maize Products Co. v. N. Y. C. 126 I. C. C. 137.

(y) Rates on lumber and products from points in Pennsylvania on the Indian Creek Valley Ry., to destinations in trunk-line and c. f. a. territories found unreasonable and unduly prejudicial as compared with those contemporaneously in effect from Baltimore to various New York destinations for comparable distances, and to extent they exceeded those contemporaneously maintained from Group 3 points to same destinations. Latter rates are not depressed since they compare favorably with those from adjacent groups, and nothing of record warrants a differential from points on the Indian Creek Valley Ry. over Group 3 rates. Reasonable and nonprejudicial

rates prescribed for future and reparation awarded. Indian Creek Valley Lbr. Company v. B. & O., 126 I. C. C. 161.

(z) Proposal of carriers to provide for addition of arbitraries on traffic to and from branch lines of trunk-line carriers in official territory, not approved. Southern Class Rate Investigation, 128 I. C. C. 567, 584.

(aa) Upon further consideration in original report 113 I. C. C. 389, Nelson & Albemarle Railway Co., Linville River Railway Co., and Atlanta & St. Andrews Bay Railway Co., weak lines, permitted to charge rates on fertilizer and materials 50 cents per ton in excess of standard-line scale same as accorded other weak lines in original report. Similar permission sought by Louisville & Nashville on behalf of Glasgow Railway and Elkton & Guthrie Railroad, denied, upon showing that latter lines are operated as part of the Louisville & Nashville system and are not shown to be in financial difficulties. Fertilizer Between Southern Points, 129 I. C. C. 215, 217, 218.

§2. Compared With Main Lines.

See Comparative Rates; Evidence §57½; Reasonableness of Rates.

(a) Bamfield, Mich.: Rates on yellow-pine piling from Lumberton and Ansley, Miss., to, situated on a branch of the Detroit & Mackinac Ry., found unreasonable to extent they exceeded lower blanket rate contemporaneously maintained to all main-line and most branch-line points of the Detroit & Mackinac, which lower rate was subsequently established to Comins, to which Bamfield is intermediate, subject to rule 77 of Tariff Circular 18-A. Reasonable rate for future prescribed and reparation awarded. Edward Hines Yellow Pine Trustees v. C., S. & M. R. R., 109 I. C. C. 387.

(b) Proposal to cancel joint rates on grain and products between points on the Spearman branch of the Panhandle & Santa Fe Ry., and points in Kansas and Missouri on lines other than the A., T. & S. F., and apply combinations in lieu thereof, found not justified. Carriers contend that these joint rates were erroneously established in complying with commission's order in 101 I. C. C. 116, that joint rates from the branch-line points are considerably lower than from main-line points, and thus contrary to all theories of rate making, and that it has not been the practice of the Panhandle to publish joint rates between points on its lines and lines other than the Santa Fe for reason that demand for commodities consumed along the Panhandle can well be supplied from Santa Fe origins. Contention raised can not be sustained and last-named reason advanced in justification of proposed schedules does not establish their reasonableness. Grain and Products, 115 I. C. C. 615.

(c) Upon further consideration, authority to charge for transportation of fertilizers and materials, an arbitrary of 50 cents per net ton in addition to standard-line rates between points on certain additional so-called short or weak lines in the Southeast not considered in original report 113 I. C. C. 389, and between points on those lines and points on standard lines, such arbitraries to accrue solely to weak lines, found justified. Fertilizers Between Southern Points, 123 I. C. C. 193.

(d) Proposed increased rates on grain and products from Montana points on Great Northern Ry. to destinations on the Goldendale branch of Spokane, Portland & Seattle Ry., found not justified. The Goldendale branch points are part of a large destinations group. Respondents propose to cancel blanket rate to Goldendale branch points and to establish rates made by addition of arbitraries to the junction-point rate. No arbitraries now apply on traffic from Montana to this branch and in 66 I. C. C. 330, 336, it was stated that when blanket rates apply over an extensive area, fact that branch-line points lie within that blanket does not argue as strongly that there should be a branch-line differential as when rates are applied upon a graded basis, for in an extensive blanket a branch-line haul loses its significance unless it is much more expensive than main-line operations. Here, although operating conditions are more difficult and expensive than on main line, the markedly shorter total haul required with higher earnings, and fact that rates to other more distant branch lines will continue to be accorded the group basis, greatly offsets this showing. Grain from Montana, 128 I. C. C. 123.

(e) An extensive group or blanket adjustment necessarily disregards, to some extent, differences in distance and other elements which go to make up cost

of service, and when arbitraries over group rates for comparatively short branch-line hauls are proposed the essential issue to be determined is not so much the reasonableness per se of the through rates which would result, as the propriety of the proposed arbitraries in the light of the extensive group adjustment voluntarily maintained by the carriers. Grain from Montana, 128 I. C. C. 123, 124, 125.

(f) Proposal of carriers to provide for addition of arbitraries on traffic to and from branch lines of trunk-line carriers in official territory, not approved. Southern Class Rate Investigation, 128 I. C. C. 567, 584.

(g) Joint rates on naptha and gasoline in tank-car loads from Philadelphia to Sandyville, W. Va. a branch-line point, constructed on the basis of rates to Ravenswood, W. Va., plus arbitraries beyond, found unreasonable as compared with contemporaneous rates in opposite direction and with those to Spencer, W. Va., a farther distant point, subsequently made applicable to Sandyville; and rates from Meraux, La., and points in Kansas, Oklahoma, and Texas to same destination, found unreasonable to extent they exceed rates subsequently estalished. Reparation awarded. Virginian Gasoline & Oil Co. v. B. & O., 128 I. C. C. 621.

(h) Combination rates on structural steel from Indiana Harbor, Ind., a Group D point, to Blythe, Calif., a Group 1 point, based on transcontinental factor from Group D to Group 3, plus a branch-line arbitrary to Group 1, found not unreasonable. Facts that other branch-line points were on the main-line basis and that Blythe was subsequently accorded the Group 3, or main-line, basis, do not warrant a conclusion that the rate charged was in excess of a maximum reasonable rate. Illinois Steel Bridge Co. v. A., T. & S. F., 129 I. C. C. 87.

(i) Combination rates on relaying rails from Bellwood and Hartford, Ala., to Hellams, S. C., found unreasonable as compared with joint-line rate named in fourth-section committee's distance scale subsequently used by southern trunk lines, in revising rates on these commodities; with lower rates between other points in same general territory for similar distances; and to extent they exceeded single-line distance rates plus 60-cent differential, contemporaneously in effect, differential being basis employed in making rates to points on so-called weak or short lines on shipments of iron and steel articles from Birmingham, Ala. Reparation awarded. Rinehart & Dennis Co. v. C. of G., 129 I. C. C. 247.

§3. As Part of System.

See Evidence §57½.

(a) Rates on lumber from Flinn, Va., on Warm Springs Valley branch of the C. & O. Ry. Co., to destinations in c. f. a., trunk-line, and New England territories, found not unreasonable but unduly prejudicial to extent they exceed on eastbound traffic rates 2 cents lower, and on westbound traffic rates 2 cents higher, than like rates contemporaneously maintained from Marlinton and other points on C. & O.'s Greenbrier division. Original report, 92 I. C. C. 699, modified. Freehold Lbr. Co. v. C. & O., 118 I. C. C. 463.

(b) Muscle Shoals, Birmingham & Pensacola Ry., is now a part of the St. Louis-San Francisco, a strong system, and need for special treatment, accorded in 100 I. C. C. 513, no longer exists and and since it participates in traffic to Mobile and Pensacola, above carrier may be held responsible for the undue prejudice to Mobile. Mobile Chamber of Commerce v. M. S., B. & P., 129 I. C. C. 419, 421, 422.

§4. In Competition With Main Lines.

See Competition.

(a) C. & O. branch-line points: Class rates on fresh meats packing-house products, and other articles, in peddler cars, from Chicago and East St. Louis, Ill., to branch-line points on Big Sandy and Logan divisions of C. & O., found unreasonable and unduly prejudicial to extent they exceeded rates to main-line junctions plus differentials for hauls beyond, computed under distance scale prescribed herein. Reasonable and nonprejudicial class rates prescribed for future and reparation awarded. Wilson & Co. v. C. & O., 104 I. C. C. 641.

(b) Based upon light traffic density and unfavorably operating and financial conditions, certain independent short lines in southern territory granted authority to continue to charge lower rates on lumber and other forest products to trunk-line and New England territories

from junction points with trunk-line connections than from intermediate points on their lines; provided rates from such intermediate stations shall in no case exceed lowest combination, and further provided that differences between rates from more-distant junction points on the one hand, and intermediate points on short lines on the other, shall not be increased. North Carolina Pine Asso. v. A. C. L., 107 I. C. C. 190.

(c) Upon application of certain independent short lines in southern territory for authority to continue to charge lower rates on lumber and other forest products to trunk-line and New England territories from junction points with trunk-line connections than from intermediate points on their lines, relief sought being based solely on ground of water competition, FOUND: Considering the great difference between all-rail and water rates from south Atlantic ports to eastern port cities, and small volume of movement via eastern ports to interior destinations, the continued maintenance of lower rates from these ports than from intermediate points to this destination territory would divert or retain little, if any, traffic to rail carriers. Fourth section relief denied and original report, 85 I. C. C. 270, affirmed. North Carolina Pine Asso. v. A. C. L., 107 I. C. C. 190, 192, 193.

(d) Complainant attacked commodity rates charged on cotton seed products, carloads, shipped since Oct. 22, 1921, from Tiptonville, Tenn., to points east of Illinois and north of Tennessee and North Carolina, with the exception of Michigan, also to Cairo, Chicago and East St. Louis, Ill., St. Louis, Mo., Paducah and Louisville, Ky., as unreasonable and unduly prejudicial to extent they exceed the rates from Dyersburg Tenn. Tiptonville is on a branch line of the I. C. which extends from Dyersburg to Hickman, about 51 miles. Dyersburg is on the main line of the I. C. 30 miles south of Tiptonville. Ripley, Covington and Memphis, Tenn., points on the main line of the I. C. 24, 38 and 76 miles, south of Dyersburg take the Dyersburg rates. Tiptonville is a few miles farther distant from northern and eastern markets than Dyersburg and a few miles nearer the same markets from Memphis. The rates are about 40 cents per ton higher from Tiptonville. The rates attacked do not appear unreasonably high. In the sale of their products complainants are in competition with mills engaged in the same business at Dyersburg and other points, and they are compelled to observe the difference between the Dyersburg and Tiptonville rates. Complainants have shown that their products are sold in the same general competitive markets as are the like products manufactured and sold by their competitors at Dyersburg and adjacent points taking lower rates than Tiptonville; that in the sale of their products they were forced to meet their competitors prices; that they were compelled to forego certain profits solely because the freight rates from Tiptonville exceeded the rates available to their competitors and that as a result of the additional transportation charges paid they have suffered pecuniary loss. It follows, therefore, that the undue prejudice found to exist was the proximate cause of the injury sustained by complainants and that their damage is measured by the difference in these rates. HELD, rates attacked not unreasonable but unduly prejudicial to extent they exceeded the rates from Dyersburg, reparation awarded. Gannaway & Rice v. I. C. R. R., 120 I. C. C. 400.

(e) The commission may properly give sympathetic consideration to the financial circumstances of carriers when passing upon the propriety of establishing or continuing through routes and joint rates. See 107 I. C. C. 523. However, the financial status of a weak line is not of such importance that all other elements must be subordinated to it. Restrictions in Routing over S. L. & U., 122 I. C. C. 208, 212, 213.

IV. FACILITIES.

See Facilities and Privileges.

§7. In General.

(a) Tariff provided for assessing of charges for transferring fuel oil from standard to narrow gauge cars at Palisade, Nev., for transportation over the narrow-gauge line of the Eureka Nevada Ry Co., based upon an estimated weight of 7.4 pounds per gallon at full shell gallonage capacity of the car. Upon contention of shipper that transfer charges should have been based on weight per gallon of oil transported which aggregated less than weight based on full shell gallonage capacity of cars, HELD: Transfer charges being restricted in tariff to apply per carload, the contention is without merit. Mackintosh Mines Co. v. E. N. Ry., 120 I. C. C. 121.

§1. In General.

(a) In constructing interstate rates between points in the Southwest, in Texas and Oklahoma differential territories, and in portions of Kansas-Missouri territory, on the one hand, and Memphis, Vicksburg, Natchez, Angola, Baton Rouge, Harahan, and New Orleans, on the other, 4 cents in case of Memphis and 6 cents in case of the other east-bank crossings authorized to be added as maximum bridge arbitraries or crossing allowances. Consolidated Southwestern Cases, 123 I. C. C. 203, 390, 391.

C. O. D. SHIPMENTS

See Transportation §2.

(a) Carrier's refusal to accept shipment of watermelons for transportation, charges collect, found not discriminatory or otherwise unlawful. Governing tariff specified that watermelons would be accepted freight "collect" only where carriers were protected by surety bond guaranteeing payment of freight charges. Complainant's telegram and certain bills of lading covering similar shipments from another point were only evidence offered by shipper as authority to ship on complainant's bond and agent considered this insufficient authority to cover shipment tendered. Moreover, determination of what constitutes sufficient evidence of authority must necessarily be left to discretion of agents, and it was not an abuse of such discretion to refuse to accept the telegram as general authority to ship on complainant's bond. Edgerton & Beers v. A. C. L., 126 I. C. C. 422.

(b) A "C. O. D. shipment" means that goods transported are only to be delivered by carrier on consignee's payment in cash of amount specified as a condition precedent to or concurrent with delivery of goods, and carrier accepts check instead of cash at its own peril. Joseph Moqul, Inc., v. C. Lewis Lavine, Inc., 221 N. Y. S. 391.

CABLE RATES

See Telephone and Telegraph Companies.

CANADA

See Adjacent Foreign Country; Through Routes and Joint Rates.

(a) Commission may not prescribe joint rates for future to Canadian points, but as to rates constructed on combination, such factors as apply wholly within United States are subject to its jurisdiction. In respect of joint rates, and likewise joint-rate factors used in constructing combination rates, American lines over which shipments move are subject to commission's jurisdiction and all carriers parties to such rates are jointly and severally liable for any damage resulting from their unlawfulness. See 83 I. C. C. 460 and other cases cited. Washington Publishers Asso. v. A. C. & H. B., 104 I. C. C. 4, 9.

(b) Where unreasonable rates are assessed on shipments moving from points in the United States to Canadian destinations, commission's order awarding reparation can be entered against the American lines only. Such action however, should not be construed as affecting any right of Canadian lines to participate in making reparation. Vera Chemical Co. v. A. C., 104 I. C. C. 408, 412.

(c) Proposed increased and reduced rates on newsprint paper from Shawinigan Falls, and other points in northeast Canada taking same or related rates to Nashville, Knoxville, and Memphis, Tenn., purporting to be in harmony with commission's findings in 78 I. C. C. 258 and 101 I. C. C. 605, found not justified. Rates from these Canadian mills to Tennessee points have been same as or related to those from competing mills in New England, establishment of proposed rates without similar readjustment of rates from New England mills would result in undue prejudice to Canadian mills, and record does not warrant disruption of present long-standing adjustment. Newsprint Paper from Eastern Canada, 109 I. C. C. 701.

(d) If rates on traffic moving from Canadian points to destinations in the United States are found unduly prejudicial, commission clearly has power, under the act, to require removal of such undue prejudice. Newsprint Paper from Eastern Canada, 109 I. C. C. 701, 703.

(e) Carriers contend the Commission is without jurisdiction to require the establishment of joint rates from points in the United States to destinations in Canada. The Commission does not have such jurisdiction, but it has jurisdiction to award reparation against the lines within the United States which participate in joint rates to or from points in Canada which are shown to be unreasonable. Proctor & Gamble Co. v. A. & V. Ry., 112 I. C. C. 381, 383.

(f) The Commission has no authority to establish a rate for transportation partly in Canada; but where a joint rate has been voluntarily maintained by the carriers to a point in Canada, and charges based on such rate have been collected, it may inquire whether the joint rate is unreasonable, unduly discriminatory or otherwise unlawful. Northwestern Oil Co. v. St. L. S. F. Ry., 112 I. C. C. 488, 490.

(g) Rates on rosin from points in the South and Southeast to Hamilton, Ontario, Canada, and failure of carriers to provide transit arrangements thereon at Ivorydale (Cincinnati), Ohio, found not unreasonable, unduly prejudicial, or otherwise unlawful as compared with rates to Buffalo, N. Y. Ordinarily commission does not require establishment of transit arrangements except to remove unjust discrimination or undue prejudice, neither of which is here shown. Moreover, present rates on this traffic resulted from relatively low rates established following the decision in Naval Stores from Southern Points, 87 I. C. C. 740, and 89 I. C. C. 634, and there is nothing of record to show that rate factors to or beyond either Cincinnati or Buffalo are unreasonable. Procter & Gamble Co. v. A. & V., 112 I. C. C. 381.

(h) While commission does not have jurisdiction to require establishment of joint rates from points in the United States to destinations in Canada, it does have jurisdiction to award reparation against the lines within the U. S. which participate in joint rates to or from points in Canada which are shown to be unreasonable or unduly prejudicial. Procter & Gamble Co. v. A. & V., 112 I. C. C. 381, 383.

(i) Proposal to increase rates on sulphur from Baltimore Md., to Hamilton, Ont., Canada, found not justified. In 89 I. C. C. 383, commission prescribed reasonable rates from New York and Baltimore to Hamilton, and carrier here endeavors to advance Baltimore rate to the New York level. The increase sought, however, centers about a disproportionate division accorded Canadian lines, but commission has repeatedly held that a dispute as to divisions does not afford justification for an increase of rates. Sulphur from Baltimore to Canada, 112 I. C. C. 485.

(j) While the commission has no authority to establish a rate for transportation partly in Canada, where a combination rate, the component factors of which are joint rates, has been voluntarily maintained by carriers to Canadian points, and charges based on such rate have been collected, commission may inquire whether such joint rate is unreasonable, discriminatory or otherwise unlawful. See 66 I. C. C. 627. Northwestern Oil Co. v. St. L.-S. F., 112 I. C. C. 488, 490.

(k) Joint rates on newsprint paper from Espanola, Ontario, Canada; to points in Wisconsin, Minnesota, Illinois, Missouri, and Iowa, and to Omaha, Nebr., in which carriers subject to the act participate, found, in so far as transportation takes place within the United States, to be unreasonable and unduly prejudicial to extent they exceed or may exceed by more than 4 cents per 100 pounds the rates contemporaneously applicable from Sault Ste. Marie,

Ontario, Canada, to same destinations. Spanish River Pulp & Paper Mills v. A. & W., 113 I. C. C. 343.

(l) The Commission has found that in the case of a joint rate from Canada to United States it has jurisdiction to issue a cease and desist order against the carriers operating in this country and to award reparation on past shipments. Consolidated Water Power & Paper Co. v. C. N. Ry., 115 I. C. C. 310.

(m) Clearly the Commission has no authority to establish a rate for transportation in Canada, but American carriers parties to a joint rate from a Canadian point to a point in the United States are jointly and severally liable for damages caused by an unreasonable rate. Lissberger & Co. v. P. R. R., 115 I. C. C. 521, 525.

(n) Joint rate on wet wood pulp from Port Arthur, Ontario, Canada, to Wisconsin Rapids and Biron, Wis., found not unreasonable as compared with rates contemporaneously in effect on same commodity from the same and various other points of origin to same and various other destinations in same general territory for comparable distances. Consolidated Water Power Co. v. C. N. Rys., 115 I. C. C. 310.

(o) The commission has jurisdiction, in the case of a joint rate in which both Canadian and American carriers participate, to issue a cease-and-desist order against carriers operating in the United States and to award reparation on past shipments. See 66 I. C. C. 627; 98 I. C. C. 339, 344. Consolidated Water Power Co. v. C. N. Rys., 115 I. C. C. 310, 311.

(p) Rates on zinc by-products from points in Canada to points in New England and eastern trunk-line territories found unreasonable to extent they exceeded 85 per cent of sixth-class. Reasonable basis of rates prescribed for future and reparation awarded. Lissberger & Co. v. P. R. R., 115 I. C. C. 521.

(q) While the commission has no authority to establish a rate for transportation in Canada, American carriers parties to a joint rate from a Canadian point to a point in the United States are jointly and severally liable for damages caused by an unreasonable rate. See 66 I. C. C. 627. Lissberger & Co. v. P. R. R., 115 I. C. C. 521, 525.

(r) Proposal of carriers to restrict rates on class traffic and various commodities, from Duluth, Minn., and several Michigan points to destinations on N. Y., N. H. & H., so as not to apply in connection with Grand Trunk by way of the Niagara frontier, found not in violation of the act. The route in question is by way of a boat line, a portion thereof being wholly in Canada. While proposed cancellation is outgrowth of a dispute between carriers over divisions, which affords no justification for increased rates, and although joint rates are now in effect over the route, the use of which is of material importance to shippers, the principle referred to has no application here, since commission has no authority either to require establishment of joint rates over this route or to prevent their cancellation. Elimination of G. T. Ry. from Certain Routes, 115 I. C. C. 609.

(s) The act provides a method for adjusting disputes between carriers over divisions and controversies of that character afford no justification for increased rates and will not be permitted to work injury to shippers. This principle, however, has no application where carriers desire to eliminate through routes via Canada since commission has no authority either to require establishment of joint rates over Canadian routes or to prevent their cancellation. Elimination of G. T. Ry. from Certain Routes, 115 I. C. C. 609, 611.

(t) The commission has no authority either to require establishment of joint rates over routes through Canada or to prevent their cancellation. Elimination of G. T. Ry. from Certain Routes, 115 I. C. C. 609, 611.

(u) Commission has considered in the past joint rates from Canada to points in the United States as a whole, found them unreasonable, and awarded reparation against the defendant carriers in the United States for the full amount of the damages sustained. Hyman Michaels Co. v. B. & O. R. R., 120 I. C. C. 417, 419.

(v) The commission's order awarding reparation can be entered only against defendants in the United States, but should not be construed as affecting any right of the Canadian lines to participate in making reparation. American Cement Tile Mfg. Co. v. P. R. R., 120 I. C. C. 611, 612.

(w) Finding in prior report, 113 I. C. C. 343, that joint rates on newsprint

paper from Espanola, Ontario, Canada, to destinations in Wisconsin, Minnesota, Illinois, Missouri, Iowa, and Nebraska are and for future will be, in so far as transportation takes place within United States, unreasonable and unduly prejudicial to extent they exceed or may exceed by more than 4 cents per 100 pounds the rates contemporaneously applicable from Sault Ste. Marie, Ontario, to destinations, affirmed on reconsideration. Spanish River Pulp & Paper Mills v. A. & W., 120 I. C. C. 251.

(x) Joint rates on scrap car wheels from Windsor, Ontario, Canada, to Michigan City, Ind., and Pullman, Ill., found unreasonable and unduly prejudicial, in so far as transportation takes place within United States, to extent they exceeded or may exceed 72 and 55 cents, respectively, higher than corresponding rates from Detroit, Mich. Reparation awarded. Hyman-Michaels Co. v. B. & O., 120 I. C. C. 417.

(y) Upon contention that under the act commission's jurisdiction over rates from Canada to United States is limited to transportation actually taking place within United States, and that until the courts have passed upon this question the commission should refrain from exercising a doubtful jurisdiction over such rates, HELD: Question presented does not differ from that in International Nickel Co., 66 I. C. C. 627, and other cases, wherein commission has considered joint rates from Canada to United States as a whole, found them unreasonable, and awarded reparation against the American lines for full amount of damage sustained. Until the issue of law in above-cited case has been reviewed by the courts there is no valid reason why a different conclusion should be reached in instant proceeding. Hyman-Michaels Co. v. B. & O., 120 I. C. C. 417, 419.

(z) Findings in original report, 104 I. C. C. 408, that rates on rosin to Burlington, Ontario, Canada, from south Atlantic and Gulf ports and points taking same rates, were not unduly prejudicial or unduly preferential; that rates from Gulf ports and points taking same rates were not unreasonable; and that rates from south Atlantic ports and points taking same rates were unreasonable to extent they exceeded rates contemporaneously in effect from Gulf ports to same destinations, affirmed. Vera Chemical Co. v. A. C., 120 I. C. C. 434.

(aa) Commission has no authority to order maintenance of joint rates from points in the United States to points in Canada. Vera Chemical Co. v. A. C., 120 I. C. C. 434, 437.

(bb) Sixth-class rates on cement roofing slabs reinforced with metal, from Wampum, Pa., to Toronto, Ontario, Canada, found unreasonable to extent they exceeded 75 per cent of sixth class, which lower basis was contemporaneously in effect from Chicago and other producing points to destinations in c. f. a. territory, and from Chicago to Sarnia, Windsor, and Toronto, Ontario, Canada, for comparable hauls. Reparation awarded. American Cement Tile Mfg. Co. v. P. R. R., 120 I. C. C. 611.

(cc) Orders of the commission awarding reparation for exaction of unreasonable rates on shipments to and from Canada can be entered only against United States' carriers, and are not to be construed as affecting any right of Canadian lines to participate in making reparation. American Cement Tile Mfg. Co. v. P. R. R., 120 I. C. C. 611, 612.

(dd) Where the commission determines what will be reasonable rates for transportation between points in Canada and points in the United States, no order for the future is entered, but if participating carriers do not comply with its findings within a reasonable time, shippers may bring the matter to commission's attention for appropriate action looking to establishment of a reasonable rate for that portion of the transportation which takes place within the United States. See 66 I. C. C. 627. American Cement Tile Mfg. Co. v. P. R. R., 120 I. C. C. 611, 612, 613.

(ee) If the railroads constituting a through route for traffic from a point in Canada to a point in the United States concurred in a through rate or a carload minimum that was unreasonably high, they are jointly and severally responsible for any damage that might result to any shipper on account of such unlawful rate or minimum. Kroehler Mfg. Co. v. C. N. Ry., 123 I. C. C. 555, 556.

(ff) The commission has jurisdiction to prohibit connecting lines from joining in an unlawful rate even though part of the transportation takes place within Canada. Grain and Products to Eastern Points, 122 I. C. C. 551, 563.

(gg) Joint sixth-class rate on lumber from Sundridge, Ontario, Canada, to Naperville, Ill., found unreasonable to extent it exceeded a lower combination rate contemporaneously in effect over route of movement, and subsequently published as a joint commodity rate. Carriers submitted no evidence to rebut presumption of unreasonableness attaching to a through rate which exceeds the aggregate of intermediates. Reparation awarded against United States carriers only. Kroehler Mfg. Co. v. C. N. Ry., 123 I. C. C. 555.

(hh) Upon contention that commission has no jurisdiction to award reparation against a Canadian carrier for any portion of transportation which takes place within Canada for the exaction of unreasonable rates, HELD: While in 52 I. C. C. 145 the commission found that railroads constituting a through route for traffic from points in Canada to points in the United States concurring in an unreasonably high through rate are jointly and severally liable, in such cases the reparation award runs against the United States carriers only. See 66 I. C. C. 627; 74 I. C. C. 733. Kroehler Mfg. Co. v. C. N. Ry., 123 I. C. C. 555, 556.

(ii) Rate on lumber from Burks Falls, Ontario, Canada, to Pontiac, Mich., found not unreasonable as compared with rates contemporaneously in effect to Toledo, Detroit, and Chicago. While comparisons of distances and earnings show rates that are relatively lower than rate assailed, Toledo, Detroit, and Chicago are lake ports and failure to show conditions under which rates to those points were established impairs their probative value. Strable Lbr. & Salt Co. v. C. N. Ry., 123 I. C. C. 585.

(jj) Rate on lumber from Nashville to Toronto, Ontario, found not unreasonable, but unduly prejudicial to extent it exceeded those contemporaneously maintained from Chattanooga. Rate assailed is as low or lower than those from other lumber-producing points to Toronto from points in the Southeast to c. f. a., trunkline, and New England destinations, and as low or lower than those prescribed in 85 I. C. C. 270 and 102 I. C. C. 611, for comparable distances. However, rates from Nashville and Chattanooga to Buffalo, N. Y., Hamilton, Ontario, and various other points are the same and no reason appears for a difference in rates to Toronto. Farris Hardwood Lbr. Co. v. L. & N., 123 I. C. C. 587.

(kk) Proposed increased rates on newsprint paper and wall paper, blank, unfinished, from Canadian points to destinations in Iowa, over lines of various carriers found not justified, except that increases proposed by the C., B. & Q., found justified to all destinations except Fort Madison. Distances to various destinations are greater over the Burlington than over other lines which now enjoy same rates as those proposed by that carrier, and record tends to show that proposed rates are reasonable and will remove existing fourth-section departures. Moreover, in 113 I. C. C. 343; 120 I. C. C. 251, joint rates on newsprint paper from Ontario, Canada, to various States, including Iowa, were found unreasonable. Newsprint and Wall Paper 126 I. C. C. 166.

(ll) Joint rates in which Canadian lines participate found to apply to a service which is not "wholly within the confines of the United States" within meaning of section 1 of the act, and over which the commission has no jurisdiction. The commission having no power to prescribe such joint rates, it must follow that it is also without power to prescribe their divisions. In absence of treaty provisons or concurrent legislation in both countries affecting the matter, conflict of authority would be inevitable if any different rule were followed. New England Divisions, 126 I. C. C. 579, 637, 671.

(mm) Freight charges on through shipments from Canada to the United States are payable at schedule rates in American money. New York & Pennsylvania Co., v. Davis, Director General of Railroads, 8 Fed. (2d) 662.

(nn) Where shipper made through shipment of pulpwood from Canada into United States, and voluntarily paid through rate in United States money on its arrival in accordance with Interstate Commerce Act. § 6, par. 7 (Comp. St. § 8569), HELD such payment was not illegally exacted, and shipper could not recover as overcharge the difference between amount paid in United States and charge for carriage in Canada in depreciated Canadian currency. New York & Pennsylvania Co., v. Davis, Director General of Railroads, 8 Fed. (2d) 662.

(oo-qq) Proposed cancellation of joint commodity rates on petroleum and its products from Vicksburg and Natchez, Miss., New Orleans, La., and points grouped therewith, to destinations in the Provinces of Ontario and Quebec,

Canada, leaving in effect higher combination rates, found not in violation of interstate commerce act. As proposed cancellation was prompted by desire of Canadian lines to withdraw from participation in joint rates and provisions of section 1 of the act apply to common carriers only in so far as transportation takes place within the United States, commission has no authority to prevent Canadian lines from withdrawing their participation in joint rates, or to prevent their cancellation upon such withdrawal. See 115 I. C. C. 609. Petroleum and Products to Canadian Points, 128 I. C. C. 545.

(rr) The provisions of the act apply to common carriers engaged in transportation of property by railroad only in so far as such transportation takes place within the United States. The Commission is therefore without authority to prevent the Canadian lines from withdrawing their participation in the joint rates, or to prevent cancellation of the joint rates upon such withdrawal. Petroleum from Mississippi Valley to Canada, 128 I. C. C. 545.

(ss) Joint commodity rate assessed on printing presses from Vancouver, British Columbia, to Orlando, Fla., found inapplicable to extent it exceeded lower combination of locals contemporaneously applicable under an alternative provision contained in tariff. Refund of overcharges directed. Duplex Printing Press Co. v. B. C. E., 128 I. C. C. 692.

(tt) Combination rate on printing presses from Vancouver, British Columbia, to Orlando, Fla., a point taking Group K rates, found not unreasonable as compared with Group A rates contemporaenously maintained from Pacific coast terminals to New York. Earnings under latter rates as well as those under rates from various producing points to Orlando compare favorably with those under rates assailed for comparable distances. Duplex Printing Co. v. B. C. E. 128 I. C. C. 692.

(uu) Rates on dry tanning extract from Nashville, Tenn., to Kitchener, Ontario, Canada, found not unreasonable or otherwise unlawful, but rates on liquid tanning extract to Milwaukee, Wis., found unreasonable to extent they exceeded rate subsequently established and unduly prejudicial as compared with rates contemporaneously maintained from Lynchburg, Va., and Harriman and Chattanooga, Tenn., competitive points; and rates on dry tanning extract to Huntsville, Ontario, Canada, found unreasonable and unduly prejudicial to extent they exceeded those contemporaneously applicable from Chattanooga. Nashville is directly intermediate to Chattanooga on traffic to all three destinations, but while rates to Milwaukee and Kitchener conform to the fourth section, departure therefrom still exists in rates to Huntsville. Reparation awarded. Tennessee Extract Corp. v. L. & N., 128 I. C. C. 709.

(vv) The components of the combination rates to Kitchener and Huntsville, Ont., from the Ohio river were and are joint rates. The charges collected were made for the entire movement from point of origin to these destinations. The Commission has no authority to prescribe a joint rate for the future for transportation partly in Canada; but where a joint rate has been voluntarily maintained by the carriers to a destination in Canada, and charges based on that rate have been collected, it may inquire whether the joint rate is unreasonable or otherwise unlawful and may require defendant carriers within the United States to cease and desist from participating in a joint rate which it finds unreasonable or otherwise unlawful. Tennessee Extract Corp. v. L. & N. R. R., 128 I. C. C. 709, 713.

(ww) Commission has no authority to prescribe a joint rate for the future for transportation partly in Canada; but where a joint rate has been voluntarily maintained by carriers to a destination in Canada, and charges based on that rate have been collected, it may inquire whether the joint rate is unreasonable or otherwise unlawful and may require defendant carriers within the United States to cease and desist from participating in a joint rate which is found unreasonable or otherwise unlawful. See 66 I. C. C. 627 and other cited cases. Tennessee Extract Corp. v. L. & N., 128 I. C. C. 709, 713.

(xx) Although joint through rates are now in effect over routes through Canada from points other than those here considered within the coast group, the Commission has no authority to require the establishment of joint rates over such routes. West Coast Lumbermens Asso. v. C. M. & St. P. Ry., 129 I. C. C. 363, 364.

(yy) Commission has no authority to require estalishment of joint rates through Canada. See 115 I. C. C. 609, 611. West Coast Lumbermen's Asso. v. C., M. & St. P., 129 I. C. C. 363, 364.

(zz) Upon reconsideration, maintenance of combination rates on rosin from points in the South and Southeast to Hamilton, Ontario, Canada, accorded transit at Ivorydale (Cincinnati), Ohio, higher than joint rates from more distant points over the same route, in the same direction, the shorter being included within the longer distance, when shipments are accorded transit at Latonia or Central Covington, Ky., found to contravene the long-and-short-haul provision of section 4 of the act. See 35 I. C. C. 27, and other cited cases. Moreover, such rates contravene the fourth section notwithstanding fact that such rates are joint rates from points within United States to Canadian destinations. See Conf. Ruling 447; 66 I. C. C. 627, and other cited cases. Former report 112 I. C. C. 381. Procter & Gamble Co. v. A. & V., 129 I. C. C. 385.

(3a) Refrigeration charges on tomatoes from Port Huron, Mich., originating at Mississippi points, to Toronto and Montreal, Canada, found not unreasonable. Port Huron is the nearest point to destination in a group designated in refrigeration tariff as Group B, which embraces all points in southern peninsula of Michigan. Complainant's contention that because their shipments moved to Port Huron under ventilation they should receive special consideration in the form of lower refrigeration charge, not sustained. Refrigeration could have been had from any point above group, but complainant elected to take service only from Port Huron, and if they did not desire full refrigeration from that point they had option of moving shipments at actual cost of ice plus charge of $7.50 per car. Moreover, in 56 I. C. C. 449, commission approved present grouping and record here does not justify disturbing adjustment there authorized. Simpson Co. v. G. T. W., 129 I. C. C. 430.

(3b) Where shippers from Canada into United States, under bills of lading calling for payment of freight in dollars, without protest paid joint freight rates to terminal carrier, who in turn paid part of freight so collected to Canadian carriers, HELD, shippers could not thereafter, on theory that Canadian carriers, instead of being paid in money of United States, should have been paid in Canadian money or exchange, which was at some 15 per cent depreciation, require carrier collecting charges to account for such 15 per cent. New York & Pennsylvania Co. v. Davis, Director General of Railroads as Agent, 9 Fed. (2d) 911.

CANALS

(a) Ruling of New York courts that Public Service Commission was without authority to make order requiring railroad to operate canal terminals owned by state, which Supreme Court, by denying certiorari, declined to disturb, will be accepted in federal court. New York Cent. R. Co., v. United States, 13 Fed. (2d) 200.

(b) Interstate Commerce Commission held without authority under Interstate Commerce Act, § 6, par. 13, as amended (Comp. St. Supp. 1925, § 8569) to order railroad to operate canal terminals owned by state, where only substantial party to proceeding was state of New York, since statute requires that there shall be two carriers before commission, both subject to its jurisdiction. New York Cent. R. Co., v. United States, 13 Fed. (2d) 200.

CAR FERRY

See Across Lake Rates; Advanced Rates §11½ (a); Allowances §8½; Ferry Charges; Floatage.

(a) Proposed increased translake rate on salt from Ludington and Manistee, Mich., to Chicago, Ill., and intermediate points, applicable over car-ferry route of the Pere Marquette to Milwaukee, and the C., M. & St. P., beyond, found justified. In Salt Cases of 1923, 92 I. C. C. 388, commission fixed minimum translake rate 1 cent under all-rail rate over translake route and the own rails from Ludington and Manistee to Chicago, but the differential in favor of translake route attracts all the traffic and in order to secure the entire haul it desires to maintain same rate over both routes. In the general cases carriers were specifically authorized to apply all-

rail rate over translake route and the commission sees no reason for changing the finding made therein to effect that a translake rate equal to all-rail rate is justified. Salt from Ludington Group, 112 I. C. C. 255.

CARETAKERS

See Live Stock Shipments; Passenger Fares and Facilities §3a, §12; Personal Injury.

(a) Right to recover from interstate carrier for death of caretaker of potato cars as result of train wreck must be determined by Interstate Commerce Act (U. S. Comp. St. § 8563 et seq.), as interpreted by federal Supreme Court. Miller v. Maine Cent. R. Co., (Me. 1926) 133 Atl. 907.

(b) Caretaker traveling on pass HELD entitled to same care and protection as passenger for hire, and to recover for carrier's negligence. Miller v. Maine Cent. R. Co. (Me. 1926) 133 Atl. 907.

(c) If pass to caretaker was gratuitous in ordinary sense of terms it was in violation of Interstate Commerce Act (U. S. Comp. St. § 8563 et seq.), and contract releasing carrier from liability for negligence was without consideration and effect. Miller v. Maine Cent. R. Co., (Me. 1926) 133 Atl. 907.

(d) If caretaker's pass was given as consideration of contract of shipment, he was passenger for hire and release of carriers from liability due to negligence is invalid. Miller v. Maine Cent. R. Co., (Me. 1926) 133 Atl. 907.

(e) Caretaker of shipment of stock was a passenger, to whom carrier owed duty to enable him to alight in safety at transfer point, and compulsion or coercion to alight from moving train thereat need not be shown to recover for resulting injuries; it being negligence to induce him to alight from such train. Bersie v. Chicago, M. & St. P. Ry. Co., (Ia., 1926) 211 N. W. 250.

I. CONTROL AND REGULATION.

See Control and Regulation.

A. **Jurisdiction of Commission.**

See Jurisdiction of Commission; Interstate Commerce Commission I.

§½. In general.

(a) Under Transportation Act Feb. 28, 1920 (21), the question of character and adequacy of car service, at least in interstate shipments, is in the first instance an administrative matter for the Interstate Commerce Commission, and, until the commission acts, a state court could not entertain suit based on alleged inadequacy of car service; there being nothing in the Carmack, or Cummins Amendment to the contrary. Gardner v. Louisville & N. R. Co., (Ky., 1926) 279 S. W. 947.

(b) Order concerning preference in car distribution, issued by Interstate Commerce Commission, under Transportation Act 1920, § 402, par. 15, has force of law. United States v. Michigan Portland Cement Co., 46 Sup. Ct. 395.

(c) Under the Interstate Commerce Act, §1, subds. 3, 6, 10-12, 14, 15, as added and amended and sections 3 and 15, an order of the Interstate Commerce Commission universally abolishing "assigned car rule," relating to distribution of coal cars to mines during times of shortage, HELD unjust, unreasonable, and an unlawfully arbitrary exercise of power, which deprived railroads of their rights to regulate their internal affairs and private car owners of their property without compensation, in violation of Const. Amend. 5. Berwind-White Coal-Mining Co. v. United States, (Pa., 1925) 9 Fed. (2d.) 429, 430.

(d) Interstate Commerce Act, §1, subd. 15, as added and amended, authorizing Commission in case of emergency to suspend rules and establish just and reasonable directions with respect to car service, applies only to unexpected conditions, and does not authorize suspension of rules to meet anticipated conditions, or placing in effect of emergency orders previously condemned as unjust and unreasonable. Berwind-White Coal-Mining Co. v. United States, (Pa., 1925) 9 Fed. (2d.) 429, 430.

§½a. Construction of act.

(a) Transportation Act 1920, § 402, par. 15, and Interstate Commerce Commission's order, establishing preferences and priorities in the movement and exchange of coal cars, HELD applicable, not only to priority of car service, but also to that of transportation,

and one who secures reconsignment and diversion of coal shipment from a preferred class of consignees to less preferred class violated the order in terms. United States v. Michigan Portland Cement Co., 46 Sup. Ct. 395.

§1. Over Car Distribution.

(a) Upon contention that commission has no authority to regulate the usual freight service maintained on any railroad and that its jurisdiction over train service is to be exercised only in times of emergency, HELD: Under section 1 (10) and (11) of the act the duty of carriers with respect to "car service" is continuous, and it is their duty to furnish safe and adequate car service at all times, the terms being used with equal force. It can not be said that duty of furnishing safe car service is in force only in times of emergency, and the same is true with respect to term adequate. Moreover, section 1 (14) and section 15 impose the duty upon carriers to furnish an adequate "supply of trains" for transportation of property, and confers authority upon commission to determine and prescribe just, reasonable, and equitable practice to be followed in respect thereto. Train Service on Northern Pacific, 112 I. C. C. 191, 192, 195.

§4. Private Cars.

(a) Right of both railroads and shippers to use private cars is clearly recognized by law, and can be abolished only by Congress. Berwind-White Coal Mining Co. v. United States, (Pa., 1925) 9 Fed. (2d.) 429, 430.

(b) Interstate Commerce Commission cannot require railroads to distribute among shippers generally in time of shortage privately owned coal cars, for use of which owners receive compensation at a rate fixed by Commission. Berwind-White Coal-Mining Co. v. United States, (Pa., 1925) 9 Fed. (2d.) 429, 430.

II. DUTY TO FURNISH CARS.

§7. In General.

See Bills of Lading §5; Branch Lines IV; Infra §7½ (a); Demurrage §6; Evidence §22.

(a) It is a well recognized principle that a carriers duty to furnish transportation does not arise until request is made therefor. Victor American Fuel Co. v. D. & S. L. R. R., 115 I. C. C. 169, 174.

(b) This is an investigation upon motion of the Commission into the justness, reasonableness and lawfulness of the action of the Kansas, Oklahoma & Gulf Ry. in failing and refusing to furnish transportation and car service over certain tracks and a switch connection in the vicinity of Bromide, Okla., to Dolese Bros. Co., upon request of that company, while furnishing such transportation and car service to the Bromide Crushed Rock Co., with a view to entering such order or orders, and prescribing such just, fair and reasonable rules, regulations and practices as may appear to be warranted. Respondent owns and operates a branch line about 4 miles in length, extending from Bromide Jct. to Bromide. In 1915 respondent extended this line for a distance of about 6,100 feet beyond Bromide to a rock crushing plant having a capacity of about 25 cars a day, constructed about that time by the Hoffman Co. This extension was built at respondents expense upon land acquired by it for right of way. Later the Bromide Co. acquired the plant, and entered into a written contract with respondents which provided, among other things, for the lease of the rails and related materials used in the construction of about 5,200 feet of track. During the period 1922 to 1925 Dolese Bros. acquired a tract of about 200 acres of land in the vicinity of Bromide, which includes the land upon which the rock crushing plant of the Bromide Company is located. In order to move the necessary machinery and materials to the property and to transport products of the proposed plant Dolese Bros. applied to respondent for a connection with the track running from Bromide to the crushing plant of the Bromide Company. Respondent refused the request because of the contract with the Bromide Co. Respondent entered into a contract with Dolese Bros. for the construction of a switch connection and track sufficient to extend off the right of way. This was installed, and what Dolese Bros. now desire is that respondent accord them service over the connection so constructed and the tracks leading to such connection. The sole reason advanced by respondent for its failure to furnish the service requested is the existence of the contract with Bromide Co. There can be no question but that

the track here under consideration came into existence as a public utility and constituted a part of the transportation facilities of the carrier. The status is not altered by the fact that a portion of the rails were for a period removed and later replaced by rails leased by the carrier to a particular shipper and at the expense of the latter. Certainly the public character of the right of way was not affected thereby. The sole use of the track is by respondent in hauling cars to and from the plant of the Bromide Co. This service is and always has been performed by respondent without extra charge. The purpose of the contract has been and is being accomplished and would in no way be defeated by furnishing to Dolese Bros. the requested service. The evidence clearly shows that existing facilities are sufficient to permit respondent to accord both shippers satisfactory service without hurt or inconvenience to either. HELD, through the use of its right of way, tracks, and other facilities in furnishing transportation and car service to the Bromide Co., while refusing similar service to Dolese Bros. upon request, respondent subjects the latter company to undue prejudice. Service on K. O. & G. Ry., 118 I. C. C. 412.

(c) Complainant alleged that, in respect of cars furnished at Omaha, Neb., for loading grain and grain products in sacks, the refusal of defendants to strip the doors with waterproof paper while contemporaneously performing that service in connection with like traffic at Kansas City, Mo., is unduly prejudicial; and that their refusal to sweep the cars clean of all rubbish, dirt, and other foreign material, to drive or draw protruding nails, and to apply paper or pads over projections likely to tear sacks, while contemporaneously performing such services at Kansas City and other points is unreasonable and unduly prejudicial. The record indicates that defendants have not fulfilled in all instances their duty to furnish cars at Omaha for loading flour and other grain products reasonably free from protruding nails and projections likely to tear sacks. If they perform this duty for the future, as it appears most of them have already agreed to do, no order in this respect need now be entered. But in respect of sweeping, padding, and weather stripping cars otherwise suitable for such loading, defendants should accord to shippers at Omaha the service which they contemporaneously accord to competing millers at Kansas City. HELD, the neglect and refusal of defendants, according as they participate in the transportation, to sweep, pad and apply weather strips to cars furnished or to be furnished by them at Omaha, Neb., for loading flour and other grain products, in sacks, for interstate movement while contemporaneously performing that service at Kansas City, Mo., without charge in addition to the line haul rate is, and for the future will be, unduly prejudicial to complainant at Omaha. Omaha Grain Exchange v. C. B. & Q. R. R., 120 I. C. C. 59.

(d) Upon complaint that carriers, in respect of cars furnished at Omaha for loading flour and other grain products, in sacks, refuse to sweep cars, draw protruding nails, pad projections liable to tear sacks, and strip doors with waterproof paper, while contemporaneously performing those services in connection with like traffic at Kansas City, FOUND: (1) That carriers should furnish cars in good repair, free from contaminating materials and reasonably free from protruding nails and rough projections which might tear sacks, and (2) that performance of additional services in preparation of cars at Kansas City without charge in addition to line-haul rate, while contemporaneously refusing to perform like services at Omaha, is and for the future will be unduly prejudicial. Omaha Grain Exchange v. C., B. & Q., 120 I. C. C. 59.

(e) It is the legal duty of a carrier to provide reasonably adequate and suitable equipment for all of the traffic it holds itself out to transport, and it must determine for itself whether it will meet this obligation by owning and maintaining the necessary equipment or by renting it. If it fulfills its obligation by going to the expense of owning and maintaining equipment, a governmental requirement that it pay shippers for additional equipment would be obviously unfair, arbitrary, and unlawful. So long as a carrier has equipment to supply the public, it may use that equipment to exclusion of private equipment, and if shippers in their own interest are permitted by carrier to use their own equipment they can not reasonably expect commission to require the carrier to compensate them by a differential in the freight rate. Switching at St. Louis and East St. Louis, 120 I. C. C. 216, 221, 222.

(f) It is duty of carrier under Interstate Commerce Act to furnish just and reasonable car service and to establish, observe, and enforce just and reasonable rules, regulations, and practices with respect to car service. Midland Valley R. Co. v. Barkley, (Ark., 1927) 291 S. W. 431.

(g) Respondents proposed to establish a tariff rule governing the furnishing of suitable cars for loading grain products in western trunk line and southwestern territories, following Omaha Grain Exchange v. C. B. & Q. R. R. 120 I. C. C. 59. Proposed rule: Cars for loading flour and other gain products. For above lading the carriers will furnish suitable cars with tight roofs and siding and with interior free from debris, noxious odors, oil spots or acid spots, likely to damage the lading, also reasonably free from protruding nails and projections likely to tear sacks, but will not sweep, pad, line or weatherstrip cars nor furnish material therefor. It was agreed at the hearing that the portion of the rule beginning with the word "but" was superfluous, and that respondents would publish an amended rule eliminating that portion. HELD, schedules justified. Suitable cars for loading flour, 128 I. C. C. 442.

(h) Proposed rule governing the furnishing of suitable cars free of debris, of spots, protruding nails, etc., for loading flour and other grain products, found justified. While protest is made against respondents' failure or refusal to provide in tariffs for weather-stripping cars around doors or furnishing material therefor, nearly all freight cars require weather-stripping when lading is grain products in sacks or cartons but carriers generally neither do weather-stripping nor furnish material therefor. Although common carriers must furnish suitable equipment for safe transportation, special safeguards desired by shipper should be furnished by him. See 14 I. C. C. 154 and other cited cases. Moreover, in 26 I. C. C. 245, carriers were not required to line and pad cars for flour movements and while that case dealt with protection on inside of car while instant case deals with protection on outside, principle is the same. Suitable Cars for Loading Flour, 128 I. C. C. 442.

(i) The carriers were not required to line and pad cars for the movement of flour, it being the shippers duty to so pack and load cars as to insure the articles shipped against damage from the ordinary incidents of transportation. Suitable cars for loading flour, 128 I. C. C. 442, 444.

(j) It is well settled that a common carrier must furnish suitable equipment for safe transportation, and that special safeguards desired by the shipper should be furnished by him. Suitable cars for loading flour, 128 I. C. C. 442, 444.

(k) Certain classes of traffic, such as live stock and commodities requiring refrigeration, demand a special class of equipment. If a railroad company holds itself out as a carrier of their species of freight, it is its duty to furnish equipment to carry it, and that duty can not be shifted to the shipper. Handling of fresh meat, 132 I. C. C. 49, 52.

(l) Carriers are obligated to furnish suitable cars and to receive and transport goods tendered to them in safe shipping condition, but are not obligated to prepare shipments for transportation. Standard box, stock, ventilated and refrigerator cars in good repair will accomodate all of the ordinary and usual needs of shippers, and if more than this is demanded because of the form nature, or peculiar characteristics of goods tendered for conveyance some obligation must attach to the shipper in connection with additional demand. Hines Yellow Pine Co. v. A. C. & Y. R. R., 132 I. C. C. 626, 631.

(m) Shipper ordered two 50-foot cars. Carrier for its own convenience furnished four smaller cars and now seeks to collect undercharges on ground that two-for-one rule did not apply under class rate assessed but that a commodity rate at applicable minimum weight applied on each of the four cars furnished. FOUND: Class rate was subject to two-for-one rule and applicable charges were therefore assessed. Leggett & Platt Mfg. Co. v. A., T. & S. F., 129 I. C. C. 219, 223.

(n) Proposed cancellation of commodity rates on fluxing limestone in box cars between points in eastern trunkline territory and restriction thereof to shipments in open-top cars, found not justified. While respondents intended ground-limestone rates to become effective on this commodity in box cars by proposed cancellation, sixth-class rates would become applicable thereon. Ground-limestone rates are but 45 per cent of sixth class. Since in 112 I. C. C.

7, rates on fluxing lime were found unreasonable to extent they exceeded 80 per cent of rates on common lime, hydrated, quick or slaked, and in 128 I. C. C. 23, increases to sixth-class rate resulting from proposal to restrict rates on fluxing limestone to shipments in box cars were found not justified, record is persuasive that rates on ground limestone will not be unreasonable for application on fluxing limestone in box cars. Fluxing Limestone, 129 I. C. C. 574.

§7¼. Car Congestion or Shortage.

See Demurrage §7¼; §14½; Embargoes.

(a) Ordinarily a shipper, on reasonable demand, would be entitled to all the cars which it could promptly load with freight to be transported over the carriers line. But this is not an absolute right and the carrier is not liable if its failure to furnish cars was the result of sudden and great demands which it had no reason to apprehend would be made and which it could not reasonably have been expected to meet in full. Ayrshire Coal Co. v. S. Ry., 118 I. C. C. 531, 535.

(b) In a period of car shortage a shipper has no right to a pro rata distribution of cars based on more than his needs. Victor-American Fuel Co. v. D. & S. L., 115 I. C. C. 169, 174.

(c) Service orders Nos. 23 and 25 issued by commission during periods of car shortage brought about by the coal strike and strike of shopmen of carriers during 1922 had effect of suspending the car-distribution rules of the Southern Ry. to such an extent that it would be improper to hold that carrier responsible for its failure to accord mines on its line an equal share of available cars during that period. Ayrshire Coal Co. v. S. Ry., 118 I. C. C. 531, 534.

§7½. Inspection.

See Inspection.

(a) It is the duty of the carriers to furnish cars suitable for transportation. Obviously this duty can not be fulfilled by furnishing a car that leaks or one that is so full of projecting nails as to be unsuitable for the transportation of commodities properly packed. Whether, in view of the constant use of box cars and the constant strain upon them even under proper operation, the defendants fail in their duty to furnish suitable equipment when they fail in every instance to furnish cars absolutely free from protruding nails may be questioned. Cars should be carefully inspected by the carriers with a view of locating leakages, removing splinters and nails which would have a tendency to tear sacks filled with flour or grain, and locating foreign substances which might contaminate the product to be loaded into the car. Omaha Grain Exchange v. C. B. & Q. R. R., 120 I. C. C. 59, 61.

§8. Size and Kind Ordered By Shipper.

See Classification §21; Follow Lot Shipments; Minimums §3, §4.

(a) Refusal of carriers in official classification territory to apply two-for-one rule with respect to height as well as to length of box cars, where carriers for own convenience furnish two cars of less height than that of a single car ordered by shipper, found not unreasonable. While carriers should furnish equipment most suitable for reasonable needs of traffic offered, requirements of shipper here have been met by recent acquisition by carrier of cars of desired height. However, demand for cars of a type different from ordinary equipment usually should be more general than that of a single shipper before it may be said to be incumbent upon a carrier to acquire them. Moreover, despite advantages of such cars in handling light and bulky commodities, their usefulness is still in experimental stage and it is doubtful whether two-for-one rule could be enforced at this time without imposing an undue burden on carriers generally. Ohio Body & Blower Co. v. A., C. & Y., 104 I. C. C. 19.

(b) Failure of carriers to maintain a two-for-one rule on kitchen cabinets moving from Indiana points on the Wabash Ry. in Group C territory to transcontinental destinations, under which the c. l. rate will be applied on actual weight of contents of second car provided first car is loaded to capacity where two small cars are furnished by carrier in lieu of a large car ordered by shipper, while applying such a rule from adjacent Group D points, found not unreasonable but unduly prejudicial. Wasmuth-Endicott Co. v. C., R. I. & P., 107 I. C. C. 588.

(c) Failure of carrier to accord two-for-one rule when graduated minimum weights apply according to sizes of cars constitutes a prima facie unreasonable act. See Rule 66(a), Tariff

Circular 18-A; Conf. Ruling 339; 22 I. C. C. 432. But it is not prima facie unreasonable for carrier to fail to include a two-for-one rule in its tariffs, for application on a particular commodity, in absence of graduated minima for cars of different sizes. See 46 I. C. C. 317. Wasmuth-Endicott Co. v. C., R. I. & P., 107 I. C. C. 588. 589.

(d) Failure of carrier to furnish cars promptly and in sufficient number for outbound loading of grain or feed at Lexington, Ohio, thereby preventing unloading of inbound cars until additional room could be provided in elevators and warehouses which were filled to capacity, found not to have resulted in assessment of unreasonable demurrage charges. To allow assessing of demurrage on inbound shipments to depend upon the furnishing of cars for outbound movement, a separate transaction, would open the way to abuses not necessary in order to protect a shipper from unlawful acts of the carrier. See also 57 I. C. C. 398. Lexington Elevator & Mill Co. v. B. & O., 109 I. C. C. 542, 544.

(e) Complainant attacked commodity rate of $1.80 charged on two cars of wheelbarrows, Oct. 3, 1923, from Chattanooga, Tenn., to Los Angeles, Calif., as unreasonable, unjustly discriminatory and unduly prejudicial. Complainant ordered one 40 foot furniture car for these shipments, two 40 foot cars furnished, shipments moving N. C. & St. L., to Atlanta, Ga., A. & W. P., to Montgomery, Ala., L. & N., to New Orleans, La., M. L. & T., to Houston, Tex., G. H. & S. A., to El Paso, Tex., and S. P., beyond. Tariff did not provide two for one rule. HELD, failure of defendant to provide a rule of this character unduly prejudicial, reparation denied. Chattanooga Wheelbarrow Co. v. N. C. & St. L. Ry., 112 I. C. C. 549.

(f) It is not prima facie unreasonable for a carrier to fail to provide a two-for-one rule in its tariffs, for application on a particular commodity, in the absence of graduated minima for cars of different sizes. Chattanooga Wheelbarrow Co. v. N. C. & St. L. Ry., 112 I. C. C. 549, 550.

(g) Complainant alleged in substance that the failure of defendants to provide rule 2 of Countiss westbound I. C. C. 1114, in connection with the carload rate on stoves, gas ranges, and other heating and cooking apparatus, named in item 1724, from Detroit, Mich., to rate basis 3 destinations, while contemporaneously providing the same in connection with rates on stove from other points named in that item to the same destinations, was and is unjust and unreasonable, unjustly discriminatory and unduly prejudicial. Shipment moved May 14, 1923, from Detroit, Mich., to Los Angeles, Calif. Fifty foot car was ordered two forty foots furnished. The two-for-one rule was not applicable. HELD, failure of defendants to provide the so-called two-for-one rule of the tariff referred to in connection with the rate on stoves, carloads unduly prejudicial but not unreasonable or unjustly discriminatory. Peninsular Stove Co. v. M. C. R. R., 113 I. C. C. 225.

(h) The mere failure of carriers to provide a two-for-one rule is not prima facie unreasonable unless graduated minima are provided for cars of different sizes. Peninsular Stove Co. v. M. C. R. R., 113 I. C. C. 225, 228.

(i) Failure of carriers to maintain a two-for-one rule applicable to shipments of wheelbarrows from Chattanooga to Los Angeles while contemporaneously maintaining such a rule on similar shipments from points in various transcontinental groups to same destination found not unreasonable but unduly prejudicial to Chattanooga and shippers at that point. Chattanooga Wheelbarrow Co. v. N., C. & St. L., 112 I. C. C. 549.

(j) Upon contention that following rule 66 (a) of Tariff Circular 18-A that it was unreasonable for carriers to fail to maintain a two-for-one rule on shipments of wheelbarrows from Chattanooga to Los Angeles, HELD: Since rule relied upon applies to cars of different sizes with graduated minima, it was not unreasonable for carriers to fail to provide such a rule in their tariffs for application on a particular commodity where, as here, there was an absence of graduated minima for cars of different sizes. See also 107 I. C. C. 588. Chattanooga Wheelbarrow Co. v. N., C. & St. L., 112 I. C. C. 549, 550.

(k) Failure of carriers to provide a two-for-one rule on stoves, including gas ranges, from Detroit, Mich., to Los Angeles, Calif., and other western destinations, under which the c. l. rate will be applied on actual weight of contents of second car provided first car is loaded to capacity where two small cars are furnished by carriers in lieu of a large

car ordered by shipper while contemporaneously providing such a rule on similar commodities from Chicago, St. Louis, and other points with which Detroit comes into direct competition, found not unreasonable or discriminatory, but to result in undue prejudice. Peninsular Stove Co. v. M. C., 113 I. C. C. 225.

(l) Complainant attacked charges on an interstate shipment of furniture from Jamestown, N. Y., to Brooklyn, N. Y., in Sept. 1922 as inapplicable. Shipment moved over the Erie in two 36 ft. cars the first containing 10,400 pounds and the second 9,500 pounds. Charged commodity rate of 74.5c, based on minimum of 12,000 pounds on the first car and actual weight of 9,500 pounds on the second car. These charges were assessed under the authority of rule 34 of the consolidated classification. A 50 ft. car had been ordered for this shipment and the two 36 ft. cars were furnished for defendants convenience. HELD, charges collected applicable, complaint dismissed. Abraham & Straus Inc., v. Erie R. R., 115 I. C. C. 305.

(m) Complainant attacked transportation charges on one electric traveling crane shipped Oct. 1, 1923 from Muskegon, Mich., to South San Francisco, Calif., as unreasonable. The crane was loaded into three gondola cars, containing 24,700, 24,400 and 22,300 pounds moving as routed by consignor over Pennsylvania to Chicago, thence OGW to Kansas City, Mo., KCS, T&P and SP beyond. Charged fifth class of 35c to Mississippi river, $1.83 commodity rate beyond. Sometime prior to the shipping date consignor advised the Pennsylvania that it would require, and so ordered, one 40 foot car and one 46 foot car, which equipment complainant states would have been adequate and safe. The agent acknowledged the order and advised complainant that cars of that size were available and would be furnished. Depending upon that advice the consignor lined up and prepared for shipment, on its shipping platform, the material comprising the crane. Without previous notification the Pennsylvania placed for loading the three cars first described. Under these conditions consignor was obliged to use the three cars furnished. The sizes of the latter, owing to the dimensions of the material, rendered impossible the loading of those cars to the applicable minimum. The record shows that this crane could have been loaded into the two cars ordered, and that their individual loads would have exceeded the minima provided in connection with the respective factors of the applicable combination rate. HELD, charges unreasonable to extent they exceeded the charges on cars of the size ordered, reparation awarded. Metal & Thermit Corp. v. Pennsylvania R. R., 115 I. C. C. 396.

(n) Complainant attacked charges assessed on two cars of automobiles shipped on May 13, 1922 from Dallas, Tex., to Los Angeles, Calif., as unreasonable to extent they exceeded the charges which would have accrued had defendants furnished one car as ordered. Original report 91 I. C. C. 73. HELD in original report, applicable two-for-one rule unreasonable. This is a case where the carrier furnished two 40 foot cars for the transportation of four automobiles, in lieu of one 50 foot car ordered by the shipper. The record shows that the four automobiles could have been loaded in a 50 ft. car, with one automobile tilted at each end of the car. As transported, two automobiles were loaded in each of the 40 ft. cars furnished, and charges were assessed at applicable rate of $5 per 100 pounds on minimum of 10,000 pounds for one of the cars, and on actual weight of 5,885 pounds in the other car.. HELD, defendants two-for-one rule unreasonable in that it failed to provide for the assessment of charges on the minimum weight provided for the larger car ordered, unless the actual weight exceeds such minimum, subject only to the proviso that the shipment could have been loaded in the car ordered. Reparation awarded. Dallas Transfer Co. v. S. P. Co., 115 I. C. C. 658.

(o) Carrier, for own convenience, furnished two small cars in lieu of large car ordered and charges were collected at c. l. rate and minimum weight on first car and at actual weight on second car, under authority of a rule of consolidated classification. Contention that charges should have been assessed on basis of actual weight of entire shipment and that rule under which charges were based does not conform to provisions of rule 66 of Tariff Circular 18-A, not sustained and charges assessed found applicable. Abraham & Straus v. E. R. R., 115 I. C. C. 305.

(p) Charges applicable on one electric traveling crane resulting from carrier furnishing three cars each shorter than

two cars ordered, found unreasonable to extent they exceeded those which would have accrued based on size of the equipment ordered. A tariff rule in effect provided that where a car of specified length is ordered and a longer car is furnished, minimum weight for the latter shall be that fixed for car ordered. It was unreasonable for carriers to fail to provide a like rule to cover situations similar to that here presented. Reparation awarded. Metal & Thermit Corp. v. P. R. R., 115 I. C. C. 396.

(q) Complainant ordered one 50-foot car but carrier furnished for own convenience two 40-foot cars. Governing tariff carried a two-for-one rule which provided for application of minimum weight on one of the cars furnished and actual weight on the other, and charges were collected on that basis. HELD: Rule was unreasonable in that it failed to provide for assessment of charges on minimum weight of car ordered. Reparation awarded and reasonable rule prescribed. Former report 91 I. C. C. 73 affirmed. Dallas Transfer Co. v. S. P., 115 I. C. C. 658.

(r) On imported rattan furniture in bundles, moving from Seattle, Wash., to Cleveland, Ohio, no import c. l. rates were in effect and l. c. l. rates were assessed. Domestic rates provided minimum weights for cars of varying length but carriers elected to load this furniture in smaller cars. HELD: Domestic rates were applicable, and action of carriers in loading in smaller cars should not debar shipper from benefit of minimum on cars which presumably would have held shipments. Reparation awarded and original report 104 I. C. C. 255, reversed. Bailey Co. v. I. C., 118 I. C. C. 455.

(s) Carrier for own convenience furnished two small cars in lieu of larger car ordered. Neither classification nor governing tariff provided for graduated minima for cars of different sizes. Upon complaint attacking assessment of charges based on minimum weight for first car and actual weight at c. l. rate on second car, HELD: Record indicates that prescribed minimum could not reasonably have been loaded into cars furnished and therefore charges assessed in excess of applicable rate and actual weight of entire shipment subject to established minimum, were unreasonable. Folly Town Co. v. E. R. R., 120 I. C. C. 157.

(t) Where there is a uniform minimum for cars of all lengths, carriers are not required to furnish a car of any specified length, but are under duty of establishing a minimum weight that can reasonably be loaded into a car of size furnished. See 55 I. C. C. 17. Folly Town Co. v. E. R. R., 120 I. C. C. 157, 158.

(u) Practice of assessing charges at published minimum where cars furnished by carriers for their own convenience can not reasonably be loaded to the minimum is unreasonable. Under "carriers' convenience" rules carriers are not obliged to furnish cars of size ordered, but are required to protect actual weights where smaller cars furnished are fully loaded. See 74 I. C. C. 747. Folly Town Co. v. E. R. R., 120 I. C. C. 157, 158.

(v) Complainant attacked class rate charged on a mixed carload of toilet paper, paper towels and paper napkins forwarded in August, 1921, from Green Bay, Wis., to Tulsa, Okla., as inapplicable. Shipper ordered a 50 foot car but for their convenience defendants furnished two 40 ft. cars. Shipment moved C. & N. W., to Des Moines, Wabash to Kansas City, Mo., Frisco beyond, charged fourth class rate of $1.18, applied on a minimum of one car and actual weight on the other. The governing classification provided that a mixed carload shipment would be subject to the highest class carload rate applicable. Toilet paper and paper towels were rated fifth class and paper napkins fourth class. A rate of 59.5 cents applied on straight carloads of toilet paper. Defendants express a willingness to refund the outstanding overcharge. HELD, shipment overcharged $2.62, to be refunded, complaint dismissed. Dallas Paper Co. v. C. & N. W. Ry., 122 I. C. C. 295.

(w) Complainant alleged that charges collected on two shipments of gas ranges from Battle Creek, Mich., to Los Angeles, Calif., on Nov. 8 and 26, 1924 were unjust and unreasonable and inapplicable. Shipper ordered a 50 foot car for each shipment but two 40 foot cars were furnished in lieu of the 50 foot cars. Charged $1.87, minimum 24,000 pounds for each car. Actual weights are not of record but apparently none of the cars was loaded to the minimum. Battle Creek is a group C point and the socalled two for one rule was not applicable in connection with the through rate therefrom. The two for one rule as published was applicable only if the shipment could have been loaded into

the car ordered by the shipper. No showing has been made that these shipments could have been loaded in 50 foot cars, and it is therefore impossible to say whether the two for one rule would have applied on them had they originated at Chicago. HELD, charges applicable and not unreasonable, complaint dismissed. Barker Bros. v. M. C. R. R., 132 I. C. C. 361.

(x) In Chattanooga Wheelbarrow Co. v. N. C. & St. L. Ry., 112 I. C. C. 549 the Commission found the failure of defendants to maintain and apply the socalled two for one rule on two carloads of wheelbarrows shipped from Chattanooga, Tenn., to Los Angeles, Calif., while applying this rule to similar shipments from certain competing points to transcontinental destinations was not unreasonable but unduly prejudicial. Tariffs purporting compliance with the order have since been filed. Upon the record it is apparent that the proximate cause of complainants injury, if any, is traceable directly to a misunderstanding as to the amount of the applicable freight charges, and which is not sufficient to justify an award of reparation under a finding of undue prejudice. HELD, reparation denied. Chattanooga Wheelbarrow Co. v. N. C. & St. L. Ry., 132 I. C. C. 713.

(y) Complainant alleged defendants failure to provide socalled carriers convenience rules in connection with shipments of cedar chests from Huntington, Ind., to Los Angeles, Calif., was and is unreasonable and resulted in collection of charges on two shipments made March 9 and Oct. 15, 1923 unreasonable and inapplicable. The consignor ordered 50 foot cars. One 40 foot car and one 36 foot car were furnished for the first shipment and two 36 foot cars for the second. Each shipment was partially loaded into one car and the remainder in the second car. Charged on basis of actual weight, $514 on first shipment at combination rate of $2.57, composed of second class rate of 54c to Highlands, Ind., and a joint commodity rate of $2.03 beyond; and on the second third class rate of $3.78. The record shows that it would have been impossible to load either of the shipments into either of the cars furnished. HELD, aggregate charges collected applicable but unreasonable to extent they exceeded charges that would have accrued at the $2.25 rate had defendants furnished cars of sufficient size to accommodate the minimum of 20,000 pounds, reparation awarded. Barker Bros. v. A. T. & S. F. Ry., 132 I. C. C. 753.

(z) Shipper ordered two 50-foot cars. Carrier for its own convenience furnished four smaller cars and now seeks to collect undercharges on ground that two-for-one rule did not apply under class rate assessed but that a commodity rate at applicable minimum weight applied on each of the four cars furnished. FOUND: Class rate was subject to two-for-one rule and applicable charges were therefore assessed. Leggett & Platt Mfg. Co. v. A., T. & S. F., 129 I. C. C. 219, 223.

§8a. Multiple Carloads.

(a) The fundamental issue is whether timbers, poles and piling, too long to be transported in one car shall be charged rates no higher than those applying on fir lumber and other articles taking the same rates, in single cars. The records in the instant cases show that the transportation qualities of multiple carloads of timbers, poles and piling, on the one hand, and single carloads of fir lumber and poles, on the other, are essentially dissimilar, that the carriage of the former requires of the carriers special, expensive and burdensome services, including the furnishing of materials which are not required in the movement of the latter, and that the hazards of transportation are materially greater in the case of the former, particularly in the mountainous regions, than in the case of the latter. When ordering cars shippers are required to specify whether cars ordered are for single or multiple loads. If for multiple loads, cars must be selected which have decks of the same height. They must then be switched to the repair track, where they are given special inspection. To eliminate spring action, jacks are placed between the ends of the cars and they are forced apart until the draft springs are compressed. Metal placing blocks are then placed between the horns of the couplers and the deadwoods of the cars. To avoid the possibility of uncoupling by mistake between cars carrying a multiple load, the uncoupling levers are disconnected from the couplers. The cars are then chained together by means of switch chains, two chains being used for double loads and four for triple loads. These chains cost from $8 to $10 apiece and are furnished

by the carrier. After delivery of the shipment the chains are removed from the cars and returned to the owning carrier or are paid for by the delivering carrier. The spacing blocks are removed, uncoupling levers connected, and the cars are then ready to be returned to regular service. The weighing of multiple loads requires more time and care, and to that extent is more expensive than the weighing of ordinary lumber in single carloads. Careful weighing of multiple loads is essential as a precaution against the overloading of the trucks which bear the loads. If there is any doubt whether any particular truck is overloaded it must be weighed separately, and, in the case of triple cars, this might necessitate the taking of five separate weights. The transportation of multiple cars of poles is much more hazardous than that of single cars of lumber or timbers. Due to shifting of the load toward one end of the car, failure of stakes, wiring, etc., readjustment in transit of shipments of lumber, poles, or timbers is often necessar Multiple loads are readjusted in transit much more frequently than single loads. The cost of readjusting multiple loads while in transit, which is borne in all instances by the carriers, is seldom less than $20 per car and some times in excess of $60. All transportation units must be inspected, but multiple loads require and receive much more rigid scrutiny than other units. In fact ordinary inspection is wholly inadequate in connection with multiple loads. The expense of inspections, as well as the extra expense of readjusting these multiple loads, falls upon the carrier in possession of the shipment when the maladjustment is discovered. HELD, rates attacked not unreasonable, unjustly discriminatory or unduly prejudicial. Between Jan. 1, 1918, and Feb. 29, 1920, rates on single cars of timbers, poles or piling from points on the S. P., in Oregon to points on that line in California unreasonable to extent they exceeded rates on fir lumber, single carloads. Reparation awarded. Dutton Lumber Corp. v. Director General, 112 I. C. C. 661.

(b) Complainant alleged class rates charged on three less carloads of door and window frames shipped between Sept. 30 and Oct. 2, 1924 from Duluth, Minn., to Eagle River, Wis., were unreasonable. The three shipments weighed 2,440 pounds and consisted of two boxes of building woodwork and 14 large bulky window and door frames. The frames due to their design and peculiar make up could not be shipped knocked down and could not be loaded into an ordinary box car because of their size. The shipments were tendered to the carrier as follows: Eight frames and two boxes Sept. 30, 1924; two frames on Oct. 1; and four frames on Oct. 2. A separate bill of lading was executed for each shipment on the date it was delivered to that carrier. They were received in the ordinary course of business and no notice was given that they should be handled in any but the ordinary manner. On Oct. 2, the three shipments were forwarded over defendants lines in an automobile car, applicable charges being collected on each shipment on basis of 4,000 pounds and first class rate of 76c per 100 pounds. Complainants case in substance is that the failure of the initial carrier to promtly forward each shipment on the day of its delivery resulted in the collection of unreasonable charges. Under the provision of the tariffs the initial carrier could not have legally sent these shipments under one bill of lading or as one shipment. Any claim for damages due to delay is beyond the jurisdiction of the Commission. HELD, charges collected not unreasonable, complaint dismissed. Scott Graff Lumber Co. v. C. St. P. M. & O. Ry., 132 I. C. C. 745.

§9⅝. Insulated or Refrigerator Cars.

See Infra §9⅞ (3); Insulated Cars; Refrigeration.

(a) Respondents proposed to establish certain charges for the use of refrigerator cars in the transportation of fresh fruits, vegetables, berries, melons and other perishable freight, with certain exceptions, in less carloads, subject to a minimum of 12,000 pounds per car, any deficit in weight to be charged for on basis of the highest rated article in the shipment, covered at one bill of lading from one shipper at one point to one consignee at one destination when moving interstate between Alabama. Florida, Georgia, South Carolina, North Carolina and Virginia and intrastate in each of the foregoing states except Florida. These respondents publish no tariff rule which they hold themselves out to transport in refrigerator cars in this territory fruits and vegetables, in less carloads, and by the schedules under suspension they seek to establish rules under which they will handle such ship-

ments of perishable products, except the so-called dairy products, in refrigerator cars without ice at $5 per car per trip, and with ice in bunkers and on orders of shippers, owner or consignee, under instructions "do not reice" or where no instructions are furnished at $12.50 per car per trip. Where cars are furnished with ice in bunkers charges will also be made for such ice on basis of their published ice charges, but such provision of their tariff is not under suspension. The rates and basis of rates as well as the ratings on this traffic, in less carloads, have been in effect for many years, and the use of refrigerator equipment for the handling of less carload shipments of these perishable commodities is a new service, and the rates and ratings thereon could not have contemplated transportation in refrigerator equipment. If under the suspended rules the total charges on an interstate less than carload shipment may exceed the total charges on a carload shipment, such provision of the tariff rules should also be corrected to provide that the lower of the total charges will apply. To authorize charges for the deficit in weight to be based on the lowest rated article in a mixed shipment of perishable products might encourage shippers by defeat the very purpose of the minimum loading. HELD, proposed schedules justified. Charges on refrigerator equipment, 115 I. C. C. 198.

(b) Shipper ordered a half-tank refrigerator car but on date order was placed no car of this type was available. Carrier furnished a full-tank car which was accepted, loaded, and forwarded, bills of lading bearing notation "Full tanks ice." HELD: Under applicable tariffs and circumstances of this case shipper had option of either accepting the full-tank car, or waiting until a car of type ordered became available, but having elected to follow former course, the published tariff charge covering full-tank refrigeration assessed was applicable. Moreover, record fails to establish that carrier received reasonable advance notice, to which it was entitled under its tariffs, of type of car desired. Chase & Co. v. A. C. L., 118 I. C. C. 289.

(c) Whatever the condition of the vegetable growing industry, the commission knows of no warrant in law, and are advised of none, for requiring carriers to furnish refrigeration service at charges which are less than compensatory. Refrigeration charges on vegetables, 120 I. C. C. 555, 560.

§9¾. Peddler Cars.

See Peddler Cars.

(a) Respondent, B. R. & P., proposed to restrict its rules governing peddler car service by requiring that refrigerator cars used therein be furnished by shippers. In actual practice respondent has not furnished equipment heretofore for peddler car service and it contends that the additional phrase "furnished by them" following reference in its rules to refrigerator cars used by shipper, was published merely to clarify the meaning of the more concerning necessary arrangements and did not change that note or set forth a new rule. This contention is without merit. The additional was a requirement, where no former rule so provided, that shippers should furnish refrigerator equipment. Moreover, the evidence shows that under substantially similar peddler car rules it is the common practice of some carriers to furnish the equipment. It appears that it publishes less than carload as well as carload rates on all the articles listed in the rules governing peddler car service and that is holds itself out to carry their commodities. It does not operate a less than carload refrigerator service, and fresh meat in less than carloads may be shipped from Buffalo to destinations on its lines in no way other than in peddler car service. A shipper served by a switching line ordinarily makes initial request of that line for cars, but the carrier receiving the road haul is commonly looked to eventually to furnish cars, and respondents traffic manager so testified. The present record contains nothing to show that peddler service over respondents lines has been unremunerative or that the revenue derived therefrom would be unduly low if respondent furnished the required refrigerator equipment. HELD, suspended schedules not justified. Handling of fresh meat, 132 I. C. C. 49.

§9⅞. Miscellaneous Cars.

(3). Refrigerator Cars.

See Refrigeration.

(a) Complainant alleged charges collected on a car of citrus fruit shipped

on June 1, 1923, from Frostproof, Fla., to Mobile, Ala., were unreasonable. Frostproof is on the A. C. L. about 28 miles south of Haines City, Fla., the junction point with the main line. On May 31, 1923, complainant filed a requisition with defendants agent for one half tank refrigerator car, to be placed for loading at Frostproof on the following day. On the latter date defendant furnished a full tank refrigerator car, which was accepted and loaded by complainant under protest. The bill of lading bears the notation "full tanks ice." Shipment moved A. C. L. to Waycross, Ga., from which point it was reconsigned to Mobile, moving A. C. L. and L. & N. Charged standard refrigeration service rate of $58.50. Complainant seeks reparation to basis of rate of $45.50 applicable for half tank refrigeration service. Complainant had the option either of accepting the full tank car furnished or waiting until a car of the type ordered became available. Having elected to follow the former course, the published tariff charge covering full tank refrigeration was applicable. HELD, charges attacked applicable and not unreasonable, complaint dismissed. Chase & Co. v. A. C. L. R. R., 118 I. C. C. 289.

§10½. Private Cars.

See Infra §13; Common Carrier §6; Private Cars.

(a) Under section 1 of the act the duty is placed upon every carrier subject to the act to provide transportation, including the furnishing of cars. When a shipper furnishes his own car he relieves the carrier of so much of its obligation as a common carrier and is entitled to reasonable compensation from the carrier for the service rendered. Paragon Refining Co. v. A. & S. R. R., 118 I. C. C 166, 167.

(b) While commission has prescribed lower rates on traffic in private than in carrier-owned equipment, 58 I. C. C. 429, 64 I. C. C. 243, this should not be continued as a policy or practice except where a clear, convincing, and complete record justifies it. Switching at St. Louis and East St. Louis, 120 I. C. C. 216, 221.

§11¾. Rental Charges.

(a) Complainant attacked unreasonableness and unlawfulness in defendants failure and refusal to provide by tariff provision for the payment of a mileage allowance of 1c per mile for the use of complainant's tank cars moving in service over its line. The tank cars moved over M. P. to East St. Louis, Ill., defendant Alton & Southern to Madison, Ill., T. St. L. W. beyond. The movement over defendants line was entirely within the East St. Louis switching district. For the haul of 13 miles defendant received a switching charge of $3.75 per car prior to Aug. 26, 1920, and $5.25 per car on and after that date which was absorbed by the T. St. L. & W. out of its revenue. The obligation is on the switching line to pay the mileage allowance unless the line haul carrier assumes it, which has not been done here. The line haul carrier is not a party defendant. Under the present code of per diem rules a reclaim of one day is permitted on cars handled in intermediate switching service when the switching line is obligated to pay per diem. The trunk line should give consideration to whether a similar reclaim should not be permitted on intermediate switching service where the intermediate line is obligated to pay mileage on private cars. HELD, defendants failure to pay mileage allowance on private tank cars is unreasonable, reparation awarded to extent of 1c per car per mile prior to Oct. 1, 1920, and for future 1.5c, reparation awarded. Paragon Refining Co. v. A. & S. R. R., 118 I. C. C. 166.

(b) Compensation to private car owner should be made through a rental charge rather than through a differential in freight rates. Switching at St. Louis and East St. Louis. 120 I. C. C. 216, 222.

(c) Court held without jurisdiction of action to recover rental charges paid by potato shipper for refrigerator cars in addition to line haul rate, involving fact question as to kind of equipment that carrier should have furnished, which was primarily for Interstate Commerce Commission. J. C. Famechon Co. v. Northern Pac., 11 Fed. (2d.) 312.

§11⅞. Per Diem Charges.

See Supra §11¾; Per Diem Charges.

(a) Charges for use or detention of foreign cars on the Marcellus & Otisco Co., a short-line carrier, under code of per diem rules of American Ry. Asso., found not unreasonable. The Marcellus

Company is not a subscriber to per diem agreement of Association under which trunk lines are liable for off-line equipment while on rails of nonmember short lines. The straight per diem basis applies on many short lines operated under substantially same conditions; therefore to permit a lower basis on the Marcellus company would give it a preferred position. Moreover, as a common carrier participating in through movements short line is under obligation to furnish its share of equipment. The per diem that it pays is merely equivalent to car-ownership costs which it would have to bear if it owned cars used in interline traffic. By renting cars from its connection on a per diem basis, it is relieved of necessity of investing in equipment. See 96 I. C. C. 591. Marcellus & Otisco Co. v. N. Y. C., 104 I. C. C. 389.

(b) Upon contention by short-line carrier that increase in per diem rate for use or detention of foreign cars, promulgated by American Railway Association following Federal control, since not approved by commission or other governmental authority, or agreed to by short lines, resulted in a violation of section 208 of transportation act, 1920, FOUND: Rates, fares, or charges contemplated by section (a) of the statute relied upon plainly have reference to those collected from the public, and section (b) simply has reference to divisions of such charges between participating carriers. Marcellus & Otisco Co. v. N. Y. C., 104 I. C. C. 389, 391.

(c) The per diem system is intended to be a reciprocal agreement, although it is extended to short lines which own few cars and interchange none. In some instances short line receives some return by assessment of demurrage against shippers or consignees for part or full time the car is on its rails. Marcellus & Otisco Co. v. N. Y. C., 104 I. C. C. 389, 392.

(d) Per diem is a reciprocal arrangement between the carriers and is in the nature of a penalty. Paragon Refining Co. v. A. & S. R. R., 118 I. C. C. 166, 167.

(e) Complainant contended that as carrier holds itself out to pay per diem allowance on cars owned by carriers which move over its line but refuses to pay mileage on private tank cars in like manner, it unduly prefers carrier-owned cars and subjects complainant and its contention is not sound. Circumstances cars to undue prejudice. HELD: This and conditions in connection with the two transactions are dissimilar, as per diem is a reciprocal arrangement between carriers and in nature of a penalty. See 62 I. C. C. 513, 538. Paragon Refining Co. v. A. & S., 118 I. C. C. 166, 167.

III. ASSIGNMENT AND DISTRIBUTION.

A. Counting of Cars.

§12. In General

(a) Upon further hearing, practices of Director General during Federal control, in distribution of coal cars to mines on the Monongahela and Morgantown & Wheeling Railways, on the one hand, and mines on the Pittsburgh & Lake Erie and specific branches of the Pennsylvania R. R., on the other, found to have subjected operators on the Monongahela and the Wheeling to undue prejudice to extent that percentage of cars furnished them was less than percentage of cars the mines as a whole, on all lines here considered, would have received had all the system cars been equally distributed under car-distribution rules then in effect, See also 242 U. S. 89 and 257 U. S. 85. Original report, 60 I. C. C. 569, modified. Northern W. Va. Coal Asso. v. P. R. R., 109 I. C. C. 604.

(b) In computing damages from discrimination by carrier in car allotment, it is error to assume that complaining shipper should have received cars in same ratio to shipping requirements as was allowed a favored competitor in the making of the discrimination. In other words, complainant was entitled only to such car supply as he would have received had available cars been equally distributed. See 242 U. S. 89, affirmed in 257 U. S. 85. Northern W. Va. Coal Asso. v. P. R. R., 109 I. C. C. 604, 607.

(c) Complainants alleging that failure and refusal of Missouri Pacific to furnish complainants at McCracken, Hargrave, and Bushton, Kans., their proportionate share of available cars for shipment of bulk grain, while contemporaneously furnishing competitors located at same points cars in excess of their proportionate share, resulted in undue prejudice, not sustained. It is impossible to determine number of cars that each shipper was entitled to receive, record failing to indicate the number of cars ordered by complainants, by those alleged to be preferred, or other shippers. Nor does it show in all instances

the amount of grain shippers had on hand at time cars were ordered. It simply shows the number furnished to each at their respective places. Farmers Union Cooperative Business Asso. v. M. P., 112 I. C. C. 269.

(d) A carrier must be allowed some latitude for the exercise of business judgment in determing the scope of its operations, having due regard for the provisions of the act. Winding Gulf Colliery v. C. & O. Ry., 115 I. C. C. 113, 118.

(e) In 96 I. C. C. 161, division 5 found that the practices of defendant during the period Sept. 1, 1922, to March 31, 1923, in connection with the distribution of coal cars to certain mines operated by complainants in Indiana were not shown to have been unreasonable or unduly prejudicial. Service orders 23 and 25 had the effect of suspending the car distribution rules of defendant to such an extent in the month of Sept., 1922, that it would be improper to hold defendant responsible to complainant for failure to accord its mines an equal share of the available cars during that month. The mere fact that discrimination may have existed in the distribution of coal cars between mines in the Indiana-Illinois district and mines located several hundred miles distant in other coal fields, is not, of itself, sufficient proof that such distribution was unreasonable, unjustly discriminatory or preferential within the meaning of the act. HELD, practices not unreasonable or unduly prejudicial. Complaint dismissed. Ayrshire Coal Co. v. S. Ry., 118 I. C. C. 531.

(f) Practice of the Denver & Salt Lake R. R., in establishing mine ratings in accordance with circular CS-31, revised, and considering such ratings standing daily orders for cars over a period of one month, regardless of the number of cars ordered or desired by mines, found unreasonable and wasteful. Such practice results in furnishing certain mines more cars than they could use at times when other mines served by the carrier were being deprived of their ratable requirements for cars. Victor-American Fuel Co. v. D. & S. L., 115 I. C. C. 169, 172, 174.

(g) Rule of the Denver & Salt Lake R. R., which provides that if on any day a mine is furnished with a less number of cars than its rating and for any cause whatsoever, other than railroad's disability, fails to load all cars furnished, the mine is considered as having been furnished 100 per cent of its requirements, as evidenced by its rating, and is charged as having received cars in number equal to its rating, found unjust and unreasonable. Such rule and the practical results of its application are not in conformity with requirements of section 1 (11) of the act which makes it the duty of every carrier subject thereto to furnish safe and adequate car service and to establish, observe, and enforce just and reasonable rules, regulations, and practices with respect thereto, nor with requirements of the law which makes it duty of carriers to accommodate the needs and necessities of its shippers, as nearly as possible, upon a basis of equality. Victor-American Fuel Co. v. D. & S. L., 115 I. C. C. 169, 176.

(h) Practice of the Denver & Salt Lake R. R., in disregarding Rule 5, of circular CS-31, revised, governing distribution of cars to coal mines, by counting a car as a car regardless of its capacity, found unreasonable. Section 1 (12) of the act makes it duty of carriers "to make just and reasonable distribution of cars for transportation of coal among coal mines served by them," and a carrier can not comply therewith if it furnishes one shipper, under substantially similar circumstances and conditions, cars capable of transporting a greater quantity than it does to other shippers tendering for transportation same commodity, without equalizing in some manner the disparity between the capacity of such cars. Victor-American Fuel Co. v. D. & S. L., 115 I. C. C. 169, 177.

(i) Practice of the Denver & Salt Lake R. R., in installing what it terms the "round robin" system of distributing cars to coal mines on its line, found unjust and unreasonable, and not in harmony with the true "round robin" system. The practical result here was that some mines were furnished many more cars than they ordered or could use while other mines were deprived of cars which they had ordered and needed, the cars not used causing penalties to be assessed against the first-mentioned mines, which penalties later deprived them of cars which they ordered and needed. Victor-American Fuel Co. v. D. & S. L., 115 I. C. C. 169, 177, 178.

(j) Section 1 (12) of the act makes it the duty of carriers to count each and

every car, regardless of type, size, or capacity, against mines in distributing cars for loading, and a carrier may not under any circumstances set this mandate aside. Victor-American Fuel Co. v. D. & S. L., 115 I. C. C. 169, 179.

(k) Practice of the Denver & Salt Lake R. R., of delivering cars to certain coal mines on its line when not ordered, and in excess of orders placed, and of delivering cars on successive days when not desired, which practice is not in accordance with the "round-robin" system under which that carrier was working, and the counting of penalty or reject cars caused thereby, found to result in undue prejudice. Victor-American Fuel Co. v. D. & S. L., 115 I. C. C. 169, 180, 182.

(l) The maintenance and application of just and reasonable mine ratings is fundamental in the just and reasonable distribution of cars to mines and to effect both is a duty clearly placed upon railroads by section 1 (12) of the act. Victor-American Fuel Co. v. D. & S. L., 115 I. C. C. 169, 182.

(m) The primary duty of establishing proper mine ratings rests upon carriers. Victor-American Fuel Co. v. D. & S. L., 115 I. C. C. 169, 185.

(n) Upon reargument, original report, 96 I. C. C. 161, affirmed, and practice of Southern Ry. in connection with coal-car distribution to mines in Indiana during 1922 found not to have resulted in undue prejudice or unreasonableness. Due to abnormal conditions following strikes of miners and railway shopmen, special service orders of commission controlled distribution of equipment and all rules and regulations of carriers were suspended so far as they were in conflict with such orders. The unusual conditions brought about by strikes made it impossible for carrier to accord an equitable car supply during period in question; moreover, complainant's mines were no differently treated than other mines similarly situated, nor were operating and transportation conditions in this territory comparable with those in coal fields not affected by the strikes. Ayrshire Coal Co. v. S. Ry., 118 I. C. C. 531.

(o) Foreign-bound cars classify as interstate commerce whether laden or empty. Hatch v. Portland Terminal Co., (Me., 1925) 131 Atl. 5.

(p) In determining whether discrimination resulting from manner of car distribution is unjust or unreasonable, question whether transportation effected is under substantially similar circumstances and conditions must be considered. Berwind-White Coal-Mining Co. v. United States, (Pa., 1925) 9 Fed. (2d.) 429, 430.

§13. Private Cars.

See Supra §10½; Demurrage §10; Private Cars.

(a) Failure to charge private cars in distribution of available equipment has been repeatedly condemned by commission and the courts. Farmers Union Cooperative Business Asso. v. M. P., 112 I. C. C. 269, 274.

(b) That owners of private cars enjoy use of a disproportionately large part of facilities of carrier is not discriminatory, unless other shippers are thereby deprived of use of those facilities. Berwind-White Coal-Mining Co. v. United States, (Pa., 1925) 9 Fed. (2d.) 429, 430.

§14½. Junction Point or Joint Mines.

(a) Upon reconsideration, findings in 102 I. C. C. 19, reversed in part and practices of carriers in according joint mine service to West Virginia Coal & Coke Co., located on the Coalton branch of B. & O., while failing to accord similar treatment to complainant's mine located intermediate thereto, found to have resulted in undue prejudice in the matter of car supply. While reasonable enjoyment of advantages which a joint mine enjoys over a line served by only one road should be protected, carriers may not, by withholding equipment dictate the markets which a particular shipper shall enjoy, while adapting their services to needs of a competing shipper. Complainant was here offered arbitrarily and without regard for requirements of his business that which had been arranged for his competitor after deliberation, whereas he should have been permitted to divide his orders for cars in such divisions of 100 per cent of his mine rating as his judgment dictated, and cars accordingly furnished in conformity with supply available on the respective roads. Brady v. B. & O., 112 I. C. C. 244.

(b) If a carrier extends its service by a trackage agreement to one mine on another line, it would be difficult, if not impossible, to justify a refusal to

accord similar treatment to another intermediate competing mine located on the track over which it operates under the trackage agreement. Winding Gulf Colliery v. C. & O. Ry., 115 I. C. C. 113, 117.

(c) Where a carrier enters into a trackage agreement with another it is in effect an extension of its line. A carrier, except under certain circumstances, is not chargeable with unjust discrimination or undue prejudice if it extends its service by trackage arrangements, thus giving certain mines a joint status, while refusing to make other agreements so as to extend its service to other mines. Winding Gulf Colliery v. C. & O. Ry., 115 I. C. C. 113, 117.

(d) Complainant owns and operates a coal mine near Pemberton, W. Va., on the Winding Gulf branch of the Virginian Ry., which extends from Mullens, W. Va., through Pemberton to Frisco, W. Va., and alleged the rates on bituminous coal from its mine to interstate destinations were and are unreasonable, unjustly discriminatory and unduly prejudicial. Pemberton is a competitive point which is reached by the C. & O. The Lines of the Virginian and the C. & O. intersect in the immediate vicinity of the station at Pemberton at which a joint agency is maintained. Complainants mine is located about 0.5 mile south of the junction and within the yard limits of Pemberton. It has no outlet direct to the C. & O., and is not shown in the tariffs as a mine on that line, but the monthly mine rating and car distribution bulletins of that line classified it as a joint mine. Effective Feb. 13, 1913 the Virginian published a switching charge of $4 per car between its connection with the C. & O. and industries on its line at Pemberton. The C. & O. at no time provided for the absorption of this charge. In Feb. 1922, the Virginian canceled its switching tariff, which made applicable its distance tariff rate of $1.26 per ton. Present rate is $1.13 per ton. Complainant has made no shipments over the C. & O. since the cancellation of the switching charge. Complainant had the benefit of the district basis of rates on shipments moving via the line on which its mine is located but on shipments over the C. & O. it as well as other mines served only by the Virginian were required to pay the local rate of the Virginian to the junction plus the district rate beyond. HELD, rates from complainants mine to eastern interstate destinations on or via the C. & O. are not shown to be unreasonable, unjustly discriminatory or unduly prejudicial. Complaint dismissed. Ragland Coal Co. v. Virginian Ry., 115 I. C. C. 147.

(e) Where a carrier enters into a trackage agreement with another it is in effect an extension of its line, and a carrier is not chargeable with unjust discrimination or undue prejudice if it extends its service by trackage arrangements, thus giving certain mines a joint status, while refusing to make other arrangements so as to extend its service to other mines, except under certain circumstances. Ragland Coal Co. v. V. Ry., 115 I. C. C. 147, 150.

(f) Failure of carriers to accord same service and facilities to certain local mines in the New River district of West Virginia as are accorded other mines in the same district similarly situated, the latter by trackage agreements or otherwise being accorded a joint-mine status, found not to result in discrimination or undue prejudice. The location of mines upon two or more lines differentiates their situation from those located on but one carrier, and where a railroad enters into a trackage agreement with another, it is in effect an extension of its line. The complaining mines here are not intermediate to mines accorded a joint status, and carriers are not chargeable with discrimination or undue prejudice merely because they accord certain mines a joint status by trackage arrangements, while refusing to extend similar service to other mines. Winding Gulf Colliery Co. v. C. & O. Ry., 115 I. C. C. 113; Ragland Coal Co. v. V. Ry., 115 I. C. C. 147.

(g) The location of mines upon two or more carriers differentiates their situation from those located on but one carrier, and where a carrier enters into a trackage agreement with another for purpose of according a local mine a joint-mine status, it is in effect an extension of its line. See 62 I. C. C. 259, and other cited cases. Winding Gulf Colliery Co. v. C. & O., 115 I. C. C. 113, 116, 117; Ragland Coal Co. v. V. Ry., 115 I. C. C. 147, 149.

§15. Railway and Fuel Cars.

(a) Practice of the Denver & Salt Lake R. R., in not counting all cars fur-

nished certain mines on its line for railroad-fuel loading, found unlawful, unreasonable, and unduly prejudicial, section 1 (12) of the act making it the duty of the carriers to count each and every car, regardless of type, size, or capacity, against mines, and a carrier may not under any circumstances set this mandate aside. Victor-American Fuel Co. v. D. & S. L., 115 I. C. C. 169, 178, 180.

§19. When Counted for Loading.

(a) Practice of the Denver & Salt Lake R. R., in not counting all cars furnished certain mines on its line for railroad-fuel loading, found unlawful, unreasonable, and unduly prejudicial. Section 1 (12) of the act makes it the duty of carriers to count each and every car, regardless of type, size, or capacity, against mines, and a carrier may not under any circumstances set this mandate aside. Victor-American Fuel Co. v. D. & S. L., 115 I. C. C. 169, 178, 180.

§20. Car Famine.

(a) A shipper's request for transportation, when properly made, is his need and is the measure of a carrier's responsibility to him. A shipper has no right to more than his needs of a carrier's transportation facilities, at least not until other shippers have received their full requirements, and in a period of car shortage a shipper has no right to pro rata distribution based on more than his needs. Nor may a carrier disregard the rights of a shipper in any respect, and to arbitrarily set aside the order of a mine for cars, when less than the mine's rating, is to disregard not only the rights of the shipper, but also rights of other shippers to a fair and equitable distribution of such transportation facilities as it may possess. Victor-American Fuel Co. v. D. & S. L., 115 I. C. C. 169, 174.

B. Rating of Mines.

§21¾. In General.

(a) Complainants, operating bituminous coal mines in Routt County, Colo., on the Denver & Salt Lake R. R., alleged that the rules and practices of the railroad and receivers thereof, between Aug. 1, 1922 and April 6, 1923 in the distribution of coal cars to complainants mines and to other mines served by the railroad, were and are unjust, unreasonable and unduly prejudicial. The mines are in competition with others in the same and adjacent territories, particularly those of defendants, Moffat Coal Co. and Colorado & Utah Coal Co. During that period the railroad rated the coal mines on its line and distributed cars thereto in accordance with the provisions of circular CS-31, revised, with certain modifications. In judging the reasonableness and character of a rule, consideration must be given to the effect of the rule on both the railroad and the shipper. The mines ability to operate is dependent on the carrier to a greater extent than is the carrier dependent upon the mines ability to perform particularly during periods of car shortage. It is clear that the carrier, during the period here involved, was unable to furnish cars currently and that in some instances periods of several days elapsed when no cars were furnished to particular mines. It is manifest that under these circumstances it would be difficult, if not impracticable, for the mine operator to maintain his force of men in such readiness as would permit full capacity operation on short notice. This is emphasized by the fact that the territory around the mines is sparsely settled and that the labor supply is not plentiful. In such matters some latitude should be left, within which the operator may exercise his judgment as to the needs and possible performance of his mines on particular days. Obviously the mines order represents its maximum need on any day. To ignore the order when for less cars than the rating, and use the rating in lieu thereof, as the basis for car distribution, constitutes an unreasonable and wasteful practice. It here resulted in the furnishing to certain mines of more cars than they could use at times when other mines served by the railroad were deprived of their ratable requirements for cars. The shippers request for transportation, when properly made, is his need and is the measure of the carriers responsibility to him. A shipper has no right to more than his needs of a carriers transportation facilities, at least not until other shippers have their full requirements. It also follows that in a period of car shortage a shipper has no right to pro rata distribution based on more than his needs. A carrier may not disregard the rights of a shipper in any respect, and to arbitrarily set aside the order of a mine, when less than the mines rating, is to disregard not only the rights of that shipper, but also of his rights of the other shippers to a fair and equit-

able distribution of such transportation facilities as it may possess. It is clear that in some instances, during the period here involved, cars were placed at complainants mines on consecutive days much in excess of their actual orders and needs. This practice, coupled with the mines failure to load all such cars resulted in large numbers of reject cars being charged and thereafter cars were denied to those mines until the charges had been balanced. In some instances considerable periods of time elapsed during which particular mines of complainants were furnished no cars because of the penalties which had been charged under this modification. It is the duty of the carrier to accomodate the needs and necessities of its shippers. as nearly a possible, upon a basis of equality. Under a strict application the carriers distribute to the mines in rotation the total number of cars accruing to them up to the time of actual distribution in sufficient number to assure the mine sufficient cars to enable it to work a full day. The practical result, however, was that some mines were furnished many more cars than they ordered or could use, while other mines were deprived of cars which they had ordered and needed. The cars not used caused penalties to be assessed against the first mentioned mines, which penalties later deprived them of cars which they ordered and needed. This can not be said to be in harmony with the true round robin system. An agreement was made whereby certain mines were to furnish fuel to the railroad at $2 per ton. This agreement also provided that in consideration of the low price above stated the mines furnishing such fuel were to receive a free supply of cars therefor, i. e., the cars placed for fuel loading were not to be counted against the mines distributive share. HELD, practice of the railroad in not counting all cars furnished defendant mines for transportation of coal against said mines was unlawful, unreasonable, and unduly prejudicial to complainants. HELD, further, defendant companies have received an undue preference with their knowledge and consent by reason of their agreement with the carrier and the practice of said carrier under that agreement. The next question to be considered is whether or not the practices of the railroad under its rules resulted in further undue prejudice to complainants. The railroads practice of using the mine rating as the basis of car distribution in lieu of the mines order was the same for all mines, and no mine or mines by reason thereof received a preference or suffered prejudice. HELD, railroads practices of delivering cars when not ordered, and in excess of the orders placed by complainants and of delivering cars on successive days to complainant when not desired, which practice is not in accordance with the round robin system under which defendant railroad was working, and the counting of penalty or reject cars caused thereby, was unduly prejudicial to complainants. The maintenance and application of just and reasonable ratings of mines is fundamental in the just and reasonable distribution of cars to mines and to effect both is a duty clearly placed upon the railroad by paragraph 12 section 1 of the act. The primary duty of establishing proper ratings rests upon the railroad. The shipper or operators in this case and the carrier should confer and establish a set of rules to govern car distribution on defendant railroads line. Victor American Fuel Co. v. D. & S. L. R. R., 115 I. C. C. 169.

(b) Failure of carriers to accord same service and facilities to certain local mines in the New River district of West Virginia as are accorded other mines in the same district similarly situated, the latter by trackage agreements or otherwise being accorded a joint mine status, found not to result in discrimination or undue prejudice. The location of mines upon two or more lines differentiates their situation from those located on but one carrier and where a railroad enters into a trackage agreement with another, it is in effect an extension of its line. The complaining mines here are not intermediate to mines accorded a joint status, and carriers are not chargeable with discrimination or undue prejudice merely because they accord certain mines a joint status by trackage arrangements, while refusing to extend similar service to other mines. Winding Gulf Colliery Co. v. C. & O. Ry., 115 I. C. C. 113; Ragland Coal Co. v. V. Ry., 115 I. C. C. 147.

(c) Practice of the Denver & Salt Lake R. R. in establishing mine ratings in accordance with circular CS-31, revised, and considering such ratings standing daily orders for cars over a period of one month, regardless of the number

of cars ordered or desired by mines, found unreasonable and wasteful. Such practice results in furnishing certain mines more cars than they could use at times when other mines served by the carrier were being deprived of their ratable requirements for cars. Victor-American Fuel Co. v. D. & S. L., 115 I. C. C. 169, 172, 174.

(d) The primary duty of establishing proper mine ratings rests upon carriers. Victor-American Fuel Co. v. D. & S. L., 115 I. C. C. 169, 185.

C. Removal of Discrimination.

§27. Effect.

See Discrimination.

(a) The duty of a carrier to equalize treatment among shippers extends only to those whom it is bound to serve. Ragland Coal Co. v. V. Ry., 115 I. C. C. 147, 150.

(b) In the adjustment of rates, it is well settled that unless the conditions of transportation are substantially similar at two points no unlawful discrimination may properly be predicated upon different rates and practices. The same general principle is applicable to questions involving car distribution, where one shipper receives a smaller ratable share of the available cars than another. Ayrshire Coal Co. v. S. Ry., 118 I. C. C. 531, 536.

(c) Where a carrier elects to meet commercial or carrier competition it must not cause undue prejudice. Minnesota Dakota Transit Millers v. A. A. R. R., 118 I. C. C. 585, 592.

(d) Failure of carriers to accord same service and facilities to certain local mines in the New River District of West Virginia as are accorded other mines in the same district similarly situated, the latter by trackage agreements or otherwise being accorded a joint-mine status, found not to result in discrimination or undue prejudice. The location of mines upon two or more lines differentiates their situation from those located on but one carrier and where a railroad enters into a trackage agreement with another, it is in effect an extension of its line. The complaining mines here are not intermediate to mines accorded a joint status, and carriers are not chargeable with discrimination or undue prejudice merely because they accord certain mines a joint status by trackage arrangements, while refusing to extend similar service to other mines. Winding Gulf Colliery Co. v. C. & O. Ry., 115 I. C. C. 113; Ragland Coal Co. v. V. Ry., 115 I. C. C. 147.

(e) Mere fact that discrimination may have existed in distribution of coal cars between mines in one district and mines located several hundred miles distant in other coal fields, is not, of itself, sufficient proof that such distribution was unreasonable, unjustly discriminatory or unduly prejudicial or preferential within meaning of the act. Circumstances and conditions which limit or impede the operations of carriers should also be considered. Ayrshire Coal Co. v. S. Ry., 118 I. C. C. 531, 536.

(f) In adjustment of rates, it is well settled that unless conditions of transportation are substantially similar at two points no unlawful discrimination may properly be predicated upon different rates and practices. See 37 I. C. C. 225. The same general principle is applicable to questions involving car distribution, where one shipper receives a smaller ratable share of available cars than an other. The very terms of the statute that discrimination must not be unjust and that preference or advantage to any particular person, firm, corporation, or locality must not be undue or unreasonable, necessarily imply that strict uniformity is not always to be enforced; but that all circumstances and conditions which reasonable men would regard as materially affecting welfare of shippers and carriers should be considered. See 162 U. S. 197. Ayrshire Coal Co. v. S. Ry., 118 I. C. C. 531, 536.

V. DUTY TO TRANSPORT CARS.

See Transportation II.

§29. In General.

(a) A carrier's duty to furnish transportation does not arise until request is made therefor. See section 1 (4) of the act. Victor-American Fuel Co. v. D. & S. L., 115 I. C. C. 169, 174.

§30. Interchange of Cars.

See Interchange of Cars; Through Routes and Joint Rates.

(a) Freight cars are interchanged generally between all railways in the United States, Canada, and Mexico under an agreement in which each subscribing railroad agrees with each other subscriber to abide by and enforce the rules

prescribed for handling and settlement of freight cars, including codes of car service and per diem rules promulgated by American Railway Association. Since 1909 per diem rate has been based on average cost throughout the country of owning and maintaining freight-car equipment, and rate has been changed from time to time on basis of ascertained average cost to members of association as a whole. Marcellus & Otisco Co. v. N. Y. C., 104 I. C. C. 389, 390.

(b) Fact that by means of a switch it is possible to so handle a car at a place not a point of interchange as to reduce distance between points of origin and destination by the fraction of a mile or a few miles does not bring such a place within the meaning of the phrase "existing connections for the interchange of carload traffic" as used in a finding of commission prescribing distance rates and which provided for computation of distances by the use of "the shortest route via existing connections for the interchange of carload traffic * * *." Cottonseed to Cairo, 112 I. C. C. 709, 711.

(c) Respondent proposed to establish the following rule at all mine sidings on the Kanawha Central: "Where consignors designate certain cars for billing, located on private sidings, such cars designated not being in consecutive order from point of interchange with the K. C. Ry., there will be a charge of $5.00 per car so designated, to cover switching and set out service." Because of the gravity handling of the cars the mine can not control the order in which loaded cars stand on its siding, and it sometimes happens that one or more "no bills" stand nearer the K. C. connections than cars which are billed out. As a result respondent must pull out and then replace the "no bills." These conditions are common to most mine operations in the same section. Respondent states that ordinarily this service is incidental to the line haul; and that it seeks no extra compensation therefor when the coal in the cars billed out is of a size or loaded in equipment of a character differing from the size in or character of the cars standing nearer its connection; and that the suspended rule was not intended to and does not provide for a charge under such circumstances. It states that the rule is intended to cover instances in which the mine bills out cars of coal standing nearer its tipple when the same kind or size of coal in the same kind of equipment is held as "no bills" in cars standing nearer the connection with its line, thus unnecessarily requiring the pulling out and setting back of such "no bills." It is manifest that the rule does not conform in its terms to what respondent intends or desires, and would result in increased transportation charges which have not been shown to be reasonable. HELD, proposed schedules not justified. Switching charges at K. C. Ry. mines, 118 I. C. C. 468.

(d) The commission is not bound by terms of contracts entered into between carrier and its tenants in exercising its powers under the act in respect of interchange traffic. Rates of P. & P. U. Ry., 115 I. C. C. 469, 511.

§32. Rates on Private Cars.

See Classification §7½, §12⅞.

(a) It is the legal duty of a carrier to provide reasonably adequate and suitable equipment for all of the traffic it holds itself out to transport, and it must determine for itself whether it will meet this obligation by owning and maintaining the necessary equipment or by renting it. If it fulfills its obligation by going to the expense of owning and maintaining equipment, a governmental requirement that it pay shippers for additional equipment would be obviously unfair, arbitrary, and unlawful. So long as a carrier has equipment to supply the public it may use that equipment to exclusion of private equipment, and if shippers in their own interest are permitted by carrier to use their own equipment they can not reasonably expect commission to require the carrier to compensate them by a differential in the freight rate. Switching at St. Louis and East St. Louis, 120 I. C. C. 216, 221, 222.

§32⅛. Repair of Equipment.

(a) Upon investigation by commission on its own motion, FOUND: Cost of repairs to locomotives of Central R. R. Co. of N. J. at outside shops under contracts during 1921-1923 exceeded cost of substantially similar work in its own shops, and greater portion of such excess cost was an unreasonable expenditure for maintenance of equipment and not in interest of efficient and economical management as required by section 15a of the act. Construction and Repair of Ry. Equipment, 104 I. C. C. 352.

(b) Cost of raw materials used in making locomotive repairs does not necessarily reflect relative extent of completed repairs, the latter representing not only cost of raw materials, but also cost of labor used in fabricating and applying material. Irrespective of whether completed repairs constitute a relatively great amount of material and small amount of labor, or vice versa, completed repairs will have same value if total of labor and material are same in each case. Construction and Repair of Ry. Equipment, 104 I. C. C. 352, 361.

(c) Upon investigation by commission on its own motion, FOUND: That cost of repairs to steam locomotives of N. Y., N. H. & H. R. R. system, at outside shops during 1922-1924, greatly exceeded cost of substantially similar work in its own shops, and that greater portion of such excess cost was an unreasonable expenditure for maintenance of equipment and not in interest of efficient and economical management and reasonable expenditures for maintenance of way, structures, and equipment, as required by section 15a of the act. Construction and Repair of Ry. Equipment, 107 I. C. C. 721.

(d) It is not unreasonable to expect the shipper to sweep a car or do a reasonable amount of cleaning, or to make some minor and inexpensive repairs to prepare the car for loading and prevent leakage of grain in transit. It is impracticable for the carriers to have competent workmen at all stations to do this work, and minor cleaning, patching, and coopering can readily be done by men in the employ of the elevator companies, who know exactly what is to be done and how best to do it. Omaha Grain Exchange v. C. B. & Q. R. R., 120 I. C. C. 59, 62.

(e) The "code of rules governing the condition of, and repairs to, freight cars for the interchange of traffic" to which practically all the railroads in the country are parties, and which apply to the transportation of shipments in private cars furnished by the shipper, which are carried at reduced rates, but repairs to which cars are to be made at the expense of the owner, also provide that "each railroad is responsible for the condition of all cars on its line." HELD, that such provision did not render a railroad company liable for nondelivery of oil which leaked from a tank car furnished by the shipper and delivered after being loaded, where the defect was not discoverable by such inspection as the company could and did make, and, after the leakage was discovered, it exercised ordinary care to minimize the loss. Southern Cotton Oil Co. v. Atlantic Coast Line R. Co., 17 Fed. (2d) 411.

VI. REMEDIES AND DAMAGES.

See Reparation.

§32½. In General.

(a) In computing damages resulting from discrimination by carrier in car allotment, it is error to assume that complaining shipper should have received cars in same ratio to shipping requirements as was allowed a favored competitor in the making of the discrimination. In other words, complainant was entitled only to such car supply as he would have received had available cars been equally distributed. See 242 U. S. 89, affirmed in 257 U. S. 85. Northern W. Va. Coal Asso. v. P. R. R., 109 I. C. C. 604, 607.

(b) Complainant alleged that defendants failure to ascertain whether a tank car tendered to them by complainant at Chicago Heights, Ill., on May 31, 1923 to be transported to Okmulgee, Okla., was empty, resulted in the assessment of charges which were unreasonable, unjustly discriminatory and unduly prejudicial. On May 23, 1923 a car of fuel oil was shipped from Okmulgee to complainant at Chicago Heights. It arrived over the C. & E. I. at Chicago Heights and was delivered to the C. H. T. T. R. R. May 28, 1923. On May 29, 1923 the car was transported by the terminal company to complainants interchange track. Complainant performs switching within its plant with its own power and employees. On May 31 the car was found by the engine crew of the terminal company on the side line tracks of that company, outside of complainants plant, to which point it had been transported by complainants employees. At noon that day an employee of complainant notified the agent of the C. & E. I. by telephone that the car was empty and directed that it be returned over the inbound route. These instructions were confirmed by written instructions received by the C. & E. I. on June 1. The car was transported by the terminal company to the interchange with the C. & E. I. on May 31 and left over the C. & E. I. June 1. On July 1, 1923 the C. & E. I. received notice that the car was not empty the discovery having been made by the K. O. & G. at Muskogee.

Okla. Complainant was notified and in due time advised the C. & E. I. that the original consignor of the car of oil had taken charge of the car at Okmulgee. Rate charged 64c. Complainants witness did not deny that he had notified the agent of the C. & E. I. that the car was empty and admitted that he executed the usual certificate authorizing the return of the car to Okmulgee without having first ascertained whether or not it was empty. HELD, complaint dismissed. Chicago Heights Mfrs. Asso. v. C. H. T. T. R. R., 120 I. C. C. 357.

(c) Fuel oil shipped from Okmulgee, Okla., to Chicago Heights, Ill., was delivered to consignee. Thereafter car was placed on tracks outside plant and carrier notified by telephone that it was empty and to return same over inbound route, such instructions also being confirmed in writing. Upon arrival of returned car at original point of origin it was found to have been fully loaded. HELD: Complainant not denying that he gave instructions above set forth and that he executed the usual certificate authorizing return of car without having first ascertained whether or not it was empty, failure of carriers to ascertain whether car tendered to them was empty did not result in collection of unreasonable or discriminatory charges. Mfrs. Asso. of Chicago Heights v. C. H. T. T., 120 I. C. C. 357.

§33. Actions at law.

See Actions at Law.

(a) There is not a multiplicity of suits, for prevention of which equity may be invoked, though each of unrelated parties proposes to bring an action for damages under Interstate Commerce Act Feb. 4, 1887, § 16, as amended by Act June 18, 1910, § 13, against a carrier, based on the same order of the Interstate Commerce Commission for reparation for preferential practices in distribution of empty cars. Pittsburgh & W. V. Ry. Co. v. United States, 6 Fed. (2d) 646.

(b) In action against railroad for damages for failure to furnish cars for use in interstate shipment of coal, railroad HELD not prejudicial by instruction given at its request, introducing issue of its violation of Interstate Commerce Act and rules and orders of Interstate Commerce Commission pursuant thereto, in view of testimony warranting verdict, even if action had been based on violation of such act. Midland Valley R. Co. v. Barkley, (Ark., 1927) 291 S. W. 431.

(c) Under Interstate Commerce Act, § 22, state court has jurisdiction of action against railroad for failure to furnish cars for use in interstate shipments of coal in violation of Crawford & Moses' Dig. §§ 895, 915, since Transportation Act, § 402 do not vest in Interstate Commerce Commission supreme power in matter of distribution of coal cars. Midland Valley R. Co. v. Barkley, (Ark., 1927) 291 S. W. 431.

§33a. Appeals from Commission.

(a) On none of the claimed grounds for avoidance of Interstate Commerce Commission's order for reparation for preferential practices in distribution of empty cars, because based on erroneous legal assumption of liability of one carrier for acts of another, because conclusions were arrived at by following legally erroneous method, because order is unsupported by evidence, and because order is arbitrary, can the general equity jurisdiction be invoked; a complete, practicable and adequate remedy at law being available. Pittsburgh & W. V. Ry. Co. v. United States, 6 Fed. (2d) 646.

VIII. CAR SERVICE REGULATION.

§39. In General.

(a) Because of a strike in the anthracite fields which brought about a shortage of fuel for household use, an emergency, such as is contemplated by section 15 (4) of the act, found to exist, requiring prompt establishment of additional joint rates and through routes on bituminous coal in prepared sizes from certain mining districts in the Virginias and eastern Kentucky, and on semianthracite coal from certain Virginia mines, to points in New England and Middle Atlantic States. Additional through routes, and temporary joint rates in connection therewith, prescribed without prejudice to subsequent consideration of requests for their being made permanent. Transportation of Anthracite Coal, 104 I. C. C. 341.

(b) Upon investigation by the commission on its own motion, FOUND: That through use of its right of way, tracks, and other facilities, in furnishing transportation and car service to the Bromide Crushed Rock Co., and refusing similar service and enjoyment of these or

similar facilities to Dolese Bros., upon request, both these companies being located in vicinity of Bromide, Okla., the Kansas, Oklahoma & Gulf Ry. Co., subjects latter company to undue prejudice and gives to former an undue preference, in violation of section 3 of the act. Service on K., O. & G. Ry., 118 I. C. C. 412.

§41. Service Orders.

(a) During an acute car shortage the American Ry. Asso. issued an order requiring certain carriers, including defendant, to discontinue local loading of western-owned cars and to move such cars toward western junctions for delivery to owning lines. Defendant's agents construed this order as prohibiting either the eastbound movement of western-line equipment after arrival at original destination or its reconsignment or diversion in transit. Upon contention that defendant's refusal to permit reconsignment or diversion of western-owned cars when under load consigned to complainant resulted in assessment of unreasonable demurrage charges, HELD: A carrier may not arbitrarily set aside its tariff provisions without due notice in proper form. However, while defendant's agents misconstrued the order, complainant was unable to point out any car on which reconsignment was requested and refused and on which demurrage accrued. Assessment of demurrage charges found not unreasonable. Lexington Elevator & Mill Co. v. B. & O., 109 I. C. C. 542.

(b) Upon reargument, original report, 96 I. C. C. 161, affirmed, and practice of Southern Ry. in connection with coal-car distribution to mines in Indiana during 1922 found not to have resulted in undue prejudice or unreasonableness. Due to abnormal conditions following strike of miners and railway shopmen, special service orders of commission controlled distribution of equipment and all rules and regulations of carriers were suspended so far as they were in conflict with such orders. The unusual conditions brought about by strikes made it impossible for carrier to accord an equitable car supply during period in question; moreover complainant's mines were no differently treated than other mines similarly situated, nor were operating and strike of shopmen of carriers during territory comparable with those in coal fields not affected by the strike. Ayrshire Coal Co. v. S. Ry., 118 I. C. C. 531.

(c) Service orders Nos. 23 and 25 issued by commission during periods of car shortage brought about by coal strike and strike of shopmen of carriers during 1922 had effect of suspending the car-distribution rules of the Southern Ry. to such an extent that it would be improper to hold that carrier responsible for its failure to accord mines on its line an equal share of available cars during that period. Ayrshire Coal Co. v. S. Ry., 118 I. C. C. 531, 534.

(d) Shipments originally routed by complainant were delayed en route because of congestion. Service Order No. 22 of commission provided for disregard by carriers of shippers routing instructions and forwarding of shipments over routes which would expedite movement and prevent congestion, the rate designated by shipper in billing to be protected unless lower rate applied via route of movement. Complaint requested diversion under that order, shipment so moved, and rate over route of movement was assessed. HELD: Situation here is similar to a case where shipper's routing instructions and rate are inconsistent, under circumstances of which carrier's duty is to inquire as to which instruction shall govern. See Conf. Ruling 474 (c). Carrier here accepted diversion request subject to service order and it was incumbent upon it to have notified complainant if its intention was not to protect rate specified in original billing. Having failed therein the applicable rate was that in effect over route named in billing. Reparation awarded. Selden-Breck Const. Co. v. C., M. & St. P., 120 I. C. C. 134.

IX. ALLOWANCES FOR CARS.

§42. In General.

(a) Failure of intermediate line to provide for payment of mileage allowances on private tank cars moving in service over its line, the same as paid by line-haul carriers, found to constitute an unreasonable practice. Under section 1 of the act, it is carrier's duty to provide transportation, including furnishing of cars, and when a shipper furnishes his own cars he relieves carrier of its common-carrier obligation and is entitled to reasonable compensation for the service rendered. Reasonable allowance prescribed for future and reparation awarded. Paragon Refining Co. v. A. & S., 118 I. C. C. 166.

(b) Under section 1 of the act, duty

is placed upon every common carrier subject thereto, to provide transportation, including furnishing of cars, and when a shipper furnishes his own cars, he relieves carrier of so much of its obligation as a common carrier and is entitled to reasonable compensation therefor from such carrier. By act of May 29, 1917, commission was empowered to fix compensation to be paid by carriers for use of cars not owned by them, and in 50 I. C. C. 652, it was fixed at 1 cent per car per mile for loaded and empty movements, mileage to be computed on basis of distance tables without elimination of mileage through switching districts. Paragon Refining Co. v. A. & S., 118 I. C. C. 166, 167.

(c) Obligation is on switching line to pay mileage allowances on private cars switched by it over its line unless line-haul carrier assumes them. Paragon Refining Co. v. A. & S., 118 I. C. C. 166, 168.

(d) It is not clear what amount of difference in rate would represent a reasonable rental charge and not afford the private car owner an undue preference over the shipper which uses a railroad owned car. The use of private equipment should not excuse or justify a preference in favor of owners of private cars. Such shippers by the ownership and use of their own cars have a great advantage over other shippers, which should not be made greater by a difference in rates. Switching at St. Louis and East St. Louis, 120 I. C. C. 216, 221.

(e) The prescription of lower rates on traffic in private than in carrier owned cars is not altogether without precedent. But this should not be continued as a policy or practice except, possibly, where the Commission has a clear, convincing, and complete record which justifies it. It is the legal duty of a carrier to provide reasonably adequate and suitable equipment for all of the traffic it holds itself out to transport. It must determine for itself whether it will meet this obligation by owning and maintaining the necessary equipment or by renting it. If it fulfills its obligation by going to the expense of owning and maintaining the equipment, a governmental requirement that it pay shippers for additional equipment would be obviously unfair, arbitrary and unlawful. So long as a carrier has the equipment to supply the public it may use that equipment to the exclusion of private equipment, and if shippers in their own interest are permitted by the carrier to use their own equipment, they can not reasonably expect the Commission to require the carrier to compensate them by a differential in the freight rate. In other words, the fact that a carrier may permit shippers to furnish their own equipment does not mean that these shippers should receive compensation, unless the carrier fails to provide the necessary equipment. Whether or not it is necessary for respondent to rent equipment, for the service in question is not clear. If it is necessary, the view is that the compensation to the car owner should be made through a rental charge rather than through a differential in freight rate. Switching at St. Louis and East St. Louis, 120 I. C. C. 216, 221.

CIRCUITOUS ROUTES

See Long and Short Hauls §4¾; Routing and Misrouting §4; Through Routes and Joint Rates §6.

CIRCUS TRAINS

See Long and Short Hauls §4, §4¾; Routing and Misrouting §4; Through Routes and Joint Rates §6.

(a) Proposed schedules denying to owners of traveling tent-shows who engage special baggage cars the right to check, in regular passenger service, the usual 150 pounds of baggage allowed on each adult ticket found not justified. Baggage from and between Southern Points, 112 I. C. C. 717.

(b) The wide application schedules which deny to owners of traveling tent-shows who engage special baggage cars the right to check, in regular passenger service, the usual 150 pounds of baggage allowed on each adult ticket, is not conclusive proof of their reasonableness. Baggage from and between Southern Points, 112 I. C. C. 717, 721.

CLAIMS

I. WHEN STATUTE OF LIMITATION RUNS.

§1. In general.
§1½. Under transportation act.

§1. In General.

(a) Informal complaint filed more than two years after shipment was delivered or tendered for delivery found barred by statute of limitations. Helvetia Milk Condensing Co. v. A., T. & S. F., 104 I. C. C. 402.

(b) Where a statute of limitations is of general application the burden of showing that it does not apply to a particular case is usually on the party who denies the bar of the statute. 17 Ruling Case Law, 1004. Krauss Bros. Lumber Co. v. Director General, 112 I. C. C. 117, 118.

(c) Formal complaint filed with commission more than a year and a half after informal presentation of claims was closed found barred under Rule III (g) of Rules of Practice. Krauss Brothers Lumber Co. v. Director General, 112 I. C. C. 117, 118, 119.

(d) Claim covering a shipment moving during Federal control was first filed with commission informally in the form of an overcharge. Formal complaint, seasonably filed after complainant had been notified that claim was not susceptible of informal adjustment, contained additional allegations, predicated on ground of misrouting. HELD: The basis of an informal claim can not be broadened or otherwise varied by a formal complaint subsequently filed unless such formal complaint itself be filed within statutory period. See 49 I. C. C. 649. Aside from question of overcharge the claim is barred on account of not having been filed within one year after termination of Federal control. Harman & Hulsey v. Director General, 112 I. C. C. 275.

(e) Formal complaint was filed after the two-year limitation period as provided in section 16 (3) of the act had expired. Upon contention that, as complainant paid additional charges within 90 days after such expiration, although no action was begun by carrier for the recovery of charges in respect of the same service, it should not be estopped by its voluntary payment of legal charges from receiving reparation, HELD: Complainant seeks to have read into the statute after the word "action" the words "or without beginning an action collects charges in respect of that service." The word "action," however, must be interpreted to mean "action at law" and since the commission has only such jurisdiction as is specifically conferred upon it by statute, the two-year provision of the act sets a limit to its powers, as distinguished from a rule of law for its guidance in reaching conclusions. See 246 U. S. 638, 642. Complaint found barred. Pfister & Vogel Leather Co. v. E. R. R., 112 I. C. C. 659.

(f) The commission has only such jurisdiction as is specifically conferred upon it by statute, and the two-year limitation of action provision as set forth

in section 16 (3) of the act sets a limit to its powers, as distinguished from a rule of law for its guidance in reaching conclusions. See 246 U. S. 638, 642. Pfister & Vogel Leather Co. v. E. R. R., 112 I. C. C. 659, 660.

(g) On shipments moving during Federal control informal complaint alleged only overcharges. Formal complaint subsequently filed brought in additional issue of unreasonableness. Allegation of unreasonableness not having been presented within statutory period of one year after Federal control terminated, found barred. Rohan Co. v. Director General, 118 I. C. C. 83.

(h) Where specific shipments are named in a complaint filed within statutory period, additional shipments may not be subsequently included unless presented within limitation period required by the act, and burden of proof to show that such shipments were seasonably filed is upon complainant. Duluth Boiler Works v. A., T. & S. F., 118 I. C. C. 161, 162.

(i) Complainant attacked rate charged on a car of wrought iron pipe shipped from Reading, Pa., to Dallas, Tex., and delivered on July 30, 1923 as unreasonable. The formal complaint was received more than two years after the delivery of the shipment and the claim is barred. HELD, complaint dismissed. Hamilton Co. v. P. & R. Ry., 120 I. C. C. 205.

(j) Informal complaint seasonably filed alleged only overcharges. Formal complaint filed more than two years after delivery or tender of delivery of shipments contained additional allegations of unreasonableness and prejudice. HELD: Aside from claim of overcharge, formal complaint is barred. See 115 I. C. C. 105. North Ontario Packing Co. v. O.-W. R. R. & Nav. Co., 122 I. C. C. 360, 364, 365.

(k) Informal complaint seasonably filed failed to name as a party complainant the real party in interest, such party, however, being named in the formal complaint subsequently filed. HELD: Although such real party was not named within period prescribed by law, a sufficient cause of action was set up in the filing of informal complaint, and fact that either through a mistake of fact or law, the wrong party was named does not act as a bar to the rights of real party in same proceeding. See 101 Fed. 171. American Smelting & Refining Co. v. Director General, 123 I. C. C. 136, 138.

(l) The date upon which a complaint is received, although subsequently returned for correction and stamped as filed on a later date, is the date that tolls the statute. Crystal Springs Mfg. Co. v. I. C. R. R., 126 I. C. C. 4, 5.

(m) Complaint filed more than two years but less than three years after delivery of shipments, sought refund of allowance provided by tariff for "drayage and ferriage in lieu of lighterage." Upon contention that complaint was not properly within section 6 of the act but constituted a claim for damages resulting from carrier's failure to comply with its lawful published tariff and was therefore barred by statute of limitations, citing 69 I. C. C. 59 and other cases, HELD: Cases cited are not in point. Complaint is clearly within section 6, being in effect a complaint seeking refund of overcharges, and having been filed within the three-year period prescribed by section 16 of the act is therefore not barred. Taub v. L. V., 128 I. C. C. 105.

(n) Carriers contended that claim was barred because of failure to file formal complaint within six months from time settlement of claim on informal docket was declined. FOUND: Contention without merit, as date on which complaint was originally received by the commission, although subsequently returned for correction, was date which tolled the statute. See 100 I. C. C. 319. Practical Drawing Co. v. C. & N. W., 128 I. C. C. 540, 542.

(o) The date on which the complaint was originally received by the Commission, although subsequently returned for correction, is the date which tolls the statute. Practical Drawing Co., v. C. & N. W. Ry., 128 I. C. C. 540, 542.

(p) The date on which the complaint was originally received is the date which tolls the statute. Shafton Co., v. S. P. Co., 132 I. C. C. 715.

(q) Contention that filing of informal complaint covering similar shipments involving same carriers and directing their attention to collection of unlawful rates, asserted its claim against such carriers within statutory period as to shipments moving subsequently, found without merit. Obviously such filing does not constitute the filing of a complaint covering shipments moving at a later date. National

Tube Co. v. Director General, 129 I. C. C. 515, 517.

(r) Claim for reparation filed more than two years after the date on which shipment was delivered, including date of delivery, is barred by the statute of limitations. See 39 I. C. C. 171. Purse Bros. v. B. & O., 129 I. C. C. 727.

§1½. Under Transportation Act. See Overcharges (o) (t); Transportation Act.

(a) Claim for overcharges was originally submitted on informal docket more than two years from date of delivery of shipments and shipper was advised that claim was barred. Shipper resubmitted claim on informal docket and later filed formal complaint, citing amendment of June 7, 1924 to section 16 of the act which extended time for filing overcharge claims to three years. FOUND: The claim, being barred prior to enactment of the amendment, falls within provisions of commission's conference ruling of July 28, 1925, wherein Supreme Court's decisions in 268 U. S. 633 and 261 U. S. 133, were construed as prohibiting reparation awards on claims barred at or prior to enactment of a new statute of limitations which had the effect of reviving barred claims. Milner Lbr. Co. v. W. Ry., 104 I. C. C. 669.

(b) By virtue of amendment to section 16 of the act, passed June 7, 1924, under which a three-year period was provided for filing complaints in respect of straight overcharges in lieu of two-year period theretofore provided, complainants fixed Sept. 27, 1921, as beginning of their periods of limitation, complaint being filed on Sept. 29, 1924. FOUND: Following Danzer & Co., 268 U. S. 633, and Conf. Ruling of July 28, 1925, commission is prohibited from awarding reparation on such claims which were barred by statute at or prior to date of amendment. Reparation awarded only on shipments moving on and after June 8, 1922, or two years from date of passage of amendment. Sturges Co. v. A. & V. 107 I. C. C. 136, 139, 140.

(c) Shipments moving prior to Federal control barred by statute of limitations. Supreme Court having ruled in 268 U. S. 633, that section 206 (f) of transportation act, 1920, which provides for non-computation of Federal control period as part of limitation period in claims for reparation for causes of action arising prior thereto, may not be construed retroactively to create liability. Parkersburg Rig & Reel Co. v. C., R. I. & P., 107 I. C. C. 182.

(d) Complaint alleging unreasonableness and covering shipments moving more than two years from date of accrual of cause of action, but filed within 90 days after institution of suit in courts by carriers for collection of undercharges, accepted and decided. Lane v. S. P., 107 I. C. C. 253.

(e) Claims for reparation not presented formally until more than two years after cause of action accrued and more than six months after notice to claimant that they could not be adjusted informally, found to have been adandoned. Jones v. P. R. R., 107 I. C. C. 483, 484.

(f) Overcharge claim barred prior to June 7, 1924, found not to have been revived by amendment to section 16(d) of the act, passed on that date, which extended limitation period for filing such claims with commission. See conference ruling of July 28, 1925. Saxony Mills v. M. P., 107 I. C. C. 649.

(g) Informal filing of a claim for reparation by a copartnership, of which complainant named in formal proceeding was a member, found to stay statute of limitations in favor of such complainant, who operated the business alone, under another trade name, immediately prior to partnership. Humphreys v. Director General, 109 I. C. C. 157, 159, 160.

(h) Section 206 (f) of transportation act, 1920, provides that Federal control period shall not be computed as a part of limitation period in actions against carriers or in claims for reparation for causes of action arising prior thereto. In the Danzer case, 268 U. S. 633, the Supreme Court held that such section could not be applied to revive complaints which were barred by the statute of limitations at time it was enacted. HELD: Claim for reparation on shipments moving prior to Federal control, which were barred under the two-year limitation provision of section 16 of the interstate commerce act prior to passage of the transportation act, under the decision cited can not be revived. Chevrolet Motor Co. v. C. & A., 109 I. C. C. 462, 463.

(i) Informal complaint was seasonably filed, but shipper did not file formal complaint until more than two years and ten months after denial of claim on informal docket. HELD: Under Rules of

Practice such claims must be deemed to have been abandoned. Barnes v. C. & N. W. Ry., 109 I. C. C. 589.

(j) Complaint attacked rates charged on carloads of steel plates forwarded since March 1, 1920, from St. Louis, Mo., Gary, Ind., Bridgeport, Matins Ferry, and New Philadelphia, O., and other points to Tulsa, there fabricated and reshipped to points in Wyoming, as in violation of sections 1, 6 and 10 of the act. Shipments moved from points of origin during 1920 and were reforwarded from the fabrication point during 1920 and 1921. The actual dates of delivery are not disclosed of record, but the most recent shipment was forwarded from Tulsa on June 22, 1921, and all shipments were delivered more than two years prior to the enactment of the amendment of June 7, 1924, to section 16 of the act. That amendment extended the time for filing certain claims, but did not operate to revive claims which were previously barred. HELD: complaint dismissed. Maloney Tank Mfg. Co. v. B. & O. R. R., 113 I. C. C. 379.

(k) Claims for reparation in respect of overcharges on shipments delivered during Federal control, charges on which were paid to director general during that period, found to constitute claims against Federal Government, and are subject, not to limitation imposed under section 16 (3) of interstate commerce act, but to those imposed under section 206 (c) of transportation act, 1920. Period of limitation provided in latter statute extinguishes claims not filed "within two years and six months after termination of Federal control," and since claims here were not filed until more than four years subsequent thereto, they are barred. Krauss Bros. Lbr. Co. v. Director General, 112 I. C. C. 117, 118.

(l) Complaint alleging overcharges found barred by statute of limitations since claims were barred prior to enactment of the amendment to section 16 (3) of the act, approved June 7, 1924, and were not revived thereby. Duthie & Co. v. Director General, 113 I. C. C. 255, 256.

(m) Complainant attacked commodity rate of $1.124 charged on one car of newsprint paper shipped Sept. 25, 1919, from Sault Ste. Marie, Ont. Can., to Dallas, Tex., as unreasonable and unlawful. Complaint as to allegations under the act other than straight overcharges or undercharges barred as it was not filed within one year after the expiration of federal control. HELD, rate of $1.125 applicable, complaint dismissed. Western Newspaper Union v. Director General, 115 I. C. C. 105.

(n) With respect to shipments moving prior to federal control, complainants right to file claim expired prior to the passage of the transportation act, 1920, under the then existing statute, Section 206 (f) of that act could not revive the claim, because lapse of time not only barred the remedy but also destroyed defendants liability. Smith Grape Juice Co v. A. G. S. R. R., 118 I. C. C. 169, 170.

(o) Claim covering shipments moving during Federal control alleged only overcharges. Formal complaint seasonably filed, after notification that claim was not susceptible of informal adjustment, contained additional allegations. HELD: Basis of an informal claim can not be broadened or otherwise varied by a formal complaint subsequently filed unless such formal complaint itself be filed within statutory period. See 49 I. C. C. 649. Issues other than overcharges found barred because not presented within statutory period of one year after termination of Federal control, as provided by section 206 (c) of transportation act 1920. Western Newspaper Union v. Director General, 115 I. C. C. 105.

(p) Shipments delivered during period of Federal control are not subject to limitations imposed by section 16 of interstate commerce act, but to those imposed by section 206 (c) of transportation act of 1920, as amended. See 92 I. C. C. 519, and other cited cases. Western Newspaper Union v. Director General, 115 I. C. C. 105, 106.

(q) Allegation of unreasonableness on shipments moving during the period of Federal control found barred, complaint having been filed with commission more than one year after Federal control terminated. See section 206 (c) of the transportation act, 1920. Tidal Osage Oil Co. v. Director General, 115 I. C. C. 237.

(r) Carrier originally under Federal control but subsequently relinquished contended that it was never a Federally controlled line and could not lawfully refund charges collected without tariff authority on shipments moving during Federal control. Complaint was seasonably filed under section 206 (c) of transpor-

tation act, 1920, but carrier urges that this provision does not affect the period within which complaints could be filed against non-Federally controlled roads for violations of the interstate commerce act, and since complaint was not filed within two years after cause of action accrued, it is barred as to this carrier. HELD: Possession and control exercised by director general over carriers taken over by him were complete, and he thereby undertook to perform transportation services for shippers through them and assumed full responsibility, so far as the interstate commerce act is concerned, for their wrongful acts. Superior Coal Co. v. Director General, 115 I. C. C. 710, 712, 713.

(s) Complaint alleging overcharges was filed January 6, 1926. Citing 107 I. C. C. 136, carriers contended that limitation provision of the statute barred from consideration shipments moving more than two years prior thereto. HELD: As oldest shipment under consideration was delivered in April, 1923, and amendment of June 7, 1924, extended period for filing overcharge claims to three years, none of shipments are barred. Curtis Leather Co. v. P. R. R., 123 I. C. C. 1, 3.

(t) Claims which were barred under the two year limitation provision of section 16 of the act to regulate commerce were not revived by the provisions of section 206f of the transportation act, 1920. Western Newspaper Union v. Director General, 126 I. C. C. 437, 438.

(u) Complainant alleged overcharges were collected on carload shipments of wrought iron pipe from Ellwood City, McKeesport and Pittsburgh Pa., Syracuse, N. Y., Lorain, O., and Wheeling, W. Va., to California during the period Sept 9, 1918 to Nov 30, 1921. Finding herein does not cover shipments moving during federal control. In the absence of evidence to the contrary it must be assumed that all of the cars originating on and after March 1, 1920 were delivered or tendered for delivery more than two years prior to June 7, 1924, the date upon which the limitation period was extended for two to three years. It follows that the claims covering those shipments were barred prior to June 7, 1924 and could not be revived by the amendment of that date to the act. It also follows that the claims were barred when first presented informally on Sept 22, 1924 the statute of limitations was not stayed thereby. HELD, shipments which originated on and after March 1, 1920 are barred, complaint dismissed. National Tube Co., v. Director General, 129 I. C. C. 515.

(v) Prior to the amendment of June 7, 1924, to the act the statutory period for filing overcharge claims with the Commission was two years from the date of the cause of action, which was and is defined as the date of delivery or tender of delivery by the carriers. On that date paragraph (3) of section 16 of the act was amended by extending the limitation period on overcharge claims to tree years. On July 28, 1925 in consequence of inquiries as to the affect of the decision rendered on June 8, 1925 by the Supreme Court of the United States in Danzer Co., v. Gulf R. R. 266 U. S. 633, the Commission adopted a conference ruling to the effect that it construed that decision, in connection with the decision in Kansas City So. Ry. Co., v. Wolf. 261 U. S. 133, as preventing payment of overcharge claims which were barred by statute at or prior to the effective date of the amendment to the act, and as prohibiting the Commission from awarding reparation on such claims. National Tube Co., v. Director General, 129 I. C. C. 515, 516.

(w) Section 206 f of the transportation act, 1920, which provides that the period of federal control shall not be computed as a part of the periods of limitation in claims for reparation for causes of action arising prior to federal control, may not be construed retroactively to create liability. Bloom & Co., v. Director General, 132 I. C. C. 127, 128.

§2. Claims Accruing Before June 7, 1924.

(a) When shipments moved the statutory period for filing complaints with commission covering overcharges or reparation was two years. By act of Congress approved June 7, 1924, the act was amended to provide that where cause of action accrued after March 1, 1920, complaints shall not be deemed barred if they shall have been filed prior to June 7, 1924, or within six months thereafter. Claim here in issue found barred by statute prior to date of amendment, in that complaint was not filed within two years from date of accrual of cause of action, and claims so barred can not be revived. See also 266 U. S. 435; 109 I. C. C. 170. Mason v. M. & W. R., 112 I. C. C. 56.

(b) Claims for reparation for over-

charges found barred by statute of limitations. While such claims were filed with commission within six months after passage of amendment of June 7, 1924, to section 16 of the act, as provided in paragraph (h) of such amendment, when the cause of action accrued, the statutory period of such claims was two years. Amendment did not revive claims which were barred prior to enactment thereof. See 268 U. S. 633; 261 U. S. 133. Standard Oil Co. of N. Y. v. S. L. S. F., 112 I. C. C. 217.

(c) Complaint alleging overcharges found barred by statute of limitations since claims were barred prior to enactment of the amendment to section 16 (3) of the act, approved June 7, 1924, and were not revived thereby. Duthie & Co. v. Director General, 113 I. C. C. 255, 256.

(d) Claim for reparation found barred by statute of limitations, all shipments having been delivered more than two years prior to enactment of the amendment of June 7, 1924, to section 16 of the act. That amendment extended time for filing certain claims but did not operate to revive claims which were previously barred. See conference ruling of July 28, 1925. Maloney Tank Mfg. Co. v. B. & O., 113 I. C. C. 379.

(e) Complainant sought to amend its complaint so as to include shipments moving on and after March 1, 1920, referring to amendment to section 16 of the act, as approved June 7, 1924. However, on July 28, 1925, a conference ruling was adopted construing decisions of the Supreme Court as prohibiting awarding of reparation on claims barred by the statute prior to that amendment. Shipment sought to be included, not being covered by complaint seasonably filed, found barred. Great Northern Paper Co. v. B. & A., 113 I. C.C. 463, 466.

(f) Claim for reparation due to exaction of alleged inapplicable and illegal charges, which was barred at or prior to June 7, 1924, the date of the passage of the amendment to section 16 (3) of the act which extended the limitation period for filing such claims with the commission, not considered. See conference ruling of the commission adopted July 28, 1925. Gulf Naval Stores Supply Co. v. L. & N., 113 I. C. C. 551.

(g) Complainant attacked charges assessed on one car of batting dross shipped April 30, 1921, from Lumberton, Miss., to New Orleans, La., and on one mixed carload of batting dross, strainer dross and cup skimmings shipped Jan. 26, 1921, from Ausmac, Ga., to New Orleans as in excess of applicable charges. The complaints were barred by the provisions of paragraph 3 of section 16 prior to the amendment, as the shipments were tendered for delivery more than two years prior to June 7, 1924. HELD, complaints dismissed. Gulf Naval Stores Supply Co. v. L. & N. Ry., 113 I. C. C. 551.

(h) Claims barred by statute prior to the date of amendment of June 7, 1924, can not be revived. Northwestern Fruit Exchange v. S. I. Ry., 115 I. C. C. 127.

(i) Complainant attacked charges collected on one car of boxed apples shipped Oct. 20, 1920, from Parks Spur, Wash., to Minneapolis, Minn., final destination Milwaukee, Wis., as unreasonable in violation of the act. The claim was barred by statute prior to the date of amendment of June 7, 1924. HELD, Claim barred complaint dismissed. Northwestern Fruit Exchange v. S. I. Ry., 115 I. C. C. 127.

(j) Complainant attacked charges collected on a car of potatoes shipped Oct. 15, 1921, from Gill, Colo., to Gardner, Kan., as illegal. Shipment was delivered in Oct. 1921, at which time the statutory period for filing complaints with the Commission covering overcharge claims was two years. By act of Congress, approved June 7, 1924, paragraph 3 of section 16 of the act was amended to provide that complaints filed here for the recovery of overcharges where the cause of action accrued after March 1, 1920, shall not be deemed to be barred if such complaints have been filed prior to June 7, 1924, or within six months thereafter. But the claim here in issue was barred by statute prior to the date of the amendment of June 7, 1924, and claims so barred can not be revived. HELD, claim barred, complaint dismissed. Blacker Elevator Co. v. U. P. R. R., 115 I. C. C. 569.

(k) Claim for refund of overcharges found barred by statute of limitations, shipments having been delivered more than two years prior to enactment of amendment of June 7, 1924, to section 16 of the act. That amendment extended the time for filing certain claims but did not operate to revive claims which were previously barred. See 109 I. C. C. 170.

Northwestern Fruit Exchange v. S. I. Ry., 115 I. C. C. 127.

(l) Overcharge claim on drugs and medicines from Elkhart, Ind., to New York and Philadelphia, found barred. At time of shipment the statutory period for filing claims for overcharges was two years from delivery or tender of delivery, and that period had expired prior to enactment of amendment of June 7, 1924, when statutory period was extended to three years. Miles Medical Co. v. B. & O., 118 I. C. C. 33, 35, 36.

(m) Claims for refund of over charges which were barred prior to amendment of June 7, 1924, to section 16 (3) of the act extending limitation period for filing of overcharge claims from two to three years, found to fall within provisions of commission's conference ruling of July 28, 1925, wherein decision of Supreme Court in 268 U. S. 633 was construed as preventing payment of overcharge claims barred at or prior to effective date of that amendment. See 261 U. S. 133; 109 I. C. C. 170. Moreover, as claims were barred when first filed informally, the statute of limitations was not stayed by such filing. National Tube Co. v. Director General, 129 I. C. C. 515.

(n) Claim for reparation, on ground of misrouting shipments moving during Federal control, found barred by statute within one year after termination of Federal control, found barred by statute of limitations. Dyersburg Milling Co. v. Director General, 129 I. C. C. 739.

§4. Date of Payment of Charges.

(a) Upon complaint alleging unreasonableness in rates on shipments moving prior to Federal control, the commission can consider only such shipments on which charges were paid within two years prior to date of filing of the claim, since statute of limitations in effect at time the cause of action accrues governs in computing limitation period. See 102 I. C. C. 729, 730. Leach v. C., N. O. & T. P., 112 I. C. C. 38.

§5. Date of Amending Claims.

(a) Where specific shipments are named in a complaint filed within statutory period, additional shipments may not be subsequently included unless presented within limitation period required by the act, and burden of proof to show that such shipments were seasonably filed is upon complainant. Duluth Boiler Works v. A., T. & S. F., 118 I. C. C. 161, 162.

§5½. After Notice to File Formal Complaint.

See Supra §1.

(a) Informal complaint was seasonably filed, but shipper did not file formal complaint until more than two years and ten months after denial of claim on informal docket. HELD: Under Rules of Practice such claims must be deemed to have been abandoned. Barnes v. C. & N. W. Ry., 109 I. C. C. 589.

(b) Complainant attacked charges assessed on a carload of gasoline shipped Sept. 8, 1920, from Cushing, Okla., to Bangor, Mich., and reconsigned to Hudson, Mich., as inapplicable. Informal complaint filed June 2, 1922 and on May 23, 1923, Commission advised complainant it could not be handled in that manner. Formal complaint filed Nov. 8, 1924. HELD: complaint barred, complaint dismissed. Dillion v. C. C. C. & St. L. Ry., 112 I. C. C. 745.

(c) Formal complaint filed with commission more than a year and a half after informal presentation of claims was closed found barred under Rule III (g) of Rules of Practice. Krauss Bros. Lbr. Co. v. Director General, 112 I. C. C. 117, 118, 119.

(d) Complaint first filed informally contained nothing to show that it had been presented to interested carriers. The commission advised complainant that claim had been registered and suggested that it be taken up directly with carrier, the letter also stating that if claims could not be adjusted in that manner the complaint should be resubmitted. Record does not show that claim was presented to the carrier, and the matter was not again submitted to commission as a complaint until approximately three years later, when formal complaint was filed. HELD: It was complainant's duty to present the claim to the carrier promptly and advise commission within a reasonable time of the result. The mere receipt of informal claim was insufficient, under commission's Rules of Practice, to stay the period of limitation, which, under the circumstances, must be deemed to have been abandoned. Krauss Bros. Lbr. Co. v. Director General, 112 I. C. C. 117, 119, 120.

(e) Formal complaint filed within six months after notice that claim could not be adjusted informally was returned for correction. In corrected complaint received after expiration of six months, an additional party defendant was named. HELD: Under Rule III (g) of Rules of Practice claim against additional party defendant is barred. See 92 I. C. C. 29. Remaining carriers, however, are jointly and severally liable for any damage resulting from assessment of an unreasonable joint rate. See 66 I. C. C. 627, and cases there cited. Bunte Bros. v. C. & N. W., 112 I. C. C. 557, 558.

(f) Complaint alleging overcharges was not resubmitted on the informal docket or formal complaint filed until after expiration of the six-months' period after notification that the claim failed of informal adjustment, as provided in Rule III (g) of the Rules of Practice. HELD: Barred and not revived by the amendment of June 7, 1924, to section 16 of the act because barred at or prior to that date. See 107 I. C. C. 649. Dillon v. C., C., C. & St. L. Ry., 112 I. C. C. 745.

(g) Formal complaint filed with commission six months and one day after notification to complainant that the matter failed of informal adjustment, found seasonably filed under Rule XXII of the Rules of Practice, the last day of the six-month period falling on a Sunday. Benson Produce Co. v. G. N., 113 I. C. C. 541, 542.

(h) Complaint seeking reparation was returned to complainant and attention called to vital omissions therein. Subsequently such complaint was refiled. HELD: That statute of limitations must be computed from date of refiling and all shipments made more than two years prior thereto are barred. Bartling Grain Co. v. M. P., 115 I. C. C. 441, 442.

(i) Formal complaint was received by commission within the two-year statutory period provided in the act, but was returned for correction and subsequently refiled after statute of limitations had expired. HELD: That the original filing stopped the running of the statute and complaint as subsequently filed with corrections, is not barred. Lynchburg Chamber of Commerce v. S. Ry., 115 I. C. C. 625, 626.

(j) Claims for reparation which were not filed formally within six months after notification that claim failed of informal adjustment as provided by Rule III (g) of Rules of Practice, or within two years after causes of action accrued, as required by the statute, found barred. Seaboard Live Stock Traffic Bureau v. A., C. & Y., 115 I. C. C. 687, 688.

(k) Formal complaint not having been filed within six months after complainants were notified that claims could not be adjusted informally, as required by Rule III (g) of Rules of Practice, found barred. Whittemore's Sons v. N. Y., N. H. & H., 122 I. C. C. 451, 452.

(l) Allegation of unreasonableness included in formal complaint filed more than two years after shipments moved, found barred by the statute, informal complaints seasonably filed having alleged only that rates charged were inapplicable. Chevrolet Motor Co., v. A. T. & S. F., 128 I. C. C. 638.

(m) Abandonment, as recognized by the practice of the Commission, occurs where a formal complaint is not filed within the six months period following notification to the parties of termination of informal proceedings. Lapse of time is an important element in laches, but the doctrine does not, like the statute of limitations, rest on time alone, but is founded also on the inequity of permitting the claim to be enforced because of some intervening change in conditions. Peters Mill Co. v. Director General, 129 I. C. C. 331.

(n) Claim for reparation declined informally and not resubmitted within period provided by the act, found barred. Baldwin Hardware Co. v. Director General, 129 I. C. C. 708.

§5¾a. After Payment of Undercharges.

See Undercharges.

(a) Paragraph 3 of section 16 of the act provided that complaint must be filed within two years of the date of delivery, or tender of delivery, of the shipment by the carrier, and not after, except that, when the carrier, after the expiration of such two years, or within 90 days before expiration, begins an action for recovery of charges for the same service the limitation period is extended to and including 90 days from the time of the beginning of such action by the carrier. The Commission has ruled that the action by the carrier therein referred to is an action at law. There was no such action begun by the carrier as to these ship-

ments, the additional payments having been made by complainant, under protest, upon the demand of defendants. Paragraph 3 of section 16, as amended June 7, 1924, provides for the extension of the limitation period for 30 days after the beginning of an action for the recovery of damages by the carrier, or within 30 days after the collection of such charges without bringing action. That amendment is not retroactive. Parkersburg Rig & Reel Co. v. B. & O. R. R., 115 I. C. C. 539, 542.

(b) From the language of section 16 and its history it is clear that Congress did not intend to permit the carrier to collect undercharges after two years and within three years from accrual of the action and yet deny the shipper the right to challenge the reasonableness of the rate thus collected. Instead Congress intended, and by this amendment has provided in paragraph 3 d that regardless of whether undercharges are collected by the carrier in two years or three years the shipper may file his complaint within 90 days after such charges are paid. Prior to the amendment of June 7, 1924, the shipper clearly had the right to file complaint alleging unreasonableness of a rate which the carrier sought by action in court to collect in whole or in part after two years and within three years from the time the cause of action accrued. The amendment should not be construed as taking away this right. Its purpose, among other things, was to make certain that the right existed not only where action was brought by the carrier to collect undercharges but where, without such action, the undercharges were paid. Crerar Clinch Coal Co. v. A. A. R. R., 118 I. C. C. 171, 173.

(c) Undercharges were collected by carrier after statutory period for filing complaint with commission by shipper had expired. Complaint filed within 90 days from time additional charges were paid found to have been seasonably presented under paragraph 3 (d) of section 16 of the act. Abeles & Taussig Lbr. & Tie Co. v. C. M. & St. P., 115 I. C. C. 205.

(d) The amendment of June 7, 1924 to section 16 (3) of the act extending limitation period 90 days after the beginning of an action for recovery of damages by carriers or after collection of such charges without bringing an action, can not be applied retroactively. Parkersburg Rig & Reel Co. v. B. & O., 115 I. C. C. 539, 542.

(e) The provisions of section 16 (3) of the act, whereby the limitation period is extended 90 days from time of beginning of an action by carriers for recovery of charges, relates to actions at law and has no application where additional charges are paid by shippers under protest upon demand of carriers. Parkersburg Rig & Reel Co. v. B. & O., 115 I. C. C. 539, 542.

(f) After expiration of the two-year period provided in section 16 (3) of the act for filing of claims for reparation, complainant, under protest, paid additional charges demanded by carrier. Approximately one month thereafter formal complaint was filed. HELD: Section 16 (3) of the act extended limitation period 90 days from time of the beginning of an action by carriers in respect to recovery of charges for same service, but such actions relate to actions at law. See 112 I. C. C. 659. Here no such action was begun, and while the statute was subsequently amended June 7, 1924, extending limitation period 90 days after collection of such charges without bringing an action, that amendment is not retroactive. See 109 I. C. C. 588. It follows, therefore, that the claim is barred. Parkersburg Rig & Reel Co. v. B. & O., 115 I. C. C. 539, 541, 542.

§5¾b. Parties Named in Complaint.

(a) Informal complaint seasonably filed failed to name as a party complainant the real party in interest, such party however being named in the formal complaint subsequently filed. HELD: Although such real party was not named within period prescribed by law, a sufficient cause of action was set up in the filing of informal complaint, and fact that either through a mistake of fact or law, the wrong party was named does not act as a bar to the rights of real party in same proceeding. See 101 Fed. 171. American Smelting & Refining Co. v. Director General, 123 I. C. C. 136, 138.

II. INFORMAL COMPLAINTS.

See Reparation §22.

§6. Effect of Informal Letter.

See Overcharges (u).

(a) Claim for reparation which was not filed formally within six months after notification that claim failed of informal adjustment as provided by Rule III (g) of the Rules of Practice, found barred.

Duthie & Co. v. Director General, 113 I. C. C. 255.

(b) The basis for an informal claim can not be broadened or otherwise varied by a formal complaint subsequently filed unless such formal complaint itself be filed within the statutory period. Western Newspaper Union v. Director General, 115 I. C. C. 105.

(c) Informal complaint was filed within statutory period and was duly referred to carriers for attention. Carriers failed to advise of their action, if any, with respect thereto. Approximately three years later formal complaint filed. HELD: That informal complaint remains open and tolls the statute of limitations. Abeles & Taussig Lbr. & Tie Co. v. C., M. & St. P., 115 I. C. C. 205.

§7. Necessity and Form of Formal Complaint.

(a) Complaint alleged overcharges, while tacitly admitting that charges were correctly computed under existing published rates. It contained no specific allegation of a violation of the act; stated indefinitely origin territory; did not name as defendants any other than delivering line; and statement of shipments named neither commodities shipped, charges paid, nor routes of movement. HELD, cumulative effect of these defects warrants finding that such complaint was insufficient to stay limitation provisions of the act. Bartling Grain Co. v. M. P., 115 I. C. C. 441, 442.

(b) Complaint which did not specifically allege a violation of section 6 of the act, but stated that rates were "unreasonable and otherwise unlawful" and that complainant paid and bore "illegal excess charges" over and above those which were "just, proper, and reasonable," held sufficient to cover overcharges. Crerar Clinch Coal Co. v. A. A. R. R., 118 I. C. C. 171, 172.

(c) Claim for damages found barred by statute of limitations, supplemental complaint not having been filed within statutory period. See Rule III (u) of Rules of Practice. Hollingshead Co. v Director General, 120 I. C. C. 55, 56.

(d) Formal complaint received within statutory period of limitation was returned to complainants for correction of errors in names of defendants, attention also being called to omission of reference to informal complaint, and to fact that statements of shipments were attached to only a limited number of copies of complaint. The complaint, as corrected, was refiled after statutory period had expired. HELD: There being no substantial error in names of defendants against which complaint is principally directed, and omissions referred to not being of vital importance, original receipt of complaint operated to stay limitation provisions of the act. Ryan Fruit Co. v. Director General, 120 I. C. C. 206, 207.

§8. Requisites of Informal Complaint.
See Supra §1.

(a) Letters received by commission in the nature of inquiries can not be relied upon to toll the statute of limitations with respect to claims alleging unreasonableness of rates. Leach v. C., N. O. & T. P., 112 I. C. C. 38.

(b) Informal complaint alleging unreasonableness set forth a specific number of shipments it being stated that the claim was filed "so as to toll the statute of limitations." Subsequently an itemized statement was filed covering the same number of shipments on which "reparation is requested." Contention that these shipments were merely illustrative not sustained and claims on all shipments set forth in the formal complaint, other than those covered by the informal proceeding, which are outside the statutory periods of limitation, are barred. Kellogg & Sons v. D., L. & W., 112 I. C. C. 629, 639.

(c) Claim covering shipments moving during Federal control alleged only overcharges. Formal complaint seasonably filed, after notification that claim was not susceptible of informal adjustment, contained additional allegations. HELD: Basis of an informal claim can not be broadened or otherwise varied by a formal complaint subsequently filed unless such formal complaint itself be filed within statutory period. See 49 I. C. C. 649. Issues other than overcharges found barred because not presented within statutory period of one year after termination of Federal control, as provided by section 206 (c) of transportation act 1920. Western Newspaper Union v. Director General, 115 I. C. C. 105.

(d) A letter merely enclosing freight bills, bill of lading, and a Rule V statement covering a shipment does not constitute an informal complaint such as would toll the statute of limitations on

shipments covered thereby. Hamilton Co. v. P. & R., 120 I. C. C. 205.

(e) Letter received by commission from complainant merely enclosed a freight bill, bill of lading and what purported to be a Rule V statement covering a shipment. Complainant was advised that if it was desired that commission consider the claim on informal docket, essential details forming the basis of claim must be furnished as required by Rule III of Rules of Practice. More than two years after delivery of shipment formal complaint was filed. HELD: Complainant's letter did not toll the statute of limitations for reason that it did not constitute an informal complaint. Moreover, any claim for damages based thereon must be considered as having been abandoned by complainant's failure to resubmit the matter either informally or formally within six months subsequent to commission's letter, as required by Rule III (g) of the Rules of Practice. Claim found barred. Hamilton Co. v. P. & R., 120 I. C. C. 205.

(f) Informal complaint filed during statutory period attacked a reconsignment rule under which rates were assessed, but no particular shipments were identified until filing of formal complaint more than two years subsequent to date shipments moved. Informal complaint, therefore, did not toll statute as to shipments covered by formal complaint, and they are consequently barred. Earl Bros. v. C., M. & St. P., 120 I. C. C. 299, 300.

(g) Informal complaint seasonably filed named Armour & Co., an Illinois corporation, as a party complainant. Formal complaint filed within time required by Rule III (g) of Rules of Practice named additional complainants said to be subsidiaries of Armour & Co. HELD, fact that additional parties were subsidiaries of complainant named in informal complaint did not ipso facto entitle them to bring an action in their own name for damages suffered by the former, and not having filed their claims within time provided by statute they are accordingly barred. Armour & Co. v. Director General, 120 I. C. C. 587.

§8a. Informal Record as Evidence.

(a) Informal complaint was filed within statutory period and was duly referred to carriers for attention. Carriers failed to advise of their action, if any, with respect thereto. Approximately three years later formal complaint filed. HELD: That informal complaint remains open and tolls the statute of limitations. Abeles & Taussig Lbr. & Tie Co. v. C. M. & St. P., 115 I. C. C. 205, 206.

(b) Claim was presented informally, and after correspondence with interested carriers, complainant was advised that matter could not be adjusted on informal docket. Upon suggestion of complainant that informal file "should be adopted and made a part of the record" of the formal complaint, HELD: An informal docket may only be considered with the formal docket by agreement of the parties. Paris Flouring Co. v. N. Y., C. & St. L., 118 I. C. C. 291.

III. PRESENTATION TO CARRIERS.

See Agency (a); Loss and Damage §2.

§9. Advisability.

(a) Complaint first filed informally contained nothing to show that it had been presented to interested carriers. The commission advised complainant that claim had been registered and suggested that it be taken up directly with carrier, the letter also stating that if claims could not be adjusted in that manner the complaint could be resubmitted. Record does not show that claim was presented to the carrier, and the matter was not again submitted to commission as a complaint until approximately three years later, when formal complaint was filed. HELD: It was complainant's duty to present the claim to carrier promptly and advise commission within a reasonable time of the result. The mere receipt of informal claim was insufficient, under commission's Rules of Practice, to stay the period of limitation, which, under the circumstances, must be deemed to have been abandoned. Krauss Bros. Lbr. Co. v. Director General, 112 I. C. C. 117, 119, 120.

IV. PARTIES ENTITLED TO RECOVER.

§12. In general.

(a) Filing of informal complaint in which name of complainant differed with that shown in formal complaint found sufficient to stay the statute, as the two complainants named are parties to both complaints. Baldwin Hardware Co. v. Director General, 129 I. C. C. 708, 709.

CLASS RATES

I. TARIFFS AND CONSTRUCTION.
§1. In general.
II. REASONABLENESS AND DISCRIMINATION.
§2. In general.
III. REPARATION.
§3. In general.

CROSS REFERENCES

See classification V; Commodity Rates §2; Differentials; Evidence §13 (1½); Reasonableness of Rates §28.

I. TARIFFS AND PUBLICATION.

§1. In General.

See Commodity Rates §2; Tariffs.

(a) Class rates applicable on glass lamp globes, lettered, in boxes l. c. l., from Cincinnati and Brighton, Ohio, to Los Angeles, Calif., found unreasonable to extent they exceeded lower contemporaneous commodity rate on unlettered glass lamp globes and other commodities from and to same points. Reasonable rates prescribed for future and reparation awarded. Boyle-Dayton Co. v. A., T. & S. F., 107 I. C. C. 151.

(b) Class rate on "Salt, livestock, medicated" assessed on shipments of medicinal sheep salt found applicable and not unreasonable. Lower commodity rate applied on salt and sulphurized rock salt, complainant contending for such lower rate upon ground that "Salt, livestock, medicated" is an item shown in classification under the general heading "Salt," that commodity not being specifically excepted in commodity tariff. FOUND: Commodity shipped was not salt within commonly accepted meaning of that word, could not have been substituted for common salt, and was more in the nature of a medicine. Commodity tariff covered only common salt and sulphurized rock salt and if any salt mixture had been intended to be covered by that tariff, it is reasonable to assume that sulphurized rock salt only of all the other kinds and combinations would not have been singled out for mention in addition to the general term "Salt." Yakima Grocery Co. v. O.-W. R. R. & N. Co., 112 I. C. C. 751.

(c) Fifth-class rates applicable on monuments or monument parts, assessed on shipments of dressed, and partly polished, partly cut, and partly rough granite, found applicable. Contemporaneously a lower commodity rate applied on "rough quarried granite," "sawed granite," and "polished or planed stone or granite (not to apply on monuments or parts thereof.)" The granite here shipped being partly polished and partly dressed, was not rough quarried or sawed granite but upon further manufacture was used for monuments, and therefore monument parts. Southworth & Son v. N. Y., N. H. & H., 113 I. C. C. 171.

(d) Fourth-class rate charged on a l. c. l. shipment of malleable link belting from Indianapolis, Ind., to Algoma, Oreg., found inapplicable. Applicable rate found to be a lower commodity rate to Modoc Point, Oreg., under an intermediate rule in the tariff, Algoma being directly intermediate between Indianapolis and Modoc Point. Reparation awarded. Algoma Lbr. Co. v. Director General, 113 I. C. C. 311.

(e) Once a proper class-rate structure is adopted, the same relationships between localities and communities may well be followed in making rates on many commodities. Phosphate Rock from Florida, 115 I. C. C. 229, 235.

(f) Shipment of drugs and medicines from Elkhart, Ind., to New York and Philadelphia, found overcharged to extent third-class rates assessed exceeded lower commodity rates contemporaneously in effect from Kalamazoo, Mich. Tariff carried an intermediate clause providing that an intermediate origin station from which no specific rate is published is entitled to higher rates from either of two stations between which it is located from which rates are published. No specific rates were published from Elkhart which is directly intermediate to Kalamazoo, and it was therefore entitled to lower commodity rate. Refund of overcharges directed. Miles Medical Co. v. B. & O., 118 I. C. C. 33.

(g) First class is an unusually high c. l. rating and is generally assigned only to a few very light and bulky articles of high value, to especially perishable commodities like fresh strawberries, and to commodities that are dangerous to handle, such as high explosives. Providence Exchange v. N. Y., N. H. & H. 118 I. C. C. 190, 191, 192.

(h) Complainant attacked class rates charged on four cars of street car bodies and parts thereof, shipped June 1, 1923

and March 9, 1924 from Findlay, O., to San Francisco, Calif., as inapplicable and unreasonable. Only one body can be loaded on a flat car. Charged class A rate of $2.73. There was in effect a commodity rate of $2.61 applying on cars and car bodies, street, with or without motor attachments, minimum 20,000 pounds, for each street car or street car body. HELD, rate of $2.61 applicable, reparation awarded. Market Street Ry. Co. v. S. P. Co., 120 I. C. C. 654.

(i) Sixth-class rate on textile machinery from Tallassee, Ala., located on the Birmingham & S. E. Ry., to Natchez, Miss., found not unreasonable as compared with lower rate prescribed for like distances in Southern Class Rate Investigation, 100 I. C. C. 513. In cited case the Birmingham & S. E. was designated as a weak line entitled to special rate treatment, and it was found that joint rates between weak and standard lines should be somewhat higher than that prescribed for latter. The general class-rate revision can not properly be used as measure of reasonableness on shipments moving prior thereto. Moreover, general practice in southern territory is to apply to through movements the local rates of short lines to junction points plus standard-line rates beyond. The rate here charged compares favorably with numerous rates applicable from points in Alabama, Mississippi, and Tennessee for comparable distances, involving joint-line hauls, including one "relief" line. Cotton Mills Products Co. v. A. & V., 120 I. C. C. 473.

(j) Complainant attacked class rates charged on 17 shipments of pneumatic rubber tires made between Dec. 28, 1922 and May 22, 1923 from Cudahy, Wis., to St. Louis, Mo., as inapplicable. Charged, carloads, third class rate of 59.5 cents, less carloads first class of 88.5 cents. Rate claimed was a carload commodity rate of 29 cents, applicable on agricultural implements and parts thereof, viz: articles shown in item 843 Boyds I. C. C. A-1203 under head of vehicles (except automobiles, childrens vehicles and hearses) and parts thereof. Boyds I. C. C. A-1203 provided "commodity rates on vehicles (except automobiles, childrens vehicles and hearses) and parts thereof, referring to this item, will apply on following articles * * * vehicles, parts of * * * tires, rubber, pneumatic * * * loose or in packages." Vehicles and parts of vehicles enumerated in item 843 are restricted by the caption of the rate item to agricultural implements and parts thereof, and the commodity shipped is not shown to have been part of an agricultural implement or of any vehicle not excepted. HELD, rates charged applicable, complaint dismissed. Federal Rubber Co. v. C. & N. W. Ry., 122 I. C. C. 331.

(k) One of the fundamental functions of class rates is to provide a basis for possible shipments. Cancellation of Class Rates on Sugar, 126 I. C. C. 527, 528.

(l) Upon contention that minimum class-rate scale is inapplicable because in its publication the publishing agent failed to denote and advance, FOUND: Contention is without merit. See 74 I. C. C. 179, 181. Lynchburg Chamber of Commerce v. B. & O., 128 I. C. C. 557, 558.

(m) Complainant alleged class rate charged on a shipment of textile machinery, knocked down, from Philadelphia, Pa., to Nepperhan, N. Y., on Feb. 13, 1918 was inapplicable and unlawful. Shipment moved P. & R., Jersey Central and N. Y. C., charged carload fifth class 17c, minimum 20,000 pounds. Official classification provides second class rating on less carload shipments of textile machines, n. o. i. b.n., knocked down, in boxes, bundles or crates. The shipment weighed less than the carload minimum. Defendants evidence that the record of all the carriers show that car was treated by them as a carload shipment from point of origin to destination is of doubtful force. If the shipment was improperly classified as a carload in the first instance, obviously there is little likelihood that the error would have been detected en route. The evidence is not persuasive that the loading of this car either at origin or en route was in any way restricted by the shipper or by any of its agents. The preponderance of the evidence leads to the opposite conclusion. In the absence of a specific instruction from the shipper to treat the shipment as a carload, defendant was obliged to charge the less than carload rates. HELD, rate assailed inapplicable to the extent it exceeded 30c on the weight of the shipment, reparation awarded. Smith & Sons Carpet Co. v. Director General, 132 I. C. C. 593.

II. REASONABLENESS AND DISCRIMINATION.

§2. In General.

See Basing Points and Lines §3 (a); Classification §17; Commodity Rates §2; Discrimination §8 (3); Equalization of Rates; Reasonableness of Rates §28.

(a) Rates on high explosives, c. l., and l. c. l., from Gibbstown and Thompsons Point, N. J., to Norton, Va., Powder, W. Va., and other stations in Virginias, found unreasonable to extent they exceeded first-class and double first-class, respectively, contemporaneously applicable from and to same points. Usual basis of rates on high explosives in this territory is first-class c. l., and double first-class l. c. l., that basis having been prescribed as reasonable maximum in 35 I. C. C. 77 and 64 I. C. C. 10. Reparation awarded. Du Pont De Nemours & Co. v. W. J. & S., 104 I. C. C. 249.

(b) Fifth-class rates on furnaces and furnace parts from Holland, Mich., to Milwaukee and Chicago and points taking Chicago rates, found unduly prejudicial to extent they exceeded those based upon rates bearing same relationship to fifth-class from Holland that contemporaneous commodity rates bear to corresponding fifth-class rates from Detroit. Nonprejudicial rates prescribed. Holland Furnace Co. v. A., T. & S. F., 104 I. C. C. 286.

(c) Rates on rosin from south Atlantic ports, and points taking same rates, to Burlington, Ontario, Canada, found unreasonable to extent they exceeded rates contemporaneously in effect from Gulf ports to same destination. Rates from the Gulf ports found not unreasonable. Reparation awarded. Vera Chemical Co. v. A. C., 104 I. C. C. 408.

(d) Rates on rosin from South Atlantic and Gulf ports, and points taking same rates, to Burlington, Ontario, Canada, found not unduly prejudicial or preferential in favor of Chicago, Ill., Erie, Pa., Brooklyn, N. Y., and all points taking the Toronto and Hamilton, Ontario, basis of rates. Vera Chemical Co. v. A. C., 104 I. C. C. 408.

(e) Fourth-class rate on flexible split leather from Waukegan, Ill., to Natick, Mass., found not unreasonable. In official, southern, and western classifications various kinds of leather, including flexible splits, are and have been for many years rated fourth class. While complainant instances commodity rates on leather to Boston and several other New England destinations from numerous States to show that exceptions to class basis have been made, and estimated that volume of its shipments will continue in future as in past at about one carload a week, it failed to show how that movement compares in volume with movement of leather, generally under fourth-class rates. Griess-Pfleger Tanning Co. v. E., J. & E., 104 I. C. C. 464.

(f) Fourth-class ratings, minimum weight 30,000 pounds, in official, southern and western classifications, on cocoa powder, in bulk, in barrels, found unreasonable to extent they exceed fifth class, minimum weight 36,000 pounds. Comparisons are made with many commodities rated fifth class or lower, the best analogy being with coffee which is shipped in much same manner as cocoa, loads about same, and is to some extent competitive. Reasonable rating prescribed for future. Opler v. A. & R. R. R., 104 I. C. C. 468.

(g) Class rates on fresh meats, packing-house products, and other articles, in peddler cars, from Chicago and East St. Louis, Ill., to branch-line points on Big Sandy and Logan divisions of C. & O., found unreasonable and unduly prejudicial to extent they exceeded rates to main-line junctions plus differentials for hauls beyond, computed under distance scale prescribed herein. Reasonable and nonprejudicial class rates prescribed for future and reparation awarded. Wilson & Co. v. C. & O., 104 I. C. C. 641.

(h) Class rates on fresh meats, packing-house products, and other articles, in peddler cars, from Chicago and East St. Louis, Ill., to points on C. & O. east of Gauley, W. Va., found unreasonable to extent they exceeded aggregate of intermediates to and from Gauley. Reasonable class rates prescribed for future and reparation awarded. Wilson & Co. v. C. & O., 104 I. C. C. 641.

(i) Proposal to readjust class rates between upper Mississippi River crossings and related points and points in Minnesota and North Dakota to basis of rates between Chicago group and Fargo, N. Dak., resulting in both increases and decreases, the former predominating, found not justified. Transportation conditions between the crossings and the destination territory, on one hand, and

between Chicago and destination territory, on the other, are not materially different, and difference in distance can not be ignored. Reasonable maximum class rates between the crossings and Fargo and Moorehead, N. Dak., and from the crossings to Fargo for application on traffic from points east of Chicago in c. f. a., trunk-line, and New England territories, determined. Rates from Upper Mississippi Crossings, 107 I. C. C. 256.

(j) Fourth-class rating in official classification territory on automobile bow sockets found unreasonable to extent they exceeded fifth class, the rating on other automobile parts. Reasonable rating for future prescribed. Chevrolet Motor Co. v. B. & O., 109 I. C. C. 185.

(k) Upon reconsideration of original report, 100 I. C. C. 513, wherein commission made its findings, after investigation, of the class-rate structure in southern classification territory, following the filing by interested parties of statements objecting to various findings embraced therein, such report modified in certain respects. Southern Class Rate Investigation, 109 I. C. C. 300.

(l) The class rates of official and southern territories are based upon two differing theories of freight-rate construction, resulting in a wide difference in level of the two sets of rates. Southern Class Rate Investigation, 109 I. C. C. 300, 303.

(m) The class rates of official territory are much lower in level than the class rates of southern territory, and while transporation conditions justify some difference in level. they do not in themselves justify existing difference. The situation, however, is one that can not be radically changed without a complete reorganization of the rate structures, including both class and commodity rates, of both territories. Southern Class Rate Investigation, 109 I. C. C. 300, 303.

(n) Carload rating of third class, minimum 30,000 pounds, in western classification territory on carpets and carpeting made of cork, linoleum, or asphalted and decorated paper felt, and mats or rugs made of linoleum or of asphalted and decorated paper felt, found unreasonable for future to extent it exceeds fourth class, subject to a minimum not in excess of 36,000 pounds. Congoleum-Nairn v. C. & N. W., 109 I. C. C. 447.

(o) Class rates on ginger ale, root beer, and mineral water, l. c. l., from Tazewell, Va., to points in West Virginia on the Virginian and Kanawha, Glen Jean & Eastern Railways, and on empty bottles, l. c. l., returned from those points to Tazewell, found not unduly prejudicial or discriminatory, but unreasonable as compared with rates accorded other Virginia and West Virginia points. Reasonable distance scale of rates prescribed for future. Was-Cott Corp. v. K., G. J. & E., 109 I. C. C. 468.

(p) Carriers showed that class rates governed by official classification are generally lower per mile than class rates bearing same numerical designation governed by western or southern classification, and urged that the lower rate level in official territory shows that there is no reason why ratings in official classification should be the same as those in southern and western classifications. HELD: The commission has repeatedly pointed out that this contention is without force. Manifestly it would be improper to attempt to overcome differences in rate levels by rating articles higher in official than in western and southern classifications. Nat'l. Commercial Fixture Mgrs. Asso. v. A. A. R. R., 109 I. C. C. 479, 483.

(q) Class rate assessed on sporadic shipments of green salted hides from Moultrie, Ga., to Elsmere Junction, Del., found unreasonable as compared with lower commodity rates contemporaneously in effect from various points in Georgia, Alabama, and Florida to Elsmere Junction and to Philadelphia, New York, and Boston, and to extent it exceeded lower commodity rate subsequently established. Reparation awarded. Barr & Dougherty v. G. N., 109 I. C. C. 487.

(r) Class rates assessed on sporadic shipments of soya beans from Norfolk, Va., to Chicago Heights, Ill., found not unreasonable as compared with lower commodity rates on wheat, which lower rates were subsequently established on soya beans. To award reparation on wheat rate basis would be tantamount to prescribing a commodity rate for application nearly one year prior to time its establishment was requested, and some two years after its voluntary establishment. Moreover, volume of movement of soya beans is insignificant compared with that of wheat, no shipments have moved from and to these points subsequent to those here considered, nor does any possible future movement appear probable.

Chicago Hts. Mfrs. Asso. v. B. & O., 109 I. C. C. 545.

(s) Class rates on contractors' outfits, from Buffalo, Iowa, to Apache, Okla., and from Richards Spur, Okla., to Buffalo, found not unreasonable as compared with lower commodity rate on graders' outfits. Shipments concerned were made because of fluctuating business conditions at complainant's operations. The record fails to show any prior movements between these points, or that there are likely to be any but sporadic movements in future. The few shipments here do not justify application of a commodity rate in the past, record does not establish necessity of such a rate for the future, nor does similarity between graders' and contractors' outfits afford a sufficient basis for a finding that the same rate should be applied to both. See also 51 I. C. C. 138 and 85 I. C. C. 408. Dolese Bros. v. C., R. I. & P., 109 I. C. C. 561.

(t) Class D rates on iron ore from Ishpeming and Negaunee, Mich., to Tamms, Ill., found unreasonable as compared with commodity rates contemporaneously in effect to St. Louis, Mo., and East St. Louis and Granite City, Ill., and with commodity rate established subsequent to movement. Reparation awarded. Tamms Silica Co. v. C. & N. W., 109 I. C. C. 618.

(u) Window glass: Class rate on window glass moving rail and water from Jeannette, Pa., to Jacksonville, Fla., found not unreasonable, discriminatory, or unduly prejudicial as compared with rail-and-water commodity rates from the same origin point to Savannah, Ga. Allegations of complaint rest solely upon fact that on certain other commodities the two ports are accorded same rates. However, no showing was made that any of the commodities upon which rate parity is maintained compete with window glass or that assessment of a class rate on window glass and a commodity rate on a competing commodity results in undue prejudice. Towers Hardware Co. v. P. R. R. 109 I. C. C. 651.

(v) Rates on canned goods from Illinois freight association territory to certain west-bank Mississippi River points in that territory found unreasonable in instances where such rates exceed fifth class. Reasonable basis of rates prescribed for future and reparation denied. Burlington Shippers' Asso. v. A., T. & S. F., 109 I. C. C. 694.

(w) Sixth-class rates on sand and gravel from La Fayette, Ind., in connection with the Wabash, Illinois Central, B. & O., Kankakee & Urbana, and Illinois Traction, to specified points in Illinois, found unreasonable as compared with rates from Attica, Ind. Maximum reasonable joint commodity rates prescribed for future. Western Indiana Gravel Co. v. N. Y. C. & St. L., 109 I. C. C. 727.

(x) Fifth class rates in the southwest move little traffic, most articles rated fifth class which move in appreciable volume being subject to commodity rates lower, and often much lower, than the class rates. This situation exists to much greater degree in the southwest than in western trunk-line territory. Midcontinent Oil Rates, 1925, 112 I. C. C. 421, 433.

(y) Complainant attacked through rates charged on 59 cars of wine in tank cars and in bulk in wooden barrels since April, 1922, from St. Louis, Mo., and Sandusky, O., to Brooklyn, N. Y., as unreasonable. Short line distances 1,054 and 650 miles. In official classification wine in bulk, in barrels, is rated third class; the ratings have been increased on Aug. 31, 1921, from fourth class. Prior to July 25, 1922, the tariffs made no provisions for wine in tank cars. The carriers apparently applied third class rates, considering such shipments analogous to shipments in bulk in barrels. Charged from St. Louis $1.105, from Sandusky 82 c. prior to July 1, 1922 and 73.5 c. thereafter. HELD, rates attacked not unreasonable complaint dismissed. Garrett & Company v. N. Y. C. R. R., 112 I. C. C. 519.

(z) In 77 I. C. C. 249, Commission found sixth class rates applicable on flaxseed, carloads from New York Harbor points to Buffalo, N. Y., on shipments moving in 1920 subsequent to Federal control as not unreasonable and denied reparation. In 91 I. C. C. 663, division 2 found rates on same commodity from and to the same points as unreasonable after Jan. 1, 1922, and awarded reparation. The rates attacked are sixth class rates of 20.5 c. prior to August 26, 1920, 28.5 c. from that date until Jan. 1, 1923 and 26.5c. thereafter. HELD, rate attacked unreasonable to extent they exceeded 17.5 c. prior to Aug. 25, 1920, 24.5 c. between that date and Jan. 1, 1922 and 22 c. thereafter from New York to Buffalo; from New York to Toledo, O., unreasonable to extent they exceeded 25.5 c.

prior to Aug. 26, 1920, 36 c. between that date and Jan. 1, 1922 and 32.5 c. thereafter; from Philadelphia to Toledo unreasonable to extent they exceeded 2 c. under New York; to Chicago unreasonable to extent they exceed 33 c. prior to Aug. 26, 1920, 46 c. between that date and Jan. 1, 1922 and 41.5 c. between that date and March 26, 1923, present rate not unreasonable, reparation awarded. Kellogg & Sons v. D. L. W. R. R., 112 I. C. C. 629.

(aa) In 95 I. C. C. 161, Division 4 found rates on wire rods, in coils, in carloads, from Acme and Peoria, Ill., Harriet, N. Y., and Johnstown, Pa., to Kansas City, Mo., as not unreasonable, unjustly discriminatory or unduly prejudicial. On shipments from eastern territory to Kansas City rates on wire rods are made by combination on the Mississippi River crossings. East of the river billet rates, which approximate sixth class, apply while the fifth class proportional rates apply west of the river. In the western classification billets are classified with pig iron and take class D. The same basis of rates on rods applies to Kansas City and other cities west of the Mississippi River and a change to one point without a corresponding change to others would tend to condemn and disrupt an extensive and longstanding rate relationship. The evidence shows the classification of wire rods with other iron and steel articles in western territory to be warranted and proper. This record does not show the proportional class rates to Kansas City to be unreasonable or otherwise unlawful, complaint dismissed. Black Steel & Wire Co. v. A. T. & S. F. Ry., 112 I. C. C. 739.

(bb) Complainant attacked class rates charged on medicinal sheep salt from Salt Lake City, Utah, to Livingston, Mont., Walla Walla, Wash., Yakima, Wash., Baker, Oreg., and Mountain Home, Ida., two years prior to May 28, 1925 as unlawful and unreasonable. Salt livestock, medicated, is rated class B minimum 30,000 pounds in the western classification. Charged class B rates of $1.03 to Livingston, 92 c. to Baker, Walla Walla and Yakima and 65 c. to Mountain Home. Rates charged alleged to be unreasonable to extent they exceeded the commodity rates on salt by more than the amount of the spread between class B and class C rates. The commodity shipped was not salt within the commonly accepted meaning of that word. It was more in the nature of medicine. It clearly could not have been substituted for common salt. No such claim is made for it. On the other hand it is equally clear that the commodity tariff covered only common salt and sulphurized rock salt. The difference in the spread in the class rates on common salt and medicated livestock salt applied to the commodity rates on common salt does not of itself fix the measure of a proper commodity rate on medicated salt. There is no evidence that the volume of movement and other conditions attending the latter are such as to warrant any commodity rate on it. HELD, rate charged applicable and not unreasonable, complaint dismissed. Yakima Grocery Co. v. O. W. R. R. & N., 112 I. C. C. 751.

(cc) On June 12, 1926, all parties to this proceeding were notified that the respondent carriers had agreed to cooperate with the Commission in carrying into effect with the utmost expedition the purposes of the findings in the original report, 100 I. C. C. 513, as modified by 109 I. C. C. 300. The southern carriers have now submitted a petition asking to change the rule for the computation of distances set forth in finding 14 at page 312 of the supplemental report. HELD, finding should be amended to read as follows: That in computing distances for the application of the scale set forth in Appendix K1 and Appendix L1 of the supplemental report as modified herein, the shortest routes shall be used over which carload traffic can be moved without transfer of lading. HELD, further, Appendix K2 should be amended to provide a somewhat higher distance scale ranging first class 34 c. for 5 miles to 286 c for 1,500 miles. Southern Class rate Investigation, 113 I. C. C. 200.

(dd) Fifth-class rates on fish oil from Atlantic seaboard points to Port Ivory, N. Y., and Bayway, N. J., and from Bayway to Philadelphia and Marcus Hook, Pa., found unreasonable for future only and reasonable rates prescribed. Lower commodity rates instanced by complainants were in most, if not in all, instances so affected by competition that they do not afford a criterion upon which fifth-class rates assailed may be condemned as exceeding reasonable maxima in the past over routes of actual movement. Procter & Gamble Mfg. Co. v. B. & O., 112 I. C. C. 177.

(ee) Rates on fresh tomatoes from Silver Creek, N. Y., district to Pittsburgh,

Pa., found not unreasonable and findings in 91 I. C. C. 358, reversed. Evidence does not indicate that rates assailed are too high to move traffic or that they are unreasonable per se. There are no commodity rates on this traffic from Silver Creek district to any destination, or from any point of origin to Pittsburgh. Assailed rates are those prescribed and approved in numerous cases, and while various commodity rates are in effect both in c. f. a. and trunk-line territories, but few apply for distances comparable to the haul here considered, ripe tomatoes generally moving short distances under commodity rates made with reference to truck competition. Here traffic moves in considerable volume only during an annual 60-day period, which fact does not entitle it to a commodity rate since commodities may move in considerable volume and yet remain on a class-rate basis. Heinz Co. v. Director General, 112 I. C. C. 206.

(ff) Fifth-class rates in the Southwest move little traffic, most articles rated fifth class which move in appreciable volume being subject to commodity rates lower, and often much lower, than class rates. Midcontinent Oil Rates, 1925, 112 I. C. C. 421, 433.

(gg) From standpoint of percentages of corresponding first-class rates, fifth class under the southern classsification is the substantial equivalent of fourth class in official classification and class A in western classification. See 92 I. C. C. 340, 344. Tennessee Electric Power Co. v. L. & N., 112 I. C. C. 491, 493.

(hh) Class rates on tinware from Chicago, Rockford, and Waukegan, Ill., Milwaukee, Wis., and points taking same rates, to Burlington and Keokuk, Iowa, found not unreasonable, but maintenance of lower commodity rates from same points to St. Louis, Mo., and Quincy, Ill., would subject Burlington and Keokuk to undue prejudice and disadvantage, and give to St. Louis and Quincy an undue preference and advantage. Burlington Shippers' Asso. v. C., B. & Q., 112 I. C. C. 533.

(ii) Local and joint class rates between points in Arizona, on the one hand, and points in California, New Mexico, and El Paso, Tex., on the other hand, found unreasonable. Rates assailed are materially higher than those prescribed in 21 I. C. C. 640, and 74 I. C. C. 207, for application in the Pacific Northwest and at present in effect throughout the northern half of the Mountain-Pacific group. Operating and transportation conditions in territory here under consideration compare favorably with those in much of the territory in which the lower rates apply. Temporary scale of distance rates prescribed which will accord the Pacific Southwest substantially same scale of rates as now applies in the Pacific Northwest. Arizona Corp. Commission v. A. E., 113 I. C. C. 52.

(jj) Fifth-class rates applicable on monuments or monument parts, assessed on shipments of dressed, and partly polished, partly cut, and partly rough granite, found applicable. Contemporaneously a lower commodity rate applied on "rough quarried granite," "sawed granite," and polished or planed stone or granite (not to apply on monuments or parts thereof.)" The granite here shipped being partly polished and partly dressed, was not rough quarried or sawed granite but upon further manufacture was used for monuments, and therefore monument parts. Southworth & Son v. N. Y., N. H. & H., 113 I. C. C. 171.

(kk) Fifth-class rate on petroleum products from Brunswick, Ga., to Richmond, Va., found unreasonable to extent it exceeded lower commodity rate subsequently established from same origin point to Richmond and Petersburg. Subsequently established rate found not unreasonable as compared with lower combination rate contemporaneously in effect via routes other than route of movement, carriers showing that such lower combination was depressed, and, distance considered, that subsequently established commodity rate compares favorably with other rates between points in southern territory. National Oil Co. v. S. A. L., 113 I. C. C. 371.

(ll) The movement of carload traffic on class rates in the southwest is small, the southwestern carriers having published relatively high class rates for the carload classes and made commodity rates to move carload traffic. Dawson Produce Co. v. A. & V. Ry., 113 I. C. C. 454, 455.

(mm) Rates on certain alloys of lead, viz., babbitt, solder, terne, and type metal which have lead as a base in composition with tin, antimony, or other metals in varying proportions, from Newark, N. J., to Buffalo, Pittsburgh, Chicago, and

other destinations in Illinois, Indiana, Ohio, Pennsylvania, New York, Kentucky, and Tennessee, found unreasonable to extent they exceeded sixth-class. While no substantial movement of these commodities has been shown which would warrant establishment of commodity rates thereon, the present rates on these alloys are clearly out of line with rates found reasonable by commission on copper, brass, bronze, lead, antimonial lead, and tin. Reasonable rates prescribed for future and reparation awarded. Federated Metals Corp. v. C. R. R. Co. of N. J., 113 I. C. C. 487.

(nn) Complainant attacked rates and charges collected on a car of lumber shipped from Philadelphia, Pa., and delivered in Paterson, N. J., April 24, 1923, at Broadway station upon the Susquehanna, as unjust and unreasonable, and that the joint class rates of the Erie and Susquehanna on all interstate traffic from the Erie station to the Susquehanna station, both at Paterson, as unjust and unreasonable. Shipment was consigned by one complainant Wilgus to the other complainant at Paterson, no delivery being specified in the bill of lading. Upon arrival at the Erie station in Paterson consignee refused to accept delivery and ordered the car reshipped to its siding on the tracks of the Susquehanna in Paterson at Broadway station, where delivery was accepted. Lumber is rated sixth class in the official classification. Charged combination of 28c, consisting of sixth class factors of 18.5c to first billed destination in Paterson and 9.5c beyond, plus reconsigning charge of $6.30. The record shows no service in addition to that performed under the separate line haul rates which would justify a charge for reconsignment any more than it would if the car had been actually or constructively delivered. Under the circumstances the collection of a charge in addition to those imposed by application of the rates to and from the point of reconsignment was, is, and for future will be unreasonable. HELD, rates attacked not unreasonable but reconsignment charge was unreasonable, reparation awarded. Wilgus v. P. R. R., 113 I. C. C. 617.

(oo) Combination class rates to and beyond York, Pa., or Baltimore, Md., charged on l. c. l. shipment of marble moving from Cardiff to destinations in eastern and New England States found not unreasonable or unduly prejudicial as compared with rates on same classes from such noncompetitive points as Baltimore, York, Philadelphia, and New York City, or with rates from Westfield, Mass., and Roxbury, Vt., from which latter point Cardiff is said to meet its principal competition. Traffic and transportation conditions in connection with shipments from Cardiff, in so far as initial part of movement is concerned, are materially different from and less favorable than those obtaining between trunk-line points with which comparison is made, and whatever rate disadvantage complainant may be laboring under in marketing of its products appears to be principally due to location of its quarry on an independently owned and operated short line of light traffic density and unfavorable operating conditions. Cardiff Green Marble Co. v. M. & P., 113 I. C. C. 655.

(pp-qq) Generally speaking, class rates for longer distances in trunk-line territory are not on a mileage basis, but are grouped, and some of these rate groups are quite extensive. Cardiff Green Marble Co. v. M. & P., 113 I. C. C. 655, 657.

(rr) Complainant attacked sixth class rate charged on barrel shooks, carloads, from Rahway, N. J., to New York Harbor, N. Y., as unreasonable. These commodities move over defendants line to its rail terminus in New York Harbor where they are transferred by defendant from the cars to lighters and then moved to and unloaded on steamship docks in the harbor, a distance of 29 miles, including 10 miles for the harbor transfer. Sixth class rate of 11.5c was applicable. The rates on barrel shooks as well as on lumber between New York Harbor, including lighterage, and points in New Jersey are generally on the sixth class basis. The rate attacked compares favorably with commodity rates on barrel shooks for similar distances from New Jersey to points on Long Island. HELD, rate attacked not unreasonable, complaint dismissed. Hamilton v. P. R. R., 113 I. C. C. 723.

(ss) Fourth class all-rail rate on sole leather from Bridesburg (Philadelphia) to Boston, found not unreasonable or otherwise unlawful as compared with lower commodity rate from competing points in western Pennsylvania, or with a lower all-water rate from Philadelphia to Boston not subject to the commission's jurisdiction. Western Pennsylvania points,

from which the lower commodity rate applies, are west of the Harrisburg-Williamsport line of the Pennsylvania and in some instances are served by other carriers having more direct routes to Boston than the Pennsylvania affords. Continental Leather Co. v. P. R. R., 113 I. C. C. 745.

(tt) Fourth-class rate on sole leather from Bridesburg (Philadelphia) to Boston, found not unreasonable or otherwise unlawful as compared with a lower all-water rate from Philadelphia to Boston not subject to the commission's jurisdiction. Complainant does not ship by water apparently because drayage costs from its plant to the wharf, plus the water rate to Boston, exceed the class rate of which complaint is made. Continental Leather Co. v. P. R. R., 113 I. C. C. 745.

(uu) Complainant attacked class rate charged on sole leather, carloads, from Bridesburg (Philadelphia), Pa., to Boston, Mass., and points taking same rates as unreasonable, unjustly discriminatory and unduly prejudicial as compared with commodity rates from competing points in western Pennsylvania and an all-water rate from Philadelphia to Boston. Complainant's plant is 12 miles from the steamer wharf from which water rates to Boston are available. Complainant does not ship by water because drayage costs from its plant to the wharf plus the water rate to Boston, exceed the class rates of which complaint is made. The applicable fourth class rate is 38c. The rate attacked is applicable all rail and rail and water to Boston and Boston rate points, from Harrisburg, Sunbury, Williamsport and Newberry, Pa., and from Trenton, N. J. HELD, rate attacked not unreasonable or otherwise unlawful, complaint dismissed. Continental Leather Co. v. Penn. R. R., 113 I. C. C. 745.

(vv) Class rates on iron and steel articles between Pittsburgh, Pa., district and other points on the one hand, and Ohio points on the other, found unreasonable to extent they exceeded lowest aggregate of intermediate commodity rates contemporaneously in effect. See also 89 I. C. C. 601. Reparation awarded. Firestone Tire & Rubber Co. v. Director General, 113 I. C. C. 751.

(ww) Complainant attacked class rates charged on animal hoofs, horns, and horn tips, in carloads from Chicago, Ill., to Shelton, Conn., and Weehawken, N. J., as unreasonable, unjustly discriminatory and unduly prejudicial. Charged fifth class of 59.5c to Shelton and 56.5c to Weehawken. Under exceptions the sixth class rating is applicable on fertilizer material, consisting of the following articles having value only as a fertilizing ingredient, viz, hoofs or horns. The fifth class rating has been in effect on animal horns and hoofs in the official classification for more than 20 years. The same rating applies on most of the packing house products. HELD, fifth class rates applicable and not unreasonable, complaint dismissed. Tomkins Summer Co. v. B. & O. R. R., 115 I. C. C. 24.

(xx) Complainant attacked fifth class rates on pickles in brine, carloads, from Ohio, Indiana and Michigan to Toledo, O., as unreasonable, unjustly discriminatory and unduly prejudicial. The rates on pickles in brine here under consideration are the same as those on the finished product. Pickles in brine are somewhat in the nature of raw material, as they must be further treated before they are available for general distribution and consumption. Loss and damage claims are practically unknown. Generally speaking, most any kind of a car may be used, but some of the traffic moves in specially provided tank cars owned by shippers, and sometimes refrigerator cars are necessary in cold weather. Competitors of complainant are favored with some much lower rates on this pickles. Transportation conditions throughout the territory involved are substantially the same. Some commodity rates lower than the fifth class rates apply from certain salting stations in Michigan to the Michigan plants of its competitors. They have been maintained for a number of years. They were established so that the total of the inbound and outbound charges would be less burdensome on the Michigan picklers and assist in the sale of their products at important markets in competition with the pickles produced nearer the markets. Subject to these exceptions, practically all of the pickle movement on defendants lines is at the fifth class rates and that basis apparently applies generally in official territory. HELD, rates attacked not unreasonable but unduly prejudicial in that the rates to Toledo are on the fifth class basis while commodity rates lower than fifth class apply from the origin territory to the Chicago district and Michigan points.

Reparation denied. Harbauer Co. v. A. A. R. R., 115 I. C. C. 30.

(yy) Complainant attacked class A rate charged on three cars of castings and forgings, parts of compresses, each piece weighing 2,000 pounds or over, shipped to El Paso, Tex., from Monroe, La., during June, 1924, as unreasonable. There is no probability of a future movement from Monroe. The three shipments moved over the M. P., to Lake Charles, La., and S. P. lines beyond 1,170 miles. Charged class A rate of 126.5c applying on machinery and machines, including cotton gins, gin presses, and cotton ginning machinery, steam and power trip hammers, and ore milling and crushing machinery. Reparation is sought to basis of commodity rate of 77.5c on structural iron or steel, including unfinished castings and forgings. HELD, rate attacked not unreasonable, complaint dismissed. El Paso Compress & Fumigation Co. v. M. P. R. R., 115 I. C. C. 166.

(zz) Once a proper class rate structure is adopted the same relationships between localities and communities may well be followed in making rates on many commodities. Phosphate rock from Florida, 115 I. C. C. 229, 235.

(3a) Complainant attacked charges based on $1.23 and minimum of 34,080 pounds on nine shipments of refrigerating and ice making machinery transported during Feb. and March, 1923, from Canton, O., to Oklahoma City, Okla., as illegal, unreasonable and unduly prejudicial to extent it exceeded charges based on actual weight, minimum 20,000 pounds which was applicable on creamery and cheese factory apparatus including refrigerating machinery. Movement of 6 shipments was B. & O. to Chicago, E. J. & E. to Joliet, Ill., Santa Fe beyond; and of three, Pennsylvania to Lima, O., Nickle Plate to Peoria, Ill., and Rock Island beyond. Charged joint class A rate of $1.23. There is no evidence here to the contrary and there is no proof that the manufacturers of refrigeration and ice making machinery with whom complainant competes are in any different situation than complainant is with respect to the carload minima. The creamery apparatus item permits a generous mixture of various articles differing widely in size, shape, weight and value and the same is true of the ice making machinery item. The fact that the two overlap in so far as refrigeration machinery is concerned, lends color to complainant's contention with respect to refrigeration machinery but not with respect to ice making machinery. The articles shipped constituted ice making machinery and the shipments were properly billed. There is no provision in the creamery apparatus list for ice making machinery and a number of articles embraced in the ice making list, such as ice cutting machines have no counterpart in the creamery apparatus list. HELD, charges attacked not illegal or otherwise unlawful, complaint dismissed. Artic Ice Machine Co. v. A. T. & S. F. Ry., 115 I. C. C. 346.

(3b) Complainant attacked fifth class rate of 89c charged on two cars of sugar shipped June 10, 1924, from Jacksonville, Fla., to New Orleans, La., as unreasonable. One moved S. A. L. and L. & N. and other A. C. L. and L. & N. Contemporaneously a commodity rate of 34c applied over other routes between the origin and destination points. Under the law defendants were required to strictly observe shippers routing instructions and to assess charges on the basis of the rates applicable over the routes specified. No necessity is shown for requiring defendants to establish commodity rates on sugar from Jacksonville to New Orleans. The movement was sporadic, due to the fire, and no probability of a future movement is shown. HELD, rate charged not unreasonable or otherwise unlawful, complaint dismissed. Underwriters Salvage Co. v. L. & N. R. R., 115 I. C. C. 585.

(3c) Complainant attacked third class rate charged on 29 cars of plate glass shipped between March, 1923, and June, 1924, from Jersey City, N. J., and Brooklyn and New York, N. Y., 14 to Winston Salem and 15 to High Point, N. C., as unreasonable. They were either loaded into cars at certain piers or station in New York harbor and moved by car float to the rail terminals of defendants on the Jersey side of the harbor, or removed in lighters from the piers to the rail terminals and there loaded into cars. Five moved thence over the Pennsylvania to Hagerstown, M. D. and N. & W. to High Point, and the others over either the Pennsylvania, B. & O., or Jersey Central, Reading and B. & O. and Southern beyond. The short line distances are shown to be 535 miles to High Point and 549 miles to Winston Salem. Charged third class rates of $1 to Winston Salem and $1.08 to High Point. Plate glass

under 120 united inches is rated fourth class in the official and western classifications, or one class lower than that provided in the southern classification. The fourth class rates from the points of origin are 81c to Winston Salem and 88c to High Point. Window glass, carloads, is rated fifth class in all three classifications. The value of certain grades of so-called double window glass is shown to be greater than that of the plate glass here considered. HELD, rate charged unreasonable to extent it exceeded 84c, reparation awarded. Southern Mirror Co. v. Southern Ry., 115 I. C. C. 590.

(3d) Complainant attacked fifth class rate charged on one car of brass ingots shipped Oct. 31, 1924, from East Liberty, Pa., to Elmira, N. Y., as unreasonable, unjustly discriminatory, unduly prejudicial and in violation of fourth section. Shipment moved 277 miles via Pennsylvania, charged fifth class of 28.5c. When the shipment moved defendant maintained a commodity rate of 19.5c on copper ingots from and to the same points. Brass ingots are composed principally of copper and are slightly less valuable than copper ingots. The rate of 22c from Cleveland to Elmira was applicable through East Liberty and was published subject to rule 77. HELD, rate attacked unreasonable to extent it exceeded 22c, reparation awarded. Federated Metals Corp. v. Pennsylvania R. R., 115 I. C. C. 719.

(3e) Complainant attacked rate charged on marine engines and parts, carloads, from Hamilton, O., to Oakland, Calif., between July 15 and Oct. 15, 1921, as unjust, unreasonable and inapplicable. Charged class A rate of $3.035 applicable on machinery and machines. Claimed aggregate of intermediates of $2.96 applicable. The 11 shipments as a whole constituted two complete marine engines, but the engines were not shipped in complete units. Each shipment consisted of marine engine parts on which class A rate was applicable. The descriptions in Boyds tariff of the articles on which the rate of $1.625 from the Mississippi river to Salt Lake City was applicable are limited to specific kinds of machinery or machines and marine engine parts are not specifically named. Prior to March 15, 1918, there was a commodity rate of $1.50 Hamilton to Oakland, canceled on that date leaving in effect class A rate of $1.82, now $3.035. A commodity rate of $2.61 was published June 1, 1922, and rate now is $2.03. HELD, rate attacked applicable but unreasonable to extent it exceeded $2.96, reparation awarded. Moore Shipbuilding Co. v. C. I. & W. R. R., 118 I. C. C. 3.

(3f) Complainant attacked third class rate of 70c charged on less carloads of printing paper to Lynchburg, Va., from Erie, Pa., as unreasonable and unduly prejudicial as compared with rates to Danville and South Boston, Va. 81 moved Pennsylvania to Potomac Yard, Va., Southern beyond 655 miles, two Pennsylvania to Hagerstown, Md., and N. & W. beyond, 721 miles . On Nov. 28, 1924, the rate on printing paper from Erie to Lone Jack, Danville and South Boston was made 70c, thus removing all departures except that existing in connection with the rate to Mountview, which was removed Jan. 1, 1925. HELD, rate attacked not unreasonable or unduly prejudicial, complaint dismissed. Lynchburg Chamber of Commerce v. P. R. R., 118 I. C. C. 11.

(3g) Complainant attacked class rates charged on green salted hides, carloads, from Laurel, Meridian, Clarksdale, Greenwood, Yazoo City, Vicksburg, Jackson and Natchez, Miss., and Tuscaloosa and Dothan, Ala., to Winchester, Mass., as unreasonable and in violation of the fourth section. Green salted hides are rated sixth class in southern and fifth in official, charged joint sixth class rates and combinations. A joint commodity rate of 61.5c was in effect on this traffic from New Orleans, La., to Boston, Mass., and Winchester, and this rate was applicable from Vicksburg. HELD, rate from Natchez prior to July 1, 1922, unreasonable to extent it exceeded 86.5c, and other rates unreasonable to extent they exceeded 72c from Tuscaloosa and Dothan, 74c from Meridian, 76c from Laurel, Clarksdale, Greenwood and Jackson and 78c from Yazoo City and Natchez, reparation awarded. Beggs & Cobb v. A. & V. Ry., 118 I. C. C. 13.

(3h) Respondents proposed to increase the class rates between Gary, Ind., on the E. J. & E. and points in northern Indiana and southern Michigan. At the present time class rates from Gary, on the one hand, and points in northwestern Indiana and some few points in Michigan bordering on the Indiana-Michigan state line, on the other hand, are the same over all lines. On July 15, 1920, Gary was shown as a base

point taking a lower basis to these nearby points than that applicable to and from the Chicago district. This basis is in effect today with the exception of these few points. HELD, suspended schedules justified. Class rates between Gary, Ind., and Michigan, 118 I. C. C. 263.

(3i) Complainant attacked sixth class rate charged on 7 cars of logs shipped between Dec. 30, 1922, and Aug. 18, 1923, from Adrian, Mich., to Hicksville, O., as unreasonable, unjustly discriminatory and unduly prejudicial to the extent it exceeded 65% of sixth class rate. They moved Wabash to Defiance, O., and B. & O. beyond, 139 miles, charged sixth class rate of 13.5c. A rate of 10c on these shipments would be 74% of sixth class rate. HELD, rate attacked unreasonable to extent it exceeded 10c, reparation awarded. Crook Son Co. v. Wabash Ry., 118 I. C. C. 285.

(3j) Complainant attacked class rate of 42.5c charged on one car of wrought iron pipe forwarded on March 7, 1924, from Bowling Green, Ky., to Florence, Ala., as unreasonable, unduly prejudicial and in violation of the fourth section. Bowling Green is on the L. & N., 113 miles south of Louisville, Ky., and 73 miles north of Nashville. Florence is on the L. & N., 125 miles south of Nashville. Charged class 1 rate of 42.5c. Northbound rate is 29c. HELD, rate attacked not unduly prejudicial but unreasonable to extent it exceeded 29c, reparation awarded. Nashville Machine & Supply Co. v. L. & N. R. R., 118 I. C. C. 577.

(3k) Complainant attacked fifth class rates charged on cider vinegar, in barrels, in carloads from New York to North Dakota, South Dakota, Nebraska, Kansas, Minnesota, Iowa, Missouri and Wisconsin as unreasonable and unduly prejudicial. The general basis for rates on vinegar, carloads, in official classification territory is fifth class, although commodity rates on a lower basis apply between certain points in trunk line territory. There are no joint rates on vinegar from New York to this destination territory except joint fifth class rates to Minneapolis and St. Paul, Minn. Rates to other points in the destination territory are constructed on the basis of the proportional fifth class rates to the Mississippi river or other basing points plus the rates beyond. It is obvious that if local manufacturers in the destination territory can compete there with Pacific coast producers paying a 75c rate and New York manufacturers paying a rate of, say, 61.5c, as to the Twin Cities, increased rates from the Pacific coast would be of little avail to complainant. HELD, rates attacked not unreasonable or otherwise unlawful, complaint dismissed. American Cider Vinegar Mfrs. Asso. v. N. Y. C. R. R., 118 I. C. C. 721.

(3l) Fifth-class rate on pickles, in brine, from points in Ohio, Indiana, and Michigan, to Toledo, Ohio, found not unreasonable or discriminatory, but unduly prejudicial, in that competitive companies in Chicago district and certain Michigan cities were favored with a lower commodity rate. Transportation conditions throughout territory involved are substantially the same and with but few exceptions pickles move at fifth-class rate. Where such conditions exist commission is not disposed to allow rates from a comparatively limited section to control general basis of rates applicable throughout that general territory in absence of a clear showing that such rates are too high. Harbauer Co. v. A. A. R. R., 115 I. C. C. 30.

(3m) Class A rate assessed on finished castings and forgings, parts of compresses, from Monroe, La., to El Paso, Tex., found not unreasonable as compared with commodity rates on structural iron and steel, including unfinished castings and forgings. Rate assailed is maintained on same description of traffic to all points in the Southwest similarly situated and was prescribed in 34 I. C. C. 472, and other cited cases. Moreover, commodity rate on structural iron and steel is affected by competition. El Paso Compress & Fumigation Co. v. M. P., 115 I. C. C. 166.

(3no) Sixth-class rate assessed and lower commodity rate subsequently established on scrap iron from Burnham, Pa., to Cumberland, Md., found unreasonable as compared with rates from considerably greater hauls, with lower commodity rate in effect between points in immediate territory of this movement for comparable distances, and to extent it exceeded rate contemporaneously in effect from Burnham, Milroy, and Lewiston, Pa., to State Line, Pa., which lower rate was also in effect in the reverse direction from Cumberland to Burnham. Reasonable rate prescribed and reparation awarded. Cohen & Son v. P. R. R., 115 I. C. C. 307.

(3p) Sixth-class rate on crossties from Bedford and other points in Pennsylvania to Buffalo, N. Y., and related points, found unreasonable to extent it exceeded a commodity rate subsequently established from Everett, Pa., to Buffalo, and a lower rate applicable in reverse direction from Buffalo and related points to approximately 40 destinations of comparable distance in Pennsylvania and New Jersey, including Bedford and Everett. Reasonable rates prescribed for future, and reparation awarded. La Fayette Lbr. Co. v. P. R. R., 115 I. C. C. 445.

(3q) Rate equal to 90 per cent of sixth-class on box board from Halltown, W. Va., to Lynchburg, Va., found not unreasonable as compared with lower intrastate commodity rate on wood-pulp board from Covington, Va., to Richmond, it being shown that movement from Covington to Richmond involves but a local single-line haul whereas the movement from Halltown to Lynchburg is over two or more roads. Lynchburg Chamber of Commerce v. B. & O., 115 I. C. C. 465.

(3r) Sixth-class rate charged on refuse sand from Detroit, Mich., to Indianapolis, Ind., found unreasonable as compared with lower rates from and to same points on various other commodities and to extent it exceeded a commodity rate contemporaneously in effect on refuse sand from Detroit to Cincinnati, Ohio. Reasonable rate prescribed for future and reparation awarded. American Radiator Co. v. D. & T. S. L., 115 I. C. C. 529.

(3s) Fifth-class rate charged on a sporadic shipment of fire-damaged sugar specifically routed by shipper from Jacksonville, Fla., to New Orleans, La., found not unreasonable as compared with lower rate contemporaneously in effect over other routes and in reverse direction. No evidence was introduced to show that commodity shipped was improperly classified, and fifth-class rating under which it moved should not be condemned merely because commodity rates applied over other routes. Underwriters Salvage Co. v. L. & N., 115 I. C. C. 585.

(3t) Sixth-class rates on wood pulp from Delano Junction, N. Y., and Great Works, Me., to Housatonic, Mass., found unreasonable as compared with lower commodity rates from comparable distances in same territory and to a number of destinations in trunk-line and c. f. a. territories. Reasonable rates prescribed for future and reparation awarded. Rising Paper Co. v. N. Y., N. H. & H., 115 I. C. C. 699.

(3u) Fifth-class rate on brass ingots from East Liberty (Pittsburgh), Pa., to Elmira, N. Y., found unreasonable to extent it exceeded lower commodity rate over same route from Cleveland, Ohio, a more distant point, applicable through East Liberty and published subject to rule 77 of Tariff Circular 18-A. Reparation awarded. Federated Metals Corp. v. P. R. R., 115 I. C. C. 719.

(3v) Class rates on candy and confectionery, c. l. and l. c. l., from Salt Lake City, Utah, to destinations on Mississippi and Missouri Rivers, and to St. Paul, Minn., and Chicago, Ill., rate territories, found unreasonable and unduly prejudicial to extent they exceeded lower commodity rates contemporaneously applicable from San Francisco, Calif., to same destinations. Reparation awarded. McDonald Chocolate Co. v. B. E. R. R., 118 I. C. C. 45.

(3w) First class is an unusually high c. l. rating and is generally assigned only to a few very light and bulky articles of high value, to especially perishable commodities like fresh strawberries, and to commodities that are dangerous to handle, such as high explosives. Providence Exchange v. N. Y., N. H. & H., 118 I. C. C. 190, 191, 192.

(3x) Fifth-class rates, minimum 36,000 pounds, approved in 48 I. C. C. 515 and applied on wet rag pulp from Franklin, Ohio, to points in official classification territory, found unreasonable as compared with rates and minimum weights contemporaneously in effect on wood pulp, cottonseed-hull shavings pulp, linen pulp, and straw pulp, used in manufacture of paper, and with which rag pulp comes into competition, and to extent they exceeded sixth class, minimum 50,000 pounds. Reasonable rates and minimum weight prescribed for future. Cheney Pulp & Paper Co. v. A., C. & Y., 118 I. C. C. 477.

(3y) Class A rate applicable on a sporadic shipment of coffin material from Jackson, Miss., to New Orleans, La., found not unreasonable as compared with lower rate from Maryville, Tenn., to same destination, or with commodity rate established from Jackson subsequent to movement. The subsequently established rate was accorded with expectation of a

regular movement which never developed, whereas it is shown that there is a free movement under the rate from Maryville. Considering the sporadic character of shipment here involved, coupled with a lack of evidence to indicate that coffin stock is improperly classified, the commission does not consider class A rate as unduly high. Jackson Traffic Bureau v. I. C., 118 I. C. C. 515.

(3z) Class rates on iron pipe and oil-well supplies from and to points in Arkansas, Louisiana, and Texas, found unreasonable to extent they exceeded those which would have accrued by use of the 9702 scale prescribed in 77 I. C. C. 473. See 102 I. C. C. 761 and other cited cases. Reparation awarded. Bender Iron & Supply Co. v. K. C. S., 118 I. C. C. 661.

(4a) Fact that certain shippers have paid class rates without protest is not conclusive of their reasonableness. Bender Iron & Supply Co. v. K. C. S., 118 I. C. C. 661, 665.

(4b) Class A rates on oil-well outfits and supplies from Oil City, Caddo, Mansfield, and Marion, La., to Smackover and Louann, Ark., found unreasonable to extent they exceeded lower distance commodity rates computed under scale prescribed in 77 I. C. C. 473. Reparation awarded. Texas Co. v. K. C. S. Ry., 118 I. C. C. 713.

(4c) Rates on wrought-iron or steel pipe and fittings between points in Texas and points in Oklahoma, found unreasonable to extent they exceeded rates for like distances computed under scale prescribed on iron and steel pipe in Memphis-Southwestern Investigation, 77 I. C. C. 473. Reasonable rates prescribed, and reparation awarded. Lone Star Gas Co. v. C., R. I. & G., 118 I. C. C. 717.

(4d) Rate on iron and steel pipe from Ranger, Tex., to Ada, Bristow, Byng, Paden, and Seminole, Okla., and from Jefferson, Okla., to Ranger, Tex., found unreasonable to extent it exceeded rates for like distances computed under scale prescribed on iron and steel pipe in 77 I. C. C. 473. Reasonable rates prescribed for future, and reparation awarded. Texas Pacific Coal & Oil Co. v. A., T. & S. F., 118 I. C. C. 719.

(4e) Complainant attacked class rates on steel castings, carloads, from Attica, Ind., to St. Louis, Mo., and Chicago, Peoria, Streator and Mt. Vernon, Ill., as unreasonable and unduly prejudicial. Steel castings are rated fifth class and Attica takes the class basis to the above destinations while most producing points in Indiana and Illinois take commodity rates averaging about 65% of fifth class. Complainant has been charged rates very much above the general level in the same immediate territory and in making sales has absorbed the difference between its rates and those of its competitors. Under the circumstances it has been damaged by the rate adjustment to the extent that its rates were above the somewhat higher level now prescribed. HELD, rates attacked unreasonable to extent they exceeded rates prescribed in 96 I. C. C. 682 for same distances, reparation awarded. National Car Coupler Co. v. A. T. & S. F. Ry., 120 I. C. C. 37.

(4f) Complainant attacked rates charged on printed waxed wrapping paper, in carloads, shipped since Oct. 17, 1923 from Nashua, N. H., to New York and Brooklyn, N. Y., as unreasonable. There were and are no joint rates in effect, charged combination. Sixth class rates are maintained on this commodity from points generally in trunk line and central territories to Long Island. HELD, rates attacked unreasonable to extent they exceed 25.5c to Flatbush Ave., Brooklyn and 25c to New York, reparation awarded. Ward Baking Co. v. B. & M. R. R., 120 I. C. C. 47.

(4g) Complainant alleged that rates on all articles of every kind and description provided in the consolidated freight classification and various class and commodity tariffs between points in western trunk line and official classification territories, on the one hand, and Mayfield and Fulton, Ky., on the other, and between official territory and Boaz, Viola and Hickory, Ky., as unjust, unreasonable, unjustly discriminatory and unduly prejudicial as compared with rates on like traffic between points in the territory named north of the Ohio river and points in Kentucky, Iowa, Missouri, Indiana and Illinois. Mayfield is 23 miles south of Paducah, Ky., Fulton is 45 miles southwest of Paducah and other three complaining points are between Paducah and Mayfield, all located on the I. C. In 100 I. C. C. 513, 109 I. C. C. 300 and 113 I. C. C. 200 Commission prescribed rates to and from the south. In that case Mayfield, Fulton and the other points under consideration are given the identical adjustment accorded all other points generally throughout the south. The record in this case does not warrant a

modification of the findings. No findings are necessary with respect to the reasonableness of the present or future class rates attacked from official territory. CLASS RATES TO AND FROM WESTERN TRUNK LINE TERRITORY. Class rates between Fulton and Mayfield on the one hand and western trunk line territory on the other are generally constructed by combination on either Cairo or Metropolis, Ill., or Paducah. However, joint through rates apply between Kansas City, Mo., and Omaha, Neb., on the one hand and Mayfield and Fulton on the other, and from the Twin Cities to the complaining points. Testimony offered shows clearly the disadvantage of Mayfield and Fulton in comparison with Ohio river points in respect of many commodities. Manifestly, the basis of commodity rates to and from the points under consideration should be somewhat higher than prevails in central territory. What these exact differences as between the complaining cities and Ohio river crossings on individual commodities should be can not be determined on this record. HELD, rates between official territory on the one hand and Fulton and Mayfield on the other unduly prejudicial to extent they exceed from or to Cairo or Metropolis 24c first class; between Kansas City, Omaha and Twin Cities and Fulton and Mayfield unreasonable to extent they exceed 24c first class over Cairo or Metropolis, reparation denied. Mayfield Chamber of Commerce v. A. & W. Ry., 120 I. C. C. 137.

(4h) Complainant attacked class rate of $1.62 applicable on two cars of lemons, shipped on April 12 and 20, 1923 from New York to Nashville, Tenn., as unreasonable. Defendants admit the unreasonableness of the rate attacked and state that a reasonable rate on this traffic over the routes of movement should not exceed the 86c rate applicable via the Virginia gateways. HELD, rate attacked unreasonable to extent it exceeded 86c, undercharge waived. Hill Grocery Co. v. L. V. R. R., 120 I. C. C. 161.

(4i) Complainant attacked class rates charged on cranberries, carloads, from Massachusetts, New Jersey and Wisconsin to Hutchinson, Wichita, and Anthony, Kas., as unreasonable and unduly prejudicial as compared with the rates to Kansas City and St. Joseph, Mo., and Omaha, Neb. Hutchinson and Wichita are in south central Kansas, 219 and 213 miles, west of Kansas City, Anthony is 281 miles southwest of Kansas City. The gist of the complaint is that, distance considered, these destinations are denied the benefit of their location as compared with Kansas City and other Missouri river points. In official and western classifications cranberries are rated fourth class, carloads, and third class less carloads. The situation presented is not new. In many cases the Commission has found that traffic conditions east of the Missouri river justify a relatively lower basis of rates. The rate differences here encountered are the result of an adjustment of long standing. Neither the volume of this traffic nor the other evidence of record warrants the establishment of commodity rates. HELD, rates attacked not unreasonable or otherwise unlawful complaint dismissed. Anthony Produce Co. v. B. & A. R. R., 120 I. C. C. 224.

(4j) Complainant attacked sixth class rate of 28.5c charged on lumber, carloads, from Masten and Laquin, Pa., to Boston, Mass., and points taking same rates in Massachusetts, Rhode Island and Connecticut on the B. & A., B. & M. and New Haven as unreasonable and unjustly discriminatory. On Aug. 23, 1925 a commodity rate of 26.5c was established and reparation is sought to that basis. A rate of 26.5c was contemporaneously in effect from points on the T. V., S. & T. and K. & E., all of these roads being in the same general locality as the S. & N. Y., the originating defendant. Lumber is rated sixth class in official territory and generally moves intraterritorially on class rates. HELD, rates charged not unreasonable or otherwise unlawful, complaint dismissed. Central Pennsylvania Lumber Co. v. S. & N. Y. R. R., 120 I. C. C. 239.

(4k) Complainant attacked fourth class rates charged on iron or steel barrels, carloads, from Detroit, Mich,, and Sharon, Pa., to Hot Springs, Ark., as unreasonable. Charged fourth class $1.45 from Detroit and $1.36 from Sharon, minimum 16,000 pounds. A few months after the complaint was filed the carriers filed tariffis proposing discontinuance of the class basis and the establishment of commodity rates based on scale 14 in 77 I. C. C. 473. They are much below the class rates previously applicable. HELD, rates attacked not unreasonable, complaint dismissed. Mountain Valley Springs Co. v. C. R. I. & P. Ry., 120 I. C. C. 313.

(4l) Complainant attacked class rates charged on cotton pulp board, carloads, from Nitro, W. Va., to Marcus Hook and Lewiston, Pa., and to Roanoke, Norfolk and Newport News, Va., as unreasonable. Existing rates are on the basis of 90% of sixth class. HELD, rates attacked not unreasonable, complaint dismissed. Viscose Co. v. N. Y. C. R. R., 120 I. C. C. 352.

(4m) Complainant attacked fifth class rate on iron and steel articles, carloads, from Pittsburgh, Pa., to Jamestown and Falconer, N. Y., as unreasonable, unjustly discriminatory and unduly prejudicial. Present fifth class rate is 26.5c. HELD, rate attacked unreasonable to extent it exceeded 23c, reparation awarded. Jamestown Chamber of Commerce v. P. R. R., 120 I. C. C. 372.

(4n) Complainant attacked class rates and various commodity rates to Marshall and Jefferson, Tex., from Kansas City and St. Louis, Mo., Memphis, Tenn., and New Orleans, and from Atlantic seaboard over water and rail routes, as unduly prejudicial as compared with rates to Shreveport, La., and Texarkana, Tex. On Dec. 8, 1923 division 4 rendered its decision herein, 85 I. C. C. 115 and found the rates attacked unduly prejudicial to extent they exceeded rates in effect to Shreveport by certain differences determined so far as possible, by the scales prescribed in 55 I. C. C. 515, 77 I. C. C. 473, and found rates attacked unreasonable to extent they exceeded the aggregate of intermediates, reparation denied. Complainants made no attempt to prove damage by reason of the undue prejudice alleged. Under all the circumstances, a finding made so long ago, and which seems to have been designed primarily to place the points involved upon a proper relationship, should not be accepted ipso facto as proving intrinsic unreasonableness in rates attacked for the sole purpose of reparation. HELD, present rates on sugar, in carloads, from New Orleans to Marshall and Jefferson are just and reasonable, but unduly prejudicial to extent they exceed rates to Shreveport by more than 3 and 4c. HELD, rates higher than aggregate of intermediates unreasonable, reparation awarded. Marshall & Jefferson v. T. & P. Ry., 120 I. C. C. 455.

(4o) Complainant attacked fifth class rate of 41c charged during Sept. and Oct. 1922, 1923, 1924 and 1925 on dried seed peas, carloads, from Grace, Ida., to Smithfield, Utah, as unreasonable. Grace is on the O. S. L. 6 miles south of Alexander, Ida. Smithfield is on the O. S. L. and U. I. C. Shipments moved O. S. L. to Hyrum, Utah, thence U. I. C. 140.5 miles, charged fifth class 41c, claimed to be unreasonable to extent it exceeded rate of 27.5c. HELD, rate attacked unreasonable to extent it exceeded 38c, reparation awarded. Morgan Canning Co. v. O. S. L. R. R., 120 I. C. C. 466.

(4p) Complainant attacked double first class rate charged on 10 rolls of woven curled hair shipped from Michigan City, Ind., to Portland, Ore., on March 5 and 14, 1925 as unreasonable and unjustly discriminatory. Shipments weighed 520 and 535 pounds respectively. Rate charged $10.50 applicable on pads or padding, vehicle body or seat, curled hair, interlaced through paper or burlap. Contemporaneously the rating applicable on curled hair other than in rope form, in bags, less carloads, was double first class, and rate on machine compressed bales of loose curled hair, commodity rate of $3.45. Cotton felt, any quantity, with which curled hair woven on burlap competes, is rated first class. HELD, rating attacked unreasonable to extent it exceeded one and one half times first class, reparation denied. Blocksom & Co. v. M. C. R. R., 120 I. C. C. 521.

(4q) Complainant attacked class E rate of 13c charged on two cars of clam shells shipped in Sept. 1922 from Dixon Ill., to Fort Madison, Ia., as unreasonable, unduly prejudicial and in violation of the fourth section. The complaint was held in abeyance pending decision in 89 I. C. C. 560, wherein class E rates were found not unreasonable. HELD, rate attacked not unreasonable or otherwise unlawful, complaint dismissed. Mississippi Pearl Button Co. v. I. C. R. R., 120 I. C. C. 647.

(4r) Complainant attacked class rate charged on 11 cars of wooden handle material shipped from Meridian and Pyland, Miss., to Montour Falls, N. Y., between Dec. 1, 1922 and June 14, 1924 as unreasonable, unjustly discriminatory, unduly prejudicial and inapplicable. They were shipped loose, in bundles, without covering. Charged sixth class rate of 87.5c applicable on handles, wooden, n. o. i. b. n., in the rough, loose or in packages, c. l. min. wt. 36,000 pounds. Lumber rate is desired. HELD, rate at-

tacked applicable, complaint dismissed. Cronk & Carrier Mfg. Co. v. G. M. & N. Ry., 120 I. C. C. 663.

(4s) Complainant attacked class rates charged on 112 cars of sawdust from Clarksburg, W. Va., to Newark, N. J., between April 4, 1923 and Oct. 21, 1925 as unreasonable. Shipments moved B. & O. to Wilmington, Del., Pennsylvania beyond, 480 miles, charged sixth class rate of 28.5c. On Aug. 18, 1925 a rate of 25.5c was established. Sawdust is a very low grade commodity, the volume of movement from Clarksburg to Newark during the reparation period was comparatively heavy, and the rates between other points in that territory for similar distances were generally lower. HELD, rate attacked unreasonable to extent it exceeded 25.5c, reparation awarded. Maloney v. B. & O. R. R., 120 I. C. C. 705.

(4t) Complainant attacked class rates charged on carbide of calcium from Keokuk, Ia., to Kansas City, Mo., as inapplicable. Charged fifth class of 33.5c prior to June 1, 1925 and 32c thereafter. A commodity rate of 15.5c was in effect on line over one of the routes used. Calcium of carbide is not known commercially as lime and is produced by subjecting lime and coke to intense heat which fuses the calcium in the lime with the carbon from the coke. Only by a strained interpretation of the tariff could the commodity rate on lime be applied to calcium carbide. HELD, complaint dismissed. Kansas City Oxygen Gas Co. v. C. B. & Q. R. R., 120 I. C. C. 715.

(4u) Complainant attacked class rate charged on four cars of compoboard shipped between Feb. 9, 1918 and Feb. 1, 1919 from Minneapolis, Minn., to Omaha, Neb., as unreasonable. Short line distance is 357 miles, charged class B rates of 27c prior to June 25, 1918 and 34c thereafter. Complainant contended rates attacked unreasonable to extent they exceeded rates on wood pulp wall boards, which were made applicable on compoboard June 26, 1919. The fact that the commodity rates on wood pulp wall boards has been extended to compoboard does not of itself indicate that the class rates were unreasonable. HELD, rate attacked not unreasonable for the past, complaint dismissed. Disbrow & Co. v. Director General, 120 I. C. C. 720.

(4v) Complainant attacked class rates charged on cement building or roofing slabs reinforced with metal, in straight carloads, or in mixed carloads with roofing cement (other than liquid) and/or asphaltum, from Lincoln, N. J., to eastern trunk line and New England territories, as unreasonable. Claims for loss and damage are negligible. The carload rating of these slabs is sixth class. From Chicago, Ill., Wampum and other producing points in central territory to destinations in that territory, 75% of sixth class is generally applicable in straight or mixed carloads on the commodities involved. HELD, rates attacked for future unreasonable to extent they exceed 75% of sixth class. American Cement Tile Mfg. Co. v. A. & A. R. R., 120 I. C. C. 730.

(4w) Basis for class rates approved in Southern Class Rate Investigation, 109 I. C. C. 300, affirmed for application between official classification territory on one hand and Fulton, Mayfield, Boaz, Viola, and Hickory, Ky., on other. Mayfied Chamber of Commerce v. A. & W., 120 I. C. C. 137.

(4x) Class rates between official classification territory, on one hand and Fulton and Mayfield, Ky., on other found unduly prejudicial in favor of Ohio River crossings to extent they exceed corresponding rates contemporaneously maintained from or to Cairo or Metropolis, via whichever crossing the traffic moves from and to Fulton and Mayfield, by more than 24 cents on first class, and on the other classes by amounts bearing same percentage relationships to 25 cents as contemporaneous rates on the corresponding classes bear to first-class rates from or to Cairo or Metropolis, as the case may be, on the one hand, and points in official classification territory, on the other, resulting rates to be governed by official classification. Mayfield Chamber of Commerce v. A. & W., 120 I. C. C. 137, 144.

(4y) Class rates between Kansas City, Mo., Omaha, Nebr., and St. Paul and Minneapolis, Minn., on one hand, and Fulton and Mayfield, Ky., on other, found unreasonable and unduly prejudicial in favor of Ohio River crossings to extent they exceed corresponding rates contemporaneously maintained from or to Cairo or Metropolis by more than specified amounts herein prescribed. Reasonable maximum rates and nonprejudicial basis of rates prescribed for future and reparation denied. Mayfield Chamber

of Commerce v. A. & W., 120 I. C. C. 137, 144.

(4z) Sixth-class rate on lumber from Masten and Laquin, Pa., situated on the Susquehanna & New York R. R. to destinations in New England, found not unreasonable as compared with lower commodity rate contemporaneously applicable from points on other short lines located in same general origin territory. Formerly equal rates applied from points on all these short lines, but due to general increases under the Fifteen Per Cent Case 45 I. C. C. 303, this equalization was disrupted and subsequently restored. However, disruption of rate adjustment caused by general advances and subsequent establishment of rate sought afford no basis for award of reparation. Moreover, commission has recognized that lumber is rated sixth class in official classification and generally moves interterritorially on class rates. Central Pennsylvania Lbr. Co. v. S. & N. Y., 120 I. C. C. 239.

(5a) Sixth-class rate applicable on hollow building brick and hollow building tile from Haviland, Ohio, to Fort Wayne, Ind., found unreasonable to extent it exceeded lower commodity rate prescribed in General Brick Case, 68 I. C. C. 213, and established subsequent to movement between points here involved. Reparation awarded. Haviland Clay Works Co. v. C. N. R. R., 120 I. C. C. 241.

(5b) First-class l. c. l. rate on fresh beef hams, salted, from Chicago to Philadelphia, Pa., and Phillipsburg, N. J., found unreasonable to extent it exceeded rate on class lower than l. c. l. rate on fresh meats. See 85 I. C. C. 725. Application of a rate reasonable for fresh meats to meats partially cured by salting is unreasonable in view of protection against deterioration afforded by the salting process. Guggenheim Bros. v. B. & O., 120 I. C. C. 340.

(5c) Sixth-class rates on sulphuric acid, in tank cars, from La Salle, Ill., to Washington Court House, Ohio, found not unreasonable as compared with rates from and to various other points for comparable distances. The comparisons submitted were unaccompanied by a showing of any movement or of conditions influencing their establishment; moreover, sulphuric acid moves on the sixth-class basis throughout c. f. a. territory, except where lower rates have resulted from circumstances which are not a factor in instant case. Hamm Co. v. B. & O., 120 I. C. C. 345.

(5d) Sixth-class rates on commercial fertilizers between points in c. f. a. territory found not unreasonable or otherwise unlawful in the past as compared with rates in the South and West, but for future found unreasonable to extent they exceed distance rates herein prescribed. As volume of movement is substantial and increasing and use of fertilizers is an adjunct to successful farming, rates thereon should be more on a parity with those prescribed in 113 I. C. C. 389 in southern territory. However, on evidence presented, the commission is not convinced that sixth-class rate produces rates which might be condemned as exceeding the limits of maximum reasonableness if evidence covering conditions in c. f. a. territory in general was fully presented, and scale prescribed is, therefore, without prejudice to any future findings which may be made on a more comprehensive record. Ohio Farm Bureau Federation v. A. & W., 120 I. C. C. 361.

(5e) Fifth-class rates on iron and steel articles from Pittsburgh, Pa., and points taking same rates to Jamestown and Falconer, N. Y., found unreasonable and unduly prejudicial as compared with lower so-called short-haul commodity rates contemporaneously maintained from and to various other points for comparable distances. Reasonable and nonprejudicial rates prescribed for the future and reparation awarded. Jamestown Chamber of Commerce v. P. R. R., 120 I. C. C. 372.

(5f) Class rates on water meters, l. c. l., from Boston, Mass., to Pacific coast points, found not unreasonable as compared with lower commodity rates on numerous articles on which the risk, weight, density, and value per pound are less favorable to carriers than complainant's product, or with commodity rates established subsequent to movement. The commodities with which comparisons are made are shown to be water-compelled rates and present commodity rates on meters were established for same reason. Hersey Mfg. Co. v. B. & A., 120 I. C. C. 413.

(5g) Class rates on Compo-board from Minneapolis, Minn., to Omaha, Nebr., found not unreasonable as compared with lower commodity rates contemporaneously in effect between same points on wall board, box board, fiber

board, and pulp board. Earnings under rates assailed not unduly high when compared with those under rate found not unreasonable on Compo-board from Minneapolis to Kansas City, Kans., in 80 I. C. C. 185; moreover fact that commodity rates on fiber board, pulp board, and wall board were subsequently extended to include Compo-board does not of itself indicate that class rates previously applicable were unreasonable. Disbrow & Co. v. Director General, 120 I. C. C. 720.

(5h) Fact that class rates in eastern territory have not as yet been passed upon by commission and are not upon a distance basis, is not a sufficient reason why they should not be given consideration in the determination of a reasonable maximum level for rates on cement slabs. American Cement Tile Mfg. Co. v. A. & A. R. R. Corp., 120 I. C. C. 730, 733.

(5i) Complainant attacked class rate charged on burlap and cotton bags, straight or mixed carloads, from Jersey City, N. J., to Philadelphia, Pa., as unreasonable, unjustly discriminatory, unduly prejudicial and in violation of section four. Complainant is located on the Central of New Jersey, shipments moving between Dec. 19, 1923 and May 27, 1924, via that line to Bound Brook, N. J., and Reading beyond, 96 miles, charged third class 28.5 cents. At time of movement a commodity rate of 25 cents on burlap bags was maintained between Jersey City and Norfolk, Va., 348 miles, and a commodity rate of 19 cents on burlap bagging, carloads, from Jersey City to Philadelphia, and effective Oct. 25, 1925 the latter rate was established on the commodities in question. HELD, rate attacked unreasonable to extent it exceeded 19 cents, reparation awarded. Riegal Sack Co. v. C. R. R. of N. J., 122 I. C. C. 78.

(5j) Complainant attacked class rate of 19 cents charged on numerous cars of printing paper from Newburgh and Salisbury Mills, N. Y., to Montclair, N. J., between May, 1923 and Sept., 1924 as unjust and unreasonable. Movement 70 miles, charged sixth class rate of 19 cents. Rate of 11.5 cents was applicable from the same points of origin to Newark, Nutley, Rutherford and Belleville, N. J., all within the general vicinity of Montclair. HELD, rate attacked unreasonable to extent it exceeded 13.5 cents, reparation awarded. Holden Paper Co. v. Erie R. R., 122 I. C. C. 130.

(5k) Complainant attacked rates charged on numerous carload and less carload shipments of cowpeas from South Carolina to New Orleans, La., between Dec. 11, 1923 and Dec. 8, 1925 as unreasonable, unduly prejudicial and in violation of section four. Cowpeas are rated class D in southern classification. Prior to Feb. 20, 1922 the commodity rates were lower than the class D rates, but with the readjustment of the class rates in this territory pursuant to 64 I. C. C. 264 the commodity rates became higher than the class rates. The record indicates that all lines participating in this traffic from South Carolina to New Orleans, except the Southern, have canceled the commodity rates and applied the lower class rates. HELD, rates attacked unreasonable to extent they exceeded class D rates, reparation awarded. Gay Sullivan & Co. v. A. G. S. R. R., 122 I. C. C. 201.

(5l) Complainant attacked class rates charged on 21 cars of wood pulp from Philadelphia, Pa., to Fort Edward, N. Y., between March 26, 1923 and Feb. 24, 1924 and on 81 cars of wood pulp from Baltimore, Md., to Fort Edward between Oct. 7, 1922 and May 9, 1924 as unreasonable and in violation of section four. Fort Edward is on the D. & H. about 55 miles north of Albany, N. Y. Distances ranged from 387 to 412 miles from Philadelphia and from 446 to 550 miles from Baltimore, charged 27 and 28.5 cents from Philadelphia and 30 and 30.5 cents from Baltimore. Wood pulp is a low grade commodity used in the manufacture of newsprint and other paper products and moves in substantial volume throughout the year. A commodity rate of 26.5 cents was made effective from Baltimore on July 20, 1924. HELD, rate attacked not unreasonable, complaint dismissed. International Paper Co. v. B. & O. R. R., 122 I. C. C. 440.

(5m) Complainant alleged that the third class rate of 70 cents on less carload shipments of printing and wrapping paper from Niagara Falls, N. Y., to Lynchburg, Va., was and is unreasonable and unduly prejudicial. Three moved N. Y. C., to Newberry Jct., Pa., Pennsylvania to Potomac Yard, Va., and Southern beyond, 700 miles. Fifteen moved N. Y. C., to Charleston, W. Va., C. & O., beyond, 799 miles. Prior to Nov. 28, 1924 the less carload rates from

Niagara Falls through Lynchburg in connection with the N. & W., to Lone Jack, 779 miles were 51 and 42 cents, to South Boston, Va., 835 miles, 65 and 54 cents, in connection with Southern to Danville, Va., 764 miles, 65 and 56 cents or fourth class on printing paper and fifth class on wrapping paper under the southern classification. On that date the rates to those points were made 70 cents. Printing and wrapping paper, in less carload quantities, uniformly takes third class in official territory, and defendants show that the class rates to Lynchburg compare favorably with corresponding rates between other points in that territory. HELD, rates attacked not unreasonable or unduly prejudicial, reparation denied, complaint dismissed. Lynchburg Chamber of Commerce v. N. Y. C. R. R., 123 I. C. C. 15.

(5n) Complainant attacked sixth class rate of 11.5 cents charged on four cars of logs, shipped Jan. 7 and 30 and Feb. 4, 1924 from Huntertown and New Era, Ind., to Hicksville, O., as unreasonable and unduly prejudicial. Shipments moved N. Y. C., to Auburn Jct., Ind., B. & O., beyond. In 85 I. C. C. 533, the commission found rates on logs in central territory unreasonable to extent they exceeded 65% of sixth class. HELD, rates attacked unreasonable to extent they exceeded 8 cents, reparation awarded. Crook Son & Co. v. N. Y. C. R. R., 123 I. C. C. 93.

(5o) Complainant alleged as unreasonable and unduly prejudicial class rates maintained by defendants on carload and less than carload traffic from Bluefield, W. Va., to destinations on the Virginian in West Virginia between Princeton and Oak Hill Junction. Bluefield is in southern West Virginia on the main line of the Norfolk & Western. A branch line of that carrier extends from Bluefield through a small portion of Virginia to Matoaka, W. Va., 27 miles where it connects with the main line of the Virginian. The line of the latter carrier extends north from Matoaka and connects with the C. & O., at Deepwater, W. Va. Princeton is about 16 miles southeast of Matoaka and Oak Hill Junction, the most distant destination, is about 61.5 miles north of Matoaka, and 88.5 miles from Bluefield. The rates are the full combinations on Matoaka. On less carload traffic there is in addition a charge for transfer at Matoaka of 3 cents per 100 pounds. The rates from Princeton to destinations on the N. & W., are made in the same manner. The present disparity between the rates here attacked, on the one hand, and the local distance rates of the N. & W. and the Virginian and the joint rates from C. & O. points to Virginian destinations on the other hand, is clearly unwarranted. Transportation conditions throughout this territory are substantially the same. HELD. rates assailed unreasonable and unduly prejudicial to extent they exceed 30 miles and under first class 57 cents to 87 cents for 90 miles. Bluefield Traffic Bureau v. N. & W. Ry., 123 I. C. C. 653.

(5p) Complainant attacked rates charged on wrought iron pipe, well drilling rigs, oil well supplies and outfits, gas and steam engines, boilers, and steel tanks, carloads, from and to points in northern Louisiana and southern Arkansas as unreasonable and unduly prejudicial. All of the points of origin and destination are in or near the oil fields of northwestern Louisiana and southern Arkansas, most of the destinations being in the Smackover field. Charged on pipe at joint fifth class rates. Commodity rates were collected on two shipments from Smackover and Kenova, Ark., to Couchwood, La. Fifth class rate of 56.5 cents was collected on shipment from Oil Hill, Ark., to Lewis, La., whereas a commodity rate was applicable. Joint class A rates were collected on the engines, boilers, and oil well outfits and supplies. Fifth class rate of 38.5 cents applicable on steel tanks from Haynesville, La., to Louann, Ark. The basis claimed was established on Nov. 27, 1923. Class A rates apply on boilers and gas or steam engines in straight carloads throughout practically the entire southwestern territory. HELD, rates attacked on boilers, gas engines, and steam engines not unreasonable or unduly prejudicial. Following Crawford & Sebastian v. C. R. I. & P. Ry., 92 I. C. C. 453, rates charged on the other articles unreasonable to extent they exceeded those subsequently established, reparation awarded. Standard Oil Co. v. C. R. I. & P. Ry., 123 I. C. C. 669.

(5q) Complainant attacked fifth class rate of 97 cents charged on four cars of brass ingots shipped during April, 1924 from Charleston, S. C., to Pittsburgh, Pa., were unreasonable and in violation of section four. Shipments moved as

routed by shippers A. C. L., to Richmond, Va., thence R. F. & P., and Pennsylvania. Combination was 64 cents to Richmond and 22 cents beyond. The 22 cent rate was not applicable via route shipment moved. HELD, rate attacked not unreasonable or otherwise unlawful, complaint dismissed. Bell Bros. v. A. C. L. R. R., 123 I. C. C. 683.

(5r) Rates on green salted hides, found not unreasonable as compared with rates found reasonable on packing-house products and prescribed for application on hides in 29 I. C. C. 449 and other cited cases. Peyton Packing Co. v. A. & S., 122 I. C. C. 3.

(5s) Fifth-class rates assessed on petroleum products from Bayonne and Tremley Point, N. J., to Fresh Pond, N. Y., all Group A points, found unreasonable as compared with commodity rates from various refining points to destinations in eastern trunk-line and New England territories; as compared with commodity rates contemporaneously in effect from Point Breeze, a Philadelphia group point, to Fresh Pond, established in compliance with commission's findings in Transcontinental Oil Co., 89 I. C. C. 738; and to extent it exceeded lower rate subsequently made effective to all Group A points, some of which involve a materially longer haul than to Fresh Pond. Reparation awarded. Transcontinental Oil Co. v. C. R. R. Co. of N. J., 122 I. C. C. 61.

(5t) Sixth-class rate on printing paper from Newburgh and Salisbury Mills, N. Y., to Montclair, N. J., found unreasonable as compared with lower corresponding rates contemporaneously in effect to Newark, Nutley, Rutherford, and Belleville, N. J., points in the general vicinity of Montclair. Reasonable rate prescribed for future and reparation awarded. Holden Paper Co. v. E. R. R., 122 I. C. C. 130.

(5u) Fifth-class rate on crude glycerine (concentrated spent lye) from Milwaukee, Wis., to Union Stock Yards, Chicago, found unreasonable as compared with lower rates contemporaneously in effect from various other Illinois and Iowa points to same destination and to extent it exceeded lower commodity rate subsequently established. Reparation awarded. Armour & Co. v. C. M. & St. P., 122 I. C. C. 380, 381.

(5v) Class rates on wrapping paper and paper articles from Cincinnati, Ohio, to destinations in Missouri, Kansas, Iowa, Nebraska, and Colorado, found unreasonable and unduly prejudicial as compared with lower commodity rates contemporaneously in effect from Fox River group prescribed in 66 I. C. C. 571, to same destinations. However, as practice of basing interterritorial rates on a combination of factors to and from the Mississippi River has been in effect for many years and rates assailed, judged as combination rates, do not produce excessive earnings, they were not unreasonable in the past and no damage has been shown as a result of undue prejudice which may have existed. Reasonable and nonprejudicial rates prescribed for future. Fox Paper Co. v. A., T. & S. F., 122 I. C. C. 399.

(5w) Class rate on wood pulp from Philadelphia and Baltimore to Fort Edward N. Y., found not unreasonable as compared with lower commodity rates from certain Philadelphia piers, New York, and Boston to same destination, or with commodity rates in effect generally from Philadelphia and Baltimore to various New York and Canadian destinations. While carriers subsequently established a commodity rate lower than that charged, assailed rate compares favorably with rates approved by commission on this commodity in 104 I. C. C. 327 and other cases. International Paper Co. v. B. & O., 122 I. C. C. 440.

(5x) Sixth-class rates on wood pulp from Wilmington, Del., to points in New England territory, found unreasonable as compared with lower commodity rates contemporaneously in effect from and to various other points in same general territory. Record indicates that nowhere in territory under consideration does wood pulp actually move regularly on basis so high as sixth class or even 90 per cent of sixth class. Scale of maximum reasonable rates prescribed for future and reparation awarded. Jessup & Moore Paper Co. v. B. & A., 122 I. C. C. 543.

(5y) Class rates on metallic bedsteads and springs from Rome, N. Y., to points in official territory, based on a minimum weight of 20,000 pounds, found not unreasonable as compared with commodity rates, based on same minimum weight, from Atlanta, Ga., to Boston, New York, Philadelphia, and Baltimore, and from Rome to Chicago. Having in mind the difference in transportation conditions between these territories and further difficulty of making intelligent comparisons between class rates in offi-

cial territory and commodity rates in southern and western territories, it follows that evidence of such a nature has little probative force. Rome Metallic Bedstead Co. v. B. & A., 122 I. C. C. 733, 737, 738.

(5z) Third-class rates on printing and wrapping paper l. c. l., from Niagara Falls, N. Y., to Lynchburg, Va., found not unreasonable or unduly prejudicial as compared with lower l. c. l. rates to Lone Jack, South Boston, and Danville, Va., to which Lynchburg is intermediate. Carriers showed that rates from Niagara Falls to Lynchburg compare favorably with corresponding rates between other points in that territory. Moreover, fourth-section departures were protected by appropriate applications, and were subsequently removed by increasing the rates from the farther-distant points to level of rates to Lynchburg. Lynchburg Traffic Bureau v. N. Y. C., 123 I. C. C. 15.

(6a) Fifth-class rate on brass ingots from Chicago, Ill., to Sturgis, Mich., found not unreasonable as compared with lower commodity rate equal to sixth class subsequently established by carriers under a general readjustment of rate in c. f. a. territory, which basis commission approved in 96 I. C. C. 351. In cited case the rate from Chicago to Sturgis was not directly involved, and revision suggested was in nature of a general readjustment which might require both increases and reductions. Complainant offered comparisons with a number of miscellaneous commodities for similar distances, but made no showing with respect to transportation, competitive, and other conditions attending their movement. Carriers, on the other hand, showed that when these shipments moved the general rate basis on brass ingots in c. f. a. territory was fifth class; also that the same basis of rates apply on numerous commodities, which move in substantially greater volume than brass ingots. Hartman Ingot Metal Co. v. C., B. & Q., 123 I. C. C. 20.

(6b) Interests of neither public nor carriers are served by maintaining carload class rates on such high bases that they are rarely used, making it necessary to follow the practice which has prevailed for many years in the Southwest of establishing commodity rates on practically all commodities which move in carloads in material volume. It is due to this practice that many discrepancies in rates which are subject of complaint have arisen, and existing widespread dissatisfaction with complexity of tariffs in the Southwest arises out of prevalence of commodity rates and failure to adjust them on a basis which fairly relates the various points which compete with one another. In the circumstances, commission is of the opinion that it should follow principle that carload class rates in the Southwest should be prescribed which are capable of moving many of the carload commodities, as is the case today in official and western trunk-line territories, thus making it possible to eliminate from tariffs thousands of commodity rates. Consolidated Southwestern Cases, 123 I. C. C. 203, 234.

(6c) Generally speaking, same class percentages should apply throughout any one classification territory, and as rapidly as may be possible, progress should be made to harmonize classification ratings and class percentages throughout the country. Consolidated Southwestern Cases, 123 I. C. C. 203, 233, 234.

(6d) In so far as considerations which govern class percentages are concerned, there are no differences in conditions as between the Southwest and western trunk-line territory. Accordingly, substantially same class percentage should apply in both these territories. Consolidated Southwestern Cases, 123 I. C. C. 203, 234.

(6e) Class and commodity rates applying to, from, or between points in the Southwest and Kansas-Missouri territory found to be in generally chaotic condition, and tariffs there applying complicated and unsatisfactory. Comprehensive system of rates based on distance, and embodying uniform class percentages so adjusted as to permit greater carload movement on class rates needed to correct the situation. Consolidated Southwestern Cases, 123 I. C. C. 203, 217, 235.

(6f) Rates on each commodity in any one class should be in reasonable proportion to rates on other articles in same class, and generally speaking, rates on each article should be determined with reasonable regard for rates on other articles classified the same. Consolidated Southwestern Cases, 123 I. C. C. 203, 306, 307.

(6g) Fifth-class rate assessed on granite monument bases, found unreasonable to extent it exceeded lower commodity rate contemporaneously in effect and published in same tariff subject to shipper's declaration of value in writing.

In conformity with principle announced in 33 I. C. C. 370; 39 I. C. C. 483, duty rested upon carrier's agent to advise complainant of alternative rates and secure his signature to a proper bill of lading. This the agent failed to do. Reparation awarded. Lafayette Granite Co. v. B. & M., 123 I. C. C. 543.

(6h) Fifth-class rates on paper tablets and papeteries from East Hartford, Conn. to Baltimore and Washington, found not unreasonable but unduly prejudicial to extent they exceeded lower commodity rates contemporaneously in effect from Holyoke, Mass., a farther distant point. Carriers showed that New England points of origin are grouped with respect to class rates to Baltimore and Washington and that distance is, therefore, not a controlling factor. Commodities involved move generally from this territory under fifth-class rates and since class rates from Holyoke and East Hartford are the same, it is carrier's intention to place rates from Holyoke on the class basis. Taylor-Atkins Paper Co. v. N. Y., N. H. & H., 123 I. C. C. 583.

(6i) Class rates on interstate traffic from Bluefield, W. Va., to destinations in West Virginia on the Virginia Ry., between Princeton and Oak Hill Junction, W. Va., found unreasonable and unduly prejudicial as compared with local distance rates contemporaneously maintained by Norfolk & Western and the Virginian; with joint rates from Charleston, W. Va., on the Chesapeake & Ohio to destinations on the Virginia; and to extent they exceed distance rates prescribed. Present disparity between rates here under consideration is clearly unwarranted as transportation conditions throughout this territory are substantially the same. Reasonable and nonprejudicial distance rates prescribed for future. Bluefield Traffic Bureau v. N. & W., 123 I. C. C. 653.

(6j) Class A rates on gas engines, steam engines, and boilers between points in Louisiana and Arkansas, found not unreasonable or unduly prejudicial. Only evidence introduced to support allegation of unreasonableness was that articles named could be mixed with other oil-well supplies at rates applying on latter commodity. However, Class A rates were prescribed in 77 I. C. C. 473, for application on boilers and gas or steam engines throughout practically the entire southwestern territory and evidence here presented does not warrant a different finding. Standard Oil Co. v. C., R. I. & P., 123 I. C. C. 669.

(6k) Fifth-class rates on manufactured iron and steel articles from Youngstown, Newton Falls, and Niles, Ohio, and points grouped therewith, to Buffalo and other western New York and northwestern Pennsylvania points, found unreasonable as compared with lower rates contemporaneously in effect between points in c. f. a., territory; from Pittsburgh district to St. Louis under distance scale prescribed in 96 I. C. C. 682; from Buffalo to destinations in Youngstown district; with aggregate of intermediate rates; and to extent they exceeded distance rates prescribed, and unduly prejudicial to extent they exceed the contemporaneous rates from Buffalo to same destinations. Reasonable and nonprejudicial distance rates prescribed for future and reparation awarded. Concrete Steel Co. v. B. & O., 123 I. C. C. 677.

(6l) Complainant attacked fifth class rates charged on tin oxide carloads from East Liberty, Pa., to Sheboygan, Wis., as unjust, unreasonable and unduly prejudicial. East Liberty takes Pittsburgh rates. Shipments moved Pennsylvania to Toledo, P. M. to Ludington, Mich., by car ferry across lake to Manitowoc, Wis., and C. & N. W. beyond, 627 miles, charged fifth-class rate of 42c prior to Sept. 10, 1925 and 40.5c on and after that date. They were alleged to be unreasonable in that they exceeded the rates on pig tin. HELD, rates attacked not unreasonable or otherwise unlawful, complaint dismissed. Federated Metals Corp. v. Pennsylvania R. R., 126 I. C. C. 144.

(6m) In Miles Medical Co. v. B. & O. 118 I. C. C. 33, the Commission found the third class rates charged on drugs and medicines, carloads, from Elkhart, Ind., to New York, N. Y., and Philadelphia, Pa., were not unreasonable or otherwise unlawful, but were applicable during a certain period, and inapplicable during a certain other period. Effective July 15, 1926 the carriers voluntarily established a commodity rate of 71c which is satisfactory to complainant. Case reopened upon petition of complainant that rates charged from June 15, 1925 to Jan. 25, 1926 were applicable rates and not unreasonable, and finding of Commission to that effect was in error. It now develops for the first

time that the tariffs publishing the rate of 70c from Kalamazoo, Mich., to New York and Philadelphia between June 15, 1925 and July 14, 1926 also published a rule in conformity with rule 77 of tariff circular 18 A. HELD, class rates charged from June 15, 1925 to July 14, 1926 applicable rates but unreasonable to extent they exceeded commodity rates from Kalamazoo under rule 77, reparation awarded. Miles Medical Co. v. B. & O. R. R., 126 I. C. C. 159.

(6n) Complainant alleged first class rate of $1.42 charged on one carload of box board, flat, imprinted, to be used as trouser presses shipped Feb. 2, 1924 from Chicago, Ill., to New York, N. Y., was unreasonable and inapplicable. This rating was provided for paper goods, n. o. i. b. n., any quantity. Sixth allegation abandoned. Rate of 94.5c applied on fiber board boxes, knocked down, flat, printed, carloads. HELD, rate attacked unreasonable to extent it exceeded 94.5c, reparation awarded. Chicago Carton Co. v. N. Y. C. R. R., 126 I. C. C. 457.

(6o) Respondents proposed to cancel the application of class rates on sugar, in carloads, between points in Arkansas and Texas, on the one hand, and points in Oklahoma on the other. Present rates are fifth class. Within Texas, interstate and intrastate, commodity rates apply. Respondent proposal to cancel the carload class basis is to prevent shippers from defeating the through charges. HELD, schedules not justified. Cancellation of class rates on sugar, 126 I. C. C. 527.

(6p) Complainant alleged that the rates on potatoes, in carloads from Creeds, Va., Pungo, Va., Pleasant Ridge, Va., Fentress and Hickory Ground, Va., and from Barnetts Creek, N. C., to New York stations were and are unreasonable, unduly prejudicial and in violation of section four. Charged combination rates basing on Norfolk. Joint commodity rates on potatoes apply from points on defendants main line, Fentress to Elizabeth City, to Buffalo, N. Y., and destinations taking Buffalo rates, including Albany, Binghamton, Schenectady and Syracuse. Potatoes, in carloads, are rated sixth class in southern classification and joint sixth class rates apply from the points of origin to the destinations here considered, but the tariff publishing these rates prohibits their use on potatoes. Generally the class rates are lower. HELD, rates unreasonable to extent they exceeded class C rates, reparation awarded. Caruso Rinella Battaglia Co. v. N. S. R. R., 126 I. C. C. 555.

(6q) Complainant alleged fifth class rate of $1.03 charged on cement laundry tubs and parts thereof, carloads, from Chicago, Ill., to New Orleans, La., between Oct. 13, 1923 and Feb. 16, 1925 was unreasonable and unduly prejudicial. Shipments moved 912 miles. A joint commodity rate of 81c applied on plumbers goods generally, including enameled iron and porcelain laundry tubs, in carloads, effective Dec. 20, 1923. Effective May 2, 1925 the rate of 81c was made applicable on cement laundry tubs. They are securely packed and the loss and damage claims are negligible. Prior to Oct. 20, 1923 the rate charged was higher than the St. Louis combination. The rate attacked was higher than the rate established July 15, 1924 on the same commodity to New Orleans from Sheboygan, Wis., a point 137 miles farther distant than Chicago. HELD, rate charged unreasonable to extent it exceeded a rate of 81c, reparation awarded. Chicago Granatine Mfg. Co. v. I. C. R. R., 126 I. C. C. 572.

(6r) Class rates vary widely in the uses to which they are put and in the theories upon which they are constructed. Often they are designed chiefly for less than carload traffic and sporadic carload shipments, while in other cases they are used extensively for the movement of carload traffic in volume. They are apt to be a misleading index of general rate level. New England Divisions, 126 I. C. C. 579, 606.

(6s) Complainant attacked sixth class rate of 28.5c charged and commodity rate of 24.5c on waste paper, carloads, from Boston, Mass., to Thomson, N. Y., as unreasonable, unjustly discriminatory and unduly prejudicial. Thomson is on the G. & J., 21 miles north of Johnsonville, N. Y., the junction of that line with the B. & M. Waste paper in carloads, is rated sixth class, in official classification, but by exception to the classification a minimum of 20,000 pounds is published. The 24.5c rate was established pursuant to United Paperboard Co. v. G. & J. Ry., 81 I. C. C. 591, decided July 20, 1923. While the record clearly shows that it is now too high, it does not indicate that it should be found unreasonable for a period extending back to March 8, 1924, or two years

prior to the filing of the complaint. HELD, 24.5c rate not unreasonable prior to March 8, 1926, the date complaint was filed, but since that date was and will be unreasonable to extent it exceeded 21.5c, reparation awarded. United Paperboard Co. v. B. & A. R. R., 126 I. C. C. 751.

(6t) Proposed increased class and commodity rates between certain points in Iowa and South Dakota and in Colorado and Utah, found not justified. Proposed rates would increase all class rates as well as commodity rates on grain and products and other articles. As there is a surplus of coarse grain in South Dakota and Iowa which must be moved, proposed rates would naturally greatly affect, if not completely destroy, this movement. Moreover, in 109 I. C. C. 27, a similar proposal was found not justified and protestants urge that no such readjustment as proposed should now be made in view of investigation proceedings now pending. Rates from Iowa and South Dakota, 126 I. C. C. 81.

(6u) Third-class rates on adhesive paste in jars, tins, and metal tubes, from Columbus, Ohio to Dallas, Tex., found not unreasonable as compared with lower commodity rates contemporaneously in effect on insecticides or fungicides, including calcium-arsenate or lead-arsenate paste. Carriers urged that rates on latter commodities are low and are maintained because use of these articles by the farmer tends to increase the products of agriculture and also showed that complainant's commodity moves to Texas destinations and from Detroit-Cleveland or St. Louis and Chicago territories generally, on third or fifth-class basis depending upon manner of packing. Practical Drawing Co. v. N. Y. C., 126 I. C. C. 133.

(6v) Second-class rate on furniture frames from Chicago, to Burlington, Iowa, found unreasonable to extent it exceeded lower commodity rate contemporaneously in effect from Chicago to New London, Iowa, a farther distant point to which Burlington is directly intermediate. Lower rate was subject to Rule 77 of Tariff Circular 18-A and commission has consistently held that publication of rates subject to that rule is a substantial compliance with long-and-short-haul provision of fourth section of the act, and affords an adequate basis for an award of reparation on shipments moving to intermediate points at charges higher than those to farther distant points. Reparation awarded. Burlington Shippers Asso. v. C., B. & Q., 126 I. C. C. 179.

(6w) Proposed cancellation of class rates on sugar between points in Arkansas and Texas on the one hand, and Oklahoma, on the other, in order to prevent shippers from defeating through charges found not justified. While there is no c. l. movement of sugar on the class basis, protestants fear that occasion may arise for shipping a mixed carload of groceries, and if the class basis were canceled the fourth-class l. c. l. instead of the fifth-class c. l. rate would apply on any sugar contained in the car. However, one of the fundamental functions of class rates is to provide a basis for possible shipments. Moreover, interstate rates on sugar between points here involved were prescribed or approved in 123 I. C. C. 203, and their establishment will correct difficulties which suspended schedules intend to correct. Cancellation of Class Rates on Sugar, 126 I. C. C. 527.

(6x) Upon premise that class rates are the "normally reasonable rates which, in the absence of controlling reasons to the contrary, would be the rates on which traffic would move," and hence afford a fair test of transportation conditions and general rate levels of various territories, carriers reach conclusion that commission itself has recognized that "conditions west of Chicago call for a much higher basis of rates than in the territory east of Chicago," HELD: Premise is not sound as class rates vary widely in the uses to which they are put and in the theories upon which they are constructed. See 109 I. C. C. 300, 303. Often they are designed chiefly for l. c. l. traffic and sporadic carload shipments, while in other cases they are used extensively for the movement of carload traffic in volume. They are apt to be a misleading index of general rate-level. New England Divisions, 126 I. C. C. 579, 606.

(6y) Joint sixth-class rates on building and agricultural lime from stations on the Baltimore & Ohio to points on the Washington, Baltimore & Annapolis R. R., found unreasonable as compared with lower rates contemporaneously in effect between various Virginia, Maryland, and Pennsylvania points and to extent they exceeded joint commodity rates subsequently established. Washington Build-

ing Lime Co., v. B. & O., 128 I. C. C. 9, 11, 13.

(6z) Class rates as they now exist are frequently not accurate indicia of general rate levels or transportation conditions of different sections of the country. Oklahoma Portland Cement Co. v. D. & R. G. W., 128 I. C. C. 63, 75.

(7a) Complainants attacked class rates charged on scrap brass and brass ingots or pigs, carloads, between New York and New York rate points, Pittsburgh, Pa., rate points and Meadville, Pa., among others, as unreasonable. In the original report, 95 I. C. C. 104, rates found to be unreasonable to extent they exceeded the rates in the reverse direction, and reparation awarded. Case was reopened solely as to the reasonableness of the rates on shipments from New York and New York rate points to Pittsburgh and East Liberty. Fifth class rates applicable. The attacked rates were less than the rates in the reverse direction except prior to April 1, 1922 when the rates were the same. HELD, rates attacked prior to May 3, 1922 not unreasonable; from May 3, 1922 to Aug. 14, 1925 unreasonable to extent they exceeded 25c prior to July 1, 1922 22.5c on and after that date on scrap brass, 22.5c on scrap copper from July 1, 1922 to Nov. 26, 1923, and 23c on scrap copper from Nov. 27, 1923 to Aug. 14, 1925, on and after that date not unreasonable, reparation awarded. Union Smelting & Refining Co., v. C. R. R. of N. J., 128 I. C. C. 129.

(7b) Complainant attacked class rates charged on store and office fixtures in carloads from Columbia, Ga., to Paducah, Ky., Memphis, Tenn., and New Orleans, La., prior to and including July 14, 1925 as unreasonable and unduly prejudicial to Columbus. Furniture is rated third class and third class rates were charged. After these shipments moved, commodity rates were established, minimum 12,000 pounds. HELD, rates attacked not unreasonable or unduly prejudicial. National Show Case Co., v. S. A. L. Ry., 128 I. C. C. 193.

(7c) Third-class rates on store and office fixtures from Columbus, Ga., to Paducah, Ky., Memphis, Tenn., and New Orleans, La., found not unreasonable or unduly prejudicial as compared with those from Atlanta, Louisville, St. Louis, and Chicago, or with lower commodity rates subsequently established. Carriers stated that latter were temporary rates in both directions on a reasonable basis; were made with relation to rates from Atlanta; and should not be used as a basis for condemning rates charged. Moreover, earnings under rates assailed can not be regarded as high when value, character, and light loading of this furniture is considered, nor can it be said that it is a commodity which would call for commodity rates, and since record consists wholly of rate and distance comparisons, a finding of undue prejudice is not warranted. Natl. Show Case Co. v. S. A. L., 128 I. C. C. 193.

(7d) Complainant alleged fifth class rates on window glass, carloads, from Hartford City, Ind., to Minnesota, North Dakota, South Dakota, Iowa, Missouri, Kansas and Nebraska, are unreasonable and unduly prejudicial. Joint fifth class rates are applicable from Hartford City to St. Paul, Minneapolis, Duluth, and destinations on the Missouri river, and combination fifth class rates to points beyond. The western factors of the combination rates are proportional rates. From southwestern points to the same destinations commodity rates are applicable which, to any one destination, are the same from all of those points. The rates from Hartford City and other points in central territory to destinations in western trunk line territory are generally upon the fifth class basis. The disturbance of the class rate adjustment applicable to the numerous destinations covered by the complaint is not warranted upon the present meager record. It is not shown to what extent, if any, the carriers handling complainants traffic control the rates from the southwest. HELD, rates attacked not unreasonable or unduly prejudicial, complaint dismissed. American Window Glass Co., v. A. T. & S. F. Ry., 128 I. C. C. 222.

(7e) Following 96 I. C. C. 289 and 115 I. C. C. 27, second-class l. c. l. rates on printed, waxed wrapping paper between points in official territory found unreasonable to extent they exceeded third class. Reasonable rates prescribed for future and reparation awarded. Ward Baking Co., v. P. R. R., 128 I. C. C. 231.

(7f) Sixth-class rate on iron from Pedricktown, N. J., to Catasauqua, Pa., found unreasonable as compared with lower rates on same commodity between other points in same territory, and to extent it exceeded lower commodity rates subsequently established. Reparation

awarded. Davies & Thomas Co., v. C. R. R. Co., of N. J., 128 I. C. C. 241.

(7g) Complainant attacked class E rate charged of 11c on carloads of gravel, from Holliday, Kas., to Standish, Mo., during Oct. 1925 83 miles, as unreasonable and unduly prejudicial. Effective Feb. 1, 1926 defendant established a commodity rate of 6c, which removed the fourth section departure. There was in effect at time of movement and is now a rate of 5.5c on sand and gravel from Grinter, Muncie and Morris, Kas., 81, 79 and 80 miles, respectively to Standish. These are competing sand and gravel producing points located in the vicinity of Holliday. HELD, rate attacked unreasonable to extent it exceeded 5.5c, reparation awarded. Spencer Co., v. A. T. & S. F. Ry., 128 I. C. C. 346.

(7h) Complainant attacked class rates charged on bar iron, less carloads, from Knoxville, Tenn., to Georgia as unreasonable and unduly prejudicial as compared with rates from Birmingham, Ala. Generally speaking the rates assailed are sixth class, while the rates from Birmingham to the same destinations are less carload commodity rates. The rates from Birmingham are relatively lower than those from Knoxville, distance considered. HELD, rates attacked not unreasonable but are unduly prejudicial. Knoxville Iron Co., v. L. & N. R. R., 128 I. C. C. 513.

(7i) Complainant attacked fifth class rates charged on three cars of calcium arsenate shipped in Feb., Mar. and April 1924 from Middleport, N. Y., to Minden and Shreveport, La., as unreasonable. One shipment moved to Minden over N. Y. C., Newark, N. J., Transmarine Corp, Port Arthur, Tex., T. & F. S., K. C. S., Shreveport and L. & A. to destination. The two shipments to Shreveport moved over the same route except that the L. & A. did not participate in the haul, charged $1.11 to Minden and @ 1.04 to Shreveport. Rate to Waskum, Tex., 22 miles west of Shreveport was 90c and subsequently established to Shreveport. The rates to the Texas points were not applicable over the routes over which complainants shipments moved. HELD, rate attacked not unreasonable, complaint dismissed. Moline George Co., v. N. Y. C. R. R., 128 I. C. C. 517.

(7j) Fifth-class rate on bar steel from Youngstown, Ohio to Lynchburg, Va., governed by official classification, found not unreasonable. While a lower sixth-class rate under southern classification was contemporaneously maintained to Lone Jack, Va., a more distant point, that point is a flag stop at which there is no post office or business of any consequence and rate thereto was subsequently increased to level of the Lynchburg rate, thus removing fourth-section departure. Complainant found not to have been damaged by reason of any undue preference or fourth-section violation that may have existed. Lynchburg Chamber of Commerce v. B. & O., 128 I. C. C. 557.

(7k) Sixth-class rate on china clay from Philadelphia to Newton Falls, N. Y., found unreasonable as compared with lower rates contemporaneously in effect between points in c. f. a. territory; between points in c. f. a. territory and Canadian points; from Philadelphia and Mount Holly Springs, Pa., to numerous destinations in New York for comparable distances; and to extent it exceeded lower commodity rate subsequently established. Reparation awarded. Newton Falls Paper Co. v. R. Co., 128 I. C. C. 563.

(7l) Upon reconsideration of previous reports, wherein commission made its finding after investigation of class-rate structure in southern classification territory, and upon various petitions seeking modifications of findings therein, more particularly with respect to interterritorial rates in first supplemental report 109 I. C. C. 300, such findings modified in certain respects and affirmed in others. Southern Class Rate Investigation, 128 I. C. C. 567.

(7m) Complainant attacked class rates charged on two cars of granite from Barre, Vt., one to New Castle and one to Greensburg, Ind., on May 15 and Oct. 22, 1924, as unreasonable, unjustly discriminatory and unduly preferential. Bill of lading bore notations signed by the shipper to the effect that the value exceeded $2.25 per 100 pounds. Charged fifth class rates of 47 and 48.5c. At time shipments moved commodity rates of 27.5c and 28.5c on blocks, slabs, or pieces of granite not "carved, lettered, polished or traced" and of 32.5c and 33c on blocks, slabs, or pieces of granite "carved, lettered, polished, or traced" were applicable from Barre when the value of the commodity was declared by the shipper as not exceeding $2.25 per 100 pounds. HELD, rates charged not unreasonable or otherwise unlawful, complaint dis-

missed. Dillie v. C. V. Ry., 128 I. C. C. 641.

(7n) Complainant alleged that sixth class rates charged for the transportation of wooden last blocks, carloads, from Gaylord, Mich., to New York, Brockton, Mass., and Philadelphia, Pa., were and are unjust and unreasonable and inapplicable to extent they exceeded the rates on lumber. They are loaded loose in the car and are not susceptible of damage. Gaylord is about 63 miles south of Mackinaw City, rate charged 53c to Philadelphia, 55c to New York and 57c to Brockton. Lumber rates were 37.5c, 39.5c and 41.5c. While sixth class rates may be applicable on lumber quite generally in official territory, there is reason to believe that the bulk of the tonnage actually moves on rates substantially less than sixth class. HELD, rates attacked unreasonable to extent they exceed 47.5c to New York, 45.5c to Philadelphia and 49.5c to Brockton, rates for the future not to exceed those on lumber, reparation awarded. Jackson v. M. C. Ry., 129 I C. C. 235.

(7o) Complainant attacked class rates charged on wooden bobbins, returned empty from Massachusetts on the B. & M. to Skowhegan, Me., as unreasonable, unjustly discriminatory and unduly prejudicial. Skowhegan is on the Me. Central. Second class rate charged, less carloads, and fifth class, carloads. There is in effect upon the B. & M. and Me. C., for application between points local to their line, in each case, a rating and rates of rule 26 on certain secondhand carriers, including wooden spools, returned empty, in less carloads, HELD rating complained of not unreasonable or otherwise unlawful, complaint dismissed. Maine Spinning Co., v. B. & M. R. R., 129 I. C. C. 266.

(7p) Complainant attacked class rate charged on tin cans, carloads, from Baltimore, Md., to Buchwick, Brooklyn, N. Y., between Feb. 2 and Aug. 19, 1924 as unreasonable, unjustly discriminatory and unduly prejudicial to the extent it exceeded 28c. 75% of shipments moved B. & O. and connections for delivery by the Long Island 195 miles, remainder over Pennsylvania and Long Island, charged joint fourth class rate of 34c. The cans are shipped in crates. During the period of movement B. & O. maintained a commodity rate of 28c from Baltimore to Buchwick on enamel ware, tinware, snuff and tobacco boxes or box shapes of the same material, in carloads, and a rate of 28c on empty tin cans, new, from Baltimore to New York and Brooklyn stations, and was established to Buchwick Aug. 20, 1924. HELD, rate assailed of 34c unreasonable to extent it exceeded 28c, reparation awarded. Metal Package Corp. v. B. & O. R. R., 129 I. C. C. 301.

(7q) Complainant alleged that the rates charged on 11 cars of cotton linters shipped from Lakewood Station and Rome, Ga., to Chattanooga, Tenn., between Nov. 19, 1924 and May 8, 1925 as unreasonable. Charged 51c from Lakewood station and 39c from Rome applicable on cotton. Sixth class rates of 34c from Lakewood station and 28c from Rome were in effect. The commodity rates were cancelled May 21, 1925 after which date sixth class rates became effective. HELD, rates assailed unreasonable to extent they exceeded sixth class rates contemporaneously in effect, reparation awarded. Southern Cotton & Paper Co., v. A. & W. P. Ry., 129 I. C. C. 433.

(7r) Complainant alleged that class rates charged on granite, in carloads and less carloads, from Granite Mountain, Llano, and Teich, Tex., to Arizona, Arkansas, Colorado, Illinois, Iowa, Kansas, Kentucky, Louisiana, Mississippi, Missouri, Nebraska, New Mexico, Oklahoma, Tennessee, Utah, and Wyoming are unjust and unreasonable and compared with lower commodity rates from other points of origin unduly prejudicial. All of the points are in what is known as Texas common point territory. Granite is transported in flat or gondola cars, which are staked by the shipper, and the equipment is generally loaded the day it is received. Damage in transit is rare. Ratings in the western classification on granite are class C on carved, lettered, polished or traced, class D on chiseled, dressed, hammered, sand rubbed, or sawed more than four sides, and class E on rough quarried and sawed four sides or less, in carloads and fourth class on all descriptions in less carloads, except chiseled, dressed, hammered or sand rubbed, shipped loose, on which the rating is third class. Class rates are generally applicable to the traffic here considered. HELD, upon the record and Consolidated Southwestern Cases, 123 I. C. C. 203, attacked carload rates for future unreasonable to extent they exceed the percentages of first class pre-

scribed in that decision. HELD, allegation of undue prejudice not sustained. West Texas Chamber of Commerce v. H. & T. C. Ry., 129 I. C. C. 546.

(7s) Complainant alleged fourth class rate of $1.53 charged on three cars of varnish shipped in May, July and Oct. 1924 from Louisville, Ky., to Port Arthur, Tex., was unreasonable. Shipments moved to New Orleans, La., thence Gulf Coast Lines, K. C. S. and T. & Ft. S. A commodity rate of $1.425 applied on paints and varnishes from Louisville to Deming, N. M., and would have applied as a maximum at Port Arthur, an intermediate destination, had not an alternative tariff rule made applicable the rate and minimum applied for the reason that the charges thereby resulting were lower due to the lower minimum. In Consolidated Southwestern Cases 123 I. C. C. 203, the fourth class rate prescribed from Louisville to Port Arthur via New Orleans is $1.45. HELD, rate assailed not unreasonable, complaint dismissed. Peaslee Gaulbert Co., v. Southern Ry., 129 I. C. C. 611.

(7t) Class rates in western trunk line territory admittedly are on a materially lower level than those in the southwest or any other sections of the western district. Boston Wool Trade Asso. v. A. T. & S. F. Ry., 129 I. C. C. 681, 688.

(7u) Complainant alleged that the rates charged on 16 less carload shipments of cotton fabrics, moving between June 13 and Oct. 16, 1922 from Cooleemee Mills, Gibsonville, Graham, Greensboro, Hillsboro, Kannapolis and Salisbury, N. C., to Galveston, Tex., were inapplicable. Shipments moved Southern to Memphis, Tenn., thence over connecting lines to Galveston. The rates of $1.97 and $1.775 were provided in section 3 of the tariff on "carloads, unless otherwise specified." Neither the words "any quantity" nor a minimum weight appeared in connection therewith. After the shipments moved the words "any quantity" were added to the commodity description. The tariff carried provisions permitting the alternative application of rates in sections 2 and 3, whichever were lower, and stated that it was governed "except as otherwise provided" by the western classification, which provided any quantity ratings. While no minimum weight was provided in connection with the carload rate, rule 13 of the classification provided that "the minimum charge for carload shipments shall be $15.00 per car." Rule 14 provided that "the minimum carload weight provided is the lowest weight on which the carload rating or rate will apply." HELD, rates in section 3 subject to a minimum charge of $15 per car, plus the separate loading and unloading charges of 2.5c, were applicable when they resulted in lower charges than those provided in section 2, overcharges to be refunded complaint dismissed. Southern Traffic & Audit Asso. v. I. G. N. Ry., 129 I. C. C. 723.

(7v) Complainant alleged that class rates charged on baking powder, carloads, from Brooklyn, N. Y., to Chicago, Ill., and other points in central territory as unreasonable. Complainant alleged that class rates charged on baking powder, carloads, from Providence, R. I., to Richmond, Va., Logan, Huntington, Bluefield, Williamson and Keystone, W. Va., Pittsburgh and Philadelphia, Pa., and Washington, D. C., were unjust and unreasonable, and in violation of section four. Fourth class rates were in effect prior to July 26, 1926 when they became fifth class. In Rumford Chemical Works v. N. Y. N. H. & H. R. R. Co., 112 I. C. C. 645, the Commission found the rates unreasonable to extent they exceed fifth class. HELD, rates assailed not unreasonable or otherwise unlawful, complaints dismissed. Royal Distributing Co., v. B. & O. R. R., 129 I. C. C. 749.

(7w) Complainant alleged that class rate applicable on one car of scrap zinc from Wyandotte, Mich., June 9, 1923, to Canton, Md., was unjust and unreasonable. Shipment moved D. T. & I., B. & O., and Canton R. R., 757 miles, applicable rate sixth class 34c. The commodity transported was scrap zinc having value for remelting purposes only. A commodity rate of 29c was contemporaneously applicable on spelter, and on zinc dross. Effective July 18, 1923 defendants voluntarily established a specific commodity of 22c on scrap zinc, having value for remelting purposes only, and at the same time reduced the rate on spelter and zinc dross from 29c to 22c, which is the present rate on all three commodities. HELD, rate of 34c unreasonable to extent it exceeded 29c, reparation awarded. Lissberger & Co., v. D. T. & I. R. R., 132 I. C. C. 41.

(7x) Complainant alleged class rate charged on 11 carload shipments of dry goods samples attached to display cards from Brooklyn N. Y., to San Francisco and Los Angeles, Calif., and Seattle,

Wash., between Dec. 1923 and Jan. 1926 were and are unreasonable. Prior to Dec. 1, 1925 there was no transcontinental commodity rate on dry goods samples, and on 10 carload shipments made by complainant over various all rail routes it paid the second class rate of $4.80. Effective on that date a commodity rate of $3.98, minimum 30,000 pounds, the same in amount as the third class rate from Brooklyn to Pacific coast points, was established. HELD, rate charged prior to Dec. 1, 1925 unreasonable to extent it exceeded $3.98, but rate on and after that date not unreasonable, reparation awarded. Detmer Bruner & Mason, Inc., v. Bush Terminal R. R., 132 I. C. C. 100.

(7y) Complainant alleged that class rates applicable on sugar from north Pacific coast points and interior Washington to Chicago, Ill., Boston, Mass., and Landisville, N. J., in Oct. and Nov. 1919 and May 1920 were unreasonable. Original report 91 I. C. C. 75, division 3 found the rates not unreasonable and dismissed the complaint. Joint fifth class rates of $2.19 to Chicago and $2.375 to Boston and Landisville were charged. Reparation was sought to basis of commodity rates in effect from San Francisco and other California points, namely 82c minimum 60,000 pounds or 70c minimum 80,000 pounds, on shipments to Chicago and to the basis of these rates plus the fifth class rates beyond on shipments to Boston and Landisville. The rates on sugar from California to Chicago, on the outer edge of wide rate blankets resulting from intense competition, do not afford a measure of normal maximum reasonable rates. HELD, rates of $1.38 to Chicago and $1.975 to Boston and Landisville from Seattle will not for the future exceed maximum reasonable rates. Armour & Co., v. N. P. Ry., 132 I. C. C. 123.

(7z) Complainant alleged class rates charged on seven cars of automobile lamp lenses between June 5, 1923 and Sept. 1, 1924 from Charleroi, Wagon Works, O., and Omaha, Neb., to San Francisco and Los Angeles, Calif., were unreasonable. Charged fourth class of $3.30 from Charleroi, $3.225 from Wagon Works and $2.75 from Omaha. Subsequently commodity rates of $2.03 from Charleroi, $1.95 from Wagon Works and $1.65 from Omaha were established, which formerly applied on glassware, N. O. S. not including lenses. HELD, rates attacked unreasonable to extent they exceeded subsequently established rate, reparation awarded. MacBeth Evans Glass Co., v. P. R. R., 132 I. C. C. 129.

(8a) Complainant alleged sixth class rates on fertilizer, carloads, between points in central territory were and are unreasonable, and unduly prejudicial to extent such rates exceeded or exceed 75% of sixth class. The commodity is shipped in box cars, in burlap bags containing 125 pounds each. The claims for loss and damage are negligible. Average loading is about 46,400 pounds, average value $28 per ton. HELD, interstate rates on fertilizer carloads, from Indianapolis, Ind., to points in central territory are unreasonable to extent they exceed distance rates ranging from 6c for 5 miles and under to 33.5c for 800 miles, reparation denied. Rauh & Sons Fertilizer Co., v. A. C. & Y. Ry., 132 I. C. C. 287.

(8b) Complainant alleged that the class rates charged on scrap brass and scrap copper having value for remelting purposes only, in straight and mixed carloads from Kansas City, Mo., and Omaha, Neb., to Chicago and other destinations were unreasonable. Consideration will be confined to rates from Kansas City to St. Louis, Peoria and Chicago in 17455. Scarp brass and scrap copper, in straight or mixed carloads, are rated fifth class, minimum 36,000 pounds. Charged fifth class 33.5c to St. Louis and 41.5c to Chicago prior to July 15, 1924. Prior to that date applicable rates were $3.65 per ton to St. Louis and $4.13 per ton to Chicago. Overcharges to be refunded. Fifth class rates of 41.5c to Chicago, North Chicago and Waukegan, Ill., and 33.5c to St. Louis from Omaha. Omaha and Kansas City are Missouri river points which take the same general basis of rates to the destination concerned. The issues presented in both complaints are substantially the same and the record in this complaint does not warrant a different finding with respect to the rates from Omaha than is made with respect to the rate from Kansas City. HELD, rates assailed not unreasonable or unduly prejudicial, complaints dismissed. Atlas Iron & Metal Co., v. A. T. & S. F. Ry., 132 I. C. C. 299.

(8c) Complainant alleged fourth class rate charged on nine less carload shipments of polished marble, made between May 7, 1924 and May 9, 1925 from Knoxville, Tenn., to Lynchburg, Va., was unreasonable, unjustly discriminatory and

unduly prejudicial. Shipments moved over the Southern 430 miles. Rate charged 84.5c. From various points on the Southern more distant than Knoxville there was, and still is, in effect to Lynchburg a commodity rate of 37.5c. This rate applies over the Southern through Knoxville. Lynchburg is intermediate to Charlottesville, Va., 60 miles beyond. The rate assailed also exceeded a combination rate of 60c over the route of movement, composed of fourth class of 22.5c to Caswell and 37.5c beyond. The comparisons tend to show that the fourth class rate applicable was not and is not unreasonable as such. But such a showing is not necessarily determinative here, in the light of the lower commodity rates, not only from contiguous points to the same destination, but from the same origin to other destinations. Less than carload commodity rates lower than fourth class were and are in effect from Knoxville to eastern trunk line territory generally. HELD, rate charged unreasonable to extent it exceeded the aggregate of intermediates, reparation awarded. Lynchburg Chamber of Commerce v. Southern Ry., 132 I. C. C. 317.

(8d) Complainant alleged sixth class rate of 25c charged on ground coal, in carloads from Carleroi, Pa., to Indianapolis, Ind., is unreasonable and inapplicable. Contemporaneous commodity rate of $2.52 was applicable on bituminous coal. Ground coal is a manufactured product of much greater value than coal. It is packed in bags, barrels, and boxes and shipped in box cars, whereas bituminous coal is shipped in open top equipment. Ground coal is not used as a fuel, nor is bituminous coal, as shipped for fuel purposes, interchangeable with ground coal for foundry facings. HELD, rates assailed not unreasonable or otherwise unlawful, complaint dismissed. American Foundry Co., v. Pennsylvania R. R., 132 I. C. C. 345.

(8e) Complainant alleged fifth class rate of $1.07 charged on two cars of prepared roofing shipped during Oct. 1923 from New Orleans, La., to Kansas City, Mo., was unreasonable. Shipments moved T. & P., to Shreveport, La., and K. C. S. beyond, 882 miles. A commodity rate of 57.5c was in effect over routes east of the Mississippi river via St. Louis, Mo. Distance via St. Louis is about 100 miles in excess of the distance over route of movement. June 25, 1924 a rate of 52c was established on this traffic and is now in effect. HELD, rate assailed unreasonable to extent it exceeded 60c, reparation awarded. Nicholas Wire Sheet & Hardware Co., v. A. T. & S. F. Ry., 132 I. C. C. 347.

(8f) Complainant alleged rate charged on tin cans, carloads, and on tin pails, in carloads, from East Norwood, O., to Kentucky, Tennessee, Alabama, Mississippi, Florida, Louisiana and Arkansas were and are unreasonable, unduly prejudicial, inapplicable and in violation of section four. Cans and pails are generally loaded in bulk or in cases, and pails are sometimes nested. Fourth class rates apply on tin pails and fifth class on tin cans. Commodity rates are applicable from preferred points. HELD, rates assailed applicable, and not unreasonable in past, but unreasonable in future to extent they exceed fifth class and fourth class rates approved for the distances in Southern Class Rate Investigation, 100 I. C. C. 513, 113 I. C. C. 200. United States Can Co., v. A. & V. Ry., 132 I. C. C. 363.

(8g) Complainant alleged the fourth class rate of 43.5c charged on three carloads of glycerine, other than crude, in drums, shipped between August 3 and Sept. 19, 1925 from Ivorydale, Cincinnati, O., to Grafton, Ill., was unreasonable, unjustly discriminatory and unduly prejudicial and reparation is sought to basis of the subsequently established commodity rate of 34c. Grafton is a local point on the A. & E., about 35 miles northeast of East St. Louis. Shipments moved Big Four to East St. Louis, and A. & E. beyond, distance 400 miles, fourth class rate charged 43.5c. Prior to the movements Big Four and other carriers maintained a commodity rate of 34c on this commodity to Ashburn, Mo., 466 miles, and to Fayville, Ill., 356 miles. HELD, rate charged unreasonable to extent it exceeded 34c, reparation awarded. Illinois Powder Mfg. Co., v. C. C. C. & St. L. Ry., 132 I. C. C. 403.

(8h) Complainant alleged class rates charged on insulators, carloads, from Kenova, W. Va., to points in eastern trunk line territory are unreasonable, unjustly discriminatory and unduly preferential of its competitors. All of the shipments, with two exceptions, were sent to New York for export. Kenova is on the Ohio river, about 8 miles southwest of Huntington, W. Va. Both points were formerly in the 87% group in the

rate adjustment to trunk line territory, but in Jobbers & Mfrs. Bureau of Huntington v. A. C. R. R. Co., 57 I. C. C. 64, the Commission found that the rates from a group including both these points should not exceed 82% of the New York-Chicago rate. Insulators, in carloads, are rated fifth class in official territory and move on that basis from Kenova to eastern territory. Prior to the decision above cited commodity rates were published on various manufactured articles from both Huntington and Portsmouth, O. The latter point is in the same group, about 39 miles west of Kenova on the north bank of the Ohio river. In the report the Commission referred to the willingness of the B. & O. and C. & O. to establish commodity rates from Huntington to the east on the Columbus, O., basis of 77%. Kenova is entitled to the same consideration. HELD, rates assailed unreasonable and unduly prejudicial to extent they exceed 44c, reparation awarded. Jeffrey Dewitt Insulator Co., v. B. & O. R. R., 132 I. C. C. 423.

(8i) Complainant alleged sixth class rate of 27c on inedible tallow, carloads, from Norton Siding, Va., to New York, Jersey City and other points taking New York rates, prior to Nov. 23, 1925 were and are unreasonable, unjustly discriminatory and unduly prejudicial. Norton Siding is on the R. F. & P. 5 miles south of Washington, 4 miles north of Alexandria, Va., and 1 mile north of Potomac, Yard, Va. Inedible tallow is rated fifth class, but by exceptions it is given sixth class. Shipments moved both B. & O. and Pennsylvania, short line distance to Jersey City 232 miles and to New York over Pennsylvania, 257 miles. It would be of no advantage to complainant if the all rail commodity rate from Richmond was increased to the class basis or to the level of the rate from Norton Siding. HELD, rates assailed not unreasonable, complaint dismissed. Norton & Co. v. R. F. & P. Ry., 132 I. C. C. 517.

(8j) Complainant alleged that rate charged on numerous cars of steel from Elwood, Ind., to St. Louis, Mo., was and is unreasonable. Shipments made between May 17, 1924 and Oct. 7, 1926, over N. Y. C. & St. L. to Lafayette, Ind., thence Wabash, 293 miles, charged fifth class rate of 28c. HELD, rate assailed not unreasonable, complaint dismissed. Ames Shovel & Tool Co. v. W. Ry., 132 I. C. C. 659.

(8k) Complainant alleged sixth class rate charged on eight cars of lath from Duluth, Minn., to Detroit, Mich., April 30 and May 17, 1924 were unreasonable. Shipments moved water and rail, Minnesota Atlantic Transit Co., to the docks at Detroit, thence P. M., 726 miles, charged sixth class 30.5c plus reconsigning. A commodity rate of 23.5c was published prior to the movement but did not become effective until May 25, 1924. Sixth class all rail rate from Duluth to Detroit is 41c, whereas the all rail commodity rate on lumber, including lath, from and to those points is 33c, about 76% of the class rate. HELD, rate assailed unreasonable to extent it exceeded 23.5c, reparation awarded. Bayly Thompson Co., v. M. A. T. Co., 132 I. C. C. 665.

(81) Complainant alleged sixth class rates charged on 10 cars of rough lumber shipped between April 22, 1924 and Jan. 14, 1926 from Columbia City and Bourbon, Ind., to Moline, Ill., were unreasonable, unduly prejudicial and unjustly discriminatory. Charged 24.5c to Columbia City and 24c from Bourbon. Complainant seeks 20.5c commodity rate from both points of origin and reparation. HELD, rates assailed not unreasonable or otherwise unlawful, complaint dismissed. Peabody Lumber Co., v. Pennsylvania R. R., 132 I. C. C. 741.

(8m) Complainant alleged class rate charged on three cars of logs shipped Feb. 8, 13 and 15, 1924 from Columbia City, Ind., to Hicksville, O., was unreasonable. Shipments moved Pennsylvania to Auburn Jct., Ind., B. & O., beyond, 42 miles, charged sixth class rate of 13c. In Indiana Public Service Commission v. A. A. R. R. Co., 85 I. C. C. 533, the Commission found carload rates on logs in central territory were unreasonable to the extent they exceeded 65% of sixth class. HELD, reparation awarded on basis of 9c, minimum 34,000 pounds. Crook Son & Co., v. Pennsylvania R. R., 132 I. C. C. 749.

(8n) Fifth-class rates on petroleum fuel oil in tank-car loads from Pettys Island, N. J., to Garden City, Long Island, N. Y., a Group B point, found unreasonable as compared with rates established following 89 I. C. C. 738, from same point of origin to Group A points. Reasonable rates prescribed for future and reparation awarded.

Curtiss Aeroplane & Motor Co. v. P. R. R,. 129 I. C. C. 174.

(8o) Class rates on muriatic, sulphuric, and nitric acids from Kansas City, Mo.-Kans., Grasselli, Ind., and Hegewisch, Ill., to Omaha, Nebr., found not unreasonable as compared with lower commodity rates subsequently established. Bruce & Co. v. C. & N. W., 129 I. C. C. 435.

(8p) Fifth-class rates on pig lead, red lead, and litharge from Joplin, Mo., to Oklahoma City, Okla. found unreasonable but not unduly prejudicial as compared with lower commodity rates from Joplin to various points in western territory, including St. Louis, Mo., East St. Louis, Ill., and Kansas City, Mo., and with distance rates prescribed in Consolidated Southwestern Cases, 123 I. C. C. 203. Competitive situation prevents lower rates from Joplin to St. Louis, East St. Louis, and Kansas City from being basis of undue prejudice. Reasonable rates prescribed for future and reparation awarded. Oklahoma Traffic Asso. v. St. L.-S. F., 129 I. C. C. 461.

(8q) Fourth-class rate, minimum 30,000 pounds, on shipments of varnish weighing less than 33,000 pounds, found not unreasonable as compared with fifth-class rate, minimum 36,000 pounds, contemporaneously applicable on paint. Under an intermediate clause, a lower commodity rate on varnish, minimum 40,000 pounds, would have been applicable to shipments had not an alternative rule provided for application of rate and minimum producing lowest charge. Transportation qualities of paint and varnish are not shown to be similar and fourth-class rate was prescribed on paint between the same points, in 123 I. C. C. 203. Peaslee-Gaulbert Co. v. S. Ry., 129 I. C. C. 611.

(8r) Class rates on rough quarried granite, c. l. from East Weymouth, Mass., to local points on the N. Y., N. H. & H., found unreasonable and unduly prejudicial as compared with lower commodity rates contemporaneously applicable on common brick and on stone and granite paving and curbing; and to extent they exceeded, exceed, or may exceed rates based on distance scale herein prescribed, minimum 48,000 pounds. Reparation awarded. Plymouth Quarries v. N. Y., N. H. & H., 129 I. C. C. 621.

I. RIGHT OF CARRIER TO ESTABLISH.

§2. Jurisdiction of Commission.

See Interstate Commerce Commission I; Jurisdiction of Commission.

(a) Doctrine that burden of rail transportation should be distributed among the various kinds of freight with some regard for economic needs of the country has always had recognition, in one way or another, in the rate structure. The familiar principle of "charging what the traffic will bear," or, as some prefer to put it, of "not charging what the traffic will not bear," has had that result in some degree. The principle which has been quite generally recognized in public regulation, that the value as well as the cost of service is a factor entering into the determination of just and reasonable rates, has had a similar result. In another form the same thought seems to be predominant in the Hoch-Smith resolution. But the inevitable result of such a distribution of transportation burden must be that some kinds of traffic, under just and reasonable rates, will earn materially less for carriers than others. Fertilizers between Southern Points, 113 I. C. C. 389, 420.

(b) There are manifest limitations to the doctrine that burden of rail transportation should be distributed among the various kinds of freight with some regard for economic needs of the country. It may be conceded that commission has no power to fix rates upon any kind of freight which will fail to produce some margin over operating cost. Moreover, the fact that certain carriers are largely dependent upon a particular form of traffic and have little opportunity to recoup a deficiency in profit upon such traffic by recourse to higher rates upon other kinds must be taken into consideration. Fertilizers between Southern Points, 113 I. C. C. 389, 420.

II. BASIS OF CLASSIFICATION.

§3. In General.

(a) No classification can be so minute as to conform to differing varieties and conditions of traffic, and to separate different grades or densities of same article into different classes with varying rates, even if it could be accomplished, would go far to defeat the real purpose of classification. See 49 I. C. C. 327, 330. Western Paper Makers' Chem. Co. v. A. A. R. R., 109 I. C. C. 133, 138, 139.

(b) The classification contains but a limited number of ratings, and commodities possessing somewhat different transportation characteristics must often of necessity be assigned to same class. French Battery & Carbon Co. v. C. & N. W., 112 I. C. C. 128, 131, 132.

(c) Differences between various articles can not always find expression in different classification ratings because of the limited number of classes in the classification and the comparatively wide spreads between the class rates. Hollingshead Co. v. A. A. R. R., 115 I. C. C. 95, 97.

(d) First class is an unusually high carload rating. In general it is assigned only to a few light and bulky articles of high value, to especially perishable commodities like fresh strawberries, and to commodities that are dangerous to handle. Providence Exchange v. N. Y., N. H. & H. R. R., 118 I. C. C. 190, 191.

(e) Differences in transportation characteristics and per pound values between various articles can not always find expression in different classification ratings because of limited number of classes in classification and comparatively wide spreads between class rates. Hollingshead Co. v. A. A. R. R., 115 I. C. C. 95, 97.

(f) Rating on component or raw materials is not conclusive of rating to apply on a finished article. Troxel Mfg. Co. v. B. & O., 126 I. C. C. 169.

(g) It does not seem unreasonable to require a carrier which maintains fourth-section departures under protection of an order, to keep in touch with changes in classification governing its class rates between same points and to revise its commodity rates conformably. Fourth Section Departures, 129 I. C. C. 187, 195.

§4. Bulk or Weight of Commodity.

See Evidence §65; Express Companies §18; Loading and Unloading; Passenger Fares and Facilities §10.

(a) Official classification ratings on soda-fountain counter interiors, on soda-fountain counters when packed with soda-fountain counter interiors, and on work boards, bar or counter, found unreasonable for l. c. l. and not unreasonable for c. l. shipments. Evidence shows that only two rows of fountains can ordinarily be loaded lengthwise in a car, and that the fountains can not well be top loaded. It nevertheless appears practicable, in loading merchandise cars with l. c. l. freight, to place other packages alongside and on top of fountains if carriers desire to use this space. Nat'l. Commercial Fixture Mfrs. Asso. v. A. A. R. R., 109 I. C. C. 479.

(b) Official classification ratings on l. c. l. shipments of soda-fountain counter interiors, on soda-fountain counters when packed with sofa-fountain counter interiors, and on work boards, bar or counter, found unreasonable. Actual loading possibilities rather than mathematical weight density should be considered in fixing ratings on such commodities, and evidence shows that it is practicable, in loading merchandise cars with l. c. l. freight, to place other packages alongside and on top of fountains if carriers desire to use this car space. Nat'l Commercial Fixture Mfrs. Asso. v. A. A. R. R., 109 I. C. C. 479.

(c) In rating light and bulky articles a difference in weight density of only a few pounds per cubic foot becomes a matter of first importance, but other considerations, such as value, susceptibility to damage, and method of packing, can not be disregarded. Nat'l Commercial Fixture Mfrs. Asso. v. A. A. R. R., 109 I. C. C. 479, 482.

(d) Actual loading possibilities rather than mathematical weight density should be considered in fixing c. l. ratings for light and bulky articles. On the other hand, limitations on loading, if peculiar to c. l. shipments, are not properly a factor in fixing l. c. l. ratings. Nat'l. Commercial Fixture Mfrs. Asso. v. A. A. R. R., 109 I. C. C. 479, 483.

(e) Having regard for difference in structure of freight and express classifications, commission can not predicate a condemnation of freight rate for light and bulky articles solely upon a showing that express rates are lower between some points. Parlor Frame Mfrs. Asso. v. A. A. R. R., 118 I. C. C. 154, 155.

(f) Weight density or weight of an article in proportion to space it occupies, is an important consideration in freight classification, whereas, under existing system of express rates practically all articles except food products are charged first-class rates regardless of their bulk. Parlor Frame Mfrs. Asso. v. A. A. R. R., 118 I. C. C. 154, 155.

(g) Paper cups, nested and flat, average substantially same value per pound, and risk of damage is negligible. When used for same purpose they compete commercially. While the greater density of flat cups when packed permits loading to a c. l. weight heavier than can be attained by the nested cup, this consideration alone does not justify ratings on flat cups lower than on nested cups. Public Service Cup Co. v. A. C. L., 118 I. C. C. 697, 701.

(h) The weight per cubic foot of an article is an important factor in its classification. Burroughs Adding Machine Co. v. M. C., 120 I. C. C. 19, 22.

§4½. Knocked-down or Set-up Shipments.

See Classification §21 (a); Knocked-down Shipments.

(a) Complainant attacked less carload rating on wooden oil tank parts, in boxes, crates, or bundles, in the official classification as unreasonable. Wooden oil tanks, knocked down, are rated third class. Rule 20 of the classification provides: "Parts or pieces, constituting a complete article, received as one shipment, on one bill of lading, will be charged at the rating provided for the complete article." Knocked down wooden silos, consisting of silo staves with not to exceed their necessary equipment of iron, steel or wooden silo parts, are rated rule 26c l. c. l. HELD, third class rating unreasonable to extent it exceeds rule

26 rating of 20% less than third class. Reparation denied. Parkersburg Rig & Reel Co. v. B. & O. R. R., 115 I. C. C. 539.

(b) The rating on the complete articles applies when the missing parts are insufficient to affect its identity. Parkersburg Rig & Reel Co. v. B. & O. R. R., 115 I. C. C. 539, 540.

(c) Following 59 I. C. C. 751, and other cited cases, official classification third-class rating on wooden tanks, k. d., found unreasonable to extent it exceeded the rule 26 rating of 20 per cent less than third class. Rating found reasonable prescribed for future. Parkersburg Rig & Reel Co. v. B. O., 115 I. C. C. 539.

(d) Coffin material was assessed sixth-class rate applicable on knocked-down coffins. Complainant contended for a lower class A rate on "Coffin stock, consisting of built-up or combined wood, bent or straight." Carrier urged that shipment did not consist of built-up wood but was sap gum lumber cut to shape, and that since no commodity rate applied on coffin material there was no alternative but to assess the knocked-down coffin rate. HELD, class A rate was applicable by analogy under a rule of the classification which provided that when articles are not specifically provided for, nor embraced as articles "N. O. I. B. N." classification provided for analogous articles should apply. Gum lumber cut to shape is closely analogous to built-up or combined wood, but neither are properly described as coffins until further manufactured, and to constitute knocked-down coffins would require the inclusion of all parts necessary to make up a complete coffin. Reparation awarded. Jackson Traffic Bureau v. I. C., 118 I. C. C. 515.

(e) To constitute a shipment of "knocked-down" articles, requires inclusion of all parts necessary to make a complete or a substantially complete article. Jackson Traffic Bureau v. I. C., 118 I. C. C. 515, 516.

(f) Complainant attacked rates on six shipments of wooden chairs in the white, knocked down, in carloads, from Union City, Pa., to Memphis, Tenn., between Aug. 3, 1922 and Jan. 22, 1925 as unreasonable and inapplicable. Shipments consisted of wooden chairs, in the white, partially assembled. In order to produce a complete chair in the white complainant has only to glue the under stock, drive it into the seat and level it. HELD, applicable rate prior to July 1, 1923 was 81c, and subsequently 88.5c, not unreasonable, complaint dismissed. Memphis Furniture & Mfg. Co. v. L. & N. R. R., 120 I. C. C. 267.

(g) Rates on "Furniture and Furniture Parts" were assessed on chairs, in the white, partially assembled. In the same tariff, carrier published lower rate on "Chair Stuff or Stock, K. D., in the white." Classification provided separate ratings on wooden chairs, knocked-down, in the white, and when knocked-down flat. Upon contention that commodity here shipped was chair stock, k. d., since it conformed to a rule of the tariff which provided that k. d. ratings involved the taking apart of the commodity in such a manner as to materially reduce the space occupied, HELD: The mere separation of the chairs into two or more parts did not destroy their identity as chairs and to sustain contention raised would nullify the distinction between the ratings on chairs, knocked-down and chairs knocked-down flat. Rates charged were therefore legally assessed. Memphis Furniture & Mfg. Co. v. L. & N., 120 I. C. C. 267.

§5. C. L. and L. C. L. Shipments.

See Infra §13; Allowances §8(7a), §10(b); Any Quantity Rates I (w); Cars and Car Supply §11⅞; Class Rates §2 (3v) (5b) (7h) (8c); Classification §4 (b), §13, §17 (3k), §22 (4n) (4q); Commodity Rates §1 (c), §2 (b), §5 (d) (k); Evidence §8 (j), §63; Explosives and Dangerous Articles (a); Express Companies §10 (k); Facilities and Privileges §15½ (a); Long and Short Hauls §6¾ (s) (x); Perishable Freight (a); Rail and Water Rates (3h) (3i); Reduced Rates §5 (s) (w) (x); Refrigeration §6½ (a); Released Rates §1½ (d), §4 (a), §5 (c); Storage §2 (c), Tariffs §18 (pp) (3c); Through Routes and Joint Rates §15 (3g); Transportation §2 (b); Trap Cars (a) (b).

(a) Official classification rating and rates on steam-shovel parts, l. c. l., found not unreasonable as compared with ratings on iron and steel castings, n. o. i. b. n., in the rough. Erie Steam Shovel Co. v. B. & O., 104 I. C. C. 367.

(b) Car-mile revenue is often employed as a basis for comparison of c. l. rates, but is obviously improper for comparison of l. c. l. shipments which move at a flat charge to scattered destinations in small individual lots or parcels. Newspapers in Baggage Cars, 104 I. C. C. 527, 532.

(c) One of the most effectual ways to destroy continuity of a carload movement is to break it up into less-than-carload shipments. Armour & Co. v. Director General, 104 I. C. C. 603, 605.

(d) Class rates applicable on glass lamp globes, lettered, in boxes, l. c. l., from Cincinnati and Brighton, Ohio, to Los Angeles, Calif., found unreasonable to extent they exceeded lower contemporaneous commodity rate on unlettered glass lamp globes and other commodities from and to same points. Reasonable rates prescribed for future and reparation awarded. Boyle-Dayton Co. v. A., T. & S. F., 107 I. C. C. 151.

(e) Ratings and rates on new and on junked old worn-out electric automobile armatures, l. c. l., found not unreasonable as compared with ratings and rates on various automobile parts. Electric armatures are not rated as automobile parts. They are built in a variety of forms and sizes, ranging from diminutive type used in very small motors to the gigantic type employed in generators for central-station equipment. The record refers almost entirely to one type of automobile electric armatures, and contains little or no information as to automobile armatures generally and how such armatures compare with other small armatures in value, loading, weight per cubic foot, volume of movement, etc. It is here sought to segregate automobile electric armatures from other kinds, but there is no basis for assuming that they are entitled to more favorable ratings. Oklahoma Traffic Asso. v. A. & R., 109 I. C. C. 457.

(f) Official classification ratings on soda-fountain counter interiors, on soda-fountain counters when packed with soda-fountain counter interiors, and on work board, bar and counter, found unreasonable for l. c. l. and not unreasonable for c. l. shipments. Actual loading possibilities rather than mathematical weight density, should be considered in fixing ratings on such commodities, and evidence shows that only two rows of fountains can ordinarily be loaded lengthwise in a car, and that the fountains can not well be top loaded. It nevertheless appears practicable, in loading merchandise cars with l. c. l. freight, to place other packages alongside and on top of fountains if carriers desire to use this car space. Nat'l. Commercial Fixture Mfrs. Asso. v. A. A. R. R., 109 I. C. C. 479.

(g) Actual loading possibilities rather than mathematical weight density should be considered in fixing c. l. ratings for light and bulky articles. On the other hand, limitations on loading, if peculiar to c. l. shipments, are not properly a factor in fixing l. c. l. ratings. Nat'l. Commercial Fixture Mfrs. Asso. v. A. A. R. R., 109 I. C. C. 479, 483.

(h) Complainant attacked less carload commodity rate charged on candy forwarded from Chicago, Ill., to Portland, Ore., on Sept. 15, 1922, as unreasonable, unjustly discriminatory and unduly prejudicial. Charged $3.21 and effective Oct. 30, 1922, defendants established a rate of $2.10 on confectionery, carloads, minimum 30,000 pounds. HELD: Rate attacked not unreasonable or otherwise unlawful. Complaint dismissed. Bunte Bros. v. C. & N. W. Ry., 112 I. C. C. 557.

(i) Complainant attacked less carload rating on baking powder in cans, cartons or glass in three classifications and carload ratings in glass, in southern and western, and in cans, cartons, or glass in official classification as unjust, unreasonable, unjustly discriminatory and unduly prejudicial in comparison with the ratings on self rising flour. Baking powder is the leavener used in making bread or cake. Loss and damage claims are negligible. Present carload rating of fifty class, in cans or cartons, in the southern and western classifications represent a reduction from fourth class, and is satisfactory to complainants. Self rising flour, in inner containers in boxes, in bags, or in barrels, is rated fourth class in official and western classifications, in less carloads, and fifth class, minimum 40,000 pounds in carloads. In southern territory, on any quantity rating of class C is applicable on this commodity when shipped in the containers indicated. HELD: Less carload rating on baking powder in cans or cartons, in the three classifications not unreasonable, unjustly discriminatory or unduly prejudicial; that rating in the three classifications on baking powder, in glass, packed in barrels or boxes, when

shipped in less carloads unreasonable to extent it exceeds a rating of second class; that carload ratings on baking powder, in glass, packed in barrels or boxes, in southern and western classifications and in cans, cartons, or glass in official classification unreasonable to extent they exceed a rating of fifth class, minimum 36,000 pounds, but not unjustly discriminatory or unduly prejudicial. Rumford Chemical Works v. N. Y. N. H. & H. R. R., 112 I. C. C. 645.

(j) Rate on burlap bags, in bales, l. c. l., from New Orleans to Tuscaloosa, Ala., found not unreasonable, but unduly prejudicial to Tuscaloosa and unduly preferential of Birmingham to extent it exceeds lower contemporaneous rates on like traffic from New Orleans to the latter named point. Nonprejudicial rate prescribed. Dixie Peanut Mills v. A. G. S., 112 I. C. C. 167.

(k) First-class rate on l. c. l. shipment of all-metal and metal-and-wood settees, k. d., in bundles, assessed due to such shipment not being wrapped in burlap or paper in conformity with tariff specifications, found unreasonable to extent it exceeded lower rate subsequently established when packing requirement was removed. The wrapping of these articles would have served no useful purpose; in fact, wrapping in paper would have made them less easy to handle. Reparation awarded. Dow Co. v. C., C., C. & St. L., 112 I. C. C. 320.

(l) Less-than-carload commodity rate on candy found not unreasonable as compared with lower c. l. rate on confectionery subsequently established. The unreasonableness of a rate is not established, nor is it admitted, by a subsequent reduction. Bunte Bros. v. C. & N. W., 112 I. C. C. 557.

(m) Less-than-carload commodity rate assessed on candy found not unreasonable as compared with lower c. l. rate contemporaneously maintained on chocolate, carpets and rugs, drugs, medicines, perfumery, toilet preparations, and chemicals. Comparisons submitted are of little probative force in absence of evidence as to comparative transportation and other conditions, and while carriers subsequently established such lower rate on confectionery, unreasonableness of the l. c. l. rate is not established, nor is it admitted, by subsequent reduction. Bunte Bros. v. C. & N. W., 112 I. C. C. 557.

(n) Less-than-carload rating on baking powder in cans or cartons in southern, western, and official classifications found not unreasonable, discriminatory, or unduly prejudicial; but l. c. l. ratings on this commodity in glass in the three classifications and c. l. ratings in southern and western classifications in glass, and in official classification in cans, cartons, or glass found unreasonable as compared with ratings on self-rising flour. Reasonable ratings prescribed for future. Rumford Chemical Works v. N. Y., N. H. & H., 112 I. C. C. 645.

(o) Complainant attacked rates charged on less carloads of cash and document boxes from Middlefield, Middletown and New Haven, Conn., and Grand Rapids, Mich., to Chicago, Ill., between Nov. 3, 1922 and Sept. 20, 1924, as unreasonable and unduly prejudicial to extent they exceeded rates on boxes, iron or steel, n. o. i. b. n. Charged double first class and effective Sept. 20, 1924, the item covering cash or document boxes was cancelled, and since that time defendants have assessed first class rates. The record shows that, considering the elements of bulk, weight, value, and expense of handling, complainants boxes bear a close analogy to many other boxes which were entitled to move at first class rates during the period covered by the complaint. HELD, rates attacked unreasonable to extent they exceeded first class, reparation awarded. Horders Inc. v. C. A. T. Co., 113 I. C. C. 520.

(p) Double first-class rate on l. c. l. shipments of cash or document boxes, found unreasonable to extent they exceeded rates contemporaneously applicable on actresses makeup boxes and various other iron, steel, and tin boxes n. o. i. b. n., rated first class and with which cash or document boxes come into active competition. Carrier subsequently established first-class rates and while a finding of unreasonableness can not be presumed from the voluntary reduction, considering the elements of bulk, weight, value, and expense of handling, cash or document boxes which bear a close analogy to other boxes taking first-class rates, were entitled to move at similar rates. Reparation awarded. Horder's v. C. A. T. Co. of U. S., 113 I. C. C. 520.

(q) Complainant attacked class rates applicable on less carloads of fiber furni-

ture from Columbia, S. C., to southern classification territory, as compared with commodity rates from North Carolina manufacturing points to the same destinations as unduly prejudicial and unjustly discriminatory. Prior to April 30, 1925, the classification rating on fiber furniture, n. o. s., less carloads, was double first class. On that date it was increased to three times first class, and is uniform throughout the three classification territories. The commodity rates in effect from Winston Salem and Silver City to southeastern territory were established many years ago and were made the same as the then prevailing class rates from Virginia cities, which were published to apply on furniture, n. o. s., and included all kinds of furniture not indexed or shown by name in the tariffs, and included, technically speaking, fiber furniture. Since that time the classification has been changed and many of the rates have undergone revision, but none of the furniture class rates has been revised. There is no showing as to the extent of the competition. HELD, rates attacked not unjustly discriminatory or unduly prejudicial, complaint dismissed. South Carolina Penitentiary v. A. & R. Ry., 113 I. C. C. 584.

(r) Complainant attacked rates on marble, less carloads, from Cardiff, Md., to various destinations in eastern states and New England as unreasonable and unduly prejudicial. Cardiff is a local station on the Maryland, 43 miles north of Baltimore and 34 miles south of York. At Baltimore the Maryland connects with the B. & O. and Pennsylvania and at York with the Pennsylvania. The Pennsylvania also operates a line between Baltimore and York which is 57 miles long and thus 20 miles shorter than that of the Maryland. The official classification ratings on marble, stone, or granite blocks, pieces or slabs, less carloads, are fourth class when in the rough, and rule 26, 20% less than third class, but not less than fourth class when in the finished state. Rates attacked are composed of the combinations of class rates to and beyond the junction points or York or Baltimore. In connection with the majority of the shipments made by complainant, where were for the longer distances, the combining of the Marylands local rates and the group rate in effect from the point of interchange with its trunk line connection, served to materially reduce the ton mile earnings under the through rates as compared with those accruing under the latter carriers local rates. Traffic and transportation conditions in connection with shipments from Cardiff to the destination territory, in so far as the initial part of the movement is concerned, are materially different from and less favorable than those obtaining between the trunk line points compared by complainant. These latter points are not only located for the most part on main lines of trunk line carriers operating through territory of heavy traffic density, but in many instances the transportation entails only a single line haul. The Maryland is a road of light traffic density and encounters substantial operating handicaps practically no through or overhead traffic and is dependent upon such business as originates or terminates at points on its line, upon the most of which it receives its local rates. Whatever rate disadvantage complainant may be laboring under in the marketing of its products appears to be principally because of the location of its quarry on an independently owned and operated short line of railroad of light traffic density and unfavorable operating conditions. HELD, rates attacked not unreasonable or unduly prejudicial, complaint dismissed. Cardiff Green Marble Co. v. M. & P. R. R., 113 I. C. C. 655.

(s) Combination class rates to and beyond York, Pa., or Baltimore, Md., charged on l. c. l. shipments of marble moving from Cardiff, Md., to destinations in eastern and New England States found not unreasonable or unduly prejudicial as compared with rates on same classes from such noncompetitive points as Baltimore, York, Philadelphia, and New York City, or with rates from Westfield, Mass., and Roxbury, Vt., from which latter point Cardiff is said to meet its principal competition. Traffic and transportation conditions in connection with shipments from Cardiff, in so far as initial part of movement is concerned, are materially different from and less favorable than those obtaining between trunk-line points with which comparison is made, and whatever rate disadvantage complainant may be laboring under in marketing of its products appears to be principally due to location of its quarry on an independently owned and operated short line of light traffic density and unfavorable operating conditions. Cardiff Green Marble Co. v. M. & P., 113 I. C. C. 655.

(t) While nearly all commodities are given ratings in the prevailing classifications, it is conceded that class rates are too high for carload application in many, particularly on those commodities which are of low value or are shipped in great volume. Shipments in less carload quantities, however, ordinarily move in a way which causes relatively high cost of operation, and they are seldom far down in the scale of value. Given a reasonable level of class rates, it seems that under few, if any, circumstances will the Commission be justified in requiring the maintenance or establishment of less carload commodity rates. Cardiff Green Marble Co. v. M. & P. R. R., 113 I. C. C. 655, 660.

(u) Complainant attacked rates on small arms ammunition packed in cases, less carloads, from New York and Baltimore, Md., to Lynchburg, Va., as unreasonable and unduly prejudicial; that carload rates on brick machinery from Lancaster, Pa., to Deacon, Va., are unreasonable unduly prejudicial and in violation of fourth section. First class rates of $1.025 and 99.5c are applicable, all rail and water and rail routes, on small arms ammunition to Lynchburg from New York and Baltimore, governed by the southern classification. Small arms ammunition is rated second class in less carloads in official classification. Immediately east and west of Lynchburg on the C. & O. and N. & W., rates are governed by official classification. The all rail route traversed by the shipments from New York used for illustrative purposes in the complaint is B. & O. to Potomac Yard, Va., and C. & O. beyond. On the shipment from Baltimore the route used is Chesapeake Steamship Lines to Norfolk and N. & W. beyond. Fifth class rate of 41c governed by official classification is applicable on brick machinery in carloads from Lancaster to Deacon. Deacon is about 7 miles east of and intermediate to Lynchburg on the C. & O., to which point the sixth class rate of 33.5c governed by southern classification is applicable Obviously in view of the general investigations which cover not only class rates within southern and eastern territories, but also rates between these territories, no attempt should be made at this time and on these records to adjust the disparity brought about by the application of the rates governed by the southern instead of the official classification on small arms ammunition and rates governed by official instead of southern on brick machinery. HELD, rates attacked not unreasonable or otherwise unlawful, complaint dismissed. Lynchburg Chamber of Commerce v. B. & O. R. R., 115 I. C. C. 721.

(v) Complainant attacked class rate on less carload shipments of empty coppered or nickeled iron or steel acetylene gas cylinders, returned, between April 17, 1923 and July 25, 1924, from Butte, Mont., to Seattle, Wash., as unreasonable, unjustly discriminatory and unduly prejudicial. Charged fourth class rate of $1.52 and on Sept. 24, 1924, by exceptions to the classification a rate of 76c, one half of fourth class rate, was made applicable on empty cylinders, iron or steel, returned, in any quantity. HELD, rate attacked unreasonable to extent it exceeded 76c, reparation awarded. Sherman & Reed v. C. M. & St. P. Ry., 118 I. C. C. 56.

(w) In 93 I. C. C. 506, division 3 found that the less carload ratings on set up wooden chair and lounge frames, when in boxes, crates, bundles, or loose, in western and southern classifications, and when loose or in bundles in official classification, were not unreasonable or otherwise unlawful; that the carload rating on such frames, loose or in packages, in official classification, was not unreasonable or otherwise unlawful; and that the less than carload rating on set up wooden chair and lounge frames, in boxes or crates, in official classification was unreasonable and should be two and one half times first class. It so happens, that while the charges for the transportation of heavy and compact articles are ordinarily very much less by freight than by express, on light and bulky articles the freight charges sometimes approach or even exceed the express charges. HELD, previous finding affirmed. Parlor Frame Mfrs. Asso. v. A. A. R. R., 118 I. C. C. 154.

(x) Refusal of carriers, parties to southern classification, to accept l. c. l. shipments of stoves or ranges made of cast iron, or of plate or sheet iron with cast-iron bases or tops, unless boxed or crated, found unreasonable. Reasonable rating of second class, or one class higher than on crated stoves or ranges, prescribed for future. Cairo Asso. of Commerce v. B. & N. W., 115 I. C. C. 3.

(y) Present l. c. l. ratings in official classification on dressed or tanned rab-

bitskin clippings or scraps, found not unreasonable, but c. l. ratings found unreasonable as compared with corresponding ratings in western classification and with c. l. ratings on various commodities which are comparable in value per pound and weight per cubic foot. Reasonable ratings prescribed and reparation awarded. American Hatters & Furriers Co. v. C. N. E. Ry., 115 I. C. C. 283.

(z) Caption of tariff naming rates on furniture stated that rates were applicable to "Carloads except as otherwise specified." The furniture items carried under this caption separated different kinds of furniture into groups according to classification ratings applicable thereon, each item carrying the words "any quantity." HELD, as such tariff did not indicate whether l. c. l. or c. l. rating was to be used in determining to which commodity-rate group any particular article belonged, the words "any quantity" constituted an exception and made the rates applicable to either c. l. or l. c. l. shipments, and since the tariff item was specifically made applicable to shipments in "any quantity" the carload classification rating could and should have been used in determining commodity rates applicable to l. c. l. shipments. Refund of overcharges directed. Amber Furniture Co. v. C. & N. W., 115 I. C. C. 640.

(aa) Applicable third class l. c. l. rate under official classification on printing paper from Erie, Pa., to Lynchburg, Va., found not unreasonable or unduly prejudicial as compared with lower fourth-class rates contemporaneously in effect under southern classification to Danville and South Boston, Va., farther distant points. Rate assailed compares favorably with corresponding rates between other points in official classification territory and at time of shipment rates to alleged preferred points were protected by appropriate fourth-section applications. While complainant meets competition with paper dealers at latter points for business "in common territory," no damage was shown by reason of any undue prejudice which may have existed in past, the fourth-section departures having since been removed. Lynchburg Chamber of Commerce v. P. R. R., 118 I. C. C. 11.

(bb) A carrier is under no duty or obligation to "farm out" the work of and incident to receipt or delivery of l. c. l. freight handled in usual way, and such traffic as is accorded service of a trap or ferry car, received or delivered upon private sidings remote from carrier's own terminal facilities, is for obvious reasons loaded or unloaded by consignors or consignees. This is recognized by defining of the term "trap or ferry car service" in 34 I. C. C. 516, 519, 520. Columbia Mills v. D., L. & W., 118 I. C. C. 112, 117.

(cc) First-class l. c. l. ratings on sticky fly paper in official and southern classifications, found not unreasonable in past, but for future found unreasonable to extent they exceed western classification rating of second-class. Tanglefoot Co. v. N. Y. C., 118 I. C. C. 131.

(dd) Fourth class c. l. rating on sticky fly paper in official, western, and southern classifications, found not unreasonable or unduly prejudicial as compared with lower ratings on insecticides. Average value per pound of insecticides is materially lower than that of sticky fly paper, and carriers point out that sticky fly paper is more closey related to poisonous fly paper, fly swatters, and fly traps which are not accorded lower ratings than sticky fly paper. First-class l. c. l. rating in official and southern classifications, found not unreasonable in past but for future found unreasonable to extent they exceed western classification rating of second class. Tanglefoot Co. v. N. Y. C., 118 I. C. C. 131.

(ee) Upon further hearing, original report 93 I. C. C. 506, wherein it was found that c. l. rating on set-up wooden chair and lounge frames, loose or in packages, in official classification territory was not unreasonable or otherwise unlawful, and prescribing two and one-half times first-class for l. c. l. shipments in boxes or crates in that territory, affirmed. As to l. c. l. rating, complainant made comparisons with ratings on similar traffic moving by express, but different methods are used in constructing freight and express classifications and freight rates for light and bulky articles can not be condemned solely on a showing that express rates are lower between some points. As to c. l. rating, mere comparison with lower ratings in other classifications is not sufficient to show that rating on same article in official classification territory is unreasonable. Parlor Frame Mfrs. Asso, v. A. A. R. R., 118 I. C. C. 154.

(ff) Ratings on paper cups, c. l. and l. c. l., in official, southern, and western classifications and class rates governed thereby found unreasonable as compared with ratings on various other paper articles, glass tumblers, wooden bowls, and fiber-board berry baskets with covers detached. Reasonable ratings and rates prescribed for future and reparation awarded. Public Service Cup Co. v. A. C. L., 118 I. C. C. 697.

(gg) In 91 I. C. C. 378, division 3 found that the less than carload rating on adding machines, in boxes, in the western classification was not unreasonable in the past, but would be unreasonable for future to extent it exceeded one and one-fourth times first class, and that carload ratings of second class, minimum 30,000 pounds, in the official, southern and western classifications was not unreasonable. HELD, upon rehearing, previous decision affirmed. Burroughs Adding Machine Co. v. M. C. R. R., 120 I. C. C. 19.

(hh) Complainant attacked first class rating applied on its product in less carloads, under the western, official and southern classifications, as unreasonable to extent it exceeds second class, and, as compared with lower rating on mops, unduly prejudicial. There is no provision in the classifications for cotton dust cloths, as such, but provision is made therein for dry goods N. O. I. B. N. The record shows that complainants cloths are not cotton dusters as that term is generally understood. In the opinion of the commission the applicable rating is on dry goods, n. o. i. b. n. The cloths are used to remove dust by absorption, and also to impart a luster to painted, varnished or other finished surfaces. Dust mops are used principally, if not exclusively on floors. Although complainants dust cloths can no doubt be adapted for use as dust mops, complainants principal witness concedes that they are primarily intended for use in dusting automobiles, furniture, pianos, storage fixtures and the like. Under these circumstances it is apparent that they are not directly in competition with dust mops. Their competition, rather, is with cotton dusters, which are rated first class. But, even though there is competition between dust cloths and dust mops, the ratings for the two articles need not be the same if their classification characteristics are substantially different. The record shows that dust cloths have a substantially greater value per pound than mops. HELD, rating attacked not unreasonable and not unduly prejudicial, complaint dismissed. Auto Supplies Mfg. Co. v. A., T .& S. F. Ry., 120 I. C. C. 40.

(ii) Complainant attacked classification interpretation on three less carload shipments from Lynchburg, Va, one each to Peoria, Ill., and Navasota and Bryan, Tex. The advertising sign consists of a metal signboard placed edgewise on a pivot on top of a wooden post. To the signboard is attached a wheel with propeller blades in front and a tailboard, narrower than the main sideboard, at the rear. The wheels are more analogous to windmill parts than to sheet iron or sheet steel ware, wooden wheels, or other classified articles, so far as this record shows, and in the absence of a specific rating are entitled, under the analogy rule, to the rating provided for windmill parts. HELD, wheels are entitled to rating on windmill parts, reparation awarded. Lynchburg Chamber of Commerce v. N. & W. Ry., 120 I. C. C. 64.

(jj) Complainant attacked first class rate on fresh beef hams, salted, less carloads, from Chicago to Philadelphia, Pa., and Phillipsburg, N. J., as unreasonable. Rate attacked is alleged to be unreasonable to extent it exceeds rule 26 rate by more than 8 cents. Rate sought, 82 cents, is that applicable on lightly salted sausage meats under a rating provided in central territory exceptions. It is clear upon this record that the sausage meats rate does not present a fair test for reasonable rates on beef hams. The 82 cent rate is only 5 cents higher than the rate on fresh meats. It is equally clear that the application to this partially cured meat of a rate reasonable for fresh meats is unreasonable in view of the protection against deterioration afforded by the salting process as proved by the absence of any damage claims. A rate on beef hams, in less carloads, reflecting two full classes higher than the carload rate on that article, and one class lower than the less carload rate on fresh meats, would be $1.225. HELD, rate attacked unreasonable to extent it exceeded $1.225, reparation awarded. Guggenheim Bros. v. B. & O. R. R., 120 I. C. C. 340.

(kk) There are no l. c. l. ratings published based on condition that shipments fill the car, as such a rating would be impracticable. Brownell & Field Co. v. N. Y., N. H. & H., 120 I. C. C. 229, 231.

(ll) Complainant alleged that rating of first class on hand laundry washers, less carloads, is contrary to the provisions of the classification and was unjust and unreasonable. The Childers hand washer is a mechanical household utensil used in the laundering of clothes. There is no specific rating in the classification on hand laundry, washers, and defendants have classified this commodity under "sheet iron or sheet steel ware, n. o. i. b. n., tinned (tinware) galvanized, japanned, lithographed, nickel plated, painted or plain." First class does not appear high for laundry washers packed. HELD, rating attacked not unreasonable, complaint dismissed. Childers v. A., T. & S. F. Ry., 122 I. C. C. 116.

(mm) Complainant attacked ratings on geographical globes, with or without stands, in boxes, in less carloads, in official, western and southern territories are unjust and unreasonable. The present ratings on geographical globes, with or without stands, in boxes, any quantity, are one and a half times first class in official and western classifications and double first class in southern classification. HELD, rating in western and official not unreasonable but in southern classification unreasonable to extent it exceeds one and a half times first class. Chicago Heights Mfrs. Asso. v. A., T. & S. F. Ry., 122 I. C. C. 582.

(nn) Respondents proposed increased rates on wooden handles, in less carloads, from Arkansas and Missouri to Louisiana and Texas. Shipments moved at fourth class rates. The general basis of rates, class and commodity, from the points of origin to destination has for several years been the Memphis, Tenn., rate from some of the points and the St. Louis, Mo., rate from the others. By an exception to this general basis, effective since about 1911, wooden handles, any quantity, from certain points in Arkansas, including Jonesboro and Paragould have been accorded Little Rock, Ark., rates, and from other points of origin in Missouri, the Little Rock-Fort Smith rates have been accorded. By the suspended schedules it is proposed to make the exception apply only to carload traffic, which will have the effect, as to the less carload traffic, of placing the points of origin in the respective territorial groupings to which they are otherwise generally assigned. Except probably wagon material in less carloads from Dexter, Mo., wooden handles constitute the only commodity on which there is departure from the normal groupings on less carload traffic from and to the points involved. If any disadvantages are present by reason of the existing adjustment, the schedules under suspension will do little more than shift them and create disparities in the rates from these complaining points which for a long period have been accorded the same treatment. HELD, schedules not justified. Wooden Handles from Arkansas and Missouri, 123 I. C. C. 146.

(oo) Complainant alleged that charges collected on a less carload shipment of wire steel reels returned on Nov. 7, 1923 from Torrance, Calif., to Niles, Mich., were unreasonable and unjustly discriminatory. Charged second class rate of $4.55. There was no less carload rate or rating applicable specifically on returned reels. There is nothing of record to indicate that other shipments of returned reels have moved, or will move, between the points herein considered. It appears that the plant of complainant at Torrance has been closed for more than a year, and apparently further shipments are unlikely. Manifestly the establishment of a commodity rate or an exception to the usual classification for a less carload movement under these circumstances would not be justified. HELD, rate attacked not unreasonable or otherwise unlawful, complaint dismissed. Thomas Traffic Co. v. P. E. Ry., 123 I. C. C. 535.

(pp) Complainant alleged second class rate of $1.065 applicable on sheet brass and bronze, in less carloads, from East Alton, Ill., to Minneapolis and St. Paul, Minn., was unjust and unreasonable, unjustly discriminatory and unduly prejudicial to extent it exceeded third class rate of 87.5c. East Alton is on the Burlington about 23 miles north of St. Louis, Mo. Distances are 559.5 miles to St. Paul and 548 miles to Minneapolis. Articles are rated second class in western and third class in official, and have been so rated for several years. No instances of less carload commodity rates on sheet brass or bronze in western territory are disclosed by the record. In western trunk line territory, through which complainants shipments move to the Twin Cities, rates generally, and especially class rates, are now on a relatively lower level than in other parts of western classification territory, including the

southwest. HELD, complaint dismissed. Western Cartridge Co. v. C. B. & Q. R. R., 123 I. C. C. 547.

(qq) First-class l. c. l. rating and rate assessed on sheet-iron hand-laundry washers with wooden handles, under classification item "Sheet Iron or Sheet Steel Ware, n. o. i. b. n.: Tinned (Tinware), * * *," not nested, found applicable and not unreasonable. Complainant contended that under analogy rule these washers are more nearly analogous to tinware, nested, which takes second-class rate, as handles are removed, conical heads overlap each other, and one dozen washers complete are packed in a standard carton. However, to come within nesting rule, three or more articles must be placed one within the other so that each upper article will not project above the next lower article more than one-third of its height. Use of the rule is prohibited when articles of different name or material are nested or enclosed one with the other. As washers can not be so packed they do not come within provisions of nesting rule. Moreover, first class does not appear high for washers packed as indicated. Childers v. A., T. & S. F., 122 I. C. C. 116.

(rr) Southern classification rating of double first class on geographical globes with or without stands, in boxes, l. c. l., found unreasonable to extent it exceeded a rating of one and a half times first class. Reasonable rating prescribed for future. Official and western classification ratings of one and a half times first class found not unreasonable. Chicago Heights Mfrs. Asso. v. A., T. & S. F. 122 I. C. C. 582.

(ss) Rate on engraved copper rolls returned for reengraving, l. c. l., found not unreasonable as compared with rates on copper rivets, copper rolls, electrotype plates and various other commodities. Sunbury Converting Works v. D., L. & W., 123 I. C. C. 89.

(tt) Proposed increased rates on wooden handles, l. c. l., from producing points in Arkansas and Missouri to destinations in Louisiana and Texas, found not justified. Wooden handles constitute only commodity on which there is a departure from the normal groupings on l. c. l. traffic from and to origin and destination territories here involved and although present schedules include a number of points for which this special basis serves no purpose because of seeming abandonment of plants, the record presents no sound reason for a discontinuance of this special basis at points where its maintainance has made possible a continuance of the industries at the respective places. If any disadvantages are present by reason of existing adjustment, the suspended schedules will do little more than shift them and create disparities in the rates from complaining points which for a long period have been accorded substantially same treatment. Wooden Handles from Arkansas and Missouri, 123 I. C. C. 146.

(uu) Interests of neither public nor carriers are served by maintaining carload class rates on such high bases that they are rarely used, making it necessary to follow the practice which has prevailed for many years in the Southwest of establishing commodity rates on practically all commodities which move in carloads in material volume. It is due to this practice that many discrepancies in rates which are subject of complaint have arisen and existing widespread dissatisfaction with the complexity of tariffs in the Southwest arises out of the prevalence of commodity rates and failure to adjust them on a basis which fairly relates various points which compete with one another. In the circumstances, the commission is of the opinion that it should follow the principle that carload class rates in the Southwest should be prescribed which are capable of moving many of the carload commodities, as is the case to-day in official and western trunk-line territories, thus making it possible to eliminate from tariffs thousands of commodity rates. Consolidated Southwestern Cases, 123 I. C. C. 203, 234.

(vv) Carriers authorized to cancel existing l. c. l. classification exceptions and commodity rates applicable to and from the Southwest and to substitute class rates, subject to western classification rating. Consolidated Southwestern Cases, 123 I. C. C. 203, 401, 402.

(ww) Second-class rate applicable on reels in less than carloads charged on an l. c. l. shipment of wire-steel reels returned from Torrance, Calif., to Niles, Mich., found not unreasonable or otherwise unlawful. A lower c. l. commodity rate was in effect on secondhand reels or spools but complainant could not profitably use this rate as it was not feasible for it to accumulate a carload. Reference is made to lower l. c. l. rates on typewriters and lawn mowers from and

to these points, also for returned shipments of iron and steel blocks and car-decking racks but latter named commodities are used to facilitate packing and loading westbound c. l. shipments of automobiles. Here the shipments were sporadic, the plant of complainant at Torrance has been closed for more than a year, and further shipments are unlikely. Manifestly, establishment of a commodity rate or an exception to usual classification for an l. c. l. movement under such circumstances would not be justified. Thomas Traffic Co. v. P. E. Ry., 123 I. C. C. 535.

(xx) Second-class l. c. l. rates on sheet brass and bronze, from East Alton, Ill. to Minneapolis and St. Paul, Minn., found not unreasonable or otherwise unlawful as compared with third-class l. c. l. rate contemporaneously in effect from Detroit, Mich., Rome, N. Y., and Waterbury, Conn., competing points. Class rates in western trunk-line territory generally, through which complainant's shipments move, are now on a relatively lower level than in other parts of western classification territory including the Southwest, and fact that a lower rating exists in one of the three great classification territories is not conclusive that second-class rate applied on complainant's traffic is unreasonable. Western Cartridge Co. v. C., B. & Q., 123 I. C. C. 547.

(yy) Complainant alleged that the ratings maintained for the transportation of saddles, less carloads, from Elyria, O., to all destinations in official, southern and western classification territories are unreasonable. The saddles herein considered are those ordinarily used on bicycles, motor cycles and tricycles. There are no loss or damage claims. The saddles considered herein are rated first class in less carloads, in all classification territories, which rating has applied on bicycle saddles, in less carloads, since April 1, 1887. First class rating or higher applies on practically all bicycle parts, and also on most articles in the saddle group as shown in the classification. Leather goods are rated first class, which description would include saddles, in the absence of a specific classification. HELD, rating on saddles, less carloads, is not unreasonable, complaint dismissed. Troxel Mfg. Co. v. B. & O. R. R., 126 I. C. C. 169.

(zz) Complainant alleged that the carload and less carload ratings on chocolate and chocolate coating in the official, southern and western classifications, and carload ratings on chocolate and chocolate coating in the official and western classifications are unreasonable, unjustly discriminatory and unduly prejudicial. COCOA BEANS. Cocoa beans are imported from Java and other tropical countries, principally through the port of New York. No special equipment is required for their transportation by rail, and claims for loss or damage are infrequent. Cocoa beans constitute the raw material from which chocolate, chocolate coating, and cocoa are manufactured. Cocoa beans, in bags, barrels or boxes are rated when in less carloads second class in official and western classifications and first class in southern; and in carloads, fourth-class in all three classifications. CHOCOLATE AND CHOCOLATE COATING. Chocolate and chocolate coating are manufactured by cleaning the cocoa beans, roasting and shelling them and removing the bitter germ. The resultings nibs are then ground, producing a pasty or running substance known as chocolate liquor, and composed of cocoa butter and cocoa. Solidified chocolate liquor sweetened or unsweetened, and with or without the addition of more cocoa butter, is designated either as chocolate or as chocolate coating, depending apparently upon the size of the bar or cake. It is largely an article for household consumption. Claims for loss or damage are negligible. Chocolate, in barrels or boxes, less carloads is uniformly rated second-class, and in carloads, third-class in official and western and fourth-class in southern. CONCLUSIONS. HELD, ratings attacked not unjustly discriminatory or unduly prejudicial, but on cocoa beans, in bags, barrels or boxes, in the three classifications unreasonable to extent they exceed third class less carloads and fifth-class carloads. Also HELD, ratings attacked on chocolate and chocolate coating, less carloads, not unreasonable, but carload ratings in official and western on chocolate in barrels or boxes, are unreasonable to extent they exceed fourth-class. Cocoa & Chocolate Mfrs. Asso. v. A. & V. Ry., 126 I. C. C. 561.

(3a) First-class l. c. l. rating on saddles, used on bicycles, motor cycles, and tricycles, from Elyria, Ohio, to points in official, southern, and western classification territories, found not unreasonable as compared with c. l. rating on same commodity, or with first-class l. c.

l. rating on bells, spark plugs, magnetos, gasoline-engine starters, and various other articles. First-class rating or higher applies on practically all bicycle parts and also on most articles in the saddle group including leather goods. Moreover, first-class rating was found reasonable on automobile horns which compare favorably, weights and values considered, with bicycle saddles. Troxel Mfg. Co. v. B. & O., 126 I. C. C. 169.

(3b) One and one-half times first-class rate collected on l. c. l. shipment of portable laundry tubs under heading "Sheet Iron or Sheet Steel Ware: Wash Tubs," found inapplicable. Carriers contended that by analogy rule, applicable rating was double first class under item "Wash Sinks, n. o. i. b. n.: Plate or Sheet Iron or Steel: on legs: * * * In boxes or crates," l. c. l., while complainant sought third-class rating on laundry tubs under head of "Plumbers' Goods" by use of analogy rule. At time of shipment, however, a commodity rate applicable on wash tubs appeared under caption "Sheet Iron or Sheet Steel Ware," l. c. l., and since Century Dictionary and Cyclopedia define a wash tub as "a tub for washing, especially one in which clothes are washed," articles shipped clearly fall within that description and lower commodity rate was therefore applicable. Reparation awarded. West Texas Utilities Co. v. M. C., 128 I. C. C. 57.

(3c) Complainant alleged that the charges collected on a less than carload shipment of portable laundry tubs forwarded June 2, 1925 from Saginaw, Mich., to Abilene, Tex., as inapplicable. Shipment was billed as "24 laundry tubs, crated iron and steel." Charged at rate of $4.27, one and one half times first class, being that applicable on "wash tub, not nested in boxes or crates" in less carloads. There was contemporaneously published a commodity rate of $3.45 which was applicable on sheet iron or sheet steel ware. HELD, rate of $3.45 applicable, reparation awarded. West Texas Utilities Co., v. M. C. R. R., 128 I. C. C. 57.

(3d) Following 96 I. C. C. 280 and 115 I. C. C. 27, second-class l. c. l. rates on printed waxed wrapping paper between points in official territory found unreasonable to extent they exceeded third class. Reasonable rates prescribed for future and reparation awarded. Ward Baking Co. v. P. R. R., 128 I. C. C. 231.

(3e) Complainant attacked second class rates applicable in official classification on less carloads of printed waxed wrapping paper, in rolls, in boxes or crates, as unreasonable to extent they exceed third class rates contemporaneously applicable on the same commodity, when not printed. This rating has heretofore been found unreasonable in General Baking Co., v. P. R. R. Co., 96 I. C. C. 280. HELD, rates attacked from Milwaukee and Frankford unreasonable to extent they exceed third class rates, and likewise from Chicago, Middletown, Nashua, Tacony and New York, reparation awarded. Ward Baking Co., v. Pennsylvania R. R., 128 I. C. C. 231.

(3f) Rates on furniture from Memphis, Tenn., to points in trunk-line and New England territories, found not unreasonable or unduly prejudicial, except that l. c. l. commodity rate on mattresses will be unreasonable to extent it exceeds first-class rate contemporaneously in effect. Other rates assailed are relatively lower than those previously found reasonable from c. f. a. territory manufacturing points to destinations in trunk-line territory and also lower than corresponding rates in reverse direction, and on the whole compare favorably with corresponding rates to eastern port cities from Atlanta, Ga., and Chattanooga, Tenn., competing points. Reasonable rates on mattresses prescribed for future. Memphis Freight Bureau v. A. G. S., 128 I. C. C. 445.

(3g) Sixth-class l. c. l. rates on bar iron from Knoxville, Tenn., to points in Georgia, found not unreasonable but unduly prejudicial as compared with lower l. c. l. commodity rates contemporaneously maintained from Birmingham, Ala. Rates assailed compare favorably with those from Memphis, Nashville, and Chattanooga, Tenn., and Louisville, Ky., to Georgia points and are relatively lower than those prescribed in 100 I. C. C. 513 and other cited cases. Practically all shipments were sold on basis of Birmingham prices plus rate from Birmingham, but since no loss of business is alleged and proof of damage is insufficient, reparation is denied. Knoxville Iron Co. v. L. & N., 128 I. C. C. 513.

(3h) Second-class l. c. l. rating and rates on corrugated fibre boxes, k. d., from Omaha Nebr., to destinations in Iowa, found unreasonable as compared with lower third-class rating and rates in official, southern and Illinois classifications, and intrastate within Kansas;

with third-class rating in official and western and fifth-class rating in southern classifications on solid fibre board; and with third-class rating on cover paper, building, roofing, or sheathing felt or paper and various other related commodities in western classification; and unduly prejudicial and in unjust discrimination against interstate commerce as compared with lower fourth-class rating from Keokuk, Iowa, to same destinations. Third-class rating and rates prescribed for future and reparation awarded. Case held open to afford opportunity to revise interstate rating in harmony with rating prescribed. Eggerss-O'Flyng Co. v. C. & N. W., 128 I. C. C. 644.

(3i) Complainant alleged second class rating applied on numerous less carloads of corrugated fibre boxes, prior to April 23, 1923 from Omaha, Neb., to Iowa, are unreasonable and unduly prejudicial as compared with the rates from Keokuk, Ia. Iowa Commission ruled that the fourth class rating and rates were applicable on intrastate traffic. Effective May 1, 1927 the Iowa classification was cancelled and interstate traffic became subject to the western classification or second class. Intrastate shipments are still rated fourth class, less carloads, under an exception to western classification. HELD, fourth class rating and rates were applicable prior to May 1, 1927, overcharges to be refunded. Third class rating is in effect in all other classifications except western. HELD, second class rating unreasonable to extent it exceeded third class, reparation awarded. Eggerss-O'Flyng Co. v. C. & N. W. Ry., 128 I. C. C. 644.

(3j) Fifth-class c. l. rating on unprinted waxed wrapping paper, in boxes or crates, in official classification, found not unreasonable, but second-class l. c. l. rating in western classification found unreasonable to extent it exceeds third class. Reasonable rating prescribed for future. Kalamazoo Vegetable Parchment Co., v. C. K. & S., 128 I. C. C. 675.

(3k) L. c. l. ratings on vegetable-parchment wrapping paper, either printed or unprinted, in official, southern, and western classifications, and c. l. rating in official and southern classifications, found not unreasonable, but fourth-class c. l. rating in western classification found unreasonable as compared with fifth-class rating contemporaneously maintained on waxed wrapping paper, a competitive commodity, and to extent it exceeds class A rating. Reasonable rating prescribed for future. Kalamazoo Vegetable Parchment Co., v. C. K. & S., 128 I. C. C. 675.

(3l) Second-class l. c. l. ratings on printed, waxed wrapping paper in boxes or crates in official and western classifications, found unreasonable to extent they exceeded third-class rating found reasonable in 96 I. C. C. 280; fifth-class c. l. rating found not unreasonable in official classification as compared with group of low-grade commodities accorded sixth-class rating, but fifth-class c. l. rating in southern classification found unreasonable to extent it exceeds sixth class. Southern fifth-class rating under recently approved rate scales, is relatively higher than fifth-class rating in official classification and carriers failed to show that there are any differences in kind of paper transported or in transportation conditions which warrant a higher rating in the South than in the North. Reasonable ratings prescribed for future and reparation awarded. Kalamazoo Vegetable Co. v. C., K. & S., 128 I. C. C. 675.

(3m) First-class l. c. l. rating in southern classification was assessed on vegetable-parchment wrapping paper, in flat sheets cut to size and bearing a printed legend descriptive of article to be wrapped, a quantity of such sheets then being wrapped in heavy paper and placed in a wood frame enclosing four sides but not the ends. Upon contention that material shipped is simply wrapping paper in bales or crates and fourth-class rate applicable on wrapping paper in crates should apply, FOUND: Package described is a bundle. While in 96 I. C. C. 280, it was held that paper shipped in continuous rolls although printed to indicate its use for wrapping bread was wrapping paper, here additional step of cutting paper to size converted the wrapping paper into wrappers and rate assessed was therefore applicable. Kalamazoo Vegetable Parchment Co., v. C. K. & S., 128 I. C. C. 675, 683.

(3n) First-class l. c. l. southern classification rating on printed vegetable-parchment wrapping paper in flat sheets cut to size and a quantity of such sheets wrapped in heavy paper and placed in a wood frame enclosing four sides but not the ends, found unreasonable as compared with fourth-class rating on vegetable-parchment wrapping paper in bundles, and to extent it exceeds contemporaneous second-class ratings in official and west-

ern classifications. While paper having been cut to size constitutes wrappers rather than wrapping paper, wrappers should not be rated three classes higher than uncut paper. Moreover, although package described is a bundle and takes first class as compared with second class when in crates, southern is only classification that distinguishes between boxes, bundles, or crates, and it, as well as other classifications, disregards this distinction on other similar commodities whether in bundles, boxes, or crates. Reasonable rating prescribed for future. Kalamazoo Vegetable Parchment Co. v. C., K. & S., 128 I. C. C., 675, 683, 684.

(3o) Following General Baking Co., 96 I. C. C. 280, second-class rating and rate on l. c. l. shipments of printed waxed wrapping paper between points in official territory, found unreasonable to extent they exceeded third-class rating and rates subsequently established. Reparation awarded. Bakeries Service Corp. v. B. & M., 128 I. C. C. 695.

(3p) Complainant alleged second class rates charged on many less carload shipments of printed waxed wrapping paper made between Aug. 1, 1923 and Aug. 25, 1925 between points in official territory were unjust and unreasonable to extent they exceeded the third class rates. In General Baking Co. v. P. R. R. Co., 96 I. C. C. 280, the Commission found the second class rates unreasonable to extent they exceeded third class, which was published on May 7, 1925. Possession of the freight bills coupled with the witness' knowledge of the customary method of payment and his personal investigation of these particular claims is sufficient to support a finding that complainants paid and bore the charges under review. HELD, reparation awarded on basis of third class rates. Bakeries Service Corp. v. B. & M. R. R., 128 I. C. C. 695.

(3q) Complainant alleged that the classification rating of second class on less carload shipments of worn out paper mill plugs in official, southern and western classifications is unreasonable. Second class rating on iron or steel machinery parts, n. o. i. b. n., is applied. HELD, rating complained of in the three classifications is, and for the future will be, unreasonable to extent they exceed third class. Bahr Bros. Mfg. Co. v. C. C. C. St. L. Ry., 129 I. C. C. 289.

(3r) Complainant alleged that rate of 66.5c charged on 21 less carload shipments of cotton piece goods, shipped between Nov. 14, 1923 and Oct. 16, 1924 from East Greenwich, Saylesville, and South Providence, R. I., Jewett City, Conn., and Walpole and Fall River, Mass., to Lynchburg, Va., as unreasonable, unduly prejudicial and in violation of section four. Charged commodity rate of 66.5c. Cotton piece goods are rated fourth class in southern classification, which was 53.5c. HELD, rate attacked not unreasonable or otherwise unlawful, complaint dismissed. Traffic Bureau v. N. Y. N. H. & H. R. R., 129 I. C. C. 309.

(3s) Complainant alleged that the rating, and the rates applicable thereunder, on root beer sirup, in less carloads, in metal cans in boxes, shipped from Philadelphia, Pa., to destinations in official and western classifications were and are unreasonable. It is not affected by climatic conditions and leakage would not cause serious damage to other freight. The root beer containers permit of easy and economical handling in loading and unloading. The susceptibility to loss or damage is slight. HELD, second class rating on root beer sirup, in less carloads, in metal cans in boxes, in official and western classifications was not unreasonable in the past but such rating and rates applicable thereunder are for future unreasonable to extent they exceed rule 25 in official and third class in western classifications. Hires Co. v. A. C. & Y. Ry., 132 I. C. C. 29.

(3t) Shipments in less than carload quantities ordinarily move in a way which causes relatively high cost of operation, and they are seldom far down in the scale of value. Given a reasonable level of class rates it seems under few, if any, circumstances will the Commission be justified in requiring the maintenance or establishment of less than carload commodity rates. Lynchburg Traffic Bureau v. Southern Ry., 132 I. C. C. 317, 320.

(3u) Complainant alleged class rates charged on 70 less than carloads of cotton piece goods during 1923, 1924 and 1925 from Chadwick and New York, N. Y., Fairhill, Lancaster and Philadelphia, Pa., and Wilmington, Del., to Lynchburg, Va., were and are unreasonable, unjustly discriminatory and unduly prejudicial and in violation of section four. Chadwick takes Utica rates, Lancaster, Wilmington and Fairhill take Philadelphia rates. Rates from New York and Philadelphia to Lynchburg are the same.

Lynchburg is served by the C. & O., N. & W., and Southern and is on the border line between official and southern classification territories. Cotton piece goods are rated rule 25 in official classification which is 15% lower than second class, with third class as minimum, and fourth class in southern. Rates from Chadwick and Montview and Lone Jack, Va., 4 and 8 miles, south of Lynchburg were governed by the southern classification and lower rates were applicable. No substantial evidence was introduced with respect to unjust discrimination or undue prejudice and no damage is shown because of fourth section departures. HELD, rate of 79c from Chadwick, and 56.5c from New York, Fairhill, Lancaster and Philadelphia not unreasonable, unjustly discriminatory or unduly prejudicial, complaints dismissed. Lynchburg Chamber of Commerce v. D. L. & W. R. R., 132 I. C. C. 321.

(3v) Complainant alleged combination rates charged between May 1, 1922 and May 1, 1924 on numerous l. c. l. shipments of cotton piece goods from official and southern territories to Wichita, Kas., were unreasonable. Cotton piece goods, any quantity, are rated in official classification rule 25, which is equivalent to 85% of second class; in southern classification, fourth class and in western classification, first class. Exceptions to western classification provide for third class rates except where specific commodity rates are published. Charged from eastern territory rule 25 rates to Mississippi river and commodity rate of $1.52 west; from southeastern and Carolina territories joint any quantity commodity rates. These latter rates were slightly higher than the proportional commodity rates to Memphis, Tenn., plus the local commodity rates beyond, as well as higher than the local commodity rates to Memphis plus the class rates beyond. Joint rates now in effect appear to be on the basis of the proportional commodity rates to Memphis plus the class rates beyond. HELD, rates charged on shipments which originated in official territory unreasonable to extent the commodity rates beyond the river crossings exceeded the third class rates; and that joint rates from southeastern and Carolina territories unreasonable to extent they exceeded the lowest combination of rates to Memphis, Cairo or other river crossings, plus third class rates beyond, reparation awarded. Johnston & Latimer Dry Goods Co., v. A. T. & S. F. Ry., 132 I. C. C. 343.

(3w) Application proposing to maintain a minimum l. c. l. commodity rate on traffic between San Francisco and other California ports and Portland and other Oregon and Washington ports, denied. L. c. l. traffic should move on applicable class rates herein approved. Pacific Coast Fourth Section Applications, 129 I. C. C. 3, 17.

(3x) Third-class l. c. l. rate, under official classification, on unprinted fruit wrappers from Hamburg, N. J., to Lynchburg, Va., found not unreasonable or otherwise unlawful as compared with fifth-class rate, under southern classification, contemporaneously in effect to Montview and Lone Jack, Va., more distant points. The general level of rates applicable in official territory is extended south of Lynchburg to and including more distant points, and reasons in justification therefor are fully discussed in 31 I. C. C. 145; 107 I. C. C. 249. Rates assailed are same as those from Cincinnati, Ohio to Lynchburg, and compare favorably with those from Hamburg to various other Virginia districts for comparable distances, and presumption of unreasonableness of rate to Lynchburg is rebutted. See 269 U. S. 1. Moreover, since no movement of fruit wrappers has been shown from Hamburg to Montview, no finding of discrimination or undue prejudice can be made. See 34 I C. C. 634. Lynchburg Chamber of Commerce v. E. R. R., 129 I. C. C. 230.

(3y) Following 89 I. C. C. 251, in which third-class l. c. l. rating was found reasonable on steam superheaters, second-class l. c. l. rating on wornout paper-mill grinding plugs in official, southern, and western classification, found unreasonable. No specific rating was made in the three classifications for paper-mill plugs as such, but they are somewhat analogous to steam superheaters from a classification standpoint. Third-class rating prescribed. Bahr Bros. Mfg. Co. v. C., C., C. & St. L., 129 I. C. C. 289.

(3z) L. c. l. joint commodity rate on cotton piece goods from certain points in Connecticut, Massachusetts, and Rhode Island to Lynchburg, Va., which exceeds contemporaneous class rate to same and more distant Virginia destin-

ations, found not unreasonable or otherwise unlawful, following 113 I. C. C. 270. Fourth-section departures were pretected by appropriate applications. Traffic Bureau v. N. Y., N. H. & H., 129 I. C. C. 309.

(4a) C. l. and l. c. l. ratings on school books in official, southern, and western classifications, found not unreasonable as compared with lower ratings on school blanks and forms in same classifications. Schoolbooks are of much higher value than school forms and blanks, based upon information obtained at public hearings conducted by classification committees for purpose of affording interested shippers opportunity of expressing their views respecting classification changes. Moreover, printed articles, such as almanacs, catalogues, magazines, and calendars, take same ratings as schoolbooks, but have considerably lower value. American Book Co. v. A. A. R. R., 129 I. C. C. 372.

(4b) L. c. l. rate collected on steam condenser from Philadelphia, Pa., to Santa Fe, N. Mex., found inapplicable. A lower rate was contemporaneously in effect and tariff authority for rate collected was not shown. Refund of overcharges directed. Mirabel Motor Co. v. M. C., 129 I. C. C. 411.

(4c) Combination rates on l. c. l. shipments from Hoboken, N. J., on Hoboken Manufacturers' R. R. to Norfolk and Richmond, Va., found inapplicable. Contemporaneously Lackawanna published lower joint class rates from New York Lighterage Station, a point within the free-lighterage limit of New York Harbor, subject to a terminal tariff which provided that rates from points in free-lighterage limits would apply on shipments from Hoboken via Hoboken Manufacturers' except where specific rates from Hoboken were in effect. No specific rates covering traffic were published from Hoboken and where there is doubt as to meaning of tariff provision, the doubt should be resolved against maker and in favor of shipper. Refund directed. Jewel Tea Co. v. D., L. & W., 129 I. C. C. 424.

(4d) C. l. and l. c. l. rates on granite from Granite Mountain, Llano, Teich, and Fredericksburg, Tex. to various interstate destinations, found not unduly prejudicial but unreasonable as compared with lower rates contemporaneously in effect from points in Vermont, Massachusetts, Georgia, North Carolina, South Carolina, Minnesota, Colorado, California, and various other points to same and various other destinations for comparable distances, and to extent they exceed distance rates prescribed in Consolidated Southwestern Cases, 123 I. C. C. 203, between same points, except that rates to portions of Wyoming, Utah, and Colorado, found not unreasonable except to extent they will be reduced by reductions herein required to Colorado common points. Reasonable bases of rates prescribed for future. West Texas Chamber of Commerce v. H. & T. C., 129 I. C. C. 546.

(4e) Carriers were authorized generally, in 123 I. C. C. 203, to cancel all less-than-carload classification exceptions and commodity rates, and no reason appears why, under section 1, exception should be made in case of granite, but an exception should be made to rule 10 of the western classification to provide for application to the mixed carloads of granite, of highest rate and highest carload minimum applicable to any granite in the mixture. West Texas Chamber of Commerce v. H. & T. C., 129 I. C. C. 546, 554.

(4f) Rates charged on cotton fabrics, l. c. l., from North Carolina points to Galveston, Tex., found inapplicable. Governing tariff stated that it was subject to western classification "Except as otherwise provided," and provided for alternative application of rates in section 2 or 3, whichever were lower. No minimum weight was provided in connection with lower rates under section 3, and rates were there applicable to actual weight of shipments. However, since rule 15 of the western classification provided for assessment of separate loading and unloading charges on l. c. l. freight moving at c. l. rates, and rule 13 required a minimum charge of $15 per car, these rules must be considered in determining rates applicable to various shipments. Refund of overcharges directed on basis indicated. Southern Traffic & Audit Asso. v. I.-G. N., 129 I. C. C. 723.

§6. Competition.

(a) First-class l. c. l. rating in official, western, and southern classifications

on dust cloths found not unreasonable or unduly prejudicial as compared with lower second-class rating on dust mops. Dust cloths are pieces of cotton cloth cut to size and saturated with paraffine oil and are primarily intended for dusting automobiles, furniture, and the like, whereas, dust mops are used principally if not exclusively on floors. The two articles are therefore not directly in competition, and even though competition does exist between them ratings thereon need not be the same if their classification characteristics are substantially different. The record here shows that dust cloths have a substantially greater value per pound than mops. Auto Supplies Mfg. Co. v. A., T. & S. F., 120 I. C. C. 40.

(b) Even though there is competition between two somewhat similar articles, ratings thereon need not be the same if their classification characteristics are substantially different. Auto Supplies Mfg. Co. v. A., T. & S. F., 120 I. C. C. 40, 42.

(c) Mere possibility that two articles may in some cases be used for same purpose does not necessarily justify same classification ratings for both. Smith Co. v. A., T. & S. F., 120 I. C. C. 309, 311.

(d) Mere existence of competition between two or more articles does not require that they be accorded a parity in ratings if their classification characeristics are substantially different. Kalamazoo Vegetable Parchment Co. v. C., K. & S., 128 I. C. C. 675, 678.

§6½. Crated Shipments.

(a) Complainant alleged that the rule in the southern classification which provides that stoves and ranges, made either entirely of cast iron, or of plate or sheet iron with cast iron bases or tops, will not be accepted for transportation in less carloads unless boxed or crated, is unjust and unreasonable and unduly prejudicial. Stoves and ranges may be shipped uncrated between points where rates are governed either by the official or the western classification. Under the western classification the rating is the same whether the stoves or ranges are crated or not, and under the official classification uncrated stoves are higher than crated stoves only by the comparatively small difference between the third class and the rule 25 rates. The destination territory to which complainant wishes to ship stoves and ranges, uncrated, is that part of Kentucky and Tennessee lying west of the Tennessee river. Tennessee jobbers can ship stoves to all destinations in Tennessee without crating and it is not denied that Cairo jobbers meet them in this competitive field. Kentucky and Alabama are the only states in the Union in which stoves and ranges must be crated for intrastate shipment. HELD, refusal of defendants to accept uncrated stoves or ranges of the type here considered is unreasonable, and should not exceed the rates on stoves crated by more than one class. Cairo Asso. of Commerce v. B. & N. W. Ry., 115 I. C. C. 3.

§7. Mixed Carloads.

See Cars and Car Supply §8 (v); Class Rates §2 (5i); Classification §16½; Commodity Rates §2½ (i), §5 (3b); Evidence §34¼; Express Companies §16; Minimum §6; Mixed Carloads; Rail and Water Rates (3h); Switch Tracks and Switching §3 (kl); Tariffs §18 (nn).

(a) Following 74 I. C. C. 567, rates on stucco mix, magnesium chloride, and crushed-rock dash, articles constituting a complete commodity, viz., magnesite stucco, and shipped in separate packages in same car, found unreasonable to extent they exceeded lower rate on "stucco," commodities here shipped falling within that general description. Reasonable rate prescribed for future and reparation awarded. Rocbond Co. v. A., T. & S. F., 104 I. C. C. 517.

(b) Rotary-drill bits, fishing taps, milling tools, and weight indicators: Second-class rating and rates under western classification on, and failure of carriers to include weight indicators in the classification list of oil-well outfits and supplies, found not unreasonable or otherwise unlawful. Hughes Tool Co. v. A. & R., 107 I. C. C. 545.

(c) Rates assessed on so-called Hallock boxes, in crates, and box material, in mixed carloads, found unreasonable to extent they exceeded rates on box material. Reparation awarded. Crystal Springs Mfg. Co. v. I. C., 109 I. C. C. 177.

(d) No warrant shown for establishment of a mixing rule on sirup, molasses, and preserves, from Kansas City, Mo., to destinations in Kansas, whereby the

highest rate and highest minimum weight on any article in the mixture will apply to entire shipment. Fifth-class rates apply to this destination territory from all points at which complainant's competitors are located, so that they have no advantage in that respect, and while there may be need from a commercial standpoint for commodity rates on mixed carloads, there is no showing that present rates impose an undue burden on the traffic. Bliss Syrup Refining Co. v. A., T. & S. F., 109 I. C. C. 391.

(e) Rates on sirup, molasses, and preserves, in mixed carloads, from Kansas City, Mo., to destinations in Kansas, found not unreasonable or otherwise unlawful as compared with rates from St. Louis and Chicago. While Kansas City has an advantage in distance and the St. Louis rates are a lesser percentage of fifth class than are those from Kansas City, the former bear no fixed relationship to class rates. Complainant's difficulties in meeting competition at St. Louis and Chicago are due to the fact that it obtains its raw material at points east of Kansas City, paying inbound freight charges thereon, whereas its competitors either manufacture their own raw material or secure it where their plants are located. Bliss Syrup Refining Co. v. A., T. & S. F., 109 I. C. C. 391.

(f) Complainant attacked through rate charged on mixed cars of pears, apples, and cabbage, from Wilson, N. Y., to Jacksonville, Fla., as unreasonable. Rate charged sixth class, rate sought commodity rate of 63c plus sixth class differential of 2c. Commodity rate was applicable on apples, cabbage, and potatoes, and on beets in straight or mixed carloads, but did not apply on a mixed shipment of these commodities and pears. Effective March 20, 1925, this rate was made to include pears. There is apparently no substantial difference in the hazard of transporting the two, or in other important transportation characteristics. HELD: Rate charged unreasonable to extent it exceeded 65c. Reparation awarded. Fitch & Wilkinson v. N. Y. C. R. R., 112 I. C. C. 547.

(g) Rate assessed on mixed carloads of tin cans and pails found legally assessed and contention of shipper that lower rates applicable on tin cans or on tin pails should have been applied upon theory that there is no distinction between a tin can and a tin pail, not sustained. Shipments were tendered to carrier as cans and pails, were readily identified as such, and no substantial or reasonable doubt existed as to correct designation of containers. The shipments were referred to in complaint as tin cans and pails, were so described in bills of lading, and shippers understood that cans took a different rating from pails, and specified number of each in each shipment. Neuhoff Packing Co. v. L. & N., 112 I. C. C. 223.

(h) Sixth-class rate on mixed-carload shipments of pears, apples, and cabbage found unreasonable to extent it exceeded contemporaneously applicable lower commodity rate on mixed-carload shipments of apples, cabbage, and other vegetables, excluding pears, which was subsequently made also to include pears. Reparation awarded. Fitch & Wilkinson v. N. Y. C., 112 I. C. C. 547.

(i) Upon further consideration, former report, 101 I. C. C. 196, finding rates on bananas and coconuts, in mixed carloads, from New Orleans and sub-ports taking same rates, and Gulfport, Miss., to various destinations in Oklahoma and to Arkansas City, Kans., and from New Orleans and sub-ports taking same rates to certain Texas points, unreasonable and prescribing a scale of distance rates to Oklahoma and Arkansas City and a single rate to Texas destinations in order to conform to the Texas common-point method of rate making, affirmed. Dawson Produce Co. v. A. & V., 113 I. C. C. 454.

(j) Rates on bananas and coconuts, in mixed carloads, from New Orleans, La., to San Antonio, Tex., found unreasonable to extent they exceeded rates prescribed in 101 I. C. C. 196, and 113 I. C. C. 454. Reasonable maximum rate prescribed for future and reparation awarded. Gugenheim-Goldsmith Co. v. G., H. & S. A., 113 I. C. C. 459.

(k) The oil-well outfits and supplies list includes many articles, of varying values and weights, which are given like rates to permit mixing. Carter Oil Co. v. A., T. & S. F., 113 I. C. C. 757, 759.

(l) Complainant attacked fourth class rate of $3.585 charged on a mixed car of springs shipped Feb. 24, 1921, from Kalamazoo, Mich., to Los Angeles, Calif., as unreasonable and unduly prejudicial. Shipment moved over G. T.,

I. H. B., and Santa Fe. On Sept. 30, 1922, a commodity rate of $1.68 was established on all of the articles except the common coil springs not assembled nor covered in any way. It would appear that charges on the shipment should have been assessed on whichever of several bases resulted in the lowest total charges. There is failure, however, to show definitely the individual weights of the several articles in the shipment, and neither is it shown to what extent, if any, the chair seat assemblies were compressed for shipment. The record, therefore, does not show that the total charges collected exceed those which should have been assessed, nor is it sufficient to a finding of unreasonableness, discrimination or undue prejudice. HELD, complaint dismissed. D'Arcy Spring Co. v. G. T. W. Ry., 115 I. C. C. 91.

(m) Complainant attacked charges collected on a car of mixed vegetables shipped April 26, 1924, from San Benito, Tex., to Denver, Colo., as unjust, unreasonable and unduly prejudicial. Shipment consisted of squash, beans, peppers and garlic, 20,065 pounds, and moved St. L., B. & M., Santa Fe., Ft. W. & D. C., C. & S., to destination. Charges on squash, beans and peppers were collected at the applicable mixed carload commodity rate of 96c, minimum 20,000 pounds. Charged on garlic first class less carload rate of $2.985. The mixture upon which the 96c rate is applicable covers a long list of vegetables, including all of those named in the above described shipment except garlic. HELD, failure of defendants to include garlic unreasonable, reparation awarded to basis of 96c. Meier Dawson Produce Co. v. C. & S. Ry., 115 I. C. C. 221.

(n) Western classification fourth-class rates on "Spring assemblies, cushion, or seat, * * *, charged on a mixed shipment of cushion seat springs and coiled-wire springs, not shown in excess of those applicable or otherwise unlawful. Complainant contended for a commodity rate on "Springs, wire, n. o. s., in bundles," or a still lower commodity rate subsequently established on articles shipped. Commodities here in issue did not come within description contended for, were specifically covered by various classification items on "Springs" and "Spring assemblies," and charges should have been assessed on whichever of the several classification bases resulted in lowest total charges. Moreover, absence, among other things, of weights of the several articles renders it impossible to ascertain aggregate legal charges, and record fails to show that total charges collected exceeded those which should have been assessed. D'Arcy Spring Co. v. G. T. W., 115 I. C. C. 91.

(o) Upon contention that charges on l. c. l. mixed shipments of fruits, vegetables, and perishable freight, covered by one bill of lading, from one consignor to one consignee at one destination, should be based on the lowest instead of the highest rated article in car, to compensate carrier for any deficit in minimum weight, HELD: To authorize charges on basis contended for might encourage shippers loading less than the minimum to place in car a low-rated article and thereby defeat very purpose of the minimum loading. Charges on Refrigerator Equipment, 115 I. C. C. 198, 201, 202.

(p) Failure of carriers to include garlic in list of vegetables entitled to move under a mixed carload commodity rate on vegetables from San Benito, Tex., to Denver, Colo., found unreasonable. Garlic is analogous to various vegetables included in the mixing provision, is included in the mixing provision governing movements in the opposite direction, and no good reason appears why it should not be included therein from and to points here involved. Reparation awarded and reasonable basis prescribed for future. Meier-Dawson Produce Co. v. C. & S., 115 I. C. C. 221.

(q) Mixed shipment of veneer moved under a joint commodity rate applicable to veneer less than one-eighth inch in thickness. A portion of shipment was of greater thickness but no separate weights of differing thicknesses were shown in billing. Upon contention that as tariff made no provision for such mixed shipments a lower commodity rate on lumber or veneer, n. o. i. b. n., without restriction as to thickness, should have been assessed on entire shipment, HELD: Rate sought was restricted to apply only in absence of other specific commodity rates. Commodity rate charged was applicable on that portion less than one-eighth inch thick, and rate contended for applied on the balance of greater thickness. Adjustment of charges authorized computed to these bases, if weights of differing thicknesses can be determined or agreed upon. Standard Furniture Co. v. A. G. S., 115 I. C. C. 243.

(r) Shipment of crude oil blended with a small quantity of casing-head gasoline and assessed gasoline rates found overcharged. Such shipments found to consist of crude oil, it being shown that the material here considered, as shipped, when subjected to usual tests, showed characteristics well within the range of those exhibited by crude oils to which no casing-head gasoline had been added. Moreover, while oil originally contained a substantial percentage of casing-head gasoline, in view of highly volatile character of the commodity and opportunities that were afforded for its evaporation between time of its production and time it was loaded into the cars, the oil as tendered for shipment did not contain a sufficient quantity of casing-head gasoline to render it different in any essential respect from crude oil as covered by tariffs. Reparation awarded. National Refining Co. v. L. & N., 118 I. C. C. 177.

(s) Complainant attacked class rates charged on contractors equipment, shipped July 28, 1924, from Elgin, Ill., to Bakersfield, Calif., in a mixed carload with one complete Elgin motor street sweeper as unreasonable and unlawful. Charged second class rate of $4.43. Obviously the rating in the classification on road scrapers does not cover machines of such a character as the Austin backfiller. The mere possibility that in some cases this backfiller may be used on roads would not justify its classification as a road scraper. The body construction of the backfiller is similar to that of locomotive cranes and power shovels. It is a machine, and machines N. O. I. B. N., set up, are rated first class less carloads, and class A carloads. First class rate is $5.10 and there is a commodity rate of $1.93 on machinery rated fifth class and class A in the classification. Lowest basis of charge was commodity rate of $1.93 on the backfiller and second class $4.43 on the street sweeper. HELD, Austin backfiller was properly ratable as a machine n. o. i. b. n. and legal charges not unreasonable, outstanding undercharge to be collected, complaint dismissed. Stuart & Smith Co. v. A., T & S. F. Ry., 120 I. C. C. 309.

(t) Complainant attacked rates charged on magnesite stucco from Illinois, Iowa and Missouri to Kansas, Missouri, Oklahoma and Arkansas and from Waukegan, Ill,, to Pueblo, Colo., as unreasonable, inapplicable, and as compared with rates on stucco and other plasters, unduly prejudicial. Class D rates charged except to Oklahoma class E. The rates contemporaneously applicable on stucco ranged from 15.5 cents to 48 cents. HELD, following 104 I. C. C. 517, rates charged on magnesite stucco composed of stucco mix, magnesite chloride, and crushed rock dash shipped in separate packages in the same car, the magnesium chloride not to exceed 20% and the crushed rock dash not to exceed 50% of the gross weight of the shipment were unreasonable to extent they exceeded rates on stucco, reparation awarded. Badger Lumber & Coal Co. v. A., T. & S. F. Ry., 120 I. C. C. 590.

(u) Contention that under a classification rule which provides that charge for a package containing freight of more than one class shall be at rating provided for highest rated freight contained in packages, the applicable ratings on mixed stearine are those in effect on coconut stearine, not sustained. Mixed stearine is composed principally of coconut stearine and the mixture or compounding of that and peanut stearine operates to destroy identity of the article either as coconut or peanut stearine. In absence of a more specific classification, mixed stearine properly falls within description of stearine, n. o. i. b. n. Best Foods v. C. R. R. Co. of N. J., 120 I. C. C. 169, 172.

(v) There are no l. c. l. ratings published based on condition that shipments fill the car, as such a rating would be impracticable. Brownell & Field Co. v. N. Y., N. H. & H., 120 I. C. C. 229, 231.

(w) Following Rocbond Co., 104 I. C. C. 517, rates on magnesite stucco composed of stucco mix, magnesium chloride, and crushed-rock dash and shipped in separate packages in same car, magnesium chloride not to exceed 20 per cent and crushed-rock dash not to exceed 50 per cent of the gross weight of shipments, found unreasonable to extent they exceeded lower rates on "stucco." Reparation awarded. Badger Lbr. & Coal Co. v. A., T. & S. F., 120 I. C. C. 590.

(x) Complainant attacked class rates charged on mixed carloads of fresh meat and packing house products from Jacksonville, Ill. to Detroit, Mich., between Aug. 28, 1920 and March 4, 1922 as unreasonable, unjustly discriminatory and

unduly prejudicial. Jacksonville is on the Wabash 37 miles closer to Detroit than is St. Louis. Under mixing rules generally applicable in Illinois and central territories, mixed carloads of fresh meats and packing house products from Jacksonville to Detroit have for some years moved at the respectively carload rate for each commodity, subject to minimum revenue per car based on 21,000 pounds on fresh meat at the carload rate. Prior to Nov. 5, 1920 the applicable carload rates on fresh meats and packing house products were third class of 72c and fifth class of 38c, respectively. During that time the commodity rate on fresh meats, in carloads, from St. Louis to Detroit was 52c. Effective Nov. 5, 1920 defendant established a commodity rate of 52.5c from Jacksonville, applying on fresh meats in straight carloads and on fresh meats and packing house products in mixed carloads. Effective April 15, 1922 the fifth class basis on packing house products shipped with fresh meats was restored. The record sustains the allegation that the 72c rate on fresh meats was unduly prejudicial in relation to the rate of 52.5c from St. Louis. The record does not warrant a finding that the rate was unreasonable. HELD, the attacked rates on fresh meats in mixed carloads with packing house products in effect prior to Nov. 5, 1920 not unreasonable but unduly prejudicial, reparation denied. Rate on packing house products in mixed carloads with fresh meats between Nov. 5, 1920 and April 5, 1922 unreasonable to extent it exceeded the fifth class rates, reparation awarded. Powers Begg & Co. v. Wabash Ry., 122 I. C. C. 476.

(y) Complainant attacked charges assessed on one mixed carload of material described as sewer pipe, sewer pipe fittings, and septic tank baffle plates, shipped from North Birmingham, Ala., to Binghamton, Tenn., on July 18, 1922 as illegal and unreasonable to the extent that they exceeded those which would have accrued on basis of the carload and less carload rates applicable on the weights of the sewer pipe and fittings and on the baffle plates, respectively. Complainant attacked rates charged on sewer pipe and sewer pipe fittings so cut and shaped that they can be used to construct septic tanks, and for water meter boxes, from Chattanooga, Rome, Macon and North Birmingham to Kentucky, Louisiana, Mississippi and other southeastern states as illegal and unreasonable. It is complainant's contention that the commodities shipped were in fact sewer pipe and sewer pipe fittings. Reinforced concrete septic tanks, with which complainant's tanks compete, were given a less carload rating of third class and carload rating of fifth class. The position of defendants is that if the articles referred to are merely standard sewer pipe pieces and are so described and shipped the ultimate use to which they are to be put does not concern them. If, however, such clay pieces are not standard pipe or parts, whether they be described as septic tanks or not, they are not entitled to sewer pipe rates. HELD, rates applied applicable and not unreasonable, complaints dismissed. Southern Sewer Pipe Works v. L. & N. R. R., 122 I. C. C. 721.

(z) Complainant alleged that rates charged on numerous mixed carloads of fresh meats, packing house products, butter, eggs, and cheese, from Wheeling, W. Va., to Ohio, Pennsylvania, and West Virginia between Aug. 10, 1920 and March 30, 1922 were unreasonable and unduly prejudicial. Third class rates were applicable on fresh meats, in carloads, from and to the points under consideration. Charged at the rates applicable on the several commodities computed upon their respective weights subject to a minimum charge on each entire shipment equal to the carload rate on fresh meats, minimum 21,000 pounds. Commodity rates on fresh meats, in carloads, lower than the third class rates were established by the B. & O. on Jan. 15, 1922 and by the Pennsylvania April 1, 1922 upon request of complainants. In official territory fresh meats take third class rates or commodity rates, which are generally lower than third class. HELD, on and after August 26, 1920 rates on fresh meats unreasonable to extent they exceeded rates established Jan. 15 and April 1, 1922 and prior to Aug. 26, 1920 unreasonable to extent they exceeded those rates modified to reflect the general rate level prior to the general increases of 1920, reparation awarded. Allied Packers v. B. & O. R. R., 123 I. C. C. 115.

(aa) Rate on burlap bags, cotton-lined burlap bags, and cotton bags, in straight or mixed carloads, found unreasonable to extent it exceeded lower rate contemporaneously maintained on burlap bagging. Reasonable rate prescribed for future and reparation awarded. Biegel Sack Co. v. C. R. R. Co. of N. J.,

122 I. C. C. 78.

(bb) Rate on fresh meats, in mixed carloads with packing-house products, from Jacksonville, Ill., to Detroit, Mich., found not unreasonable but unduly prejudicial to extent it exceeded a lower rate contemporaneously in effect from St. Louis, Mo. While Jacksonville is not intermediate to St. Louis, it is nearer to Detroit. However, rate assailed was based on distance scale prescribed in 45 I. C. C. 254 and record does not warrant a finding that such rate was unreasonable. Powers-Begg & Co. v. W. Ry., 122 I. C. C. 476.

(cc) Commodity rate on packing-house products, in mixed carloads with fresh meats, from Jacksonville, Ill., to Detroit, Mich., found unreasonable to extent it exceeded fifth-class rate contemporaneously in effect on packing-house products for the same haul. Reparation awarded. Powers-Begg & Co. v. W. Ry., 122 I. C. C. 476.

(dd) Third-class rates on mixed carloads of fresh meats and other products from Wheeling, W. Va., to certain destinations in Ohio and Pennsylvania, found unreasonable as compared with lower commodity rates contemporaneously in effect from Chicago, East St. Louis, and Indianapolis, to same destinations for comparable distances, and to extent they exceed rates subsequently established. Reparation awarded. Allied Packers v. B. & O., 123 I. C. C. 115.

(ee) Class A rates on gas engines, steam engines, and boilers between points in Louisiana and Arkansas, found not unreasonable or unduly prejudicial. Only evidence introduced to support allegation of unreasonableness was that articles named could be mixed with other oil-well supplies at rates applying on latter commodity. However, Class A rates were prescribed in 77 I. C. C. 473, for application on boilers and gas or steam engines throughout practically the entire southwestern territory and evidence here presented does not warrant a different finding. Standard Oil Co. v. C., R. I. & P., 123 I. C. C. 669.

(ff) Respondents proposed to change the present mixing rule under which wire products and merchant iron move in mixed carloads at commodity rates between Shreveport, La., and points in Texas, and between points in Texas on interstate traffic, so as to bring it into accord with the mixing rule applicable between points in Texas on intrastate traffic. By the proposed change staples and woven wire would be included among the wire products, but the weight of the wire products in the mixture would be restricted to 60% of the mixed carload weight. Present rule allows an unrestricted mixture of wire and nails with certain iron and steel articles known as merchant iron. HELD, suspended schedules justified. Iron and steel articles, 126 I. C. C. 147.

(gg) Quantity or percentage restrictions in carload mixtures, are not new. Iron and steel articles, 126 I. C. C. 147, 150.

(hh) Proposed change in mixing rule covering wire products and merchant iron in mixed carloads between Shreveport, La., and points in Texas, and between Texas points on interstate traffic, so as to include staples and woven wire among wire products in mixed carloads with merchant iron at commodity rate applicable on merchant iron, and to restrict weight of wire products to 50 per cent of car-load weight, found justified. Proposed mixing rule in effect on intrastate traffic in Texas and its establishment on interstate traffic will avoid disparity between interstate and intrastate rates. Moreover, proposed restriction of weight of wire products will prevent the loading of a small quantity of merchant iron in a carload of wire products in order to secure the lower merchant-iron scale of rates, in defeat of rates on wire products. Iron and Steel Articles, 126 I. C. C. 147.

(ii) Charges on mixed shipments of lumber, built-up woods and veneer, were collected under mixed-carload rules providing that charges on two or more kinds of lumber or articles taking lumber rates should be assessed at rate applicable on highest rated article, subject to highest minimum weight of any article contained in the car. Upon contention that built-up woods should have been rated as water-closet seats under heading "Plumbers' Goods," HELD: Built-up woods consisted of five plies of wood temporarily glued together and roughly hand-sawed to shape, thus necessitating further processing before they became finished closet seats. Clearly they were not plumbers' goods. Moreover, considering the conflicting interpretations of participating carriers and mixed-carload rules and tariffs in their entirety, there is a reasonable doubt as to their proper interpretation, which doubt is ordinarily resolved in favor of shippers. Rates sought to be collected

are therefore inapplicable. Brunswick-Balke-Collender Co. v. B. & O. R. R., 126 I. C. C. 747.

(jj) Fourth-class rating on storage batteries found not unreasonable as compared with lower class A rating thereon when shipped in mixed carloads with other electrical equipment. Carriers assert that it is commercially necessary and in accordance with their policy to permit shipment of extra parts and accessories in mixed carloads with machines and electrical appliances at rate applicable on latter commodities in straight carloads. However, in instant case shippers defeated purpose of rating by including a single electrical machine with the shipment thus creating merely a technical mixture. Moreover, in 38 I. C. C. 571 and other cited cases, rates on storage batteries in straight carloads were found not unreasonable as compared with lower rates thereon in mixed carloads with electrical machines and record here does not warrant a different conclusion. National Lead Battery Co., v. M. P. 128 I. C. C. 39.

(kk) Complainant alleged that the fourth class rating and rate charged on four cars of storage batteries shipped from Kansas City and Centropolis, Mo., to Dallas, Tex., between Jan. 10 and March 26, 1924 were unreasonable. Rate charged $1.355. Contemporaneously class A rating was accorded to mixed carloads of electric generators, engines, and switchboards combined, together with their equipment of batteries. Class A rate was $1.095. On June 15, 1924 the classification was amended to restrict the batteries to the number necessary to equip the electrical appliances in the shipment. HELD, rating and rate attacked not unreasonable, complaint dismissed. National Lead Battery Co. v. M. P. R. R., 128 I. C. C. 39.

(ll) Third-class rate on mattresses and metallic cots in mixed carloads from Atlanta, Ga., to Meridian., Miss., found not unreasonable or otherwise unlawful as compared with a lower commodity rate on mattresses or cots in straight carloads contemporaneously in effect to Memphis; or with commodity rates on the same articles, including furniture in straight or mixed carloads, between various other points for comparable distances. Carrier contended that commodity rate to Memphis, and other commodity rates instanced by complainant, were subnormal, and showed that rate assailed was relatively aligned with rates from Atlanta, Chattanooga, and Knoxville to numerous destinations in Mississippi. Moreover, it was not contended or shown that mattresses and metallic cots in mixed carloads were improperly classed, and subsequent reduction of rate assailed resulting from a general investigation in 113 I. C. C. 200 does not imply that rate paid was unreasonable. Hulett & Son v. S. Ry., 128 I. C. C. 201.

(mm) Complainant attacked third class rate of 93.5c charged on 15 mixed cars of mattresses and metallic cots shipped from Atlanta, Ga., to Meridian, Miss., as unreasonable, unduly prejudicial and in violation of the fourth section. Mattresses are rated second class, and metallic cots fourth class, carloads, mixed carloads, third class. The shipments consisted principally of mattresses, and metallic cots were included in order to secure the third class rates. HELD, rate attacked not unreasonable or otherwise unlawful, complaint dismissed. Hulett & Son v. Southern Ry., 128 I. C. C. 201.

(nn) Complainant attacked rates on enameled iron bathtubs, in straight carloads, and tubs and enameled iron lavatories in mixed carloads from Monaca, Pa, and on shipments of ingot lead, sheet lead in rolls, lead pipe fittings and lead solder in mixed carloads, from Joplin, Mo., to Dallas, Tex, two years prior to August 17, 1925 as unreasonable. Monaca is about in the center of the Pittsburgh group on traffic to Texas. Joplin is near the southern boundary of the Kansas City group of origin. Rate charged on tubs, unreleased, in straight or mixed carloads, was $1.805, and a rate of $1.77 was charged on straight carload shipments of tubs released to the value of $20 each. A rate of 81c was charged on plumbers goods from Joplin. The rates to the coast terminals even when depressed, are not necessarily low or even reasonable rates to intermediate points. The record shows that other commodities suitable for water transportation, on many of which the low canal rates presumably apply, take rates to Dallas considerably lower than the Deming rates. HELD, rates attacked from Monaca unreasonable to extent they exceed $1.61, from Joplin unreasonable to extent they exceed 58c, reparation awarded. Fisher Supply Co. v. A. & V. Ry., 128 I. C. C. 215.

(oo) Rate on mixed carloads of printing paper and writing paper from Appleton and Neenah, Wis, to Dallas, Tex., found not unreasonable as compared with rates prescribed in 66 I. C. C. 571, wherein the commission approved a mixed-carload rule to effect that the highest rate on any article contained in the car and also the highest minimum carload weight on any such article should apply on entire shipment. Practical Drawing Co. v. C. & N. W., 128 I. C. C. 540.

(pp) Complainant alleged charges collected on a mixed carload of oats, barley and beans shipped from Brampton, N. D., March 3, 1924 to Burdett, N. Y., and the mixing rule were unreasonable. The car was loaded with 50,640 pounds of barley and oats, in bulk, and 120 sacks of navy beans weighing 13,-710 pounds. Charged rates to and beyond Chicago. On the grain the combination rate was 55.5c, made up of commodity rates of 36c to Chicago and 25.5c beyond. On the beans charges were based on a combination of fourth class rates of $1 and 53c to and beyond Chicago, applicable on less carload shipments. There was also in effect a carload combination rate of $1.075 on beans, subject to carload minimum of 36,000 pounds. The charges were lower when based on the actual weight and less carload rate on the beans and charges were collected on that basis. HELD, the rate and mixing rule not unreasonable, complaint dismissed. Bennett v. M. C. R. R. 132 I. C. C. 400.

(qq) Complainant alleged fourth class rate charged on shipments of sheet copper in straight carloads or in mixed carloads with sheet brass and/or bronze, and with copper, brass, and/or bronze rods, from Kenosha, Wis., to Niles, Mich., was and is unreasonable and unduly prejudicial. Shipments moved in box cars over C. & N. W. to Chicago, and beyond either over the M. C., total distance 144.6 miles, or N. Y. C. to Elkhart, Ind., and Big Four, total distance 171.1 miles, charged 32c. The Commission is of the opinion that the relationship between the rates here assailed and the rate on the same commodities from Kenosha to Chicago does not unduly prefer manufacturers at Chicago or unduly prejudice complainant. HELD, rates assailed not unreasonable or unduly prejudicial, complaint dismissed. Kawneer Co. v. C. & N. W. Ry., 132 I. C. C. 643.

(rr) Rates on Portland cement and plaster in mixed carloads from Hanover, Mont., to western and central portions of North Dakota and South Dakota, found not unreasonable but unduly prejudicial to extent that charges thereunder exceed those which would accrue under mixing rules similar to those contemporaneously maintained from Steelton, Minn., and Des Moines and Gilmore City, Iowa. Mixtures from Hanover move under rates subject to 50,000-pound minimum, whereas from preferred points cement moves at c. l. rate and actual weight subject to 50,-000-pound minimum, and plaster at actual weight and c. l. rate subject to lowest minimum. No order entered but carriers expected to provide for mixing rules in revising rates. Three Forks Portland Cement Co. v. C., B. & Q., 129 I. C. C. 107, 118.

§10. Use or Process of Making Commodity.

See Reasonableness of Rates §22, §23; Restricted Rates.

(a) Proposal to restrict, throughout official classification territory, application of the billet basis of rates to bolt, nail, rivet, or wire rods and chain iron or steel, in coils, so that it will apply on such commodities only when round in cross section, found not justified. Effect of the proposed restriction would be to increase the rates now effective on rods, in coils, which are not round in cross section. The distinction between round and not round does not reflect any substantial difference in material, stage or process of manufacture, value, or transportation characteristics other than volume of movement. Moreover, the burden resting upon carriers to justify the increase has not been borne, nor has it been made to appear that the resulting difference in rate level would be free from undue prejudice as between round rods and rods of other shapes when shipped in coils. Iron and Steel Articles, 104 I. C. C. 616.

(b) Rates may not be based upon the use to which a commodity is put. Brass, Bronze, and Copper Articles, 109 I. C. C. 351, 357.

(c) Although the commission has repeatedly found that rates upon same commodity, varying according to the use to which it is put, are unlawful, it has as consistently found that there is nothing unlawful in establishment of different rates on different commodities after

taking into consideration, along with other factors, the general uses to which the commodities are respectively put. Eastern Lime Mfrs. Traffic Bureau v. A. & B. B., 112 I. C. C. 7, 15.

(d) The nature of an article shipped and not price at which it is sold or use to which it is put determines applicable rating thereon. See 102 I. C. C. 325, 326. Richmond Radiator Co. v. C. & N. W., 115 I. C. C. 743, 744.

(e) Rates may not be constructed based upon use to which a commodity is put, use being an element which is not controlling in fixing of rates. Duluth Boiler Works v. A., T. & S. F., 118 I. C. C. 161, 163.

(f) Use to which an article is put does not alone determine its essential character or charges which may be legally exacted for its transportation, but it tends to distinguish its qualities from other closely analogous articles. McEwing & Thomas Co. v. C. & E. I., 118 I. C. C. 211, 213.

(g) The line of demarcation separating commodities should not be controlled by mechanical processes but by actual differences in grades. See also 77 I. C. C. 727. Cotton Linters from Southwest, 118 I. C. C. 419, 425, 426.

(h) Every step in process of manufacture can not be reflected in a difference in classification treatment. Cheney Pulp & Paper Co. v. A., C. & Y., 118 I. C. C. 477, 481.

(i) Mere possibility that two articles may in some cases be used for same purpose does not necessarily justify same classification ratings for both. Smith Co. v. A., T. & S. F., 120 I. C. C. 309, 311.

(j) Character of an article shipped and not use to which it is put determines the rate applicable thereon. Menasha Wooden Ware Co. v. D., S. S. & A., 120 I. C. C. 415, 416.

(k) The Commission has consistently found that rates shall not be made based upon the use which is to be made of a commodity. Zimmerman Wells Brown Co. v. Director General, 122 I. C. C. 199, 200.

(l) Rates shall not be made based upon use which is to be made of a commodity. Zimmerman-Wells-Brown Co. v. Director General, 122 I. C. C. 199, 200.

(m) Rates predicated upon use to be made of a commodity are unlawful because of resulting discriminations, nevertheless, such rates, while in effect, are the legally applicable rates on the particular commodity when conditions of tariffs publishing them have been fully complied with. Harlem & Morrisiana Tranp. Line v. N. Y., N. H. & H., 123 I. C. C. 480, 484.

(n) Rates on pottery clay and imported china and ball clay found not unreasonable or otherwise unlawful, as compared with rates contemporaneously in effect on "clay, crude or ground (common or fire)." While complainants contend that all clays used in manufacture of pottery are crude, are formed through decomposition of feldspar in granitic rocks, and can be used in manufacture of brick. Pottery clay is found only in restricted areas, in considerably more valuable than common or fine clay, and use to which it is put requires that it be transported in clean tight box cars, whereas common clay may be shipped in leaky or open-top cars. Although pottery clays can be used for making brick, brick clays can not be used for making pottery and because of their high value pottery clays are not ordinarily so used and can not be properly included as brick clays. Moreover, in 112 I. C. C. 7, differentiation was made as between high-grade and low-grade lime, and applying that principle here, differentiation in classification and tariffs between types of clays involved is fully justified. United States Potters' Asso. v. A., C. & Y., 128 I. C. C. 249.

(o) Although the Commission has repeatedly found that rates upon the same commodity, varying according to the use to which it is put, are unlawful it has consistently found that there is nothing unlawful in the establishment of different rates on different commodities after taking into consideration along with other factors the general uses to which the commodities are respectively put. In other words, the Commission regards lime suitable for chemical or building purposes and lime having no value for such purposes, such as agricultural and fluxing lime, as different commodities. United States Potters Asso. v. A. C. & Y. Ry., 128 I. C. C. 249, 254.

§11. Value.

See Advanced Rates §18 (5); Evidence §61; Reasonableness of Rates §38.

(a) The oil-well outfits and supplies

list includes many articles, of varying values and weights, which are given like rates to permit mixing. Fact that derricks are of lower value than some other commodities taking same rates, is not, in and of itself, a compelling reason for according them lower rates. Carter Oil Co. v. A., T. & S. F., 113 I. C. C. 757, 759.

(b) It is clear that the factory cost of adding machines without the addition of any profit, can not properly be compared with the sale prices of other commodities in which a profit is included. This is true regardless of the basis upon which complainants filed claims against carriers for machines lost or damaged in transit. Burroughs Adding Machine Co. v. M. C. R. R., 120 I. C. C. 19, 20.

(c) Rating on component parts or raw material is not conclusive of rating to apply on a finished article. Troxel Mfg. Co. v. B. & O., 126 I. C. C. 169.

(d) Although it is true that a manufactured article would ordinarily be rated higher than the material from which it is made the comparatively small number of classes into which all commodities must be grouped in the classifications places an important limitation upon the application of that principle. Eggerss-O'-Flyng Co. v. C. & N. W. 128 I. C. C. 644, 649.

(e) Fifth-class c. l. rating on unprinted, waxed wrapping paper, in boxes or crates in official classification, found not unreasonable, but second-class l. c. l. rating in western classification found unreasonable to extent it exceeds third class. Reasonable rating prescribed for future. Kalamazoo Vegetable Parchment Co. v. C., K. & S., 128 I. C. C. 675.

(f) L. c. l. ratings on vegetable-parchment wrapping paper, either printed or unprinted, in official, southern and western classifications, and c. l. rating in official and southern classifications, found not unreasonable,but fourth-class c. l. rating in western classification found unreasonable as compared with fifth-class rating contemporaneously maintained on waxed wrapping paper, a competitive commodity and to extent it exceeds class A rating. Reasonable rating prescribed for future. Kalamazoo Vegetable Parchment Co. v. C., K. & S. 128 I. C. C. 675.

(g) Carriers urge printed paper because of its higher value should invariably be rated higher than unprinted paper of the same kind. However if value is the sole consideration it seems rather obvious that such a rule strictly applied would result in many improper ratings because of difference in values of unprinted paper. Therefore, it can neither be said that printed paper should always be rated higher than same paper unprinted nor that printed and unprinted paper should always be rated the same. Kalamazoo Vegetable Parchment Co. v. C., K. & S., 128 I. C. C. 675, 679.

III. CLASSIFICATION REGULATIONS.

§11¾. In General.

(a) When missing parts of a complete article are insufficient to affect its identity rating on complete article applies. Parkersburg Rig & Reel Co. v. B. & O., 115 I. C. C. 539, 540.

§12¼. Description.

(a) On shipments of rough marble, originally imported, and used for interior decorations, sixth-class rates were assessed under governing classification on "Stone, Natural, * * * Marble * * *." Contemporaneously commodity tariff provided lower rates on "Stone (Building)." HELD: The lower commodity item not being restricted to domestic traffic, or otherwise, rates thereunder were applicable on traffic here involved. Refund of overcharges directed. Lautz Marble Corp. v. E. R. R., 115 I. C. C. 543.

(b) Upon contention that an exception to classification takes item in the exception out of the classification and the exception governs, HELD: Contention is sound in part only as description in the exception must be read in connection with the classification item, and not wholly by itself. See 36 I. C. C. 519. General Motors Truck Co. v. G. T. W., 118 I. C. C. 99, 103.

(c) A manufacturers description of an article to induce its purchase by the public also describes it for transportation and carriers may accept his description for purposes of classification and rates. Carriers are not required to analyze freight to ascertain whether it is in fact inferior to the description or public representations under which it is sold, in order to give it a lower rate corresponding to its actual value. Southern Sewer Pipe Works v. L. & N. R. R., 122 I. C. C. 721, 725.

§13½. Long Articles.

(a) Complainant attacked class rate

charged on four steel girders forwarded from Pittsburgh, Pa., to Atlanta, Ga., on Jan. 2 and 4, 1924, as unreasonable and inapplicable. The girders constituted part of one electric crane, knocked down, forwarded as three shipments on different days, and under separate bills of lading. The knocked down parts consisted of the four girders above mentioned, measuring 24 inches square and 68 ft. long, and various smaller parts and fixtures. Each of the shipments considered consisted of two girders, which were loaded on two cars because of their length. The charges were collected at sixth class rate of 88.5 cents minimum 53,760 pounds for each shipment. The competent facts of record show that the shipments were stripped of all attachments or fixtures, and, for the purposes of transportation, were steel girders entitled to the special iron rating. HELD, rate charged inapplicable, applicable rate was 58 cents, reparation awarded. Knight Luttrell Iron Co. v. S. A. L. Ry., 120 I. C. C. 580.

§14. Marking and Addressing.

(a) Penalty charges collected on canned fruit in fibre boxes because of shipper's failure to mark boxes with a description of contents, in conformity with governing classification provision, which provided that "boxes must show a description of contents," found unreasonable as applied to c. l. shipments. Ball & Co. v. D. & R. G. W., 109 I. C. C. 759.

§15. Minimum Charge and Weight.

See Passenger Fares and Facilities §6½.

(a) Minimum charges on fresh meats, packing-house products, and other articles, in peddler cars, from Chicago and East St. Louis, Ill., to points on C. & O. in Kentucky, West Virginia, and Virginia, found unreasonable and unduly prejudicial to extent they exceeded charges on 20,000 pounds of freight at 3 cents per 100 pounds less than fourth-class rates from point of origin to final destination of car. Reasonable and nonprejudicial minimum charges prescribed for future, and reparation awarded. Wilson & Co. v. C. & O., 104 I. C. C. 641.

(b) Proposed increased minimum charges on articles, in peddler cars, from East St. Louis, Ill., to points on C. & O. in Kentucky and West Virginia, designed to place such charges on a basis similar to that from Chicago to same points, found not justified. The loading of peddler cars is dependent upon consuming ability of destination territory. Territory served by the C. & O., especially the branch lines, is thinly settled, and limited refrigeration facilities render storage of perishable articles for extended periods impossible. Wilson & Co. v. C. & O., 104 I. C. C. 641.

(c) Upon contention that theater chairs compete with portable chairs, church furniture, and wood benches, and that an increase in the minimum on theater chairs would be unduly prejudicial to the latter, HELD: This competition, which is limited, should not be controlling in determination of a reasonable minimum on theater chairs. Theater Chairs to Southwestern Destinations, 113 I. C. C. 313, 318.

(d) Weight density, or the weight of an article in proportion to the space it occupies, is an important consideration in freight classification, whereas under the existing system of express rates practically all articles except food products are charged the first class rates regardless of their bulk. Parlor Frame Mfrs. Asso. v. A. A. R. R., 118 I. C. C. 154, 155.

(e) One factor of combination rate on a carload of sawmill machinery shipped in a car 41 feet 4 inches in length, was published at "$61 per car as per classification." Governing classification rated sawmill machinery sixth class, minimum 24,000 pounds, subject to rule 34, and exceptions thereto provided class N rating on "Machines and machinery, c. l., * * * minimum weight 20,000 pounds," for cars 36 feet 6 inches, or under, larger cars being subject to rule 34. Upon contention by carriers that under rule 34 the rate of $61 should be regarded as applicable to a unit of 23,400, the minimum weight for a car of size used, and that excess above such weight should be computed proportionately, HELD: The portion of rule 34 on which carriers rely fits ordinary situation where rates are applicable to specified units of weight, but has no reasonable application where, as here, the rate stated as a flat charge per carload, and charges collected were inapplicable. Reparation

awarded. West Florida Lbr. Co. v. G., F. & A., 129 I. C. C. 62.

(f) Fourth-class rate, minimum 30,000 pounds on shipments of varnish weighing less than 33,000 pounds, found not unreasonable as compared with fifth-class rate, minimum 36,000 pounds, contemporaneously applicable on paint. Under an intermediate clause, a lower commodity rate on varnish, minimum 40,000 pounds, would have been applicable to shipments had not an alternative rule provided for application of rate and minimum producing lowest charge. Transportation qualities of paint and varnish are not shown to be similar and fourth-class rate was prescribed on paint, between the same points, in 123 I. C. C. 203. Peaslee-Gaulbert Co. v. S. Ry., 129 I. C. C. 611.

§15½. Nesting.

(a) Paper cups, nested and flat, average substantially same value per pound, and risk of damage is negligible. When used for same purpose they compete commercially. While the greater density of flat cups when packed permits loading to a c. l. weight heavier than can be attained by the nested cup, this consideration alone does not justify ratings on flat cups lower than on nested cups. Public Service Cup Co. v. A. C. L., 118 I. C. C. 697, 701.

§16. Packing.

See Reasonableness of Rates §2.

(a) Meats: Rating in official classification of fourth class on dry-salted, dried, smoked, and pickled meats, loose, from Chicago and various other packing points to destinations in trunk-line territory east of Buffalo-Pittsburgh line and to New England territory found unjust and unreasonable for future to extent it exceeds fifth class on like traffic in packages. Reasonable rating prescribed for future. Morrell & Co. v. N. Y. C., 104 I. C. C. 104, 136, 137.

(b) Lubricating oils, lubricating greases, and paraffine wax were accorded same rates whether moving in tank cars or in packages. Carriers established lower rate on tank-car shipments and subsequently again equalized rates by reducing those on package shipments. FOUND: Rates assessed on shipments in packages moving during period when higher rates thereon were in effect were not unreasonable, since existence of lower rates on tank-car shipments and subsequent establishment of lower rates on shipments in packages do not alone demonstrate unreasonableness of higher rates. Texas Oil Co. v. T. & N. O., 104 I. C. C. 337.

(c) Long-established requirement that shipments of rosin be packed in barrels, found not unreasonable or otherwise unlawful. Prayer for a change in rules to permit shipment of that commodity loose, in box cars denied, doubt existing as to practicability of shipping in bulk in summer time. Vera Chemical Co. v. A. C. R. R., 104 I. C. C. 408.

(d) Rates on unfermented grape juice, in bulk, in barrels, found unreasonable and unduly prejudicial to extent they exceed rates contemporaneously in effect on same commodity, in glass, in boxes. Reasonable rates prescribed and reparation awarded. Joseph v. O.-W. R. R. & N., 104 I. C. C. 477.

(e) Following 96 I. C. C. 437, apples, in bulk or in lug boxes without tops, found unreasonable and unduly prejudicial to extent they exceeded lower rates on same commodity in boxes and crates. Lane v. S. P., 107 I. C. C. 253.

(f) Penalty charges collected on canned fruits in fiber boxes because of shipper's failure to mark boxes with a description of contents, in conformity with governing classification provision which provided that "boxes must show a description of contents," found unreasonable as applied to c. l. shipments. Ball & Co. v. D. & R. G. W., 109 I. C. C. 759.

(g) A description of contents outside of fiber boxes facilitates the policing of special packing requirements in connection with particular articles. However, as a practical matter, considering the large amount of traffic to be policed, it is probable that where articles liable to break, sift, or leak are enclosed in fiber boxes, inspections to determine whether packing requirements have been met should be limited to instances where boxes show external evidence of breakage, leakage, or sifting. Ball & Co. v. D. & R. G. W., 109 I. C. C. 759, 761.

(h) There has been and is a tendency to increase requirements for packing. These requirements vary but are generally that shipments shall be wrapped in paper, burlap, or fiber board, or boxed or crated. Suitable packing is advantageous not only to carrier but also to the trade, since it manifestly is better for the dealer to have satisfied customers

receiving consignments in good and merchantable condition than to have one of the parties to transaction burdened with a loss or damage claim and attendant delays and vexations. Nat'l. Council of Furniture Assos. v. A. A., 112 I. C. C. 289, 292.

(i) Refusal of carriers, parties to southern classification, to accept l. c. l. shipments of stoves or ranges made of cast iron, or of plate or sheet iron with cast-iron bases or tops, unless boxed or crated, found unreasonable. Reasonable rating of second class, or one class higher than on crated stoves or ranges, prescribed for future. Cairo Asso. of Commerce v. B. & N. W., 115 I. C. C. 3.

(j) Carriers assessed sixth-class rate applicable on rosin in bulk in barrels on shipments of rosin in boxes without tops. Governing classification which rated rosin in boxes at second class, defined a box as a closed container. It also provided for charging of rates one class higher where improperly closed containers are inadvertently accepted for transportation. HELD, while first-class rate was legally applicable, there is a general rate parity on dry and solid articles in barrels and in boxes and no reason appears why this parity should not obtain on rosin. Accordingly, rosin in barrels being rated sixth class, the applicable first-class rate on rosin in boxes was unreasonable to extent it exceeded fifth class which would apply under penalty provision for failure to comply with packing requirements. Adjustment of charges directed. Hyman-Michaels Co. v. A. C. L., 120 I. C. C. 127.

(k) Complainant sought same rating on l. c. l. shipments of fiberboard cans in paper bags as apply on l. c. l. shipments of same commodity in barrels, boxes, or crates, contending that although it might be proper to penalize shipments of cans in paper bags which do not fill the cars, such a penalty is unreasonable when cars are loaded to capacity, as possibility of damage is no greater than if the cans are boxed or crated. HELD, although commission has condemned the maintenance of minimum weights which ordinarily can not be loaded into cars of standard dimensions, evidence here does not establish a case of that kind with respect to fiberboard cans in general. Charges accruing on complainant's shipments based on c. l. rates and minima can not, therefore, be said to have been unreasonable. Brownell & Field Co. v. N. Y., N. H. & H., 120 I. C. C. 229.

(l) Upon further hearing, finding in 104 I. C. C. 408, that a requirement that rosin shipped c. l. be packed in barrels is not unreasonable, affirmed. Complainant, in attempting to show that rosin can be safely transported in bulk from southern producing points, showed lowest and highest mean temperatures over a 10-year period, but these figures are without probative value in that they fail to show daily temperatures. On certain days the temperature at several points through which rosin must move is considerably higher than figures presented, and in box cars, where air does not circulate freely, the temperature is still higher. Nor is it shown that this commodity, under pressure encountered, would not soften sufficiently to pass through the interstices of the cars. Moreover, complainant is the only user of rosin to request its transportation in bulk and facts of record do not warrant disturbing the long-established packing requirements of carriers. Vera Chemical Co. v. A. C., 120 I. C. C. 434, 437.

(m) Complainant alleged fifth-class rate charged on one car of paste shipped May 8, 1924 from Columbus, O., to Dallas, Tex., was unreasonable. Charged fifth-class of $1.38 applicable on paste, in bulk, in pails, or in barrels, minimum 36,000 pounds. Third class rate of $1.995 was applicable, and applied on adhesive paste, n. o. i. b. n., in glass or earthenware packed in barrels or boxes, in metal tubes in barrels or boxes, or in metal cans, or pails in barrels, boxes or crates. HELD, applicable third-class rate not unreasonable, complaint dismissed. Practical Drawing Co. v. N. Y. C. R. R., 126 I. C. C. 133.

(n) Rates on steel rods, in straight lengths and coils found discriminatory and unduly prejudicial to extent they exceeded the contemporaneous rates on same articles when shipped in coils. Since cost of both articles and transportation conditions are the same, no valid reason appears why rates on the two shapes of same material should be different. Standard Nut & Bolt Co. v. N. Y., N. H. & H., 126 I. C. C. 731.

(o) When an article is packed in inner containers in barrels there is less likelihood of loss or damage in transit than when packed in bulk in barrels, and that the rating for the former package should not be higher than on the latter,

except in cases where the article shipped in inner containers is of markedly better quality and hence of higher value than the same article shipped in bulk. Hires Co. v. A. C. & Y. Ry., 132 I. C. C. 29, 31.

(p) A regulation by the Interstate Commerce Commission relative to shipping carbon bisulphide in metal cans of not less than 28-gauge, being unauthorized under Act March 4, 1909 and Act June 18, 1910, § 12, imposed no duty on shippers, and violation thereof by shipper does not constitute negligence as matter of law, or evidence of negligence W. A. Hover & Co. v. Denver & R. G. W. R. Co., 17 Fed. (2d.) 881.

§16a. Penalty Charges.

See Passenger Fares and Facilities §4¼; Penalty Charges.

(a) Penalty charges collected on canned fruit in fiber boxes because of shipper's failure to mark boxes with a description of contents, in conformity with governing classification provision which provided that "boxes must show a description of contents," found unreasonable as applied to c. l. shipments. Ball & Co. v. D. & R. G. W., 109 I. C. C. 759.

(b) Upon contention that as shippers are charged with a knowledge of classification provisions but having for some reason elected to ship a commodity in a manner which did not comply with packing requirements, they should not be heard to complain of resulting penalty charges occasioned thereby, HELD: This view can not be sustained. Even if shippers knowingly subject themselves to higher rates, clearly they are not estopped thereby from complaining that charges exacted for service performed were excessive. Hyman-Michaels Co. v. A. C. L., 120 I. C. C. 127, 128.

(c) Classification rule provides that articles tendered for shipment in packages not specified in connection with ratings will be refused transportation but if such packages get into carrier's possession and are transported, ratings thereon will be determined in accordance with certain specifications embodied in the rule, among which is a provision that unauthorized shipments in boxes will be accorded rating provided for same commodity in barrels. HELD: Latter provision is plainly intended only to provide a legal basis for determining charges on shipments inadvertently accepted and does not negative requirement that shipments in boxes be rejected. If carriers are willing to transport shipments in boxes at ratings applicable on same commodity in barrels, they should amend classification accordingly, and until and unless that is done it is a violation of section 6 of the act for them knowingly to accept shipments in boxes. Best Foods v. C. R. R. Co. of N. J., 120 I. C. C. 169, 172.

§16¾. Valuable Articles.

(a) Principle underlying rates based on actual value of commodity is that articles covered by different groups of valuations are in fact so different as to constitute in effect different commodities. See 100 I. C. C. 471. Bourgoin & Co. v. M. & W. R., 123 I. C. C. 545, 546.

(b) Principal reason for rule of the classification that a manufactured article should properly pay a higher rate than raw materials from which it is produced is that a finished article is ordinarily more valuable per pound than the raw materials entering into its manufacture. Federated Metals Corp. v. C. R. R. Co. of N. J., 126 I. C. C. 703, 711.

IV. COMPARATIVE RATINGS.

See Infra §22; Supra §6, §16; Advanced Rates §5 (3); Commodity Rates II; Comparative Rates; Differentials §2½a; Evidence §12, §31, §64 (u); Live Stock Shipments; Reasonableness of Rates §28; Tariffs §7.

A. Analogous Articles.

§17. In general.

(a) Steam shovel parts: Official classification rating and rates on steam-shovel parts, l. c. l., found not unreasonable as compared with ratings on iron and steel castings, n. o. i. b. n., in the rough. Erie Steam Shovel Co. v. B. & O., 104 I. C. C. 367.

(b) Insulating material, viz., flax felt and wood-fiber felt: Proposed increased classification ratings on, in western and southern territories, which will have effect of making ratings uniform and provide same ratings for the several varieties of insulating materials, found justified. Earnings under proposed ratings will not be unduly high in comparison with those yielded by class rates applicable on analogous and comparable articles. Moreover, considering the rat-

ings applicable to other similar or heavier loading articles, and to light weight density of insulating materials, suggested ratings do not appear unreasonably high. Classification of Insulating Material, 104 I. C. C. 713.

(c) First-class rating and rates on rotary-tool joints, loose, l. c. l., in western classification, found unreasonable to extent they exceeded second class. While a rotary-tool joint is a much higher class article than an ordinary pipe connection, a rating as high as first class is not justified by usual classification considerations of value, weight density, and susceptibility to damage. Reasonable rating and rates prescribed and reparation awarded. Hughes Tool Co. v. A. & R. R. R., 107 I. C. C. 545.

(d) The analogous-article rule of classification can not be applied where an article has a specific rating or where it is embraced in classification as an article not otherwise indexed by name. Berninghaus Co. v. C. & N. W., 109 I. C. C. 104, 105.

(e) Fourth-class rating in official classification territory on automobile bow sockets found unreasonable to extent they exceeded fifth class the rating on other automobile parts. Reasonable rating prescribed. Chevrolet Motor Co. v. B. & O., 109 I. C. C. 185.

(f) Complainant attacked commodity rate charged on cars of crude and fuel oil received at Alexandria, La., between July 1, 1923, and June 15, 1924, from El Dorado, Norphlet and Smackover, Ark., as unjust and unreasonable. Shipments moved 175 miles from El Dorado, 183 from Norphlet and 189 miles from Smackover, charged 16c, reparation desired to 11c. During the period of movement the rate on refined oils was 28.5c. Subsequently, on June 5, 1924, that rate was reduced to 17.5c. From the latter rate complainant deducts 6.5c the differential on fuel and other low grade oils under refined oils, to arrive at the 11c rate sought. HELD: Rate attacked not unreasonable, complaint dismissed. Alexandria Refining Co. v. M. P. R. R., 112 I. C. C. 613.

(g) Complainant attacked sixth class rate of 85c charged on a car of wooden insulator pins shipped Sept. 28, 1922, from Chicago, Ill., to New Orleans, La., as unreasonable, unjustly discriminatory, and unduly prejudicial. Shipment moved C. & E. I., to Tamms, Ill., thence M. & O., to Meridian, Miss., and N. O. & N. E., beyond. There was a contemporaneous rate on lumber of 33.5c. HELD: Rate attacked unreasonable to extent it exceeded the rate on lumber, reparation awarded. Joslyn Mfg. & Supply Co. v. C. & E. I. Ry., 112 I. C. C. 743.

(h) Complainant attacked class rates charged on glass lighting bowls, glass globes, and glass lamp shades, less carloads, from eastern transcontinental groups to San Francisco, Calif., between March 15, 1918, and March 14, 1921, as inapplicable. Charged on globes, first class from Groups A and B, with the exception of one shipment from Monaca on June 27, 1928, on which a rate one and a half times first class was charged; on shades, first class rates from Groups A, B and E; on semidirect lighting bowls not exceeding $36 per dozen in value, first class rates, on bowls valued at between $36 and $72 per dozen, one and a half times first class, and on bowls exceeding $72 per dozen in value, double first class, from Groups A and B with the exception of one shipment from Monaca on Jan. 20, 1921. Less carload commodity rates considerably lower than class rates collected were applicable on glass semidirect lighting bowls, glass lamp shades, and glass lamp globes actual value not exceeding $24 per dozen. Following 100 I. C. C. 471, class rates charged applicable, complaint dismissed. Day v. Director General, 112 I. C. C. 749.

(i) Complainant attacked class rate charged on two cars of partly polished and partly rough granite shipped from Quincy Adams, Mass., to Plymouth and Keokuk, Ia., during 1918, as illegally assessed. Charged to Plymouth, Ind., fifth class rate of 43c, to Keokuk fifth class of 40c. Shipment to Plymouth was billed as 36 pieces dressed granity and to Keokuk 101 pieces granite monuments. Complainants shipping order described the granite shipped to Plymouth as 36 pieces of dressed granite monument, partly finished. None of the granite at the time of the shipment was carved or lettered. All of the granite underwent further manufacture by complainants and was used for monuments. When the shipments were made commodity rates of 27.5c to Plymouth and 26c to Keokuk were applicable on stone or granite classified sixth class in official classification. The granite rated sixth class was rough quarried and sawed granite. It is clear that the commodities shipped were not rough quarried granite or sawed granite and they were monu-

ment parts to be used in the manufacture of monuments. Commodity rates not applicable. The granite was partly polished and partly dressed, which brings it within the description of the commodities on which the fifth class rates were applicable. HELD: Fifth class applicable, complaint dismissed. Southworth & Son v. N. Y. N. H. & H. R. R., 113 I. C. C. 171.

(j) Complainant attacked class A rates charged on 11 cars of engines and engines with power machinery (power pumps) from Corliss, Wis., Cleveland and Hamilton, O., Philadelphia, Pa., and Auburn and Buffalo, N. Y., to Seattle, Wash., as in violation of section 6. The first question presented, with respect to the applicability to complainant's shipments of the commodity rate, is whether marine engines are comprehended in the term "engines" as used in the item in view of the limiting words in the heading, viz, "Electrical, Iron Working (Power), mining and smelting." In common acceptation the term "engine" does not include motors and generators or dynamos, which the item specifically names. It can not be said that engines used for operating iron working, mining, or smelting machinery are essentially different from other engines used to operate power machinery. Indeed the same kind and style of engines as are used for the purposes named are put to many other uses. Marine type engines are sometimes used on land for power purposes. The parenthetical expression in the heading clearly does not so restrict the term "engines" as to prevent its application to marine engines. The record indicates that all the items mentioned in connection with the shipment from Cleveland were either directly parts of the engine itself or for use in connection therewith, and that without such equipment the engine would be incomplete. With the exception of the shipment from Hamilton, the other shipments involved did not constitute complete engines, nor, so far as the bills of lading show, did they contain articles included in the commodity item. The note in connection with the commodity item prevents the rate from applying on straight carloads, but only in mixed carloads. HELD: Rate charged not illegal, complaints dismissed. Duthie & Co. v. Director General, 113 I. C. C. 255.

(k) Official classification fourth-class rating and rates on carbon flour found unreasonable to extent they exceeded sixth class. The classification contains but a limited number of ratings, and commodities possessing somewhat different transportation characteristics must often of necessity be assigned to same class. Carbon flour is shown to be a heavy low-grade commodity, more closely associated with carbons and carbon articles rated sixth class than with those rated fourth or fifth class. Reparation awarded. French Battery & Carbon Co. v. C. & N. W., 112 I. C. C. 128.

(l) Shipper requested that commission modify its conclusions in the Salt Cases of 1923, 92 I. C. C. 388, wherein it was held that all kinds of salt should be accorded a common rate and minimum weight, contending that lower rates on crude than on refined salt are justified. It was stated that crude salt is of low grade, is dirty and discolored, and about one-third or one-fourth the value of refined salt used for curing meats. Also that damage claims are practically unknown and that the two grades of salt do not compete. HELD: Finding in the general cases was based largely upon a practical unanimity of opinion between carriers and salt producers and commission is not prepared to depart from previous conclusion that refined and crude salt should take the same rate. Salt from Ludington Group, 112 I. C. C. 255, 258.

(m) Rates on worn-out autotruck rims with solid rubber tires attached found unreasonable and unduly prejudicial to extent they exceed rates on scrap iron. Reasonable and nonprejudicial rates prescribed for the future. Ames & Co. v. N. Y., N. H. & H., 112 I. C. C. 624.

(n) Rates on timbers, poles, piling, and spars cut from various kinds of wood which, on account of length, require two or more cars for their transportation, found not unreasonable, discriminatory, or unduly prejudicial, the additional expense and hazard incident to movement of multiple shipments of long timbers, etc., warranting charging of higher rates on such shipments than on single carloads of lumber. Dutton Lbr. Corp. v. Director General, 112 I. C. C. 661.

(o) Telescoped barrels were by analogy assessed fourth-class rate, minimum 16,000 pounds, applicable to wooden butter tubs. Complainant contended for lumber rate, or relative fixed percentage above, minimum 30,000 pounds. HELD: Transportation characteristics are quite dissimilar to those of lumber, and barrels

have greater value due to further manufacture. Moreover, regularity and volume of traffic do not warrant a commodity rate. There is marked similarity, however, between telescoped barrels and wooden cooperage stock rated sixth class, minimum 36,000 pounds, subject to rule 34, except that the former load lighter. For the future, therefore, charges on telescoped barrels should be collected on latter basis. J. D. Hollingshead Co. v. A. A. R. R., 115 I. C. C. 95.

(p) Box board is a low grade commodity made from scrap paper, comparable with wood-pulp board. Both commodities are used for similar purposes, are included under same general headings and given same rating in consolidated classification and exceptions thereto, and from a transportation standpoint are practically identical. Lynchburg Chamber of Commerce v. B. & O., 115 I. C. C. 465, 466.

(q) Coffin material was assessed sixth-class rate applicable on knocked-down coffins. Complainant contended for a lower class A rate on "Coffin stock, consisting of built-up or combined wood, bent or straight," carrier urged that shipment did not consist of built-up wood but was sap gum lumber cut to shape, and that since no commodity rate applied on coffin material there was no alternative but to assess the knocked-down coffin rate. HELD: Class A rate was applicable by analogy under a rule of the classification which provided that when articles are not specifically provided for, nor embraced as articles "N. O. I. B. N." classification provided for analogous articles should apply. Gum lumber cut to shape is closely analogous to built-up or combined wood, but neither are properly described as coffins until further manufactured, and to constitute knocked-down coffins would require the inclusion of all parts necessary to make up a complete coffin. Reparation awarded. Jackson Traffic Bureau v. I. C., 118 I. C. C. 515.

(r) In 98 I. C. C. 331, the commission found the ratings and rates on coconut stearine, in carloads and less carloads, from Bayonne, N. J., to official territory were unreasonable and unduly prejudicial to extent they exceeded ratings and rates on peanut, cottonseed and mixed stearines, reparation awarded. In complying with the order defendants published the same ratings and the same package specifications on coconut stearine as are applicable on stearine, n. o. i. b. n., but made no change in the ratings on coconut stearine in boxes, which were and are second class in less carloads and third class carloads. HELD, ratings and rates on coconut stearine in boxes or barrels unreasonable to extent they exceed third class less carloads and fifth class carloads, reparation denied. Best Foods, v. C. R. R. of N. J., 120 I. C. C. 169.

(st) Complainant attacked ratings in official, southern and western classifications, and rates thereunder, on sandwich spread from Cleveland, O., to all destinations in United States, as unreasonable, unjustly discriminatory and unduly prejudicial to extent they exceeded rates and ratings on salad dressing. No specific rating is provided for sandwich spread in these classifications. Defendants contend it is prepared food, n. o. i. b. n. Complainant contends it is a salad dressing. Sandwich spread is composed of mayonnaise 40%, sweet pickles 50%, olives and condiments 7% and shredded ham 3%. It is advertised for use as a salad dressing, as a relish, as a spread for sandwiches, and in various other ways. It is packed in glass. Complainants sandwich spread may be used as a salad dressing, but it is intended to be used principally for other purposes. The rates and ratings on salad dressing are applicable only to such preparations as are primarily and principally intended for the use suggested by their name. Accordingly they can not be applied to complainant's preparation. But sandwich spread clearly is a prepared food; and not being provided for in the classification under a more specific designation, it follows that the rates and ratings for prepared food, n. o. i. b. n., are applicable. Undercharges are outstanding. HELD, ratings attacked and rates for future unreasonable to extent they exceed second class less carloads in all three classifications, and fifth class in the official and western and sixth class in southern in carloads, minimum 36,000 pounds. Reparation awarded, undercharges waived to basis of prescribed rates and ratings. Sar-A-Lee Co. v. A. C. & Y. Ry., 120 I. C. C. 512.

(u) Wheels with propeller blades used to direct attention by their revolutions to advertising matter on signboards were not specifically listed in the classification. Carrier contended that classification item "Sheet Iron or Sheet Steel Ware, N. O. I. B. N.: Painted or Plain"

should apply, also suggesting a rating under "Wheels—Wooden." Complainant contended for a rating under "Windmills, K. D., or Parts." HELD, these wheels were not sheet-iron or sheet-steel ware, nor wood wheels, within meaning of classification descriptions; nor were they windmills parts, because they do not generate power which is the usual function of a windmill. However, they were more analogous to that article than to items suggested by carrier, and in absence of specific rating were entitled under the analogy rule to rating provided for windmill parts. Reparation awarded. Lynchburg Chamber of Commerce v. N. & W., 120 I. C. C. 64.

(v) Complainant sought same rating on l. c. l. shipments of fiberboard cans in paper bags as apply on l. c. l. shipments of same commodity in barrels, boxes or crates, contending that although it might be proper to penalize shipments of cans in paper bags which do not fill the cars, such a penalty is unreasonable when cars are loaded to capacity, as possibility of damage is no greater than if the cans are boxed or crated. HELD, although commission has condemned the maintenance of minimum weights which ordinarily can not be loaded into cars of standard dimensions, evidence here does not establish a case of that kind with respect to fiberboard cans in general. Charges accruing on complainant's shipments based on c. l. rates and minima, can not, therefore, be said to have been unreasonable. Brownell & Field Co. v. N. Y., N. H. & H., 120 I. C. C. 229.

(w) Rates on broom and mop handles, dowels, and curtain poles, not further finished than sawed, turned to shape, planed or sand belted, found unreasonable and unduly prejudicial to extent they exceeded rates contemporaneously in effect on lumber by more than 15 per cent; and rates on same articles when shellacked, painted, or varnished found unreasonable and unduly prejudicial to extent they exceeded by more than 3 cents per 100 pounds rates found reasonable herein when not shellacked, painted, or varnished. See 52 I. C. C. 598, 616, and other cited cases. Reasonable and nonprejudicial rates prescribed for future and reparation awarded. Lumberton Broom & Mop Handle Factory v. G. & S. I., 120 I. C. C. 233.

(x) Rate on basket tops found unreasonable to extent it exceeded rate contemporaneously maintained on lumber. Reasonable rate prescribed for the future and reparation awarded. Liberty Cooperage & Lbr. Co. v. N. Y., C. & St. L., 120 I. C. C. 271.

(y) An Austin backfiller equipped with swinging boom and adjustable steel scraper so that it could be used as a crane or a backfiller, was rated by analogy as a power shovel. Upon contention of shipper that it should have been rated as a scraper under general heading of grading and roadmaking implements, HELD: Classification rating on road scrapers does not cover machines of such character as the Austin backfiller, and mere possibility that in some cases this backfiller may be used on roads would not justify its classification as a road scraper. On the other hand, while this backfiller has a limited use as a crane or power shovel, it constituted a machine and was properly subject to a commodity rate on machines and machinery, n. o. i. b. n. Smith Co. v. A., T. & S. F., 120 I. C. C. 309.

(z) The analogous-articles rule in classification contains two conditions both of which must be met when the rule is invoked. First, it must be that there is no specific rating on the article, and, second, that it is not embraced in the classification as an article n. o. i. b. n. See 85 I. C. C. 383. Smith Co. v. A., T. & S. F., 120 I. C. C. 309, 311.

(aa) Rate on wooden insulator pins and brackets found unreasonable to extent it exceeded rate contemporaneously in effect on lumber. Reasonable rate prescribed for future and reparation awarded. Peninsular Teleph. Co. v. S. Ry., 120 I. C. C. 669.

(bbcc) Complainant attacked sixth class rate charged on 105 cars of acid phosphate shipped between March 9, 1923 and Dec. 29, 1924 from Lowell, Mass., to East Windsor, Conn., as unreasonable and unduly prejudicial to extent it exceeded subsequently established rate. Distance hauled 140 miles, charged sixth class 18.5 cents for the line haul plus 3 cents for switching at Lowell. A commodity rate of 17 cents was subsequently established. The record is not convincing that the rate on fertilizer affords a measure for the reasonableness of the rate on acid phosphate. HELD, rate attacked not unreasonable or otherwise unlawful, complaint dismissed. Consolidated Rendering Co. v. N. Y., N. H. & H. R. R., 123 I. C. C. 98.

(dd) Complainant alleged third class rates charged on four carloads of gas generators and parts, shipped in October, 1924 from Pittsburgh, Pa., to Seattle, Wash., as unreasonable to extent it exceeded $1.76, applicable on Edison electric storage batteries. A rate of $2.12 was applicable on electrical appliances rated class A or fifth class in the western classification. HELD, rate attacked unreasonable to extent it exceeded $2.12, reparation awarded. Pacific Nitrogen Corp. v. C. B. & Q. R. R., 123 I. C. C. 717.

(ee) Rates on glue stock, from El Paso, Tex., to Chicago and St. Louis, found unreasonable as compared with rates contemporaneously in effect on soap stock and with rates on various other unrelated commodities. Reasonable rates prescribed for future. Peyton Packing Co. v. A. & S., 122 I. C. C. 3, 9, 10.

(ff) Fifth-class rate assessed on granite monuments and parts thereof under classification description "Granite * * * carved, lettered, polished, or traced," found applicable. Governing classification carried no rating on monuments and while a lower commodity rate contemporaneously applied on polished granite, tariff item naming this rate specifically excluded monuments or parts. Accordingly, such lower commodity rate could not be applied to monuments, but under analogy rule carried in the classification articles here shipped may be regarded from a classification standpoint as polished granite. Kassebaum & Son v. N. Y., N. H. & H., 122 I. C. C. 59.

(gg) In the fixing of rates in the past on washed gravel, crushed stone, slag, sand, clay gravel, and unwashed gravel, the commission has not recognized existence of a difference in transportation characteristics, or in any other facts entitled to consideration in the fixing of rates, such as to warrant a different basis of rates on some as distinguished from others. Where scales have been prescribed in any territory they have been rated the same. Rates on Chert, Clay, Sand, and Gravel., 122 I. C. C. 133, 163.

(hh) Fourth-class rate covering that factor of a combination rate from Illco, Wyo., to Salt Creek, Wyo., assessed on shipment of copper wire, in coils, and copper-wire strand, on reels, from Black Eagle, Mont., to Salt Creek, found unreasonable to extent it exceeded lower commodity rate contemporaneously in effect on oil-well outfits, including such articles as copper sheets, iron or steel strand wire, and copper or iron wire, which rate was subsequently made applicable on copper wire. Reparation awarded against carrier publishing unreasonable factor. Midwest Refining Co. v. G. N., 122 I. C. C. 205.

(ii) Rate on pipe, wooden, water, found unreasonable to extent it exceeded a lower rate contemporaneously in effect on lumber and lumber products. Reparation awarded. Pacific Tank & Pipe Co. v. S. P., 122 I. C. C. 284.

(jj) Rate on basket tops, found unreasonable to extent it exceeded lower rate contemporaneously in effect on lumber. Reparation awarded. Liberty Cooperage & Lbr. Co. v. S. Ry., 122 I. C. C. 297.

(kk) Rate on wall paper, found not unreasonable as compared with lower rate on wrapping paper. Pan American Wall Paper & Paint Co. v. C., R. I. & P. Ry., 122 I. C. C. C. 333.

(ll) Rate on woodpulp, found not unreasonable as compared with rates on china clay, caustic soda, and cottonseed-hull shavings pulp. International Paper Co. v. B. & O., 122 I. C. C. 440, 441.

(mm) Class A rates on boilers, pumps, heaters, and engines, from defined territories to destinations in Louisiana and Arkansas and between points in Louisiana and Arkansas, found not unreasonable or otherwise unlawful as compared with lower commodity rates contemporaneously in effect on oil-well supplies, or with commodity rates on machinery and machines. In 104 I. C. C. 623, class A rate on internal-combustion engines, heat exchanges, and gas compressors from same origin points to Texas destinations was found not unreasonable. Moreover in 77 I. C. C. 473, class A rate was prescribed on machinery and machines for application throughout this territory at same time rates on oil-well supplies were prescribed, and no reasons have been advanced which warrant a change therefrom. Standard Pipe Line Co. v. T. & P., 122 I. C. C. 463.

(nn) Rates on linseed oil, found not unreasonable or otherwise unlawful as compared with rates on creosote oil, coconut oil, cottonseed oil, cooking oils, and various other commodities. Portland Linseed Oil Works v. G. N., 122 I. C. C. 484.

(oo) Although question of relationship between rates on grain and the rates on grain products has been presented frequently for commission's determination, it has never prescribed a fixed differential for universal application. The commission has been inclined rather to treat each case on its merits, recognizing the differences in conditions which prevail in various parts of the country. Accordingly, it has been held in some instances that there should be a substantial parity between rates on wheat and flour, in other cases differentials have been prescribed, and in others wheat and flour rates were prescribed on same basis. Ogden Grain Exchange v. A. & S., 122 I. C. C. 691, 714.

(pp) Fifth-class rate on ingots, brass, found not unreasonable as compared with rates on various other commodities. Complainant made no showing with respect to transportation, competitive, and other conditions, attending movement of the commodities with which comparisons were made, whereas, carriers showed that fifth class applies on numerous commodities of relatively low value which move in substantially greater volume than brass ingots. Hartman Ingot Metal Co. v. C., B. & Q., 123 I. C. C. 20, 21, 22.

(qq) Rates on rig irons, found unreasonable as compared with those on agricultural implements, fencing material, stoves and parts, wire, iron and steel tanks, canned goods, bags and bagging, machinery and machines, and various other articles. Parkersburg Rig & Reel Co. v. C., R. I. & P., 123 I. C. C. 79, 83.

(rr) Transportation characteristics of linseed oil are similar to those of cottonseed and other vegetable oils, and rates on such analogous oils should be same. See 109 I. C. C. 721. Fredonia Linseed Oil Works Co. v. A., T. & S. F., 123 I. C. C. 153, 156.

(ss) Carriers contended for establishment of rates on dairy products in the Southwest equal to rates on fresh meats, fruits, and vegetables, on ground that there is great similarity in transportation conditions, especially as between dressed poultry and fresh meats which compete in consuming markets. HELD: Similar contentions have been advanced in other cases but commission has never been of the view that dairy products should necessarily take the same rates as fresh meats or fruits and vegetables. Moreover, rates approved and prescribed in various cases were higher than those on fresh meats or on most fruits and vegetables, and upon reconsideration commission finds nothing to change its view that the diary-products rates should be higher. Consolidated Southwestern Cases, 123 I. C. C. 203, 253, 256.

(tt) Rates on nitrate of soda, in the Southwest may well be somewhat higher than those on other fertilizer. Consolidated Southwestern Cases, 123 I. C. C. 203, 269.

(uu) Rates on each commodity in any one class should be in reasonable proportion to rates on other articles in same class, and generally speaking, rates on each article should be determined with reasonable regard for rates on other articles classified the same. Consolidated Southwestern Cases, 123 I. C. C. 203, 306, 307.

(vv) Rates on printed and unprinted vegetable parchment and waxed wrapping paper, paper-box board, and plain and waxed paper boxes, printed and unprinted, found not unreasonable or otherwise unlawful as compared with rates on printing paper and manilla wrapping paper. Complainant's wrapping paper is of high grade, is not as extensively used as papers generally included within that description, and volume of traffic thereon does not compare with that on ordinary wrapping paper. Nor does record warrant a finding that rates on paper boxes or paper-box board are unduly high as compared with those applicable on other paper articles. Kalamazoo Vegetable Parchment Co. v. A., T. & S. F., 123 I. C. C. 493.

(ww) Rate on unfinished broom handles from Pellston, Mich., to Wichita, Kans., found unreasonable as compared with rates on sleigh wood, agricultural-implement wood, and vehicle wood, all in the rough, and various other lumber articles, and to extent it exceeded contemporaneous lumber rates by more than 1.5 cents. See 92 I. C. C. 574. Reasonable rate prescribed for future and reparation awarded. Wichita Chamber of Commerce v. A., T. & S. F., 123 I. C. C. 529.

(xx) Rate on granite, rough, found not unreasonable as compared with those on granite that is dressed or otherwise finished, except carved, lettered, polished, or traced. Bourgoin & Co. v. M. & W. R., 123 I. C. C. 545.

(yy) Rates on hollow building tile from Volant, Pa., to Hamersville, Ohio,

found unreasonable as compared with lower rates contemporaneously in effect on common, pressed, fire, or paving brick, and to extent that factor from Carrel Street (Cincinnati) to Hamersville exceeded lower rate subsequently established and contemporaneously applicable on commodities with which comparisons are made. In 68 I. C. C. 213, equal rates were accorded face, fire, and paving brick, hollow building tile, and other clay products of similar transportation characteristics from and to same points east of the Rocky Mountains. Reparation awarded. Moores-Coney Co. v. C., G. & P., 123 I. C. C. 559.

(zz) Rates on clay, ball and china, imported, found unreasonable as compared with those on domestic clay and other articles included in uniform brick list prescribed in 68 I. C. C. 213. Ceramic Traffic Asso. v. P. R. R., 123 I. C. C. 591.

(3a) Rates on sulphur, found not unreasonable as compared with those on iron and steel articles, soap, starch, terra cotta and molding sand. While car-mile earnings on latter commodities are considerably higher than those yielded by sulphur shipments, due to heavy car loading, there is no analogy between sulphur and these commodities nor any similarity in transportation conditions. Stauffer Chemical Co. v. H. & B. V., 123 I. C. C. 657, 658.

(3b) Third-class rate on cells, electrolytic, (electrolyzers), found unreasonable as compared with lower rates contemporaneously applicable on machinery and electrical appliances, including batteries, fans, motors, generators and engines combined, carbonating machines, and various other articles, and to extent it exceeded lower commodity rate applicable on machinery and machines, n. o. s. Reasonable rate prescribed for future and waiver of undercharges authorized. Pacific Nitrogen Corp. v. C., B. & Q., 123 I. C. C. 717.

(3c) The fact that two articles may resemble each other in respect of material appearance, process of manufacture, value and other characteristics is not sufficient to make them the same, but may afford a basis for a finding of unreasonableness or undue prejudice. Chicago Carton Co. v. N. Y. C. R. R., 126 I. C. C. 457, 458.

(3d) Complainant attacked commodity rates charged on numerous carloads of hot rolled unfinished steel, in coils and straight lengths, from Pittsburgh, and Johnstown, Pa., Youngstown, O., and Buffalo and North Tonawanda, N. Y., to Valley Falls and Pawtuckett, R. I., as unreasonable, unjustly discriminatory and unduly prejudicial. In a general way iron and steel articles, for rate making purposes, are separated in three groupings, first, pig iron and articles taking pig iron rates; second, steel billets and articles taking billet rates; and third, finished and manufactured articles of iron and steel, which, with the exceptions of the group hereinafter described, include all articles that have progressed in manufacture beyond the billet stage. From the points of origin from which complainants shipments moved the normal basis of rates on billets is sixth class or slightly lower, and that for manufactured iron and steel articles is fifth class or slightly lower. The billet rate is generally published in amounts per long ton, whereas the rates on manufactured iron and steel articles are generally published in cents per 100 pounds. Under recent decisions it is immaterial whether a rod be circular, rectangular, or hexagonal in cross section. When in straight lengths defendants differentiate the rods under the name of bar steel or steel bars, upon which the rates on manufactured iron and steel articles are applicable, which are about the fifth class rates. In other words, complainants materials when shipped in straight lengths take a higher rate than the identical article when shipped in coils, although the cost is the same per pound in each case. HELD, rates attacked not unreasonable but as to shipments in straight lengths, such rates will be unjustly discriminatory to extent they exceed the same rates on the same articles when shipped in coils. Reparation denied. Standard Nut & Bolt Co. v. N. Y. N. H. & H. R. R., 126 I. C. C. 731.

(3e) Circumstances and conditions under which freight rates on perishables were established between Boston and Chicago and conditions affecting divisions of such rates are substantially different from those affecting establishment of rates on milk for application within New England territory, and, aside possibly from some incidental feature in connection with so-called fast-freight service, the services are not comparable. Furthermore, divisions from perishable-freight traffic received by some of the New England roads do not afford a sound

basis upon which to judge reasonableness of rates on milk throughout New England. Milk and Cream Between New England Points, 126 I. C. C. 39, 63, 64.

(3f) Rates on tank material, iron and steel found unreasonable as compared with rates on iron and steel pipe. See 100 I. C. C. 245. Reasonable basis of rates prescribed and reparation awarded. Sinclair Crude Oil Co. v. A., T. & S. F., 126 I. C. C. 73.

(3g) Rates on iron and steel tank material from points in Pennsylvania, Ohio, Illinois, Indiana, and from Kansas City, Kans., to destinations in Kansas, Oklahoma, and Tex., found unreasonable to extent they exceeded those contemporaneously applicable on iron or steel pipe. Rates on tank material are same as those on pipe from Chicago territory to western trunk-line and lower Mississippi River points, from c. f. a. territory to points in Colorado, Wyoming, Montana, California, Oregon, and Washington, and from Pittsburgh territory to trunk-line points and no sufficient reason appears for a difference in rates on these commodities between points under consideration. See 100 I. C. C. 245. Reparation awarded. Sinclair Crude Oil Co. v. A., T. & S. F., 126 I. C. C. 73.

(3h) Rates on paste, adhesive, found not unreasonable as compared with rates on agricultural insecticides or fungicides, including calcium-arsenate or lead-arsenate paste. Practical Drawing Co. v. N. Y. C., 126 I. C. C. 133.

(3i) Fifth-class rates on tin oxide, found not unreasonable or otherwise unlawful as compared with lower commodity rates contemporaneously in effect on pig tin. Pig tin is an imported commodity and low basis of rates was undoubtedly established to assist industries, whereas record does not show competitive or other influences which would necessitate or justify establishment of lower commodity rates on tin oxide. Federated Metals Corp. v. P. R. R. Co., 126 I. C. C. 144.

(3j) Rating on component parts or raw material is not conclusive of rating to apply on a finished article. Troxel Mfg. Co. v. B. & O., 126 I. C. C. 169.

(3k) First-class l. c. l. rating on saddles, used on bicycles, motor cycles, and tricycles, from Elyria, Ohio, to points in official, southern and western classification territories, found not unreasonable as compared with c. l. rating on same commodity, or with first-class l. c. l. rating on bells, spark plugs, magnetos, gasoline-engine starters, and various other articles. First-class rating or higher applies on practically all bicycle parts and also on most articles in the saddle group including leather goods. Moreover, first-class rating was found reasonable on automobile horns which compare favorably, weights and values considered, with bicycle saddles. Troxel Mfg. Co. v. B. & O., 126 I. C. C. 169.

(3l) Rates on wall paper, found not unreasonable as compared with those on wrapping paper. Wall paper is more susceptible to damage than wrapping paper, and there is no relationship or analogy between these commodities. See also 122 I. C. C. 333. Tex-Mex-Jobbing House v. L. V., 126 I. C. C. 175.

(3m) Comparisons with rates on commercial coal are not conclusive of reasonableness of rates on lake cargo coal. Lake cargo coal has a more concentrated movement and moves at a more favorable season of the year than the heaviest movement of commercial coal. The larger proportion of joint-line hauls is in the case of commercial coal and there is a vast difference in the terminal delivery service of the two classes. Moreover, there is a greater availability of cars used for shipping lake cargo coal for return loading with ore. Lake Cargo Coal Rates, 1925, 126 I. C. C. 309, 361.

(3n) First-class rate provided for paper goods, n. o. i. b. n., any quantity, was assessed on cardboard trouser presses. Upon contention that lower sixth-class rate applicable on fiber-board boxes, k. d., flat, printed, is by analogy applicable on trouser presses since material, appearance, process of manufacture, value, and other characteristics of the two articles are the same, only difference being in uses to which each is put, HELD: Fact that two articles may resemble each other in these respects is not sufficient to make them the same. Rating on boxes applied definitely on that article, and as there was no specfic rating for trouser presses, it follows that rate applicable was rate on paper goods, n. o. i. b. n. Chicago Carton Co. v. N. Y. C. R. R., 126 I. C. C. 457.

(3o) First-class rate applicable on paper goods, n. o. i. b. n., any quantity, assessed on cardboard trouser presses from Chicago to New York, found applicable, but unreasonable as compared with lower rates contemporaneously in effect on numerous analogous paper arti-

cles. Reasonable rate and minimum weight prescribed for future and reparation awarded. Chicago Carton Co. v. N. Y. C., 126 I. C. C. 457.

(3p) Rates on fleshings, tannery, found unreasonable as compared with lower rates contemporaneously in effect on dry tanning extract and wood pulp. While carrier points out that no competition exists between these commodities, complainant shows that wood pulp and tanning extract move in volume, are of considerably higher value and afford some measure for testing rates on fleshings. Tanning extract requires a better class of equipment and involves greater transportation risks. Keystone Glue Co. v. S. Ry., 126 I. C. C. 507.

(3q) L. c. l. rating on chocolate and chocolate coating, in official, southern, and western classifications found not discriminatory or unduly prejudicial, but c. l. rating in official and western classifications found unreasonable as compared with rating on coffee and other comparable commodities, and to extent it exceeds fourth class, minimum 36,000 pounds. Reasonable rating prescribed for future. Cocoa & Chocolate Mfrs. Asso. v. A. & V. Ry., 126 I. C. C. 561.

(3r) Fifth-class rate on tubs, laundry, cement, found unreasonable as compared with lower commodity rate on wooden or iron barrels and refrigerators, higher rated articles, and to extent they exceeded lower commodity rate contemporaneously in effect on plumbers' goods, including enameled iron and porcelain laundry tubs, which was subsequently made applicable on cement laundry tubs. Reparation awarded. Chicago Granatine Mfg. Co. v. I. C. R. R., 126 I. C. C. 572.

(3s) In a general way iron and steel articles, for rate-making purposes, are separated into three groupings, first, pig iron and articles taking pig-iron rates; second, steel billets and articles taking billet rates; and, third finished and manufactured iron and steel articles, which, with few exceptions, includes all articles that have progressed in manufacture beyond the billet stage. Standard Nut & Bolt Co. v. N. Y., N. H. & H., 126 I. C. C. 731.

(3t) Rates on brick, paving, found unreasonable as compared with those contemporaneously in effect on cement. Reparation awarded. Buffalo Brick Co. v. M. P. Ry., 126 I. C. C. 744.

(3u) Rate on paper, waste, found unreasonable as compared with rate contemporaneously in effect on wood pulp. United Paperboard Co. v. B. & A. R. R., 126 I. C. C. 751, 753.

(3v) One and one-half times first-class rate collected on l. c. l. shipment of portable laundry tubs under heading "Sheet Iron or Sheet Steel Ware: Wash Tubs" found inapplicable. Carriers contended that, by analogy rule, applicable rating was double first class under item "Wash Sinks, n. o. i. b. n.: Plate or Sheet Iron or Steel: on legs: * * * In Boxes or crates," l. c. l., while complainant sought third-class rating on laundry tubs under head of "Plumbers' Goods" by use of analogy rule. At time of shipment, however, a commodity rate applicable on wash tubs appeared under caption "Sheet Iron or Sheet Steel Ware," l. c. l., and since Century Dictionary and Cyclopedia define a wash tub as "a tub for washing, especially one in which clothes are washed," articles shipped clearly fall within that description and lower commodity rate was therefore applicable. Reparation awarded. West Texas Utilities Co. v. M. C., 128 I. C. C. 57.

(3w) The analogy rule has no application where commodity shipped is clearly and definitely covered by a description set forth in an item of the classification and referred to in the tariff item naming a commodity rate. West Texas Utilities Co. v. M. C., 128 I. C. C. 57, 58.

(3x) Complainant attacked commodity rates charged on broom handles, in carloads, from Des Moines, Ia., Crandon, Glidden and Antigo, Wis., Atlantic and Sidnaw, Mich., and Chicago, Ill., to Pueblo, Colo., as unreasonable, unjustly discriminatory and illegal. Shipments consisted of broom handles in the white, turned to shape with a hole bored through one end, charged at rates of finished handles. Rates based upon an arbitrary of 1.5c over the current rates on lumber are sought. HELD, rates charged from Crandon unreasonable to extent they exceed 3c over lumber rate, and from other points of origin unreasonable to extent they exceeded 3c over lumber rate, reparation awarded. National Broom Co. v. A. T. & S. F. Ry., 128 I. C. C. 98.

(3y) Rate on asparagus roots found unreasonable as compared with rates on nursery stick, horse-radish, and chicory roots; and to extent it exceeded lower rate contemporaneously in effect on gin-

ger, celery, laurel, yucca, soap weed, and roots n. o. i. b. n. Reparation awarded. C. W. Kress v. C. R. R. of N. J., 128 I. C. C. 101.

(3z) Fifth-class rate on copper sulphate found not unreasonable as compared with lower commodity rate subsequently established on insecticides, including calcium arsenate, to which list copper sulphate was later added. While value of calcium arsenate and copper sulphate is the same and both are used in manufacture of agricultural insecticides, at time of movement calcium arsenate and all insecticides, including copper sulphate, were rated the same. Mere fact that copper sulphate was subsequently accorded the commodity rate is not of itself sufficient to justify an award of reparation on shipments moving prior to the reduction. See 112 I. C. C. 228; 20 I. C. C. 43. Peaslee-Gaulbert Co. v. C. & A., 128 I. C. C. 103.

(4a) Rate on earth crude infusorial found unreasonable as compared with rates on scrap lead crude or calcined magneste, magnesium chloride, crude lump pumice, crushed or ground stone, cement or magnesite stucco, crude iron ore, zinc ore and concentrates, flourspar, and sericite schist. Hylonite Products Co. v. A., T. & S. F., 128 I. C. C. 135, 136.

(4b) Second-class rate applicable on "Fresh Fruit n. o. i. b. n.," and assessed on cold-pack cherries found unreasonable to extent it exceeded lower fourth-class rate established subsequent to movement on cold-pack fruit. While at time of covering mold-pack cherries and by movement there was no specific rating analogy the fresh-fruit rate was applicable, complainant pointed out that cold-pack fruit is not as perishable as ordinary fresh fruit. Moreover, record indicates that cold-pack fruit loads much more heavily than ordinary fresh fruit, and should therefore be entitled to an appreciably lower rating. Reparation awarded. American Preserve Co. v. Reading Co., 128 I. C. C. 146.

(4c) Rates on paper, newsprint, found unreasonable to extent they exceed those contemporaneously maintained on blank wall paper. Reasonable rates prescribed for future. Iroquois Pulp & Paper Co. v. A. A. R. R., 128 I. C. C. 187.

(4d) Rate on talc found not unreasonable as compared with those on ground limestone. While both are used in the manufacture of paint, talc is used in the better grades of paint and both are rated separately in western classification. Sewall Paint & Glass Co. v. C., C. C. & St. L., 128 I. C. C. 247.

(4e) Rates on clay, pottery, imported china and ball, found not unreasonable or otherwise unlawful as compared with rates contemporaneously in effect on "clay, crude or ground (common or fire)." While complainants contend that all clays used in manufacture of pottery are crude, are formed through decomposition of feldspar in granitic rocks, and can be used in manufacture of brick, pottery clay is found only in restricted areas, is considerably more valuable than common or fire clay, and use to which it is put requires that it be transported in clean, tight box cars whereas common clay may be shipped in leaky or open-top cars. Although pottery claps can be used for making brick, brick clays can not be used for making pottery and because of their high value pottery clays are not ordinarily so used and can not be properly included as brick clays. Moreover, in 112 I. C. C. 7, differentiation was made as between high-grade and low-grade lime and applying that principle here, differentiation in classification and tariffs between types of clays involved is fully justified. United States Potters' Asso. v. A., C. & Y., 128 I. C. C. 249.

(4f) Rates on coal, bituminous found unreasonable as compared with those on mine props, crushed stone, and numerous other lighter-loading commodities of far greater value and susceptibility to damage. Illinois-Indiana Coal Cases, 128 I. C. C. 265, 269, 270.

(4g) Second-class rate applicable on games or toys n. o. i. b. n., and assessed on domestic mah-jongg sets from San Francisco and Paraffin, Calif., to Chicago, found applicable, but unreasonable as compared with lower commodity rate contemporaneously in effect on toys, and to extent it exceeded lower commodity rate applicable in opposite direction, to which basis rates assailed were subsequently reduced. Reparation awarded. Paraffine Companies v. S. P., 128 I. C. C. 421.

(4h) Third-class rate on oleomargarine found unreasonable to extent it exceeded rate on butter. While value of oleomargarine is about one-half that of butter, both have practically the same transportation characteristics. See 53 I.

C. C. 59, and other cited cases. Both are rated third class in principal classifications, and where commodity rates are published on the two they are generally the same. Record indicates that rates on oleomargarine should not be higher than those on butter, but it is not convincing that oleomargarine should take lower rates than those on butter. Moreover, in 60 I. C. C. 663, rate on oleomargarine was found unreasonable to extent it exceeded rate on butter. Reasonable rate prescribed for future and reparation awarded. Boren-Stewart Co. v. G., C. & S. F., 128 I. C. C. 493.

(4i) Sixth-class rate on clay, china found unreasonable as compared with sixth-class rate prescribed in 38 I. C. C. 120 on wrapping and newsprint paper. China clay is used as a filler in the manufacture of paper. Complainant showed that it is a low-grade commodity, of much lower value than newsprint and other kinds of paper. Newton Falls Paper Co. v. R. Co., 128 I. C. C. 563, 564.

(4j) Fifth-class rates on monuments, granite and pieces of, axed, lettered, and rock-faced granite, found not unreasonable or otherwise unlawful as compared with lower commodity rates contemporaneously in effect on granite not carved, lettered, polished or traced; with those on granite "carved, lettered, polished, or traced" when declared value does not exceed $2.25 per 100 pounds; or with lower commodity rates on marble for comparable distances. Here, declared value exceeded $2.25 and in 47 I. C. C. 91, the fifth-class rating on natural stone, sawed more than four sides, chiseled, dressed, hammered, or sand rubbed, carved, lettered, polished, or traced, was found justified. Dillie v. C. V., 128 I. C. C. 641.

(4k) Rates and rating on boxes, fiber, corrugated, k. d. found unreasonable as compared with lower third-class rating and rates in official, southern, and Illinois Classification, and intrastate within Kansas; with third-class rating in official and western and fifth class in southern classifications on solid fiber board; and with third-class rating on cover paper, building, roofing, or sheathing felt or paper and various other related commodities in western classification. Third-class rating and rates prescribed for future and reparation awarded. Eggerss-O'Flyng Co. v. C. & N. W., 128 I. C. C. 644.

(4l) Complainant alleged commodity rates charged on nine cars of broom handles in the white shipped in 1923 and 1924 from Antigo, Wis., and Tacoma, Wash., to Oklahoma City, Okla., were unreasonable and in violation of section four. Shipments from Antigo charged 79c on broom handles, in the white. From Tacoma charged 94.5c on broom handles, without metal fixtures. A rate of 87c was applicable from Tacoma to McAlester, Okla., and Little Rock, Ark., to which destinations Oklahoma City is intermediate. This violation was removed Nov. 15, 1924, by the publication of a rate of 90c to the three destinations. On April 15, 1926 the rate from Antigo to Oklahoma City was reduced to 52.5c. On Feb. 27, 1926 the lumber rate of 69c from Tacoma to Oklahoma City was made applicable on "handles, broom or mop as from the lathe or sanded, not oiled, waxed, primed or further finished, without metal fixtures." This description embraces the commodity here under consideration. On May 12, 1926 this rate was increased to 70c. In view of the fact that the present rates on handles are the same as or 1.5c higher than the lumber rates, no order for the future will be necessary. HELD, rates assailed were unreasonable to the extent that they exceeded by more than 1.5c the rates on lumber, reparation awarded. Oklahoma Traffic Asso. v. A. T. & S. F. Ry., 129 I. C. C. 403.

(4m) Complainant alleged rate charged on wood shipping blocks, carload, forwarded from March 13, 1924 from Kenosha, Wis., to San Francisco, Calif., was unreasonable and inapplicable. The commodity shipped consisted of rough blocks cut and formed in complainants wood mill at Kenosha, and is used in packing steel beds, charged class C rate of $1.65. Lumber rate was $1.14. HELD, rate attacked applicable, complaint dismissed. Simmons Co. v. W. P. R. R., 129 I. C. C. 511.

(4n) Complainants attacked the unreasonableness and unlawfulness in other respects of the rates on petroleum fuel, crude and gas oils from the midcontinent field in Kansas and Oklahoma to Kansas City, Mo., to Vale, Independence, and Leeds, Mo., and to Harrisonville and St. Joseph, Mo. The essential question is what differential, if any, the rates on low grade oils should have been, and should be, under the rates on refined oil. HELD, rates assailed not unreasonable

except that the rates from Argentine to Vale, were unreasonable to extent they exceeded 11c prior to July 1, 1922 and 9.5c, thereafter, that rate assailed from Argentine and Kansas City, Kas., to Harrisonville unreasonable to extent it exceeded 11c, reparation awarded. Haydite Co. v. A. T. & S. F. Ry., 132 I. C. C. 132.

(4o) Grapes and other deciduous fruits are close enough in their transportation characteristics to bear a comparable relation as a classification matter. Calif. Growers' & Shippers' Protective League v. S. P., 129 I. C. C. 25, 57.

(4p) Rates on seed, millet found unreasonable as compared with rates contemporaneously in effect on corn, coarse grains, and flaxseed, and to extent they exceeded by more than 12 per cent the contemporaneous rates on wheat. In 107 I. C. C. 35, rates on flaxseed were found unreasonable to extent they exceeded wheat rates by more than 12 per cent, and since from a traffic standpoint millet seed resembles flaxseed in many respects, although of less value, and the two seeds have been maintained on same rate basis in the past, this relationship, for convenience, should be preserved. Reasonable rates prescribed for future and reparation awarded. Northrup, King & Co. v. A., T. & S. F., 129 I. C. C. 125.

(4q) Rates on strawboard found not unreasonable or unduly prejudicial as compared with contemporaneous rates on building and roofing paper, fuller's earth, wrapping paper, agricultural implements and various other commodities. Comparisons were of doubtful value because neither volume of movement nor values of commodities compared were shown. United Paperboard Co. v. A. & R., 129 I. C. C. 131.

(4r) Rates on limestone containing 2.5 per cent or more of asphalt, broken, crushed or ground from Margerum and Colrock, Ala., to destinations in southern territory, except Florida, found unreasonable and unduly prejudicial as compared with rates on similar asphalt rock from Oklahoma and Texas to Mississippi River points and west thereof and with those on sandstone asphaltic rock produced at Kyrock, Ky., competitive products; with rates prescribed in 96 I. C. C. 319 on crushed asphalt rock from Dougherty, Okla., to Kansas City, Mo.-Kans.; and to extent they exceeded distance rates herein prescribed. Reasonable maximum rates prescribed for future and reparation denied. Colbert Limerock Asphalt Co. v. A. C., 129 I. C. C. 177.

(4s) Third-class l. c. l. rate, under official classification, on unprinted fruit wrappers from Hamburg, N. J., to Lynchburg, Va., found not unreasonable or otherwise unlawful as compared with fifth-class rate, under southern classification, contemporaneously in effect to Montview and Lone Jack, Va., more distant points. The general level of rates applicable in official territory is extended south of Lynchburg to and including more distant points, and reasons in justification therefor are fully discussed in 31 I. C. C. 145; 107 I. C. C. 249. Rates assailed are same as those from Cincinnati, Ohio, to Lynchburg, and compare favorably with those from Hamburg to various other Virginia districts for comparable distances, and presumption of unreasonableness of rate to Lynchburg is rebutted. See 269 U. S. 1. Moreover, since no movement of fruit wrappers has been shown from Hamburg to Montview, no finding of discrimination or undue prejudice can be made. See 34 I. C. C. 634. Lynchburg Chamber of Commerce v. E. R. R., 129 I. C. C. 230.

(4t) Following 89 I C. C. 251, in which third-class l. c. l. rating was found reasonable on steam superheaters, second-class l. c. l. rating on worn-out paper-mill grinding plugs in official, southern and western classifications, found unreasonable. No specific rating was made in the three classifications for paper-mill plugs as such, but they are somewhat analogous to steam superheaters from a classification standpoint. Third-class rating prescribed. Bahr Bros. Mfg. Co. v. C., C., C. & St. L., 129 I. C. C. 289.

(4u) Rates on liquid asphalt found unreasonable as compared with rates on petroleum oils, gasoline, sulphuric acid, creosote oil, and coal tar. Reasonable rates prescribed for future and reparation awarded. Continental Roofing & Mfg. Co. v. G. & S. I., 129 I. C. C. 313.

(4v) Sixth-class rates on "80-5-15" dry insecticides found not unreasonable as compared with lower rates based on cost of shipping separately the sulphur lead, arsenate, and lime, the ingredients of the mixture; nor with rates on blackstrap molasses insecticide, bicarbonate of soda, denatured alcohol, and various other commodities. While insecticides introduced for comparison are highly poisonous and more hazardous to handle than the "80-5-15" mixture, this difference does not warrant disturbance of class-rate basis generally applicable on insecticides in classification territory involved. General Sprayer Co. v. A., B. & A., 129 I. C. C. 318.

(4w) Rates on unfinished broom handles from Antigo, Wis., and Tacoma, Wash., to Oklahoma City, Okla., found unreasonable to extent they exceeded by 1.5 cents rates contemporaneously maintained on lumber. See 92 I. C. C. 574; 104 I. C. C. 183, 115 I. C. C. 437. Reparation awarded. Oklahoma Traffic Asso. v. A., T. & S. F., 129 I. C. C. 403.

(4x) Carload of wooden shipping blocks from Kenosha, Wis., to San Francisco, Calif., was assessed class C rates applicable on wooden automobile blocks under an analogous-article rule in governing classification, which provided for application of most analogous classification to shipments not specifically provided for in classification. Contention of complainant that under the analogous rule, shipment was entitled to commodity rate on lumber, not sustained, the rule in question referring to classification only and not to commodity rates. Rates assessed found applicable. Simmons Co. v. W. P., 129 I. C. C. 511.

(4y) Class rates on granite, rough quarried c. l., from East Weymouth, Mass., to local points on the N. Y., N. H. & H., found unreasonable and unduly prejudicial as compared with lower commodity rates contemporaneously applicable on common brick and on stone and granite paving and curbing; and to extent they exceeded, exceed, or may exceed, rates based on distance scale herein prescribed, minimum 48,000 pounds. Reparation awarded. Plymouth Quarries v. N. Y., N. H. & H., 129 I. C. C. 621.

(4z) Spread between rates on stone or granite curbing and paving and rough quarried granite is too great but it would seem that rough granite should be on somewhat higher basis than brick, in view of the heavier loading and lesser value of brick. Plymouth Quarries v. N. Y., N. H. & H., 129 I. C. C. 621, 625.

(5a) Rates on schoolbooks from Chicago to Oklahoma City, Okla., and Dallas, Tex., found not unreasonable, discriminatory, unduly prejudicial, or otherwise unlawful as compared with lower rates on paper articles, including school blanks or forms and school copy books. Complainant contends that as schoolbooks are approved by State educational authorities, and follow a prescribed form, they should take lower rates applicable on school blanks or forms. However, schoolbooks in question can not be termed forms. Moreover, rates assailed are lower than third-class rates on books n. o. i. b. n., between same points. Wheeler Publishing Co. v. A., T. & S. F., 129 I. C. C. 672.

(5b) While higher rates on grain than on products thereof is extraordinary and commission has frequently prescribed same rates on both commodities, mere showing that rates thereon differ is not conclusive that higher rates on grain are unreasonable, as it may indicate that rates on the products are too low. Indianapolis Board of Trade v. B. & O., 129 I. C. C. 675, 680.

(5c) Factor of applicable combination rates on wrought-iron pipe from Lorain, Ohio, to Mississippi River crossing, was full fifth-class rate applicable to iron and steel articles. Lower rates on wrought-iron pipe than on iron and steel articles were prescribed in 29 I. C. C. 544 and 36 I. C. C. 86, and ton-mile earnings under rates from Lorain were higher than from Chicago to same destination. Combination rates based on Mississippi River crossing found unreasonable to extent they exceeded combination based on Jacksonville, Ill. Reparation awarded and waiver of undercharges authorized. National Tube Co. v. A., T. & S. F., 129 I. C. C. 693.

(5d) Fourth-class rates on baking powder found not unreasonable or otherwise unlawful. Complainant contends that rate assailed was unreason-

able to extent it exceeded fifth-class rate subsequently established following decision in 112 I. C. C. 645, in which fourth-class rating was found unreasonable to extent it exceeded fifth class, and as it was a party to that complaint it now seeks reparation on shipments which moved during the two years previous to date lower rate was established. However, in 20 I. C. C. 43, it was found that subsequent reduction of a rate is not of itself sufficient to justify an award of reparation. Moreover, no reparation was sought in first cited case and Rule III (s) of Rules of Practice provides that reparation will not be awarded upon a complaint in which it is not specifically prayed for or upon a new complaint by same complainant based upon finding in original proceeding. Royal Distributing Co. Inc. v. B. & O., 129 I. C. C. 749.

§18. Specific Comparisons.

See Supra §17; Comparative Rates.

(a) Rates on wire rods, in coils, from Illinois, New York, Ohio, and Pennsylvania points to Kansas City, found not unreasonable or otherwise unlawful. Complainant seeks application of the billet rates to this commodity and shows that carriers in eastern territory and in a few instances carriers in western territory maintain or concur in that basis. The lower bases, however, are maintained by those lines to induce movement of traffic or meet rates of direct lines, do not constitute undue preference or prejudice, and have no effect upon rates under attack. Application of the billet rate in c. f. a. territory was accorded years ago and has more or less grown up with the industry. The classification of wire rods with other iron and steel articles in western territory is warranted and proper and fact that lower bases have been and are accorded east of Mississippi does not prove that iron and steel rates west thereof are unreasonable. Former report, 95 I. C. C. 739, affirmed. Black Steel & Wire Co. v. A., T. & S. F., 112 I. C. C. 739.

(b) The commission has in classification cases frequently considered comparisons between wholly dissimilar commodities where accompanied by a showing of value per pound and weight per cubic foot. See 78 I. C. C. 313; 96 I. C. C. 595. American Hatters & Furriers Co. v. C. N. E. Ry., 115 I. C. C. 283, 285.

(c) In the ordinary situation little is gained by comparing rating of a commodity in one classification with rating for same commodity in another classification when rating in neither classification has been fixed by us. However, the correctness of the principle of classification uniformity is well established. That principle presumes that if ratings on any given commodity in two classifications, as official and southern, are on the proper basis, the ratings will be substantially the same. If they are different there is presumptive error in one or both classifications. Kalamazoo Vegetable Parchment Co., v. C. K. & S., 128 I. C. C. 675, 681.

§19. Evidence and Procedure.

See Evidence; Procedure Before Commission.

(a) Reasonableness of a classification rating on any given article can not be determined merely by a showing of effect in increased revenue accruing to carriers thereby. Classification of Insulating Material, 104 I. C. C. 713, 716.

(b) Complainant attacked rates on cotton linters charged on numerous carloads of cottonseed hull fiber and shavings, other than bleached and dyed, shipped between Sept., 1922 and Oct., 1925, from Georgia, Alabama, Tennessee, Mississippi, Arkansas, and Pennsylvania to New York, Pennsylvania, Maryland, Ohio and other states as illegal. The material here considered was purchased by complainant from about 16 cottonseed oil producing companies as cottonseed hull fiber or shavings, resold by complainant to its customers as such, delivered to the carriers, and so described in the bills of lading. Shipments were examined by the carriers and in their judgment were found to consist of cotton linters, whereupon the description of the shipments was changed and higher charges collected. A question of fact is thus presented which must be determined by the evidence. There is no reason to question the good faith of the parties who made the invoices but such documents alone do not satisfactorily establish the character of the commodity shipped, when that is in issue, or determine the rate applicable. Concrete evidence from complainant, such as samples of the shipments which could have been examined by witnesses qualified to

testify as to their character, would have been helpful. In cases of this character there is no statutory burden upon defendants, and the commission is of the view that the complainant has not sustained the burden of proof in this instance. HELD, rates attacked not inapplicable, complaint dismissed. Fraser Jr. v. A. C. L. R. R., 122 I. C. C. 520.

(c) Rates on phosphate rock, found not unreasonable as compared with rates on coal, slag, sand, and various other commodities. In order to be used as a basis for a finding of unreasonableness such comparisons should be supported by data respecting traffic, transportation, and other pertinent conditions and considerations. Pelham Phosphate Co. v. A. C. L., 122 I. C. C. 509, 512.

(d) The rating on component parts or raw material is not conclusive of the rating to apply on a finished article. Troxel Mfg. Co. v. B. & O. R. R., 126 I. C. C. 169.

§20. Different Classification Territories.

See Through Routes and Joint Rates §20¾.

(a) Due chiefly to difference in traffic density, a higher rate level prevails generally in Southwest than in c. f. a. territory. West Coast Lumbermen's Asso. v. A. & S., 104 I. C. C. 695, 699.

(b) The commission can not assent to a proposition that a rate level in official classification territory lower than in southern and western territories can properly be offset by establishment of higher classification ratings in lower-rated territory. Classification of Radio Sets and Talking Machines, 107 I. C. C. 175, 177.

(c) Transportation conditions in c. f. a. territory are dissimilar to and more favorable than those in southern territory. Knoxville Iron Co. v. L. & N. R. R., 107 I. C. C. 627, 631.

(d) The class rates of official territory are much lower in level than the class rates of southern territory, and while transportation conditions justify some difference in level, they do not in themselves justify existing difference. The situation, however, is one that can not be radically changed without a complete reorganization of the rate structure, including both class and commodity rates, of both territories. Southern Class Rate Investigation, 109 I. C. C. 300, 303.

(e) Carriers showed that class rates governed by official classification are generally lower per mile than class rates bearing same numerical designation governed by western or southern classification, and urged that the lower rate level in official territory shows that there is no reason why ratings in official classification should be the same as those in southern and western classification. HELD: The commission has repeatedly pointed out that this contention is without force. Manifestly it would be improper to attempt to overcome differences in rate levels by rating articles higher in official than in western and southern classifications. Nat'l. Commercial Fixture Mfrs. Asso. v. A. A. R. R., 109 I. C. C. 479, 483.

(f) Ratings and rates on numerous articles of furniture in official classification territory found not unreasonable or otherwise unlawful as compared with ratings and rates on same articles in western, southern, and Illinois classifications, comparisons of rate levels in different sections simply showing that class-rate structure within the several territories are by no means homogeneous. Nat'l. Council of Furniture Assos. v. A. A., 112 I. C. C. 289.

(g) There is no such harmonious adjustment in rates on furniture as would constitute recognized rate levels in the respective classification territories, it being possible to select rates tending to support or overthrow other rates in comparison therewith, according to purpose sought. Furniture from Southern Points, 112 I. C. C. 302, 308.

(h) From standpoint of percentages of corresponding first-class rates, fifth class under the southern classification is the substantial equivalent of fourth class in official classification and class A in western classification. See 92 I. C. C. 340, 344. Tennessee Electric Power Co. v. L. & N. R. R., 112 I. C. C. 491, 493.

(i) The classification of wire rods, in coils, with other iron and steel articles in western territory found warranted and proper and fact that lower bases have been and are accorded east of Mississippi does not prove that iron and steel rates west thereof are unreasonable. Black Steel & Wire Co. v. A., T. & S. F., 112 I. C. C. 739, 741.

(j) While in numerous cases the commission has recognized the rate pro-rate basis as an approximate means of dividing rates in accordance with amount and

cost of service rendered, it is evident that the computation of divisions on such basis between carriers in official and western territories, made solely on basis of the respective first-class rates, is not convincing. Different classifications apply in the two territories, rates on lower classes bear considerably different percentage relationships to first class in the East from those in the West, and much traffic between the two territories moves on combinations of local or proportional factors to and from Chicago or Mississippi River gateways. Revenues in Western District, 113 I. C. C. 3, 24.

(k) One level of class rates should prevail in southern territory and no sound reason exists for departing from this principle by making distinctions in computation of distances, of necessity largely arbitrary, between single-line and joint-line routes. Not only will resulting rate structure be simpler without such distinctions, but it will also be more generally satisfactory to shippers served. Nor will carriers have any just cause of complaint if distance scale is made high enough to compensate fairly for its general application to routes of varying efficiency and for the measurement of distances in all cases by short-line routes. Southern Class Rate Investigation, 113 I. C. C. 200, 205.

(l) As to certain commodities, rates in Southeast are as a whole on a lower level than rates in Southwest. Fletcher-Wilson Coffee Co. v. L. & N., 113 I. C. C. 319, 321.

(m) Generally speaking, class rates for longer distances in trunk-line territory are not on a mileage basis, but are grouped, and some of these rate groups are quite extensive. Cardiff Green Marble Co. v. M. & P. R. R., 113 I. C. C. 655, 657.

(n) Although the Commission has frequently stated that uniformity of ratings in the classification is desirable, nevertheless it can not conclude that the rating of an article in one classification is unreasonable on a mere showing that the carriers parties to another classification have voluntarily established a lower rating. Parlor Frame Mfrs. Asso. v. A. A. R. R., 118 I. C. C. 154, 155.

(o) The commission has in many cases recognized that usually transportation conditions in the Southwest warrant a somewhat higher basis of rates than in the Southeast, and that fact may be judicially noticed. United Fig & Date Co. v A. C. L., 115 I. C. C. 643, 645.

(p) Although uniformity of ratings in varying classification territories is desirable, commission can not conclude that rating of an article in one classification is unreasonable on a mere showing that carriers parties to another classification have voluntarily established a lower rating. Parlor Frame Mfrs. Asso. v. A. A. R. R., 118 I. C. C. 154, 155.

(q) Rates from Mississippi Valley to the Southeast are generally on a lower level than rates to the Southwest. Jackson Traffic Bureau v. A. & V., 118 I. C. C. 217, 219.

(r) Meridian, Miss., and Mobile, Ala., are border-line points between Mississippi Valley and southeastern territories and are considered Mississippi Valley points for rate-making purposes. Teague Hardware Co. v. C., B. & Q., 118 I. C. C. 221.

(s) Transportation conditions east of Mississippi are more favorable than those west and justify a lower level of rates. Teague Hardware Co. v. C., B. & Q., 118 I. C. C. 221, 225, 226.

(t) Rates maintained or prescribed for application in or to Mississippi Valley can not be used as a gauge for reasonable maximum rates in or to the Southeast. Bradley & Woertz v. I. C., 118 I. C. C. 233, 235.

(u) Generally speaking, rates in c. f. a. territory are on a lower basis than those in the Southwest and the latter are on a lower basis than those in the Southeast. White Provision Co. v. A., B. & A., 118 I. C. C. 601, 603.

(v) The level of rates in Mississippi Valley territory is lower than in southeastern territory. See 87 I. C. C. 547. Florence Chamber of Commerce v. A., T. & S. F., 118 I. C. C. 710, 712.

(w) Transportation conditions in the Southeast do not warrant any higher basis of rates than in the Southwest. Capital Grain & Feed Co. v. I. C., 118 I. C. C. 732, 746.

(x) Sixth-class rates on commercial fertilizers between points in c. f. a. territory, found not unreasonable or otherwise unlawful in the past as compared with rates in the South and West, but for future found unreasonable to extent

they exceed distance rates herein prescribed. As volume of movement is substantial and increasing and use of fertilizers is an adjunct to successful farming, rates thereon should be more on a parity with those prescribed in 113 I. C. C. 389 in southern territory. However, on evidence presented, the commission is not convinced that sixth-class rate produces rates which might be condemned as exceeding the limits of maximum reasonableness if evidence covering conditions in c. f. a. territory in general was fully presented, and scale prescribed is, therefore, without prejudice to any future findings which may be made on a more comprehensive record. Ohio Farm Bureau Federation v. A. & W., 120 I. C. C. 361.

(y) It does not follow that because a lower rating exists in one of the three great classification territories the second class rate applied on complainants traffic is unreasonable. Western Cartridge Co. v. C. B. & Q. R. R., 123 I. C. C. 547, 549.

(z) Texas differential territory is recognized as a territory of comparatively light traffic density in which carriers require a higher level of rates than in Texas common-point territory to the east thereof. Peyton Packing Co. v. A. & S. Ry., 122 I. C. C. 3, 5.

(aa) Rates west of the Mississippi River should be somewhat higher than east of the river. Crescent Bed Co. v. C., R. I. & P., 123 I. C. C. 41, 46.

(bb) In so far as considerations which govern class percentages are concerned there are no differences in conditions as between the Southwest and western trunk-line territory. Accordingly, substantially same class percentages should apply in both these territories. Consolidated Southwestern Cases, 123 I. C. C. 203, 234.

(cc) Generally speaking, same class percentages should apply throughout any one classification territory and as rapidly as may be possible progress should be made to harmonize classification ratings and class percentages throughout the country. Consolidated Southwestern Cases, 123 I. C. C. 203, 233, 234.

(dd) While rates in the Southwest should be somewhat higher than in southern territory, there should be a reasonable relationship between the two territories, in which in many respects conditions are similar. Consolidated Southwestern Cases, 123 I. C. C. 203, 268.

(ee) In numerous cases commission has recognized that rates in the Southwest may properly be somewhat higher than in southern territory. Consolidated Southwestern Cases, 123 I. C. C. 203, 382.

(ff) Rates in southwestern territory may properly be somewhat higher than rates for comparable distances in southern territory. Sugar Between Louisiana and Texas Points, 128 I. C. C. 309, 316.

(gg) Fact that commodity moves within a given classification territory on class rates which have been found reasonable, is not proof that it should move on class rates from a point outside that territory to destinations therein. Memphis Freight Bureau v. A. G. S., 128 I. C. C. 445, 453.

(hh) Recognition must be given to more favorable transportation conditions and lower class-rate level in official territory as compared with those in southern territory. Rates over routes partly through official territory lower than rates for same distances wholly within southern territory are not necessarily unduly prejudicial or preferential. Southern Class Rate Investigation, 128 I. C. C. 567, 575.

(ii) Where two territories in which rate levels and classifications vary widely lie contiguous for long distances no plan of through rates can avoid some anomalous situations. Groups constitute a practical way of avoiding many of the difficuties and where this method is impracticable without undue sacrifice of revenue, the situation may be met, either by appropriate fourth-section relief or by establishment of rates over certain of the higher-rated routes that conform to the fourth section but do not in all cases meet the rates of lower-rated routes to and from relatively unimportant competitive points. Southern Class Rate Investigation, 128 I. C. C. 567, 577.

(jj) Shippers are entitled to benefit of reasonable rates over all routes operating between various classification territories and should not be forced to pay rates higher than reasonable over routes operating in part through one territory merely because higher-rated routes exist through another territory. Southern Class Rate Investigation, 128 I. C. C. 567, 583, 584.

(kk) A complicated situation exists along the border line between any two rate territories subject to rate levels as

different as those that exist in case of class rates in official and southern territories. However, there must be a border line somewhere. Generally speaking, the Ohio River is the natural boundary between the two territories and should be the boundary determining the application of official and southern classifications. Southern Class Rate Investigation, 128 I. C. C. 567, 585.

(ll) In the absence of unusual circumstances classification ratings should be uniform in all territories, and a showing of nonuniformity in the ratings of a particular article suggests the query as to whether the article has not been improperly classified in one classification, if not in both. Eggerss O'Flyng Co. v. C. & N. W. Ry., 128 I. C. C. 644, 649.

(mm) In the ordinary situation little is gained by comparing rating of a commodity in one classification with rating for same commodity in another classification when rating in neither classification has been fixed by us. However, the correctness of the principle of classification uniformity is well established. That principle presumes that if ratings on any given commodity in two classifications, as official and southern, are on the proper basis the ratings will be substantially the same. If they are different there is presumptive error in one or both classifications. Kalamazoo Vegetable Parchment Co. v. C., K. & S., 128 I. C. C. 675, 681.

(nn) Combination rates on enamel, other than watch dial, from Cicero, Ill., to Chattanooga, Tenn., found unreasonable to extent that factor south of Cairo, Ill., second class under southern classification, exceeded the fifth-class rating contemporaneously applicable in western and official territories and subsequently established in southern. Fact that no carload movement existed at time second-class rating was established found not sufficient to justify spread in rating between southern and other territories. Reparation awarded. Tennessee Furniture Corp. v. B. & O. C. T., 128 I. C. C. 701.

(oo) Petition for amendment of fourth-section order No. 144, general No. 5, so as to permit changes in classification ratings, rules, and regulations without observing the fourth section of the act, denied, except that temporary relief previously granted in that order should be continued until rates prescribed in Southwestern Class Rate Investigation, 100 I. C. C. 513; 109 I. C. C. 300; 113 I. C. C. 200, have become established. Petitioners do not contend that departures which result from classification changes justify lower charges for longer than for shorter distances as defined by the statute, but, on contrary, concede that investigation of individual departures would disclose a complete absence of justification. Moreover, petition does not present a "special case" for relief as provided by section 4, but a complete repeal of that section in so far as it relates to classification changes. This the commission has no power to effect. Fourth Section Departures, 129 I. C. C. 187.

(pp) Fourth-section departures resulting from changes in classification may be either of long-and-short-haul or aggregate-of-intermediates type. They may occur on local traffic within a classification territory, or on interterritorial traffic between points where joint through rates are in effect. Fourth Section Departures, 129 I. C. C. 187, 189.

(qq) In some instances class-rate scales to intermediate and more distant destinations, subject to different classifications, are constructed on such entirely different bases that fourth-section departures would still exist if ratings in the two classifications were unified; but, generally speaking, cooperation between classification committees with a view to promoting uniformity or preserving it where it now exists, will go far toward correcting existing violations, and preventing creation of new ones. In the mass, individual cases of this type are merely the product of a defective rate structure and without inherent justification. Fourth Section Departures, 129 I. C. C. 187, 193.

(rr) Differences between ratings in southern classification on the one hand and those in other major classifications on the other are perhaps more numerous and marked than differences between other classifications, and more changes will probably be necessary therein in order to bring about uniformity between classifications. Situation

created by overlapping of classifications is also more serious along boundary between southern and official classification territories because of condition of the southern classification. Fourth Section Departures, 129 I. C. C. 187, 195.

(ss) It does not seem unreasonable to require a carrier which maintains fourth-section departures under protection of an order, to keep in touch with changes in classification governing its class rates between same points and to revise its commodity rates conformably. Fourth Section Departures, 129 I. C. C. 187, 195.

(tt) Generally, rates in official classification territory are on a lower basis than in southern territory, or from southern territory to official territory. The reverse is true, however, on some of the heavy moving commodities. Jackson v. M. C., 129 I. C. C. 235, 239.

§21. Follow Lot Shipments.

See Follow Lot Shipments; Minimums.

(a) Applicable rate on cotton compresses, k. d.; loose or in packages, charged on shipments of castings and forgings, constituting parts of a compress, from Meridian, Miss., to Blytheville, Ark., found not unreasonable. These shipments were tendered on separate bills of lading, and moved on different dates, none consisting of a complete compress. Distance considered; the rate charged compares favorably with those contemporaneously applicable between various points, and higher rates were found not unreasonable on commodities having like transportation characteristics in 45 I. C. C. 549 and 51 I. C. C. 138, between other points in same general territory for comparable distances. Blytheville Compress & Warehouse Co. v. M. & O., 123 I. C. C. 95.

V. REASONABLENESS AND DISCRIMINATION.

See Advanced Rates §5 (8) (b); Class Rates; Commodity Rates §3.

§22. In General.

(a) Rating in official classification of fourth class on dry, salted, dried, smoked and pickled meats, loose, from Chicago and various other packing points to destinations in trunk-line territory East of Buffalo-Pittsburgh line and to New England territory found unjust and unreasonable for future to extent it exceeds fifth class on like traffic in packages. Reasonable rating prescribed for future. Morrell & Co. v. N. Y. C., 104 I. C. C. 104, 136, 137.

(b) Boxes, battery: Proposed increased rating in official classification on asphalt composition battery boxes found not justified on ground that facts shown in record as to their value, weight density, and other transportation characteristics fall far short of establishing propriety of a c. l. rating higher than fourth class now in effect. Classification of Asphalt Battery Boxes, 104 I. C. C. 190.

(c) Proposed increased c. l. minimum weight on asphalt composition battery boxes in official, southern, and western classifications from 20,000 to 24,000 pounds found justified, it being shown that such boxes readily load to the higher minimum. Classification of Asphalt Battery Boxes, 104 I. C. C. 190.

(d) Shipments of bull-wheel arms, cants, and pins, from Tulsa, Okla, to Bluffdale, Tex., found not to have been overcharged. Complainant contended these articles were not named in governing classification at time of movement and should therefore have been rated by analogy same as vehicle material. An examination of tariffs, however, discloses that articles were listed in classification under oil-well outfits and supplies and in absence of commodity rates were subject to class rates assessed. Marion Machine, Foundry & Supply Co. v. Director General, 104 I. C. C. 265.

(e) Cocoa powder: Fourth-class ratings, minimum weight 30,000 pounds, in official, southern and western classification, on cocoa powder, in bulk, in barrels, found unreasonable to extent they exceed fifth-class minimum weight 36,000 pounds. Comparisons are made with many commodities rated fifth class or lower, best analogy being with coffee, which is shipped in much same manner as cocoa, loads about same, and is to some extent competitive. Reasonable rating prescribed for future. Opler v. A. & R. R. R., 104 I. C. C. 468.

(f) Proposed increased minimum charge on articles, in peddler cars, from East St. Louis, Ill., to points on C. & O. in Kentucky and West Virginia, designed to place such charges on a basis similar to that from Chicago to same points,

found not justified. The loading of peddler cars is dependent upon consuming ability of destination territory. Territory served by the C. & O., especially the branch lines, is thinly settled, and limited refrigeration facilities render storage of perishable articles for extended periods impossible. Wilson & Co. v. C. & O., 104 I. C. C. 641.

(g) Brooms, bahia and bassine fiber: On reconsideration, rating of second class, minimum 12,000 pounds, on bahia and bassine fiber brooms, found unreasonable for future to extent it exceeds fourth class, minimum 24,000 pounds, subject to rule 34, in view of fact that difference in weight density between such brooms and broomcorn brooms is substantial. Former report, 92 I. C. C. 749, reversed in part. Edlund Broom Corp. v. B. & M., 104 I. C. C. 692.

(h) Proposed increased classification ratings on insulating material, viz., flax felt and woodfiber felt, in western and southern territories, which will make ratings uniform, and provide same ratings for the several varieties of insulating materials, found justified. Earnings under proposed ratings will not be unduly high as compared with those yielded by class rates applicable on analogous and comparable articles. Moreover, considering ratings on similar or heavier-loading articles, and light weight density of most of these insulating materials, suggested ratings do not appear unreasonably high. Classification of Insulating Material, 104 I. C. C. 713.

(i) Reasonableness of a classification rating on any given article can not be determined merely by showing of effect in increased revenue accruing to carriers thereby. Classification of Insulating Material, 104 I. C. C. 713, 716.

(j) Talking machines and radio sets combined: Proposal to increase from second to first class the rating in official classification on combined talking machines and radio sets found not justified. Granting contention that freight charge is a relatively small burden in marketing such a high-grade specialty, it nevertheless is incumbent upon respondents to show that rating proposed is reasonably consistent with those maintained on other comparable articles, and this they have failed to do. If schedules are permitted to become effective, both rating and minimum will be higher on combined machines than on orchestrions, notwithstanding that former are heavier and cheaper. Classification of Radio Sets and Talking Machines, 107 I. C. C. 175.

(k) Rotary-tool joints: First-class rating and rates on, loose, l. c. l., in western classification, found unreasonable to extent they exceeded second class. While a rotary-tool joint is a much higher-class article than an ordinary pipe connection, a rating as high as first class is not justified by usual classification considerations of value, weight density, and susceptibility to damage. Reasonable rating and rate prescribed and reparation awarded. Hughes Tool Co. v. A. & R. R. R., 107 I. C. C. 545.

(l) Rates on nails, washers, nuts, and bolts, l. c. l., from Birdsboro, Coatesville, Lebanon, and Pottstown, Pa., to Lynchburg, Va., found neither unreasonable nor unduly prejudicial as compared with rates on like traffic from same points of origin to other Virginia points for comparable distances. Lynchburg Chamber of Commerce v. R. Co., 107 I. C. C. 610.

(m) Barber-chair parts: Fourth-class rating and rates, minimum 36,000 pounds, applicable on shipments of barber-chair parts, consisting of seat rims, back rims, and arm rims, in straight carloads, or in mixed carloads with bases or pedestals, from North Chicago, Ill., to Cincinnati, Ohio., found not unreasonable. Such rating does not appear inconsistent with value and weight per cubic foot of articles, and compares favorably with that on rough iron or steel castings, on iron or steel hardware, and on various iron and steel furniture parts mentioned of record. Berninghaus Co. v. C. & N. W., 109 I. C. C. 104.

(n) Floor coverings: Carload rating of third class, minimum 30,000 pounds, in western classification territory on carpets and carpeting made of cork, linoleum, or asphalted and decorated paper felt and mats or rugs made of linoleum or of asphalted and decorated paper felt, found unreasonable for future to extent it exceeds fourth class, subject to a minimum not in excess of 36,000 pounds. Congoleum-Nairn v. C. & N. W., 109 I. C. C. 447.

(o) Armatures, automobile: Ratings and rates on new and on junked old worn-out electric automobile armatures, l. c. l., found not unreasonable as compared with ratings and rates on various automobile parts. Electric armatures are not rated as automobile parts. They are built in a variety of forms and sizes,

ranging from diminutive type used in very small motors to the gigantic type employed in generators for central-station equipment. The record refers almost entirely to one type of automobile electric armature, and contains little or no information as to automobile armatures generally and how such armatures compare with other small armatures in value, loading, weight per cubic foot, volume of movement, etc. It is here sought to segregate automobile electric armatures from other kinds, but there is no basis for assuming that they are entitled to more favorable ratings. Oklahoma Traffic Asso. v. A. & R., 109 I. C. C. 457.

(p) Soda fountains: Official classification ratings on soda-fountain counter interiors, on soda-fountain counters when packed with soda-fountain counter interiors, and on work boards, bar or counter, found unreasonable for l. c. l. and not unreasonable for c. l. shipments. Actual loading possibilities rather than mathematical weight density should be considered in fixing ratings on such commodities, and evidence shows that only two rows of fountains can ordinarily be loaded lengthwise in a car, and that the fountains can not well be top loaded. It nevertheless appears practicable, in loading merchandise cars with l.c.l. freight, to place other packages alongside and on top of fountains if carriers desire to use this car space. Nat'l. Commercial Fixture Mfrs. Asso. v. A. A. R. R., 109 I. C. C. 479.

(q) Carriers showed that class rates governed by official classification are generally lower per mile than class rates bearing same numerical designation governed by western or southern classification, and urged that the lower rate level in official territory shows that there is no reason why ratings in official classification should be the same as those in southern and western classifications. HELD: The commission has repeatedly pointed out that this contention is without force. Manifestly it would be improper to attempt to overcome differences in rate levels by rating articles higher in official than in western and southern classifications. Nat'l. Commercial Fixture Mfrs. Asso. v. A. A. R. R., 109 I. C. C. 479, 483.

(r) Metal columns: Ratings on, in official classification territory found not unreasonable, discriminatory, or unduly prejudicial, as compared with ratings on hollow wooden columns and other building sheet-metal work. Metal columns have a considerably lower weight per cubic foot and higher value per pound than commodities with which comparison is made, and mere fact that metal columns compete with wooden columns to some extent does not entitle them to same ratings. See 46 I. C. C. 40; 68 I. C. C. 213, 221. Union Metal Mfg. Co. v. A., C. & Y., 109 I. C. C. 490.

(s) Rates on canned goods from Illinois freight association territory to certain west-bank Mississippi River points in that territory found not unreasonable as compared with rates on cereal beverages in Illinois territory, or with cereal beverage rates and canneds goods rates in western trunk-line and c. f. a. territories, except to extent they exceeded fifth class. Transportation conditions in Illinois are not shown to be more favorable than in c. f. a. territory, and prescription of rates lower than fifth class would be based not on transportation conditions but on existence of commodity rates voluntarily established by carriers to meet competitive conditions and which they regard as too low. Burlington Shippers' Asso. v. A., T. & S. F., 109 I. C. C. 694.

(t) In 95 I. C. C. 9 the commission found not unreasonable or unjustly discriminatory the class A rates of $3.35 in effect prior to July 1, 1922 and $2.73 on 13 cars of automobile wheels from Portland, Ind., to Los Angeles and San Francisco, Calif., and Tacoma and Seattle, Wash. All of the wheels were made of wood and were without hubs, bearings or tires, and all except two of the shipments of wheels were shown as finished on the bills of lading or waybills or both. The consolidated classification provided that the finished wheel ratings would apply on wheels with more than one priming coat of paint. HELD: Original report affirmed. Bimel Spoke & Auto Wheel Co. v. L. E. & W. Ry., 112 I. C. C. 405.

(u) Complainant attacked combination rate charged on one car of electrical machinery, or transformer cores, shipped June 22, 1923, from Ocoee, Tenn, to Pittsfield, Mass., as unjust and unreasonable and in violation of section four. Ocoee is on the L. & N., 78 miles south of Knoxville, Tenn., and 118 miles north of Atlanta, Ga. Pittsfield is 154 miles northeast of New York served by the B. & A. and New Haven. Instructions to route L. & N. via Southern Ry. at Knoxville, Tenn., were inserted in the

bill of lading by the shipper. Rate charged first class of 69.5c to Knoxville plus first class $1.50 beyond. A lower combination was applicable via Cincinnati $1.36 to Cincinnati and fourth class 60.5c beyond. HELD: First class rating unreasonable to extent it exceeded fifth class, reparation awarded. Tennessee Electric Power Co. v. L. &. N. Ry., 112 I. C. C. 491.

(v) Complainant attacked commodity rate of $3.15 charged between April 15, 1922, and date of filing on numerous carloads of tin plate scrap from Baltimore, Md., stations to Carteret, N. J., as unreasonable. Tin plate scrap consists of the clippings from tin plate used by can manufacturers in the making of tin cans. Shipments moved B. & O. to Park Junction, Pa., just outside Philadelphia thence P. & R. to Bound Brook, N. J., Jersey Central beyond, 185 miles, via Pennsylvania route would be 207 miles. Commodity is rated sixth class. HELD: Rate attacked unreasonable to extent it exceeded $2.75 prior to July 1, 1922, and $2.475 thereafter, reparation awarded. Metal & Thermit Corp. v. C. R. R. of N. J., 112 I. C. C. 523.

(w) Complainant attacked sixth class rate on cottonseed hull fiber or shavings, carloads, during Jan. and Feb., 1924, from Memphis, Tenn., to Chicago, Ill., as unjust, unreasonable unjustly discriminatory and unduly prejudicial. Shipment moved on one bill of lading from Memphis over the Mississippi Warrior service. It apparently was for Pennsylvania delivery and moved from Cairo, Ill., part way over the I. C., not a defendant. Shipment was originally billed as cottonseed hull shavings or fiber, not bleached or dyed. When it reached Cairo the Southern Weighing and Inspection Bureau considered the commodity cotton linters, and billed rates were so changed. Rate on uncompressed cotton linters from Memphis to Chicago was 55.5c sixth class rate, cottonseed hull shavings 24.5c commodity rate. A joint rate of 38c applied on cotton hull fiber or shavings and on second cut linters to Chicago from Bridge Junction, Ark., 3 miles west of Memphis, via which city this rate applied all rail. HELD: Applicable rate was 55.5c, unreasonable to extent it exceeded 38c, reparation awarded. Stern Kauders Co. v. U. S. War Dept., 112 I. C. C. 580.

(x) Complainant attacked class rate charged on four cars of loose dried horsehides from New York, N. Y., to Milwaukee, Wis., delivered May 12, 14, 17 and 18, 1920, as unreasonable, unjustly discriminatory and unduly preferential. On Dec. 30, 1919, the rating on dry horsehides, loose, in official classification was changed from fourth to second class and on Sept. 10, 1920, the former rating was restored. The complaint was filed subsequent to the expiration of the two years period. HELD: Complaint barred. Pfister & Vogel Leather Co. v. Erie R. R., 112 I. C. C. 659.

(y) Official classification fourth-class rating and rates on carbon flour, found unreasonable to extent they exceeded sixth class. The classification contains but a limited number of ratings, and commodities possessing somewhat different transportation characteristics must often of necessity be assigned to same class. Carbon flour is shown to be a heavy low-grade commodity, more closely associated with carbons and carbon articles rated sixth class than with those rated fourth or fifth class. Reasonable rating and rate prescribed for future and reparation awarded. French Battery & Carbon Co. v. C. & N. W., 112 I. C. C. 128.

(z) Fifth-class rate on red oil, found not unreasonable or unduly prejudicial as compared with sixth-class rates under exception to classification on inedible stearine, tallow, grease, and other soap stock. While red oil compares favorably from a transportation standpoint with certain other articles used in manufacture of soap, the commission is not prepared to say that failure to accord red oil by exception the same rating as these other articles results in unreasonableness or undue prejudice. Williams Co. v. C. N. E., 112 I. C. C. 158.

(aa) Rates on cigar-box lumber found not unreasonable as compared with rates on lumber and various lumber articles, including box shooks. Rates assailed produce low ton-mile and car-mile earnings, and while earnings on shipments in question were shown to be slightly higher than those under comparable lumber rates instanced by complainant, that fact alone does not demonstrate that rates assailed were or are unreasonable. Eggerss-O'Flyng Co. v. A. G. S., 112 I. C. C. 218.

(bb) Transformer cores: First-class rating on, in southern classification territory, found unreasonable to extent it exceeded fifth class. Transformer cores

are rated Class A in western classification, but in official classification fourth class, or one class higher than armatures, generators, motors, and transformers. From standpoint of percentages of the corresponding first-class rates, fifth class under the southern classification is the substantial equivalent of the fourth class in official and class A in western classifications. Reparation awarded. Tennessee Electric Power Co. v. L. & N. R. R., 112 I. C. C. 491.

(cc) Rates on wire rods, in coils, from Illinois, New York, Ohio, and Pennsylvania points to Kansas City, found not unreasonable or otherwise unlawful. Complainant seeks application of the billet rates to this commodity, and shows that carriers in eastern territory and in a few instances carriers in western territory maintain or concur in that basis. The lower bases, however, are maintained by those lines to induce movement of traffic or meet rates of direct lines, do not constitute undue preference or prejudice, and have no effect upon rates under attack. Application of the billet rate in c. f. a. territory was accorded years ago and has more or less grown up with the industry. The classification of wire rods with other iron and steel articles in western territory is warranted and proper and fact that lower bases have been and are accorded east of Mississippi does not prove that iron and steel rates west thereof are unreasonable. Former report, 95 I. C. C. 739, affirmed. Black Steel & Wire Co. v. A., T. & S. F., 112 I. C. C. 739.

(dd) While in southern territory the predominant use of cottonseed meal is that of fertilization, in the southwest and in official territory it is used almost exclusively for feeding purposes. Its fertilizing characteristics are especially desirable in tobacco growing, although it it is also used quite extensively on cotton and other crops, principally in combination with other materials. The commission, therefore, finds that cottonseed meal should for the present be classified as a fertilizer material in southern territory. Fertilizers between Southern Points, 113 I. C. C. 389, 419.

(ee) Based upon sound economic grounds fertilizer is a commodity which should be leniently treated in distributing the burden of freight transportation. The need for continued progress in use of this commodity is so great and degree of its use is so dependent upon financial considerations that all burdens associated with its use should be made as light as possible. Fertilizers between Southern Points, 113 I. C. C. 389, 421.

(ff) Complainant attacked rates on alloys of lead, in pigs, bars, and ingots, carloads, from New York and Newark, N. J., to Buffalo, N. Y., Pittsburgh, Pa., Chicago, Ill., and other destinations in c. f. a. territory as unreasonable, unjustly discriminatory and unduly prejudicial. Respondents proposed to cancel commodity rates on terne metal, carloads, from Newark and Brills, N. J., to Buffalo and Buffalo rate points and destinations in central territory and to apply higher fifth class rates. The term "alloys of lead" as used herein comprehends babbitt, solder, terne, and type metal which have lead as a base in composition with tin, antimony, or other metals in varying proportions. These articles are rated fifth class, in official classifications, and have moved on this basis generally in the past, except during the period subsequent to Sept. 28, 1924, when lower commodity rates, the same as those on tin, were established on terne metal from Newark and Brills to Buffalo and central territory. Throughout territory governed by the official classification tin moves, with few exceptions, on the fifth class basis, such commodity rates as apply having been published from the ports through which tin is imported from the East Indies. Substantially no commodity rates now apply in that territory on solder, babbitt or type metal. Whatever may have lead to the publication of these commodity rates on terne metal, a test of their operation during the first nine months indicating a movement to only three destinations and in an aggregate of 11 cars does not show that a departure from the class basis is justified. HELD, proposed schedules have not been justified in their entirety but sixth class basis would be reasonable for application on terne metal; rates attacked from Newark unreasonable to extent they exceed sixth class rates, reparation awarded. Federated Metals Corp. v. C. R. R. Co. of N. J., 113 I. C. C. 487.

(gg) Respondents proposed certain changes in the commodity descriptions of various petroleum products applicable from points in California to destinations in several western and southwestern states. The proposed descriptions provide specifications for each commodity, the distinction between the several com-

modities with the exception of petroleum crude oil being gravity or flash point, or both, as the case may be. No rate changes are proposed. Respondents state that the purpose is to clarify the tariffs and to restrict the application of the rates to commodities for which they were established. Under the proposed changes refinery tops now billed by shippers as gas oil and moving under the gas oil rate of 38.5c at an estimated weight of 7.75 pounds per gallon from Los Angeles, and points taking same rates, to Phoenix will be assessed rates applicable on engine distillate, which at the time of the hearing varied, according to origin points, from 79 to 94c based on an estimated weight of 6.6 pounds per gallon. Gas oil is generally understood to be a low grade product containing no gasoline or kerosene, and that refinery tops are not considered to be gas oil for transportation purposes. The proposed descriptions for fuel oil and gas oil contain specifications as to gravity but do not indicate that those gravities are to be determined at any particular temperature. Inasmuch as petroleum oils have different gravities at different temperatures, any specification in the tariffs as to gravity should make it clear that the gravity is to be determined at a certain temperature, which should be stated. HELD, proposed schedules not justified, but without prejudice to the filing of schedules designed to reflect the suggestions here made. Commodity specifications on petroleum products, 113 I. C. C. 707.

(hh) Complainant attacked commodity and class rates charged on iron and steel derricks, carloads, from Sistersville, W. Va., to Honig, Kas., and Naptha, Tulsa, Bristow, Wetumka, and Wilson, Okla., as unreasonable. Iron and steel derricks, together with other oil well supplies and outfits, are rated class A in straight or mixed carloads in the western classification. The oil well outfits and supplies list includes many articles of varying values and weights, which are given like rates to permit mixing. Even if derricks are of lower value than some of the other commodities taking the same rates, that fact alone is not a controlling reason for according them lower rates. There are about 135 articles included in the oil well outfits and supplies mixture, the present description of which was published at the request of manufacturers of such supplies, has long been in effect, and apparently is satisfactory. There is no complaint against the rating and rates on the mixture and a lower rating and lower rates should not be published on derricks except upon a clear showing that the conditions surrounding their transportation differ materially from the conditions surrounding the transportation of the other articles on the list, or that they are the same as those surrounding the transportation of articles taking lower rates. HELD, rates attacked not unreasonable, complaint dismissed. Carter Oil Co. v. A. T. & S. F. Ry., 113 I. C. C. 757.

(ii) Complainant attacked second and third class rates of 105.5c and 79c charged on less carloads of waxed wrapping paper printed and not printed, from Cincinnati, O., to Lynchburg, W. Va., as unreasonable and unduly prejudicial. Shipment of printed paper moved over the N. & W. throughout, 510 miles. Shipment of paper, not printed, moved C. & O. throughout, 472 miles. In 96 I. C. C. 280, the Commission found the second class rates and ratings on printed waxed paper unreasonable to extent they exceeded third class. HELD, rates attacked not unduly prejudicial but unreasonable to extent they exceeded third class rate, reparation awarded. Lynchburg Chamber of Commerce v. N. & W. Ry., 115 I. C. C. 27.

(jj) Complainant attacked class rates charged on telescoped barrels, in carloads, from Thebes, Ill., and Louisville, Ky., to destinations in official classification territory as unjust, unreasonable, and unduly prejudicial. There is no specific provision in the official classification for telescoped barrels, and defendants have collected the fourth class rates observing a minimum of 16,000 pounds, under the classification rule of analogy. That rating and minimum is published specifically on wooden butter tubs. Complainant conceded that the rates might reasonably be made a fixed percentage over the lumber rates. It is quite evident that telescoped barrels, although made largely of wood, have passed far beyond the lumber stage of manufacture. The uses and transportation characteristics of telescoped barrels are dissimilar from those of lumber. Considerations of carrier and market competition, together with regularity and volume of movement, are of prime importance in fixing the rates on lumber, but they enter only slightly and then in a different manner

into the determination of rates on telescoped barrels. For these reasons, the Commission is not of the opinion that rates on telescoped barrels should be the same as, or definitely related to, the rates on lumber. HELD, rates for past not unreasonable. rates for future not to exceed sixth class, minimum 30,000 pounds, subject to rule 34. Hollingshead Co. v. A. A. R. R., 115 I. C. C. 95.

(kk) Complainant attacked ratings in official classification on clippings or scraps of dressed or tanned rabbit skins in car loads and less carloads as unreasonable. The present ratings were established on March 25, 1924, as a result of an application filed by complainant and others. Prior to that date there were in effect any quantity ratings of first class in official and western and first class in bags and second class in bales, barrels, or boxes in southern classification. The failure of the committee to accord in official classification the ratings now sought is the moving cause of the present complaint. The commodity can be transported in any kind of a car and the claims for loss and damage are negligible. HELD, less carload ratings not unreasonable but carload rating unreasonable to extent it exceeded fourth class minimum 24,000, reparation awarded. American Hatters & Furriers Co. v. C. N. Ry., 115 I. C. C. 283.

(ll) In 104 I. C. C. 183, Commission found that rates on broom handles, in carloads, from Michigan and Wisconsin to Des Moines, Ia., North Kansas City and Kansas City, Mo., and Deshler, Neb., were unreasonable. The handles contained in the shipments were turned to shape with a hole bored through one end. Commission found reasonable rates to be 1.5c over lumber rates. HELD, rates on handles (wooden) in the white, turned or tumbled to shaped, and not further finished beyond holes bored through one end unreasonable to extent they exceed 1.5c over lumber rates when such lumber rates were higher than 31.5c prior to July 1, 1922, and higher than 28.5c thereafter, and 2c over lumber rates when lumber rates were 31.5c or less prior to July 1, 1922, and 28.5c thereafter, reparation awarded. Deshler Broom Factory v. A. T. & S. F. Ry., 115 I. C. C. 437.

(mm) Complainant attacked charges for transportation on Dec. 12, 1923, of one steam road roller from Shreveport, La., to Bluff Springs, Fla., as illegal and unreasonable. Original destination was Flomaton, Ala., but reconsignment was effected without charge. The movement was over T. & P., to New Orleans and L. & N. beyond, charged 74.5c to New Orleans and 49.5c beyond. First factor not attacked. Sixth class factor applied from New Orleans. Self propelling road roller is a machine in an entirely proper and normal sense of the word. Rating on machines should apply. HELD, class L rate of 39.5c was applicable from New Orleans, overcharge should be refunded, complaint dismissed. Lawrence Construction Co. v. L. & N. Ry., 115 I. C. C. 439.

(nn) Reasonable maximum rates on building and roofing paper and paper boards between points within CFA territory and within trunk line territory and between the two territories and between either of them and points in New England territory should not exceed 90% of the sixth class rates. Lynchburg Chamber of Commerce v. B. & O R. R., 115 I. C. C. 465, 467.

(oo) Complainant attacked rates on spelter by-products, i.e.; zinc dross, ashes, skimmings, and residue, carloads, from Canada, New England, and trunk line territory to trunk line points, and from Pennsylvania, Ohio, West Virginia, Michigan, Indiana, Illinois, Wisconsin, Missouri to Trenton, N. J., as unreasonable and unduly prejudicial. From points in Canada the sixth class rates were applicable on this traffic to all of the destinations. Complainant contends that these rates were and are unreasonable to extent they exceed 85% of the sixth class rates, or the commodity rates on zinc between the same points, if lower. HELD, rates attacked unreasonable to extent they exceeded 85% of sixth class between the same points, except that between points where commodity rates were and are maintained on spelter, lower than 85% of sixth class rates, they should not be exceeded. HELD, rates attacked on spelter by-products between points in central territory, or western terminal points and Trenton, N. J., not unreasonable except that from Pittsburgh to Trenton unreasonable to extent it exceeded 17c. From Canada to New England and Trunk Line unreasonable to extent they exceeded 85% of sixth class, reparation awarded. Lissberger & Co. v. Pennsylvania R. R., 115 I. C. C. 521.

(pp) Complainant attacked class rate of 81c charged on three cars of metallic couch frames, folded flat, from Chicago, Ill., to Memphis, Tenn., as unreasonable, unjustly discriminatory, and, as compared with rates on kitchen safes, knocked down, in the white, or shellaced, from and to the same points, unduly preferential of latter traffic, to extent it exceeded 59.5c. Shipments moved I. C. and Y. & M. V., 527 miles. The classification provides a distinction as between furniture and metallic couch frames and since April 1, 1922, save for the eight months period from July, 1923, to March, 1924, defendants have recognized such a distinction in the fixation of commodity rates. A rate equal to 75% of the rate on furniture would have been 61c. HELD, rate attacked unreasonable to extent it exceeded 61c, reparation awarded. Memphis Furniture Mfg. Co. v. I. C. R. R., 115 I. C. C. 554.

(qq) Complainant attacked first class rate charged on l. c. l. shipments of so-called tinsel wire from New York and Brooklyn, N. Y., and Weehawken, N. J., to Manitowoc, Wis., as inapplicable and that second class rate provided for wire, n. o. i. b. n., should have been collected, and that rate charged was unreasonable to extent it exceeded second class. The shipments in question consisted of metal threads or strands, usually flattened, for use in making tinsel articles. They are made of silvered, lacquered, or plain copper or of tinned iron. It is imported by complainant from France and Germany. The German name for it is "lahn." The official classification provides a rating of first class on tinsel in any quantity. Wire and lahn are similar in that both are manufactured by extruding metal through dies. But in the manufacture of wire tensile strength or electrical conductivity, or both, are the qualities principally sought, without much reference to the appearance of the finished article. The reverse is true of lahn. It has but little tensile strength, and except for its glitter and sparkle it would be practically valueless. Lahn is a form of tinsel and is not wire. Complainants shipments have not been overcharged. HELD, rate attacked, applicable and not unreasonable, complaint dismissed. National Tinsel Mfg. Co. v. C. & N. W. Ry., 115 I. C. C. 631 .

(rr) Complainant alleged third class rates of $3.675, minimum 12,000 pounds, charged on four cars of servidor doors, not further finished than primed, shipped during July, August and Sept., 1924, from Milwaukee, Wis., to Seattle, Wash., as unreasonable and unlawful to extent they exceeded $1.14, minimum 30,000 pounds. Servidors are patented doors designed with double panels enclosing a narrow compartment to permit the delivery or removal of clothes and other articles from hotel rooms without an employee having to enter a room. There was a commodity rate of $1.14 minimum 30,000 pounds applying on doors in the white or having one coat of shellac in addition to priming. Servidors compete with all ordinary types of doors used in such buildings as hotels and apartment houses. It is plain from the evidence that the servidors doors comprising the shipments under consideration were combination articles having characteristics of both doors and cabinets. Although they possess qualities in addition to those of the ordinary doors, it must be admitted that their primary purpose and use continues to be that of a door. Unless, therefore, the commodity rate on doors was restricted to certain types or qualities of doors, it was applicable to complainant's shipments although the servidor doors were of more value and possessed features not common to ordinary doors and presumably not contemplated when the commodity rate on doors was published. Such articles might reasonably take higher rates than those provided for the relatively low priced common doors. HELD, rate charged inapplicable, applicable rate was $1.14, minimum 30,000 pounds, reparation awarded. Servidor Co. v. C. M. & St. P. Ry., 118 I. C. C. 49.

(ss) Complainant attacked ratings and rates applied on numerous carload and less carloads of electric automobile horns between Oct. 11, 1922, and June 16, 1923, as unreasonable. Shipments moved from Lowell, Mass., to New York, Brille, N. J., Detroit, Mich., and Ford, Ont. Can., charged one and half times first, less carload and second class carloads. Effective June 16, 1923, following 78 I. C. C. 313, the ratings were charged to first less carloads and third class carloads. HELD, rates and ratings not unreasonable, reparation denied, complaint dismissed. Heinze Electric Co. v. B. & M. R. R., 118 I. C. C. 77.

(tt) Complainant alleged the classification ratings of sticky fly paper, in

carloads, and less carloads, and rates thereon, from Grand Rapids, Mich., are unreasonable and unduly prejudicial. Sticky fly paper is used to catch and exterminate the house fly. Ordinary box cars with a good roof are required for the transportation of this commodity. It is stated that about 20 years ago, in response to an application for lower ratings, the carload ratings in the three major classifications were reduced from third to fourth class, the minimum was increased from 24,000 to 30,000 pounds, and the less than carload rating in the western classification was reduced from first to second class. HELD, ratings attacked not unduly prejudicial and carload rating and less carload rating in western classification not unreasonable and less carload ratings in the official and southern classifications not unreasonable for the future to extent they exceed second class. Tanglefoot Co. v. N. Y. C. R. R., 118 I. C. C. 131.

(uu) Complainant attacked commodity rates on common brick, carloads, shipped since July 1, 1923, from Albion, Ill., to St. Louis, Louisville, Ky., and Princeton and English, Ind., as inapplicable and unreasonable. Charged at rates applicable on brick included in the uniform brick list. Effective July 1, 1923, in compliance with 68 I. C. C. 213 defendants established between Albion and specified destinations rates on common brick which were 80% of the rates on brick included in the uniform brick list. The use to which the brick is put does not, of course, alone determine its essential character or the charges which may be legally exacted for its transportation, but it tends to show that it has qualities which distinguish it from the ordinary common brick. HELD, rates complained of applicable, complaint dismissed. M'Ewing & Thomas Co. v. C. & E. I. Ry., 118 I. C. C. 211.

(vv) Complainant attacked charges on a shipment of horse hair from Philadelphia, Pa., to Chicago, Ill., in April, 1923, as based on an excessive weight and were illegal and unreasonable. Complaint is barred as to unreasonableness. Charged 64c, fourth class rate and weight of 124,200 pounds. Fourth class rate was applicable on hair, horse mane or tail, not curled. Rate claimed 54.5c applicable on hair, cattle, goat, horse, or hog, including crude hog bristles, not curled, n. o. i. b. n. HELD, rate and weight applicable, overcharge of $1 ordered refunded, complaint dismissed. Smolin & Gumbiner v. Pennsylvania R. R., 118 I. C. C. 293.

(ww) Complainant attacked fifth class rates, minimum 36,000 pounds, charged on wet rag pulp, carloads, from Ohio to official classification territory as unreasonable, unjustly discriminatory and unduly prejudicial to extent they exceed 90% of the sixth class rates minimum 60,000 pounds. Commission has heretofore found justified the fifth class rating 48 I. C. C. 515. Rag pulp is used in the manufacture of high grade and low grade papers, such as waxed, vegetable parchment, tissue, and surface coated papers, etc. There is practically no movement of dry rag pulp. The record indicates that wet rag pulp on account of the high water content has a value, per pound of shipping weight, but little, if any, in excess of that of rags. Rags doubtless move in greater volume, but, on the other hand, rag pulp-loads vary much heavier. HELD, rating unreasonable to extent it exceeds sixth class minimum 50,000 pounds. Cheney Pulp & Paper Co. v. A. C. & Y. Ry., 118 I. C. C. 477.

(xx) Complainant attacked as unreasonable third class rating carloads on paper cups in official classification territory. Flat and nested paper cups are accorded the same ratings in official classification which are third class, subject to rule 34, which provides for graduated minimum according to the size of the car, and first class in less carloads. Southern and western classifications carry the same rating and minimum for carloads but for less carloads each provides first class for nested and second class for flat cups. Paper cups, nested and flat, average substantially the same value per pound and risk of damage is negligible. When used for the same purpose they compete commercially. While the greater density of the flat cups when packed permits loading to a carload weight heavier than can be attained by the nested cup, this consideration alone does not justify ratings on flat cups lower than on nested cups. HELD, first class and third class ratings attacked unreasonable to extent they exceed second class in less carloads and fourth class in carloads, subject to rule 34, reparation awarded. Public Service Cup Co. v. A. C. L. R. R., 118 I. C. C. 697.

(yy) Complainant contended that

rates and ratings assessed on automobile horns were unreasonable to extent they exceeded lower rates and ratings subsequently established in conformity with commission's decision in 78 I. C. C. 313, and sought reparation to that basis, citing cases wherein commission awarded reparation in connection with reductions in classification ratings, HELD: Assailed ratings had been maintained for many years and subsequent reductions applied throughout a large territory affecting shippers at many points. Under such circumstances commission has frequently denied reparation. See 37 I. C. C. 81, and other cited cases. Heinze Electric Co. v. B. & M., 118 I. C. C. 77.

(zz) Complainant attacked rates charged on a car of unfinished yellow pine mop handles shipped Jan 17, 1924, from Lumberton, Miss., to Boston, Mass., and on a car of unfinished yellow pine dowels shipped June 17, 1923, from Lumberton to Giard, Pa., as unreasonable and unduly prejudicial. To Boston charged sixth class rate of 97 cents. To Giard charged 80.5 cents to Cincinnati and fifth class 30 cents beyond. The articles here considered are manufactured by complainant from material which has no other commercial use, such as slabs and edgings. Because of the low grade of the material from which these commodities are turned, sand belting has been found necessary. HELD, rates charged unreasonable to extent they exceed by more than 15% the rate on lumber, reparation awarded. Lumberton Broom & Mop Handle Co. v. G. & S. I. Ry., 120 I. C. C. 233.

(3a) Upon further hearing, former report 98 I. C. C. 331, modified in part, and ratings and rates on coconut stearine, in boxes or barrels, found unreasonable to extent they exceed third class, l. c. l., and fifth class, c. l., minimum 30,000 pounds; and unduly prejudicial to extent they exceed ratings and rates contemporaneously applicable on palm-kernel, palm, and mixed stearines, in bags, boxes, or barrels. Reasonable ratings and rates prescribed for future and reparation denied. Best Foods v. C. R. R. Co. of N. J., 120 I. C. C. 169.

(3b) Ratings and rates in official, southern, and western classifications on sandwich spread found unreasonable to extent they exceeded second class, l. c. l., in all three classifications and fifth class in official and western classifications and sixth class in southern classification, in carloads, subject to a 36,000-pound minimum. Reasonable ratings and rates prescribed for future and reparation awarded on shipments moving from Cleveland, Ohio, to various destinations. Sar-A-Lee Co. v. A., C. & Y., 120 I. C. C. 512.

(3c) Double first-class rating applied on rolls of woven curled hair, l. c. l., found unreasonable to extent it exceeds rating of one and one-half times first class. Reasonable rating prescribed for future. Blocksom & Co. v. M. C., 120 I. C. C. 521.

(3d) Complainant attacked class rate charged on a car of dressed and polished granite on March 26, 1924 from Quincy Adams, Mass., to Aurora, Ind., as unreasonable and inapplicable. The consignor invoiced them as monuments and bases and described them in the bill of lading as granite monuments. Shipment moved over New Haven, B. & M., C. P., Wabash and B. & O., charged fifth class rate of 50.5 cents, on stone, natural, other than bituminous asphalt rock, granite, carved, lettered, polished or traced, in carloads. It did not carry a rating on monuments. A commodity rate of 33 cents was applicable on polished granite. It is equally clear that in the absence of a specific rating on monuments the articles shipped may be regarded for classification purposes as polished granite. As the tariff item naming the 33 cent rate specifically excluded monuments or parts thereof, it is clear that it was not applicable on complainants shipment. HELD, rate charged applicable, but unreasonable to extent it exceeded 33 cents, reparation awarded. Kassebaum & Son v. N. Y., N. H. & H. R. R., 122 I. C. C. 59.

(3e) Classification ratings can not be condemned as unreasonable merely upon showing that there are a limited number of commodities which load as heavily as, and are rated lower than, the commodity under consideration. Childers v. A., T. & S. F. Ry., 122 I. C. C. 116, 118.

(3f) Complainant attacked class rates charged on fresh berries, preserved in sugar, in barrels, in carloads, shipped between Feb. 3, 1922 and Jan. 31, 1925 from Seattle and Tacoma, Wash., Portland, East Portland, Salem and Eugene, Ore., to Los Angeles, Calif., as illegally assessed and unreasonable and unduly prejudicial as compared with rates on the same commodity to New York, Philadelphia and Pittsburgh, Pa., Chicago, Ill.,

St. Louis, Mo., Cincinnati, O., and Louisville, Ky. The commodities on which the rates are attacked are strawberries, blackberries, raspberries, and loganberries, to which sugar has been added in the proportion of 1 pound of sugar to 2 pounds of berries. The mixture is packed in barrels, and is placed in a cold storage plant, where it is subjected to a temperature of from 5 to 10 degrees above zero. It is shipped to complainants upon their order, in refrigerator cars. The sugar is added and the mixture is frozen to preserve the color and flavor of the berries and to hold them in their original shape. These sugared berries were used by complainants in the manufacture of preserves and jams. Contemporaneously commodity rates were in effect on fresh fruits from the points of origin to Los Angeles, and upon the assumption that sugared berries are fresh fruits. This contention is without merit. It is clear that sugared berries, the sugar having been added for preservation, are not fresh fruits in the commonly accepted meaning of the term. Sugared berries can be kept in ice storage for a year, and often remain in a solid frozen mass for several days after the barrels in which they are shipped have been removed. Applicable rates were charged and collected. The rates attacked are higher than the rates not only on canned goods but on fresh fruits. HELD, rates attacked applicable, but unreasonable to extent they exceed 80 cents from Portland, East Portland, Salem and Eugene and 94 cents from Seattle and Tacoma, subject to minimum of 43,000 pounds, reparation awarded. North Ontario Packing Co. v. O. W. R. & N. Co., 122 I. C. C. 360.

(3g) Complainant attacked class A rate charged on a car of crushed stone in sacks, shipped Jan. 1, 1924 from Gantts Quarry, Ala., to Biloxi, Miss., as unreasonable, unjustly discriminatory and unduly prejudicial. Complainant's averment is that the commodity was crushed stone. Defendant states it was crushed marble known to the trade as terrazzo, and actually used in terrazzo flooring. Shipment moved 333 miles, charged class A rate of 70 cents. Rate of $1.69 was contemporaneously in effect on stone, rubble, crushed or broken, from Gantts Quarry to New Orleans, La., 412 miles. Defendant proposed a rate of $2.10 which is the equivalent of the rate from Moretti, Ala., to Gulfport, Miss., 349 miles. HELD, rate attacked unreasonable to extent it exceeded $2.10, reparation awarded. Dagostin & Angelini Bros. v. L. & N. R. R., 122 I. C. C. 385.

(3h) Complainant attacked class rates charged on internal combustion engines, boilers, pumps, and heaters, in carloads, from defined territories to Louisiana and Arkansas, and between Louisiana and Arkansas, as unreasonable, unjustly discriminatory and unduly prejudicial. Majority of shipments originated at Oil City, Pa., Quincy, Ill., and Seneca Falls, N. Y. Charged class A rates. This basis is in effect on machinery, carloads, throughout this entire territory. HELD, rates attacked not unreasonable or otherwise unlawful, complaint dismissed. Standard Pipe Line Co. v. T. & P. Ry., 122 I. C. C. 463.

(3i) Complainant attacked class rates charged on scrap brass and scrap copper, carloads, from official and southern classification territories, and certain points in western classification territory to East Liberty, Pa., as unreasonable and unduly prejudicial. Complaint was withdrawn as to rates from the southern classification territory as satisfactory rates were to be established. Scrap brass and scrap copper are rated fifth class in the official classification from points in central territory to East Liberty commodity rates equivalent to the sixth class rates are generally in effect, the only exception to this basis being the rate on scrap copper of the Pennsylvania from Chicago, Ill., to East Liberty which is less than the sixth class rates. Commodity rates less than the sixth class are in effect from many of the large cities in trunk line and New England territories to East Liberty. The rates on scrap brass and scrap copper from Little Rock, Oklahoma City, Okla., Minneapolis and St. Paul, Minn., and Kansas City, Mo. The rates attacked to East Liberty from Little Rock and Oklahoma City are less than, and from Minneapolis and St. Paul equivalent to, 85% of the sixth class rates from and to the same points. From Kansas City to East Liberty the attacked rate is lower than the combination sixth class rate from and to these points, but more than 85% of that rate. HELD, rates attacked not unreasonable except in so far as they exceed rates approved in 109 I. C. C. 351 and 118 I. C. C. 725, reparation denied. Federated Metals Corp. v. B. & O. R. R., 122 I. C. C. 513.

(3j) Complainant alleged that the

fifth class rate on foundry flasks, carloads, from New Castle, Del., to Chicago Heights, Ill., is unreasonable. Foundry flasks are rough iron box shaped containers for the sand and patterns used in making castings. They are not subject to damage by the elements and are not readily breakable. Complainant has never filed a claim for loss or damage in transit. Rate charged 54.5 cents. HELD, rate attacked not unreasonable, complaint dismissed. Chicago Heights Mfrs. Asso. v. Pennsylvania R. R., 123 I. C. C. 167.

(3k) Complainant alleged third class rate of 50 cents charged on fresh and frozen fish and on bait fish in carloads from Boston to New York has been and is unreasonable, unjustly discriminatory and unduly prejudicial and unlawful in violation of section 6. Respondents proposed to cancel fifth class carload and third class less carload on bait, fish, in packages, such as shucked clams, fish, etc., used for fish bait carried in exceptions to the classification. The cars used for fish must be washed and fumigated before they can be used to transport high grade merchandise or commodities subject to contamination. While loss and damage claims on the fish are negligible, there have been claims filed when the train was too late for the market. If the suspended schedules become effective the rates on fresh and frozen fish will apply on fish heretofore used for bait. The alleged violation of section 6 appears to be based on the fact that since August, 1925, fish formerly shipped as bait were charged the rate on fresh and frozen fish. It appears, however, that all shipments of fish made by the consolidator to complainant since that time consisted of fresh and frozen fish, were tendered defendant as such, and were properly charged the rate applicable thereto. HELD, rates on fresh and frozen fish here attacked were not and are not unreasonable or otherwise unlawful, suspended schedules justified, complaint dismissed. Harlem & Morrisiana Transp. Line v. N. Y., N. H. & H. R. R., 123 I. C. C. 480.

(3l) Complainant alleged that the rates charged on vegetable parchment and waxed wrapping paper, printed and unprinted, and on paper box board, and paper boxes, plain or waxed, printed and unprinted in carloads, from Kalamazoo, Mich., to Indiana, Illinois and Wisconsin were, and present rates are and for future will be, unreasonable and as compared with the rates on printing paper, unjustly discriminatory and unduly prejudicial. Most of the shipments moved to Chicago, Ill., short line distance 141 miles. Sixth class rates apply on waxed and vegetable parchment wrapping paper under exceptions, sixth class rate 18 cents. A commodity rate applies on printing paper of 15 cents. Sixth class rates also apply on paper boxes, paper box board takes 90% of sixth class, making the rate to Chicago 16 cents. Complainants wrapping paper is of a high grade and is not as extensively used as the papers generally included within that description. The volume of traffic thereon does not compare with that on ordinary wrapping paper. The record does not warrant a finding that rates on waxed and vegetable parchment wrapping papers and paper boxes should be lower than sixth class or that rates on paper box board are unduly high as compared with the rates on other paper articles. HELD, rates assailed not unreasonable or otherwise unlawful, complaints dismissed. Kalamazoo Vegetable Parchment Co. v. A., T. & S. F. Ry., 123 I. C. C. 493.

(3m) Complainant attacked class C rates charged on 6 cars of sulphur from Bryanmound, Tex., refined in transit at Freeport, Tex., and reforwarded thence to Fresno, Livny, and Los Angeles, Calif., in June, July and August, 1922 as unreasonable. Charged $1.50 prior to July 1, 1922 and $1.35 thereafter. In Southern Acid & Sulphur Co. v. A. & N. M. Ry., 74 I. C. C. 641 the commission found reasonable rates to be $1.05 prior to July 1, 1922 and 94.5 cents thereafter. HELD, rates assailed unreasonable to extent they exceed $1.05 prior to July 1, 1922 and 94.5 cents thereafter, reparation awarded. Stauffer Chemical Co. v. H. & B. V. Ry., 123 I. C. C. 657.

(3n) Southern classification rating of double first class on geographical globes with or without stands, in boxes, l. c. l., found unreasonable to extent it exceeded a rating of one and a half times first class. Reasonable rating prescribed for future. Official and western classification ratings of one and a half times first class found not unreasonable. Chicago Heights Mfrs. Asso. v. A., T. & S. F., 122 I. C. C. 582.

(3o) Eastbound rates on flour, minimum 40,000 pounds, from points in Colorado, Utah, Idaho, Montana, Oregon, and Wyoming found unreasonable and unduly

prejudicial in favor of dealers located at points in Montana and Colorado, to extent they exceed corresponding rates on wheat. Ogden Grain Exchange v. A. & S., 122 I. C. C. 691, 718.

(3p) Complainant attacked combination class rates charged on 19 cars of steam road rollers from Springfield, O., to Kentucky, Tennessee and Florida and on 3 cars from Sangully, Olympia and Boulevard, Fla., to Springfield, O., between Dec. 6, 1922 and Sept. 26, 1924 as inapplicable. Charged combinations constructed on Cincinnati, O., and Jacksonville, Fla., based on fifth and sixth class rates north and south of the Ohio river. The sole point of controversy is as to the application of the rates from Cincinnati to destinations in Kentucky and Tennessee and between Jacksonville and points beyond in Florida. In the southern classification steam road rollers are rated sixth class under the heading of grading and road making implements. By exceptions to the southern classification a class L rating was provided from Cincinnati on machinery, machines rated sixth class in the southern classification. A class N rating was provided between Jacksonville and points on machinery, machines carload, rated sixth class in southern also dredging machinery and parts thereof. HELD, class L rates were applicable from Cincinnati and class N rates from Jacksonville, overcharges to be refunded, complaint dismissed. Buffalo Springfield Roller Co. v. D. T. & I. R. R., 126 I. C. C. 177.

(3q) Complainant alleged that the second class rates charged on carloads of parlor or furniture frames, from Chicago, Ill., to Burlington, Ia., were unreasonable and unduly prejudicial as compared with third class rates to western trunk line territory. Rates to Burlington are subject to the official classification, and western trunk line territory western classification. Rates were 69.5c prior to July 1, 1922 and 62c since that date. Commodity rates were published to New London, Ia., 19 miles beyond Burlington 52.5c prior to July 1, 1922, 47.5c from that date to Nov. 1, 1922 and 49c since that date subject to rule 77. HELD, charges prior to April 7, 1926 unreasonable to extent they exceeded rates to New London. Present rate not unreasonable or unduly prejudicial, reparation awarded. Burlington Shippers Asso. v. C. B. & Q. R. R., 126 I. C. C. 179.

(3r) Complainant alleged fifth class rates on scrap brass and scrap copper from New York Harbor and Greater New York points to Bridgeport, Waterville, Hartford, Waterbury, Springdale, and Stamford, Conn., and Taunton, New Bedford and Boston, Mass., have been and are unreasonable, unjustly discriminatory and unduly prejudicial. The issues in this case are practically identical with Lissberger & Co. N. Y. N. H. & H., 96 I. C. C. 231. Scrap copper and brass are used in place of new metal. Commodity rates substantially lower than fifth class rates are in effect from Pittsburgh, Cleveland, Chicago and St. Louis groups to Boston group destinations on both new and scrap copper and brass. By an exception to the classification sixth class rates have applied from all central territory points from which specific commodity rates are not applicable. The rate from Pittsburgh to Boston was 25c, and it applied via New York. The fifth class rates charged from New York to Boston was 27.5c. The sixth class basis would provide uniformity in the rating on scrap copper and brass, and the earnings thereunder appear adequate on carload traffic of this character even for the generally higher rated New England territory. HELD, rates attacked not unreasonable, unjustly discriminatory or unduly prejudicial but for future unreasonable to extent they exceed sixth class rates and unduly prejudicial to extent they exceed rates from Pittsburgh and Cleveland group points to the same destinations. Federated Metals Corporation v. N. Y. N. H. & H. R. R., 126 I. C. C. 439.

(3s) Complainant alleged as unreasonable, unduly prejudicial and in violation of section four rates on tannery fleshings, from tanning points in the south to West Williamsport, Pa. Fleshings is a low grade commodity, and is used in making glue. As shipped it consists of 80% water and 20% solid matter. It is not easily damaged and may be and is transported in either box cars or open top equipment. After the shipments are unloaded the cars are cleaned out by the consignee and may be used for other kinds of freight generally. West Williamsport is on the S. & N. Y., 3 miles west of Williamsport, Pa., and generally takes the same rates. Springdale is on the Pennsylvania, 17 miles northeast of Pittsburgh. Gowanda is on the Erie, 32 miles south of Buffalo. It is rated sixth class in southern and fifth class in official, but by exceptions to the official sixth

class rates are applicable from and to points in trunk line and central territories. Most of the rates on fleshings between the points here considered are commodity rates but they are on a higher level than the commodity rates on fertilizer in the south. HELD, rates attacked unreasonable, reparation awarded. Keystone Glue Co. v. Southern Ry., 126 I. C. C. 507.

(3t) Complainant attacked rates on alloys of lead, in carloads, from New York, N. Y., and Newark, N. J., to Buffalo, N. Y., Pittsburgh, Pa., Chicago, Ill., and other destinations in Illinois, Indiana, Ohio, Pennsylvania, New York, Kentucky, and Tennessee, as unreasonable unjustly discriminatory and unduly prejudicial. Respondents proposed to cancel commodity rates on terne metal, an alloy of lead in carloads, from Newark and Brills, N. J., to Buffalo, Buffalo rate points, and destinations in central territory, and apply higher fifth class rates. The two cars were heard in one report by division 3, 113 I. C. C. 487, by which it was found that the rates from Newark were unreasonable to extent they exceeded the sixth class rates. Complainant attacked rates on solder, carloads, from Newark to Buffalo, Black Rock and other points in the Buffalo district. Division 1 in 92 I. C. C. 319 found the fifth class rates not unreasonable, unjustly discriminatory or unduly prejudicial and dismissed the complaint. Metals intended for manufacturing purposes are cast into various shapes, designated pigs, bars, slabs, cakes, blocks and ingots, varying in weight from 25 pounds to 100 pounds or more each. They are not finished in any respect and are remelted in the course of their use. The term alloys of lead is applied to any alloy having lead as a base. Copper and brass occupy a large field of industrial usefulness where no competition with lead alloys is encountered, and the Commission should not, therefore, require the maintenance of a definite relationship between the rates on copper and brass and those on lead alloys on a showing that the commodities meet competitively in relatively limited uses. HELD, rates on lead alloys not unreasonable, respondents have justified the proposed schedules, but rates on alloys of lead including terne metal for the future should not be higher than rates on tin. Federated Metals Corp. v. C. R. R. of N. J., 126 I. C. C. 703.

(3u) Rating on component parts or raw material is not conclusive of rating to apply on a finished article. Troxel Mfg. Co. v. B. & C., 126 I. C. C. 169.

(3v) C. l. and l. c. l. ratings on cocoa beans in official, southern, and western classifications found not discriminatory or unduly prejudicial, but unreasonable as compared with lower ratings contemporaneously maintained on coffee, chicle, and crude rubber, and to extent they exceed third class, l. c. l., and fifth class, c. l. minimum 36,000 pounds. Reasonable ratings prescribed for future. Cocoa & Chocolate Mfrs. Asso. v. A. & V. Ry., 126 I. C. C. 561.

(3w) In a general way iron and steel articles, for rate-making purposes, are separated into three groupings, first, pig iron and articles taking pig-iron rates; second, steel billets and articles taking billet rates; and, third, finished and manufactured iron and steel articles, which with few exceptions, includes all articles that have progressed in manufacture beyond the billet stage. Standard Nut & Bolt Co. v. N. Y., N. H. & H., 126 I. C. C. 731.

(3x) Complainant attacked class rates charged on four cars of asparagus roots shipped from Seabrook, N. J., to Kress, S. C., in Nov. and Dec. 1923, as unreasonable. Shipments moved C. of N. J., Reading, B. & O. R. F. & P. and A. C. L., 767 miles, charged at first class rate of 176.5c. Effective June 15, 1924 the rate was reduced to 112.5c through a change in the classification rating from first class, any quantity, to fourth class in carloads. HELD, reparation awarded to basis of 112.5c. Kress v. C. R. R. of N. J., 128 I. C. C. 101.

(3y) Complainant attacked fifth class rate of $1.245 charged on a carload of copper sulphate from Chicago, Ill., to Dallas, Tex., as unreasonable to extent it exceeded 87c. Shipment moved Dec. 7, 1923 via C. & A. to East St. Louis, Ill., St. L. S. W. to Texarkana, Tex., and St. S. W. of Texas to destination. Effective April 20, 1924 a commodity rate of 87c on agricultural insecticides, and fungicides, including calcium arsenate, was established. When the shipment moved, calcium arsenate and all other insecticides including copper sulphate was rated the same and took the same rates from Chicago to Dallas. HELD, rate attacked not unreasonable or otherwise unlawful, complaint dismissed. Peaslee Gaulbert Co. v. C. & A. R. R., 128 I. C. C. 103.

(3z) Complainant attacked class rate charged on seven carloads of cold pack cherries shipped between Aug. 8, 1924 and Aug. 21, 1925 from Sodus and Buffalo, N. Y., to Philadelphia, Pa., as unreasonable. Shipments moved N. Y. C. to Newberry Junction, Pa., Reading beyond, charged second class rate of 68.5c and third class 54.5c. No joint commodity rates were in effect and no specific rating was named in the governing classification. Second class rate was applicable under the classification on fresh fruit, n. o. i. b. n., in barrels, boxes and crates, minimum 20,000. Fifth class rates were applicable on fruit, other than dried, evaporated or fresh; canned or preserved in juice or syrup, or in liquid other than brine or alcoholic liquor. The term "preserved" as applied to fruit contemplates only fruit that has been treated in such a manner that it will keep for an indefinite but substantial length of time at ordinary temperatures. On the other hand cold pack fruit is fresh fruit, the deterioration of which has been arrested by freezing and refrigeration. Effective Aug. 25, 1925 fourth class rating was published on fruit, fresh, cold pack, in bulk, in barrels, fourth class rate being 34c from Sodus and 37.5c from Buffalo. The record indicates that the cold pack fruit loads much more heavily than ordinary fresh fruit, and should therefore be entitled to an appreciably lower rating. Defendants admit rate charged unreasonable and express willingness to award reparation. HELD, second class rates applicable but unreasonable to extent they exceed 34c from Sodus and 37.5c from Buffalo, reparation awarded. American Preserve Co. v. Reading Co., 128 I. C. C. 146.

(4a) Rates on furniture from Memphis, Tenn., to destinations in c. f. a., Buffalo-Pittsburgh, and southern territories, found unreasonable to extent they exceed: In case of mixed furniture, minimum 12,000 pounds, 60 per cent of the corresponding first-class rates; in case of iron beds and articles classified therewith, minimum 12,000 pounds, the fourth-class rates, and minimum 30,000 pounds, the sixth-class rates, all of which are to be established under Southern Class Rate Investigation 100 I. C. C. 513; 109 I. C. C. 300; 113 I. C. C. 200; and in the case of l. c. l. rates on all articles of furniture, the class rates so established applicable under the southern classification. Reasonable bases of rates prescribed for future. Memphis Freight Bureau v. A. G. S., 128 I. C. C. 445.

(4b) Complainant attacked third class rate charged on oleomargarine, carloads, from Chicago, Ill., to Dallas, Tex., as unreasonable. Shipments moved via Santa Fe, 1,110 miles, third class rate charged $1.765. Oleomargarine is used as a substitute for butter, and except as value it has practically the same transportation characteristics. Its weight density is the same, the same kind of containers are used, and it is shipped in refrigerator cars and requires expedited service. Loss and damage claims are few. The facts of record indicate that from and to the points here in issue, oleomargarine should not pay rates higher than those on butter. HELD, rate attacked unreasonable to extent it exceeds $1.48 reparation awarded. Boren Stewart Co. v. G. C. & S. F. Ry., 128 I. C. C. 493.

(4c) Complainant attacked commodity rate charged on seven cars of "cold pack" blackberries, strawberries, and cherries, in barrels, from Fredonia and Sodus, N. Y., Camden station, Md., and Port Norfolk, Va., to Pittsburgh, Pa., from June 9 to Oct. 2, 1924 as inapplicable. Cold pack fruit, socalled, is prepared by freezing fresh fruit, which has been cleaned, pared, and hulled or pitted, depending upon the variety. Sugar is usually added before freezing. The frozen product is packed in tight cooperage and is shipped under refrigeration. Charged second class on cherries, third class on berries, rate claimed fifth class on fruit, other than dried, evaporated or fresh, canned or preserved in juice or syrup, or in liquid other than brine or alcoholic liquor. The term "preserved" as applied to fruit contemplates only fruit that has been treated in such a manner that it will keep for an indefinite but substantial length of time at ordinary temperatures. The record shows that cold pack fruit is simply fresh fruit, the deterioration of which has been arrested by freezing and refrigeration. HELD, rates charged applicable, complaint dismissed. Lutz & Schramm Co. v. P. & L. E. R. R., 128 I. C. C. 521.

(4d) Complainant alleged that rates charged on 12 shipments of cottonseed shavings shipped between July 27, 1923 and Nov. 26, 1924 from Georgia, North Carolina, and South Carolina to Ken-

tucky, Georgia, Florida, Pennsylvania, Ohio, New York, Delaware, West Virginia, Connecticutt and District of Columbia as inapplicable. The bills of lading covering the shipments described the commodity as cottonseed hull fiber or shavings, cottonseed hull fiber, or merely as hull fiber, but complainants allege that the commodity actually shipped was cottonseed shavings. The shipments were examined at points of origin or en route by the Southern Weighing & Inspection Bureau, and in its judgment were found to consist of cotton linters, whereupon the description of the shipments was changed, and charges collected on basis of rates on cotton linters, which were higher than those applicable on cottonseed hull fiber or shavings. Neither the tariffs publishing the commodity rates nor the classification define the terms "cotton linters" or "cottonseed hull fiber or shavings." The material here considered was bought and/or sold by complainants as cotton seed shavings. The Commission will not attempt to determine from the samples introduced whether the commodity shipped was cotton linters or cottonseed shavings, but from the price quotations introduced by complainants, together with the other evidence of record, it is of the view that complainants have sustained the burden of proof, and that the applicable rate or ratings on the shipments here considered was that published and in effect at the time of the respective shipments on cottonseed shavings. HELD, rates attacked inapplicable to extent they exceeded the rates on cottonseed shavings, reparation awarded. Speir & Co. v. A. & W. P. R. R., 128 I. C. C. 559.

(4e) In absence of unusual circumstances, classification ratings should be uniform in all territories, and a showing of nonuniformity in ratings of a particular article suggests the query as to whether the article has not been improperly classified in one classification, if not in both. Eggerss-O'Flyng Co. v. C. & N. W., 128 I. C. C. 644, 649.

(4f) Complainant alleged that the ratings in the official, southern and western classifications for waxed wrapping paper, printed or unprinted, and for vegetable parchment wrapping paper, printed or unprinted are unjust and unreasonable and unduly prejudicial. Complainant sought the ratings applicable to plain wrapping paper, except that in the official classification it asks that the carload rating be made sixth class. It is shipped either printed or unprinted, in boxes or crates. While it is true that all kinds of wrapping paper are to some extent competitive, it is nevertheless apparent that vegetable parchment and waxed wrapping paper do not compete with plain wrapping paper to the same extent that they compete with each other. It can neither be said that printed paper should always be rated higher than the same paper unprinted, nor that printed and unprinted paper should always be rated the same. In General Baking Co. v. P. R. R. 96 I. C. C. 280, division 4 found that the less carload rating of second class in official classification for printed waxed wrapping paper, in crated rolls, was unreasonable to extent it exceeded third class. Fifth class appears to be a reasonable carload rating for waxed wrapping paper, either printed or unprinted, in the official classification. This record does not warrant the conclusion that any of the carload ratings in issue are unreasonable except in the western classification. There the rating of fourth class appears to be excessive for application to a commodity of the weight and value of vegetable parchment wrapping paper particularly in view of the maintenance of fifth class, two classes lower, on the competitive waxed wrapping paper. Under the circumstances, the carload rating in the western classification should not reasonably exceed class A. In the southern classification vegetable parchment wrappers are rated first class in bundles and second class in crates; while vegetable parchment wrapping paper in bundles or crates is rated fourth class. Less carload rating in southern classification for vegetable parchment wrappers in bundles should not reasonably exceed second class, reparation awarded. Kalamazoo Vegetable Parchment Co. v. C. K. & S. Ry., 128 I. C. C. 675.

(4g) In fixing commodity rates slight differences between two articles in respect of their value, weight density, or other factors necessary to be considered, may be reflected in rate differences as narrow as may be desired; but in compiling a freight classification all articles, both in carloads and less, must be grouped into from 8 to 12 classes, and it is therefore manifest that commodities with somewhat different classification characteristics must often be assigned

the same rating. Kalamazoo Vegetable Parchment Co. v. C. K. & S., 128 I. C. C. 675, 678, 679.

(4h) First-class l. c. l. southern classification rating on, wrappers, paper, vegetable-parchment, printed in flat sheets cut to size and a quantity of such sheets wrapped in heavy paper and placed in a wood frame enclosing four sides but not the ends, found unreasonable as compared with fourth-class rating on vegetable-parchment wrapping paper in bundles, and to extent it exceeds contemporaneous second-class ratings in official and western classifications. While paper having been cut to size constitutes wrappers rather than wrapping paper, wrappers should not be rated three classes higher than uncut paper. Moreover, although package described is a bundle and takes first class as compared with second class when in crates, southern is only classification that distinguishes between boxes, bundles, or crates, and it, as well as other classifications, disregards this distinction on other similar commodities whether in bundles, boxes, or crates. Reasonable rating prescribed for future. Kalamazoo Vegetable Parchment Co. v. C., K. & S., 128 I. C. C. 675, 683, 684.

(4i) Complainant alleged rates charged on 80-5-15 dry insecticide, in carloads, from Jacksonville, Fla., to Fort Valley, Marshallville and Perry, Ga., were and are unreasonable. Dry insecticide consists of 80% sulphur, 5% lead arsenate and 15% lime. Lead arsenate is a poison. Sulphur, although not considered a poison, assists in destroying the plum curculio and brown rot. As lead arsenate constitutes only 5% of the mixture, apparently this insecticide is not highly poisonous. Rated sixth class, southern classification, charged 51c, distances 234 to Fort Valley and 227 to Marshallville, and 52c to Perry, 247 miles. HELD, rates assailed not unreasonable, complaint dismissed. General Sprayer Co. v. A. B. & A. R. R., 129 I. C. C. 318.

(4j) Complainant alleged that ratings applicable on school books, in the official, southern and western classifications under the item "books, n. o. i. b. n." are unreasonable. Books, n. o. i. b. n., are uniformly rated first class in less carloads and third class, minimum 30,000 pounds, in carloads, while school blanks and forms are rated less carloads, third in official second in southern and western, and carloads fifth in official and fourth in southern and western. HELD, ratings assailed unreasonable, complaint dismissed. American Book Co. v. A. A. R. R., 129 I. C. C. 372.

(4k) Complainant assailed fifth class rates charged on 20 cars of certain rods known as nut flats, shipped from North Tonawanda, N. Y., to Columbus, O., between Sept. 27, 1922 and July 23, 1923 as inapplicable and unreasonable. These nut flats were iron or steel wire rods, in coils, rectangular in cross sections, not further processed than hot rolled, and were used to make nuts, charged fifth class of 29.5c and 29c applicable to iron or steel bars. Rate of $4.28 per long ton was applicable on rods, bolt, nail, rivet and wire (iron or steel) in coils (not in straight lengths) unfinished, not drawn through a die, not lighter than No. 8 gauge, nor greater than 1¼ inches in diameter, which can be transported in open cars without damage from exposure to weather in carloads. HELD, applicable rate $4.28 per long ton, not unreasonable, complaint dismissed. Columbus Bolt Works Co. v. Pennsylvania R. R., 129 I. C. C. 512.

(4l) Complainant alleged carload rates charged on rough quarried stone from East Weymouth, Mass., to local points on the New Haven were unreasonable and unduly prejudicial to the extent they exceeded the rates on common brick. Rough quarried stone is rated sixth class and moves on sixth class distance rates betwen local points on the New Haven, with 20c as the maximum. This maximum is reached at a distance of about 175 miles. New York, N. Y., about 225 miles from East Weymouth appears to be the only important destination where the distance rate is held down by the maximum of 20c. HELD, rates unreasonable and unduly prejudicial to extent they exceed under 25 miles 9c to 16c 220 miles and over, reparation awarded. Plymouth Quarries v. N. Y. N. H. & H. R. R., 129 I. C. C. 621.

(4m) Complainants allege that the interstate rates on well boring outfits and oil well supplies, including derricks and casing, new and secondhand iron and steel pipe, iron and steel tanks and tank material, and rig iron, in carloads, between Kansas, Oklahoma, Arkansas, Texas and western Louisiana were unreasonable. The governing western classification provides ratings of class A on well boring outfits and oil well sup-

plies, including rig irons, subject to minima of 24,000 and 36,000 pounds, respectively, and fifth class on pipe and tanks and tank material, knocked down, minimum 36,000 pounds. It may be said that there are at least seven different rate bases or levels applying in this territory. Speaking generally, complainants contend that this anomalous rate situation would be corrected by the extension of the 9702 scales into their territory. Defendants admit generally that the various bases of rates in effect on these commodities result in a very unsatisfactory rate adjustment. Little, if any, defense is made of the rate applied. They propose, to remedy the existing chaotic condition by establishing for the future distance scales applicable to the respective commodities. Derricks and rig irons are included in the general term "oil well supplies." However, in Parkersburg Rig & Reel Co. v. C. R. I. & P. Ry., 95 I. C. C. 181, rates on these commodities were prescribed on the basis of 85% of the rates on oil well supplies. Damage has not been shown with that degree of certainty required for an award of reparation under a finding of undue prejudice. HELD, the assailed interstate rates prior to Nov. 27, 1923 were not unreasonable, but on and since that date they were, are, and for the future, will be unreasonable to the extent they exceeded rates and differentials wherever applicable from and to the same points prescribed in Consolidated Southwestern Cases, 123 I. C. C. 203; except that the assailed interstate rates on and since Nov. 27, 1923 which did not exceed rates on the basis prescribed in the 9702 case, were not unreasonable, reparation awarded. Prairie Pipe Line Co. v. A. W. Ry., 132 I. C. C. 56.

(4n) Complainant alleged that combination rate charged on carloads of wooden handles and rollers for lawn mowers from Marquette, Mich., to Newburgh, N. Y., between March 1, 1924 and Feb. 1, 1926 were unreasonable. The handles and rollers are finished products of birch, beech or maple. The handles are varnished, the cross handle is drilled and belted to he long handle, and the long handle is drilled at the lower end for bolts. Charged rates ranging from 75.5c to 86c according to the junction point on which the combination was based. The correct rate was 80c, composed of fifth class of 48c to Buffalo and 32c beyond. The record indicates that shipments of lawn mower handles and rollers are constantly being made from Marquette to Newburgh. The shipments here in question were not isolated shipments. Commodity rates are effective on other articles of wood manufacture, or lighter loading and greater value. It would seem to be compatible with the practice of the carriers as to the other wooden articles from this same general territory, and to be justified by the nature and substantial loading of the commodity, to establish a commodity rate not to exceed 61.5c on shipments of the kind here in question. HELD, rates assailed unreasonable to extent they exceeded 61.5c, reparation awarded. Coldwell Lawn Mower Co. v. N. Y. C. R. R., 132 I. C. C. 390.

(4o) Complainant alleged class A rate of 31 c charged on ground feldspar, carloads, shipped since Jan 11, 1924 from Trenton, N. J., to Hopewell, Va., was and is unreasonable. Shipments moved Pennsylvania to Norfolk, Va., thence N. & W. to destination, 387 miles. From the standpoint of value and general transportation characteristics, ground feldspar is fairly comparable with most of the following commodities: Poultry grit, lime, limestone, chrome ore, phosphate rock, and rough granite. In Ceramic Traffic Asso. v. M. C. R. R., 92 I. C. C. 675, the Commission found a rate of 22.5c from Maine on the Maine Central to Trenton, 405 miles, unreasonable to extent it exceeded 21c. HELD, rate assailed unreasonable to extent it exceeded 21c, reparation awarded. Hopewell China Corp. v. A. C. L. R. R., 132 I. C. C. 565.

(4p) Complainant alleged rates charged on fiberboard cans, in paper bags, in carloads, from Jersey City, N. J., to Providence, R. I., were unreasonable and unduly prejudicial. Previous report, 120 I. C. C. 229. Generally speaking, however, the car mile revenue for the transportation of such light and bulky articles as these, should be considerably less than the average for all freight. Moreover, the Commission can not overlook the fact that the car mile revenue under the basis of charges sought by complainant is exactly the same as the defendants would receive, under rates of their own making, for transporting these shipments of cans as less carloads from Jersey City to Providence if the cans were in boxes or crates and out of the revenue thus re-

ceived they would be obliged to absorb the expense of loading and unloading. Tender as carloads received defendants of this expense and as defendants concede that it is a matter of indifference to them whether carload shipments of cans are loose or in packages, it follows, that the complaint must be sustained. HELD, with respect to these shipments in cars fully loaded the charges assailed were, are, and for future will be unreasonable to extent they exceed charges based on actual weight and on the less carload rate applicable to the cans comprised in the shipments when in boxes or crates, reparation awarded. Brownell & Field Co. v. N. Y., N. H. & H. R. R., 132 I. C. C. 599.

(4q) Complainant alleged first class rating and rates charged on paper pan liners, in less carloads, from Boston, Mass., to destinations to which rates are subject to official, southern, and western classifications were since Aug. 1, 1924, unreasonable, unjustly discriminatory and inapplicable to extent they exceeded third class ratings and rates. Paper pan liners consist of flat paper of varying sizes and shapes dependent upon the dimensions and shapes of the pans for which designed. They are cut to size and shape by machinery about 90% from newsprint paper and the remainder from grease proof parchment chipboard silicated on one surface high finish wrapping paper, or book printing paper. There is no specific rating on paper pan liners, and they have been classified by defendants under "paper goods, n. o. i. b. n.," first class any quantity. Witness for the classification committee conceded that the articles here considered should not be rated higher when shipped in bundles than when shipped in boxes. If a rating lower than first class is warranted on the unprinted pan liners the fact that these liners are of somewhat greater value when printed does not of itself justify a higher rating on the latter. HELD, first class rating and rates unreasonable to extent they exceed second class, reparation awarded. Sherman Paper & Box Co. v. A. C. & Y. R. R., 132 I. C. C. 605.

(4r) Complainant alleged class rate of $4.80 charged on 48c less carloads of rayon from New York to San Francisco, from Sept. 25, 1925 to Jan. 13, 1926 was and is unreasonable and unduly prejudicial. Applicable rate commodity of $4.80 on dry goods, n. o. i. b. n., any quantity. There was contemporaneously in effect a rate of $3.75 on cotton underwear including womens underwear manufactured of rayon. HELD, rate assailed unreasonable to extent it exceeded $3.75, reparation awarded. Pacific Embroidery Co. v. Erie R. R., 132 I. C. C. 679.

(4s) Rates on canned goods in straight or mixed carloads from Mobile, Ala., to destinations in Georgia, Mississippi, Tennessee, Kentucky, Missouri, Ohio, and Illinois, and from New Orleans to Nashville, Tenn., found unreasonable as compared with those prescribed in 77 I. C. C. 473; 123 I. C. C. 203; with lower rates contemporaneously maintained from Neely, Ala., a point within Mobile switching limits to same destinations; and to extent they exceed class 7 rates approved in 113 I. C. C. 200, applicable between same points. Reasonable rates prescribed for future. Mobile Chamber of Commerce v. A. & V., 129 I. C. C. 147.

§24. Exceptions to Classification.

See Infra §28 (l); Supra §5 (4e); Commodity Rates §5 (h) (4d); Refrigeration §3½ (b), §6½ (c).

(a) Fact that carriers in certain territories have seen fit, under exceptions to classification, to apply a low basis of rates on a commodity, to encourage its movement, can not be taken as a measure of reasonable rates. Coco-Cola Co. v. A., T. & S. F., 104 I. C. C. 377, 379.

(b) Exceptions to classification which require reference to tariffs naming class rates can not be considered specific commodity rates. See 62 I. C. C. 471. Elaborated Ready Roofing Co. v. C. & E. I., 109 I. C. C. 401, 402.

(c) Complaint is that the application of ratings provided in the southern classification and notes A and 4 of exceptions thereto in connection with rates on classes 1 to D, both inclusive, from Augusta, Ga., to points in South Carolina resulted in unreasonable charges, and, as compared with ratings provided in note 5 exceptions governing the rates on intrastate traffic in South Carolina, in undue prejudice to Augusta and shippers there located, in undue preference of points in South Carolina. The underlying cause of the complaint is that note 53 exceptions generally provide lower ratings than those in the southern classi-

fication and note 4 exceptions thereto, and therefore result in lower rates on intrastate traffic in South Carolina than from Augusta to South Carolina for similar distances. Augusta is located on the west bank of the Savannah river, which is the boundary at that point between South Carolina and Georgia. At the present time the exceptions do not apply on any interstate traffic to points in South Carolina. That the situation disclosed of record results in undue prejudice to Augusta and shippers there located and in undue preference of shippers in intrastate commerce in South Carolina is admitted by defendants as well as by the South Carolina interveners. The record indicates that competition between shippers from Augusta and from South Carolina points is and has been generally restricted to a territory in South Carolina not more than 100 miles from Augusta. HELD: Exceptions do not result in unreasonable charges but unduly prejudicial as compared with interstate rates. City of Augusta v. A. C. L. R. R., 113 I. C. C. 303.

(d) Application of ratings provided by southern classification and notes A and 4 of exceptions thereto in connection with rates on classes 1 to D, both inclusive, from Augusta, Ga., to South Carolina points for distances of 100 miles, found not unreasonable but unduly prejudicial to Augusta and shippers located there, unduly preferential of South Carolina points, and unjustly discriminatory against interstate commerce, as compared with lower ratings provided in note 53 exceptions governing rates on intrastate traffic in South Carolina for comparable distances. City of Augusta v. A. C. L., 113 I. C. C. 303.

(e) Rates were published in exceptions to the classification in two-column form numbered 1 and 2. Method of determining rates on oil between specified points was to first determine the fifth-class rate and amount in column 2 opposite amount in column 1 which equaled the fifth-class rate was the oil rate. Individual tariffs in effect carried so-called intermediate rules and published specific commodity rates to farther distant points which were lower than those computed under tariff naming rates in column form. Upon contention that computation of oil rates under above method did not provide specific rates to intermediate points and that therefore lower rates provided under the intermediate rule were applicable, FOUND: That the methods of determining oil rates were sufficiently specified under the tariff as to render intermediate rules inoperative. Standard Oil Co. v. A., T. & S. F., 113 I. C. C. 597, 598, 601.

(f) Exception sheets frequently appear to be inconsistent and prepared without due regard for the terms of the classification proper, and classification exceptions must be interpreted in the light of the classification. General Motor Truck Co. v. G. T. W. Ry., 118 I. C. C. 99, 104.

(g) Shipments of condensing machinery, condensers, pumps, and parts thereof from North Philadelphia, Pa., to Florida points moved under combinations, the factor beyond Jacksonville being based on rates per carload, minimum 20,000 pounds, excess in proportion. Tariff naming rates was governed by exceptions to the classification which omitted the words "excess in proportion." Upon contention of shipper that, due to such omission, the rates stated in the tariff were the applicable total charges for each carload, regardless of weight of contents, HELD: While omission of phrase made application of rates confusing, the tariff naming them stated that they applied "Per carload. As prescribed in classification, excess in proportion," thereby supplying the measure of the carload unit while the minimum weight was supplied by the classification exception. Rates assailed were, therefore, applicable. Wheeler Mfg. Co. v. A. C. L., 115 I. C. C. 527.

(h) Upon contention that an exception to classification takes item in the exception out of the classification and the exception governs, HELD: Contention is sound in part only as description in exception must be read in connection with classification item, and not wholly by itself. See 36 I. C. C. 519. General Motors Truck Co. v. G. T. W., 118 I. C. C. 99, 103.

(i) The language of classification exceptions should conform substantially with that of classification item it is intended to displace. Much progress in simplification of tariffs can be made and many controversies obviated if more care is exercised in preparation of individual rules and items. General Motors Truck Co. v. G. T. W., 118 I. C. C. 99, 104.

(j) Complainant attacked sixth class rate of 25.5 cents charged on cement roofing slabs, reinforced with metal, in carloads, from Wampum, Pa., to Toronto, Ont., Can., between April 6 and July 27, 1923, as unreasonable to extent it exceeded 75% of sixth class. By exceptions to the official classification a rating of 75% of sixth class is provided on slabs, cement, building and roofing (reinforced with metal), in mixed carloads with roofing cement (other than liquid) not to exceed 5% of the total weight of the slabs, minimum 50,000 pounds, from Chicago, Ill., Wampum, and other producing points to destinations in central territory. HELD, rates attacked unreasonable to extent they exceed 75% of sixth class, reparation awarded. American Cement Tile Co. v. V. P. R. R., 120 I. C. C. 611.

(k) Carriers authorized to cancel existing l. c. l. classification exceptions and commodity rates applicable to and from the Southwest and to substitute prescribed class rates, subject to western classification ratings. Consolidated Southwestern cases, 123 I. C. C. 203, 401, 402.

(l) Commodity rates or rates published as exceptions to the classification are usually determined by the peculiar conditions surrounding each transaction, and the elements entering into their adjustment are so numerous and varied that there is no presumption that on different articles such rates should be a fixed percentage of the class rates. American Maize Products Co. v. N. Y. C. R. R., 126 I. C. C. 137, 139.

(mn) Where exceptions have general application, it would appear that the classification should be revised and no exceptions maintained. One of the objects sought in interterritorial rates prescribed is the elimination of undue prejudice to interterritorial shippers. Mere establishment of class rates on interterritorial traffic properly aligned with class rates within southern territory will not bring about equality between shippers if different classifications or exceptions are applied on the two kinds of traffic. Southern Class Rate Investigation 128 I. C. C. 567, 582.

(o) Complainant alleged combination rates charged were in excess of those applicable on carloads of plaster from Grand Rapids, Mich., and Gypsum, O., to Logan, W. Va. Complainants shipments are routed over the N. Y. C. to Barboursville, W. Va., and C. & O. beyond, no joint rates in effect, charged 33c from Grand Rapids and 25c from Gypsum, based on commodity rates of 24 and 16c, to Barboursville, and sixth class proportional rate of 9c beyond. The applicable commodity rates are 24c and 16c. The item in the exceptions to the classification applies only when sixth class rates are appicable from points of origin named therein. HELD, rates assailed applicable, complaint dismissed. Beaver Products Co. v. C. & O. Ry., 132 I. C. C. 721.

(p) Carriers were authorized generally, in 123 I. C. C. 203, to cancel all less-than-carload classification exceptions and commodity rates, and no reason appears why, under section 1, exception should be made in case of granite, but an exception should be made to rule 10 of western classification to provide for application to the mixed carloads of granite of highest rate and highest carload minimum applicable to any granite in the mixture. West Texas Chamber of Commerce v. H. & T. C., 129 I. C. C. 546, 554.

§25. **Refusal to Transport.**

(a) Classification rule provides that articles tendered for shipment in packages not specified in connection with ratings will be refused transportation, but if such packages get into carrier's possession and are transported, ratings thereon will be determined in accordance with certain specifications embodied in the rule, among which is a provision that unauthorized shipments in boxes will be accorded rating provided for same commodity in barrels. HELD: Latter provision is plainly intended only to provide a legal basis for determining charges on shipments inadvertently accepted and does not negative requirement that shipments in boxes be rejected. If carriers are willing to transport shipments in boxes at ratings applicable on same commodity in barrels, they should amend classification accordingly, and until and unless that is done it is a violation of section 6 of the act for them knowingly to accept shipments in boxes. Best Foods v. C. R. R. Co. of N. J., 120 I. C. C. 169, 172.

(b) Proposed cancellation of commodity rates on limestone, fluxing in box cars between points in eastern trunk-line territory and restriction

thereof to shipments in open-top cars, found not justified. While respondents intended ground-limestone rates to become effective on this commodity in box cars by proposed cancellation, sixth-class rates would become applicable thereon. Ground-limestone rates are but 45 per cent of sixth class. Since in 112 I. C. C. 7, rates on fluxing lime were found unreasonable to extent they exceeded 80 per cent of rates on common lime, hydrated, quick or slaked, and in 128 I. C. C. 23, increases to sixth-class rates resulting from proposal to restrict rates on fluxing limestone to shipments in box cars were found not justified, record is persuasive that rates on ground limestone will not be unreasonable for application on fluxing limestone in box cars. Fluxing Limestone, 129 I. C. C. 574.

§27. Reparation.

See Reparation.

(a) Where classification ratings throughout an extensive territory affecting shippers at many points have been maintained for many years and are subsequently ordered reduced by commission, under such circumstances reparation on shipments moving under higher ratings will be denied. See 37 I. C. C. 81. Heinze Electric Co. v. B. & M., 118 I. C. C. 77, 78.

(b) An order by the commission for reduction of a classification rating of long standing does not create a right to an award of reparation on past shipments. Kalamazoo Vegetable Parchment Co. v. C., K. & S., 128 I. C. C. 675, 684.

(c) Contention of carrier that reparation should be denied on shipments moving prior to change in classification rating, citing 88 I. C. C. 103, and other cases, not sustained. Ratings assailed in cases cited were not shown to have been unreasonable as applied to past shipments. Tennessee Furniture Corp. v. B. & O. C. T., 128 I. C. C. 701, 702.

VI. TARIFFS AND CONSTRUCTION.

§28. In General.

See Tariffs.

(a) Fourth-class rating and rates in official classification territory on automobile bow sockets assessed under tariff item on "Carriage or wagon irons: * * * Bow sockets" found illegal. Fifth-class rating carried in same tariff on "Automobile parts, n. o. i. b. n.," found applicable. Automobile bow sockets are not carriage or wagon irons. They are designed and manufactured solely for automobiles, and are not interchangeable with the analogous parts of horse-drawn vehicles. Tariff description of latter being specific, analogous article rule could not be applied; hence bow sockets must be considered to have been embraced in item of automobile parts n. o. i. b. n. Refund of overcharges directed. Chevrolet Motor Co. v. B. & O., 109 I. C. C. 185, 186, 187.

(b) Governing classification accorded rating of class A to bridge builders', contractors', graders' outfits, n. o. i. b. n. Commodity item carried a lower rate on "Graders', bridge builders', and contractors' outfits," qualified by further description "Graders' outfits." Upon contention that general heading in commodity item stands alone and establishes specific commodity rates applicable on shipments of contractors' outfits. HELD: Terms in general heading are merely descriptive of what follows and may only be read in connection therewith. They are not to be treated alone, but must be considered as qualified by further descriptions appearing in the item. Commission can not consider only that part of the rule that is favorable to shipper's contention and ignore other provisions of the tariff that make clear its application. The tariff must be construed in its entirety, considering both the limitations in the particular item and in the general index to commodities. Dolese Bros. Co. v. C. R. I. & P., 109 I. C. C. 561, 562.

(c) Governing classification provided fifth-class rate on red oil. By exceptions thereto "soap stock" was rated sixth-class. HELD: Red oil is a "soap stock" and is so described in a definition from the Condensed Chemical Dictionary. While it may not have been carrier's intention that classification exception should embrace red oil, the familiar rule of construction is that ambiguities in a tariff must be resolved against the maker. Shipments found overcharged and refund directed. Williams Co. v. C. N. E., 112 I. C. C. 158.

(d) Fourth-class rate charged on a l. c. l. shipment of malleable link belting from Indianapolis, Ind., to Algoma, Oreg., found inapplicable. Applicable rate found to be a lower commodity rate to Modoc Point, Oreg., under an intermediate rule in the tariff, Algoma being

directly intermediate between Indianapolis and Modoc Point. Reparation awarded. Algoma Lbr. Co. v. Director General, 113 I. C. C. 311.

(e) Complainant attacked commodity rates charged on newsprint paper, carloads, shipped from Nov. 1, 1921, to July 31, 1923, from Millinocket and East Millinocket, Me., to Providence, South Providence and Pawtucket, R. I., as unreasonable and unduly prejudicial. Shipments moved B. & A., to North Maine Jct., Me. Cent., either to Portland, or Deering Jct., B. & M., to Boston, Lowell or Worcester, Mass., and New Haven beyond. There were no joint rates combination being 38.5c and 35c from Nov. 1, 1921, to and including June 30, 1922, and from July 1, 1922, to July 31, 1923. The fact that a specific commodity rate, either proportional or otherwise, was published on printing paper did not take newsprint paper out of the classification. No specific commodity rate was published on paper or newsprint paper until July 1, 1923, and Aug. 1, 1923. HELD, rates attacked not unduly prejudicial but unreasonable to extent they exceeded 36.5c prior to July 1, 1922, and 33c thereafter, reparation awarded. Great Northern Paper Co. v. B. & A. Ry., 113 I. C. C. 463.

(f) Complainant attacked combination rates charged on 15 cars of condensing machinery, steam condensers, pumps, and parts thereof shipped between Jan. 10, 1923, and Oct. 20, 1924, from North Philadelphia, Pa., to points in Florida as inapplicable. Charged sixth class rate of 70.5c to Jacksonville, Fla., and class N of 4,100 to 6,500 c per carload, minimum 20,000 pounds, excess if proportion beyond. The factor to Jacksonville is not assailed. The tariff naming the class N rates was governed by note 10 of exceptions to the southern classification. Effective Nov. 15, 1922, that note was changed to provide as follows: Machinery and machines C. L., rated 6th class in southern classification, also dredging machinery and parts thereof, C. L., minimum weight 20,000 pounds-N. The words "excess in proportion" had formerly been included in the applicable description, following the word "pounds." The rates charged were the same as the rates previously in effect and those in effect when the note was corrected, on April 15, 1925, to again include those words. HELD, rates attacked applicable, complaint dismissed. Wheeler Mfg. Co. v. A. C. L. R. R., 115 I. C. C. 527.

(g) Complainant attacked first, second and third class rates charged on less carloads of defective or damaged radiators, enameled or cast iron bath tubs, sinks, lavatories, and other articles, which moved during the two years prior to Sept. 18, 1925, from New England, Eastern and Central states to Uniontown, Pa., as unreasonable and illegal. The sole question for determination is whether the shipments came within the tariff description of "scraps or pieces of iron or steel suitable for remelting purposes only." The evidence shows that the various articles were transported in their original form and generally crated or boxed; that they were described in the bills of lading under the names of the individual pieces, sometimes with such notations as "damaged," "defective" "scrap value, for remelting purposes;" and charges collected at rates applicable to the articles described. It appears that the damage or defects consisted mainly of chips in the enamel or other imperfections arising in the manufacture or subsequent handling. It is well settled that to come within the tariff description referred to the articles must not be shipped in their original form, but must be so reduced to fragments, scraps or pieces so as to be useless for any purpose other than remelting. It is the nature of the article shipped, not the price at which it is sold or the use to which it is put, that determines whether the rate on scrap iron applies. The record does not disclose that the shipments in this case conformed to these requirements. HELD, rates attacked applicable and not unreasonable, complaint dismissed. Richmond Radiator Co. v. C. & N. W. Ry., 115 I. C. C. 743.

(h) Complainant attacked sixth class rate of 45.5c charged on one car of coffin material shipped June 5, 1924, from Jackson, Miss., to New Orleans, La., as unreasonable and inapplicable. Shipment was described as 515 packages KD coffin in white state. Sixth class applicable on knocked down coffins. Complainant contends class A rate of 30.5c rating on coffin stock. On Dec. 30, 1924, defendant established commodity rate of 20c on coffin material or stock, wooden, in the white. The evidence sustains the contention of the defendant that the material shipped did not conform to the classification description of coffin stock.

Under the analogous rule class A rate of 30.5c was applicable. HELD, class A rate of 30.5c applicable by analogy and not unreasonable, reparation awarded. Jackson Traffic Bureau v. I. C. R. R., 118 I. C. C. 515.

(i) When missing parts of a complete article are insufficient to affect its identity, rating on complete article applies. Parkersburg Rig & Reel Co. v. B. & O., 115 I. C. C. 539, 540.

(j) Shipments of defective or damaged radiators, bathtubs, sinks, and lavatories were transported in their original form and described in bills of lading under names of individual pieces, charges being collected at rates applicable to articles as described. Upon contention that shipments came properly within tariff description of scrap iron and should be accorded rate applicable thereto, HELD: In order to come within tariff description of scrap iron, articles must not be shipped in original form but must be reduced to fragments, scraps, or pieces so as to be useless for any other purpose except remelting, for it is nature of the article shipped and not price at which it is sold or use to which it is put that determines whether scrap iron rate shall apply. See 102 I. C. C. 325, 326. As shipments did not conform to these requirements, rates assailed were applicable and not unreasonable. Richmond Radiator Co. v. C. & N. W., 115 I. C. C. 743.

(k) Upon contention that an exception to classification takes item in the exception out of the classification and the exception governs, HELD: Contention is sound in part only as description in the exception must be read in connection with the classification item, and not wholly by itself. See 36 I. C. C. 519. General Motors Truck Co. v. G. T. W. Ry., 118 I. C. C. 99, 103.

(l) The language of classification exceptions should conform substantially with that of classification item it is intended to displace. Much progress in simplification of tariffs can be made and many controversies obviated if more care is exercised in preparation of individual rules and items. General Motors Truck Co. v. G. T. W., 118 I. C. C. 99, 104.

(m) Complainant alleged charges which defendants are seeking to collect on a carload of rosin waste or rosin refuse shipped Dec. 14, 1923, from Pig Point, Va., to Schenectady, N. Y., as unreasonable and unduly prejudicial. Shipment moved A. C. L., Pennsylvania and N. Y. C. Classification rated rosin, in boxes, second class, any quantity; and rosin in bulk in barrels, fifth class, less carload and sixth class carloads. Charged sixth class. Since open boxes were used for this shipment first class rate was applicable. Barrels doubtless are the standard containers for rosin. There is, however, a general parity in the rates on dry or solid articles in barrels and the same articles in boxes and no reason is suggested why this parity should not obtain in connection with rosin. Had the sixth class rate, applicable on rosin in barrels been applicable on rosin in boxes when the shipment moved the fifth class rate of 52 cents would have applied. HELD, applicable rate unreasonable to extent it exceeded 52 cents, reparation awarded. Hyman Michaels Co. v. A. C. L. R. R., 120 I. C. C. 127.

(n) Upon further hearing, decision in 91 I. C. C. 378, approving an l. c. l. rating of one and one-fourth times first class in western classification and second-class c. l. rating in official, southern, and western classifications on adding machines in boxes, affirmed. Complainants contend that l. c. l. rating was prescribed in error due to incomplete or erroneous evidence submitted as to value, numerous instances being cited where comparable articles are rated lower, value and weight per cubic foot considered. However, complainants fail to cite any case in which commission has prescribed an l. c. l. rating as low as first class or a c. l. rating lower than second class for any article as high in value as adding machines. Burroughs Adding Machine Co. v. M. C., 120 I. C. C. 19.

(o) Complainant attacked sixth class rate charged on three cars of castings and forgings, parts of a cotton compress, from Meridian, Miss., to Blytheville, Ark., between June 7 and June 20, 1923 as unreasonable. Shipments moved M. & O., to Memphis and Frisco beyond, 355 miles. Charged rate applicable on cotton compresses, knocked down, loose, or in packages, minimum 30,000 pounds. The three shipments were tendered to the carriers on separate bills of lading and moved on different dates. None consisted of a complete compress and obviously the sixth class rate was not applicable. A commodity rate of 45 cents was applicable on iron and steel articles, including cast-

ings and forgings. HELD, rate applicable was 45 cents, not unreasonable, reparation awarded. Blytheville Compress & Warehouse Co. v. M. & O. R. R., 123 I. C. C. 95.

(p) First-class rating on "Dry goods: braid, n. o. i. b. n., cotton or other than cotton" applied on round braided twine, found to have been legally assessed. Contemporaneously lower third-class rating applied on "Twine, n. o. i. b. n." While this particular article may not have been used for braid, it is made of cotton on a braiding machine, could be used as a cheap braid, and clearly falls within the generic group of woven or braided trimmings. It does not fall within the correct description of twine described in Standard Dictionary as "A string of some fibre, composed of two or more threads or strands twisted together." Fall River Chamber of Commerce v. B. & O., 122 I. C. C. 100.

(q) Rates applicable on septic tanks assessed on shipments described as clay sewer pipe and sewer-pipe fittings, found applicable and not unreasonable. Carrier showed that commodities involved were in fact material for construction of individual septic tanks; that complainant's catalogue describes them as such and also shows tank to be patented; and that application of various shippers for establishment of specific classification entries for septic tanks, both clay and concrete, is evidence that term "septic tank" is an appropriate description. Moreover, in 4 I. C. C. 41, the commission stated that manufacturer's description of an article for selling purposes describes it for transportation, and carriers may accept such description for classification and rate purposes and are not required to analyze the freight to ascertain whether it is in fact inferior to description or public representation in order to give it a lower rate corresponding to actual value. Southern Sewer Pipe Works v. L. & N., 122 I. C. C. 721.

(r) Complainant attacked rates charged on iron and steel articles between March 30 and Oct. 24, 1923 from Norfolk and Port Norfolk, Va., to Newark, N. J., and McKees Rocks, Pa., as unreasonable, unduly prejudicial and inapplicable. The parties agreed at the hearing to limit the issues to the question of whether the shipments lawfully came within the tariff description of "scraps and pieces of iron and steel which have value only for remelting purposes" and therefore subject to commodity rates on scrap iron and steel. The evidence shows that these articles were transported in their original form, either boxed or loose, that they were described in the bills of lading by the names of the individual articles, and that the charges thereon were collected at the rates applicable to the articles so described. It is well settled that to come within the above tariff description the articles may not be shipped in their original form, but must be reduced to fragments, scraps or pieces so as to render them useless for any purpose other than remelting. It is the nature of the article shipped, not the price at which it is sold the use to which it is put, or the commercial demand, that determines whether the rate on scrap iron and steel applies. HELD, rates applicable, not unreasonable or otherwise unlawful, complaint dismissed. Hyman Michaels Co. v. N. & W. Ry., 126 I. C. C. 195.

(s) Complainant alleged that the rates charged on numerous shipments of lumber, veneer, and built up woods, in mixed carloads, shipped since Oct. 19, 1923 from Knoxville, Tenn., to Dubuque, Ia., Muskegon, Mich., and Rockford, Ill., were inapplicable and unreasonable. Most of the shipments consisted of mixed carloads of veneer and built up woods, but some were mixed carloads of lumber, veneer and built up woods. Charges were collected at the rate applicable on the highest rated article in the car, subject to the highest minimum weight on any article in the car, on the theory that the mixed carload rules were applicable. Clearly seat cores are not plumbers goods and they are not embraced in that classification. Considering the mixed carload rules and the tariffs in their entirety, and the conflicting interpretation thereof by the defendant carriers, it is evident that there is a reasonable doubt which should be resolved in favor of complainant. HELD, rates charged applicable, undercharges to be waived, complaint dismissed. Brunswick Balke Collender Co. v. B. & O. R. R., 126 I. C. C. 747.

(t) First-class rate on passenger and freight automobiles in straight or mixed carloads moving in 36-foot cars, or longer lengths furnished for carrier's convenience on orders for 36-foot cars, under tariff item providing minimum weight of 10,000 pounds, found applicable. While lower commodity rate was listed in same tariff, shipments involved weighed less

than minimum weight provided thereunder and with exception of two shipments on which lower rate applied, actual weights of shipments at first-class rates produced lower charges than minimum weight and rates provided under the commodity rate. Moreover contention that since tariff is goverened by western classification and contains nothing which relieves it from provisions thereof, minimum weight provided thereby should be used rather than minimum weight carried in item itself, is untenable. Rates assessed, except on two cars mentioned, were therefore applicable. Refund of overcharges directed. Chevrolet Motor Co. v. A., T. & S. F., 128 I. C. C. 638.

(u) C. l. rate on shipment of one boiler and parts from Kewanee, Ill., to Wichita Falls, Tex., found applicable. Complainant's evidence failed to support its contention that charges should have been collected on basis of l. c. l. rate. Carrier showed that while at time of movement an embargo was in effect against c. l. shipments of like traffic, complainant obtained a permit for one c. l. shipment and that in accordance with bill of lading and permit shipment was handled as a carload from origin to destination. See also 92 I. C. C. 639. Kinnison Bros. v. Director General, 128 I. C. C. 703.

(v) Complainant attacked charges on numerous carloads of what it describes as cottonseed hull fiber and shavings, not bleached or dyed, shipped between April 17, 1922 and Oct. 31, 1924 from Georgia, South Carolina, and Alabama to destinations in D. of C., Virginia, New York, New Jersey, Pennsylvania, Connecticut, and Louisiana as inapplicable and unduly prejudicial. Shipments were billed as cotton seed hull shavings and were set up by the carriers to cotton linters, which takes a higher rate. The terms "hull fiber or shavings" and "linters" were not defined in the governing tariffs or classification. Commission suggests that carriers and shippers confer with a view to devising an appropriate and lawful tariff rule or test which would make more definite the determination of the correct rate on a given shipment of these commodities, and thereby avoid the disputes and discriminations which may occur under the present tariffs. In cases of this character there is no statutory burden upon defendants, and the Commission is of the view that the complainant has not sustained the burden of proof in this instance. HELD, rates charged applicable and not unduly prejudicial, complaint dismissed. Glarner & Co. v. Southern Ry., 129 I. C. C. 75.

(w) Complainant attacked rate charged on 177 cars of cottonseed hull fiber or shavings, as inapplicable, unjust and unreasonable from Georgia, North Carolina, South Carolina, Mississippi and Alabama to Hopewell, Va., between Nov. 1924 and April 1925. Complainant contends that the commodity shipped was cottonseed hull fiber or shavings and should take the rates applicable on that commodity, or, if not, was of so low a grade that a reasonable rate would have been that applicable on cotton seed hull fiber or shavings. During the time of movement cotton linters were rated sixth class in the southern classification and cottonseed hull fiber or shavings, other than bleached or dyed, class A. Commodity rates on cottonseed hull fiber or shavings lower than the class rates, and lower than the rates on cotton linters, were contemporaneously in effect to Hopewell from all points of origin in this case. The record does not support a finding that the shipments here considered were of so low a grade that they should have been rated as cottonseed hull fiber or shavings. HELD, shipments consisted of cotton linters, rate charged applicable and not unreasonable, complaint dismissed. Virginia Cellulose Co. v. N. & W. Ry., 129 I. C. C. 297.

(x) From samples alone the commission is not prepared to make a positive finding on question of classification nor is it especially qualified as an official body to determine therefrom of just what a certain shipment consists. See 122 I. C. C. 520. Eblin & Co. v. N., C. & St. L., 129 I. C. C. 629, 631.

(y) Grain and grain products originating at points exclusively on defendant's line was forwarded to and milled at established transit points which are also junction points with other lines, thence shipped over defendant's line to destinations where delivery was accomplished through a switching service performed by another carrier. Upon contention that as shipments moved from "junction points with foreign lines" within meaning of provision of governing tariff the switching charges should have been absorbed by defendant,

construing words "from junction point with foreign lines" as applying to all shipments from transit stations, irrespective of origin, HELD: Such interpretation would, in effect, require defendant to absorb destination switching charges on traffic local to its line and for which it does not compete with other lines and there is no provision in its published tariff covering such absorption of noncompetitive traffic. Southern Kansas Millers Club v. A., T. & S. F., 129 I. C. C. 632.

CLAYTON ACT

(a) Provisions of section 10 of the Clayton anti-trust act found not to have been violated in purchase by New York Central lines of automatic train-stop or train-control apparatus of the General Railway Signal Co., no officer or employe of carrier being shown to have or hold any "substantial interest" in the Signal Company as that expression is used in section 10. Automatic Train Control Devices, 112 I. C. C. 259, 267, 268.

COASTWISE TRAFFIC

See Advanced Rates §5 (2) (o); Import Traffic; Port-to-Port Rates; Rail-and-Water Rates.

COMBINATION RULE

See Basing Points and Lines §1 (a); Local Rates and Combinations; Long and Short Hauls §12 (2) (i); Routing and Misrouting §7½ (g) (h) (i).

COMMODITIES CLAUSE

(a) Whether or not a carrier is violating the commodities clause of the interstate commerce act is a matter over which the courts alone have jurisdiction. American Salt & Coal Co. v. C., R. I. & P., 126 I. C. C. 7, 11.

§5. In general.

CROSS REFERENCES

See Advanced Rates §18 (4); Alternative Rates; Class Rates; Classification §4; Differentials; Evidence §13 (1½); Special Rates and Services; Tariffs.

I. CREATION AND PURPOSE.

§1. Nature in General.

(a) Proposed establishment of special commodity rate on wagon skeins from Chattanooga to Montgomery lower than applicable class rate now in effect, found justified. Wagon Parts to Southern Destinations, 104 I. C. C. 179.

(b) Volume of movement, present or prospective, is one of the controlling factors in establishment of commodity rates. Western Paper Makers' Chem. Co. v. A. A. R. R., 109 I. C. C. 133, 135.

(c) Establishment of commodity rates on l. c. l. traffic is a pronounced departure from usual practice and should be required only upon a clear showing of compelling reasons. See 52 I. C. C. 439, 477. Western Paper Makers' Chem. Co. v. A. A. R. R., 109 I. C. C., 133, 137.

(d) Mere fact that a commodity moves in considerable volume during an annual period of 60 days does not entitle it to a commodity rate. Commodities may move in considerable volume and yet remain on a class-rate basis. Heinz Co. v. Director General, 112 I. C. C. 206, 212.

(e) Rates on certain alloys of lead, viz., babbitt, solder, terne, and type metal which have lead as a base in composition with tin, antimony, and other metals in varying proportions, from Newark, N. J., to Buffalo, Pittsburgh, Chicago, and other destinations in Illinois, Indiana, Ohio, Pennsylvania, New York, Kentucky, and Tennessee, found unreasonable to extent they exceeded sixth-class. While no substantial movement of these commodities has been shown which would warrant establishment of commodity rates thereon, the present rates on these alloys are clearly out of line with rates found reasonable by commission on cop-

per, brass, bronze, lead, antimonial lead, and tin. Reasonable rates prescribed for future and reparation awarded. Federated Metals Corp. v. C. R. R. Co. of N. J., 113 I. C. C. 487.

(f) Proposal to cancel commodity rates on terne metal from Newark and Brills, N. J., to Buffalo, N. Y., and Buffalo rate points and destinations in c. f. a. territory, and to apply higher fifth-class rates, found not justified. Transportation and other characteristics do not justify different rates on this commodity than on other alloys of lead and whatever may have been circumstances surrounding establishment of commodity rates on this article, the small volume of traffic therein does not justify a continuance of commodity basis. Sixth-class rates found reasonable for application thereon. Federated Metals Corp. v. C. R. R. Co. of N. J., 113 I. C. C. 487.

(g) It is a well established principle of rate making that a regular and considerable movement of a given commodity between specified points may justify or require the establishment of commodity rates lower than would otherwise be warranted. Russellville Compress Co. v. G. M. & N. R. R., 120 I. C. C. 481, 485.

(h) Commodity rates must be applied strictly. Paraffine Companies v. S. P., 128 I. C. C. 421, 423.

§2. Relation to Class Rates.

See Class Rates; Commodity Rates §5 (r).

(a) Class rates and commodity rates bearing a direct relation thereto from points in c. f. a. and border territories to Williamson, W. Va., found unreasonable as compared with rates from same territories of origin to Charleston, Gauley, Kenova, Huntington, and other West Virginia destinations, and to extent they exceed rates constructed on distance scale of class rates applicable in c. f. a. territory for short-line distance to Williamson, plus specific arbitraries for the six classes respectively. Williamson Chamber of Commerce v. A., C. & Y., 107 I. C. C. 639.

(b) A commodity rate applicable on l. c. l. traffic is a pronounced departure from usual practice. See 52 I. C. C. 439, 477. Given a reasonable level of class rates, under few, if any, circumstances will the commission be justified in requiring maintenance or establishment of l. c. l. commodity rates. Bananas from Gulf Ports, 109 I. C. C. 211, 218.

(c) So many elements enter into determination of a commodity rate that it can not be said that a commodity rate must bear a fixed relation to corresponding class rate, even as between competing points. See 83 I. C. C. 503. Bliss Syrup Refining Co. v. A., T. & S. F., 109 I. C. C. 393, 394.

(d) The general fabric of commodity rates in Illinois classification territory is low and a source of difficulty in dealing with relative adjustments in that territory and c. f. a. territory. Burlington Shippers' Asso. v. A., T. &. S. F., 109 I. C. C. 694, 699.

(e) Following Southern Class Rate Investigation, 109 I. C. C. 300, commodity rates which are constructed on basis of previously existing class rates to and from river crossings should be adjusted with relation to class rates prescribed as reasonable therein. Birmingham Traffic Bureau v. Director General, 115 I. C. C. 33, 38.

(f) Proposal of carriers to cancel commodity rates on tin cans from Virginia points to destinations in Alabama, Florida, and the Mississippi Valley, and apply higher fifth-class rates from Roanoke and Bedford, with rates from Buchanan and Troutville revised to reflect customary differential relationship over rates from Roanoke, found not justified. Carriers showed that class rates formerly applied on this traffic and that commodity rates were published through inadvertence, and introduced evidence showing higher rates from various sections of the country to numerous destinations in southeastern territory. The latter, however, demonstrate that rates generally in southern and Mississippi Valley territories are in great confusion. Distances considered, many of the proposed rates present inconsistencies, and rates based on existing fifth-class rates would result in inequalities. Tin Cans from Virginia, 118 I. C. C. 91.

(g) Commodity rates on strawberries from North Carolina points to Providence, R. I., found unreasonable to extent they exceeded southern classification first-class rates contemporaneously in effect. Carrier in justification of commodity rates higher than corresponding class rates contended that classification rating is too low because of liability incurred and extra handling necessary in

transporting strawberries. However, considering fact that first-class rating has been maintained in southern classification for more than five years and ratings in the other two major classifications have been same or lower, showing in instant case is not persuasive that rating in southern classification is subnormal. Reasonable rate prescribed for future and reparation awarded. Providence Exchange v. N. Y., N. H. & H., 118 I. C. C. 190.

(h) Presumption of unreasonableness attached to a commodity rate which exceeds corresponding class rate. Providence Exchange v. N. Y., N. H. & H., 118 I. C. C. 190, 191.

(i) So many elements enter into the determination of a commodity rate that even if a definite relation of the class rates were shown it would not at all follow that a similar relation must be observed as between commodity rates. Peyton Mfg. Co. v. A. & S. Ry., 122 I. C. C. 3, 6.

(j) The classification generally imposes the highest rate which a particular commodity should bear under normal conditions. A commodity rate which is higher than the class rate is an abnormality which on its face requires special justification. Gay Sullivan & Co. v. A. G. S. R. R., 122 I. C. C. 201, 203.

(kl) If a definite relationship is shown in class rates, it does not follow that a similar relationship should be observed as between commodity rates, in view of the many elements entering into the determination of the latter. Peyton Packing Co. v. A. & S., 122 I. C. C. 3, 6.

(m) A commodity rate which exceeds the class rate is an abnormality which requires special justification. Grain and Products to Southwest, 123 I. C. C. 569, 572.

(n) Commodity rates or rates published as exceptions to the classification are usually determined by peculiar conditions surrounding each situation, and elements entering into their adjustment are so numerous and varied that there is no presumption that on different articles such rates should be a fixed percentage of the class rates. American Maize Products Co. v. N. Y. C., 126 I. C. C. 137, 139.

(o) Given a reasonable level of class rates, it seems that under few, if any, circumstances will the Commission be justified in requiring the maintenance or establishment of less carload commodity rates. Knoxville Iron Co. v. L. & N. R. R., 128 I. C. C. 513, 514.

(p) In fixing commodity rates slight differences between two articles in respect of their value, weight density, or other factors necessary to be considered, may be reflected in rate differences as narrow as may be desired; but in compiling a freight classification all articles, both in carloads and less, must be grouped into from 8 to 12 classes, and it is therefore manifest that commodities with somewhat different classification characteristics must often be assigned the same rating. Kalamazoo Vegetable Parchment Co. v. C. S. & G. Ry., 128 I. C. C. 675, 678.

(q) The publication of a commodity rate on an article, whether in specific or general terms, removes that article from application of class rates between the same points. Sunbury Converting Works v. Pennsylvania R. R., 132 I. C. C. 230, 231.

(r) The classification generally imposes the highest rate which a particular commodity should bear under normal conditions. A commodity rate which is higher than the class rate is an abnormality which on its face requires special justification. Lynchburg Chamber of Commerce v. D. L. & W. R. R., 132 I. C. C. 321, 322.

(s) The establishment of a commodity rate between two points takes that commodity out of the classificaton between those points and that rate is the only one that may be applied. Beaver Products Co. v. C. & O. Ry., 132 I. C. C. 721, 722.

II. APPLICATION AND CONSTRUCTION.

See Application of Rates; Tariffs §7.

§2½. In General.

(a) A commodity rate should be applied strictly; and where, in the original classification, provision is separately made for two articles, closely resembling each other in form and nature, and a commodity rate is subsequently established naming one of such articles, the commodity rate so established can not be applied on similar articles specifically named in classification, but not specifically named in commodity tariff. Great Northern Paper Co. v. B. & A., 113 I. C. C. 463, 465.

(b) Commodity rates between official classification territory and western trunk-line terrtiory, on one hand, and Fulton and Mayfield, Ky., on other, not shown unreasonable, but found unduly prejudicial to extent that differences between these rates, on the one hand, and corresponding commodity rates to or from Paducah, Cairo, and Metropolis, on the other, will be greater than differences in rates from and to same points on the classes to which respective commodities belong in official classification when to or from points in official territory and in western classification when to or from points in western trunk-line territory. Nonprejudicial basis of rates prescribed. Mayfield Chamber of Commerce v. A. & W., 120 I. C. C. 137, 145.

(c) Publication of a commodity rate removes commodity covered thereby from application of classification rules. Market Street Ry. Co. v. S. P., 120 I. C. C. 654, 656.

(d) Commodity rates or rates published as exceptions to the classification are usually determined by peculiar conditions surrounding each situation, and elements entering into their adjustment are so numerous and varied that there is no presumption that on different articles such rates should be a fixed percentage of the class rates. American Maize Products Co. v. N. Y. C., 126 I. C. C. 137, 139.

(e) Rule that established carload commodity rate removes class rates does not abrogate rule that commodity rates govern only when lower than class rates. Norfolk Southern R. Co. v. Treeman Supply Corporation, (Va., 1926) 133 S. E. 817.

(f) Where rate applies to specific commodity alone, it is a "commodity rate"; and, where single rate applies to number of articles of same general character, it is a "class rate." Norfolk Southern R. Co. v. Treeman Supply Corporation, (Va., 1926) 133 S. E. 817.

(g) Complainant attacked commodity rate charged on one boiler and parts, shipped Nov. 1, 1919 from Kewanee, Ill., to Wichita Falls, Tex., as unreasonable and inapplicable. No complaint was filed to cover the allegation of unreasonableness until more than one year after the termination of federal control and the claim is barred. Shipment was routed C. B. & Q. and M. K. T., charged $1.10. minimum 24,000 pounds. HELD, carload rate charged applicable, complaint dismissed. Kinnison Bros. v. C. B. & Q. R. R., 128 I. C. C. 703.

(h) General commodity tariff found applicable on shipments of horses and mules from Sikeston and Oran, Mo., to Memphis, Tenn., moving prior to date of its cancellation, although tariff, by exception, referred specifically to other tariffs for rates from points on carrier's lines in Missouri to Memphis. Contention of carrier that exception prohibited application of general tariff not sustained in view of fact that tariffs referred to failed to provide rates on livestock from and to points in question. Under rule 4(c) of Tariff Circular 18-A it is permissible for a general commodity tariff to refer to other tariffs in which certain named class or commodity rates may be found, but where, as here, the tariff referred to fails to publish any rate on commodity in question, rate in general commodity tariff remains applicable. Maxwell Sons Commission Co. v. St. L.-S. F., 128 I. C. C. 725.

(i) Complainant alleged that rates and stated refrigeration charges on straight and mixed carloads of beets and carrots with "clipped tops" from points in lower Rio Grande Valley of Texas, to destinations east of the Mississippi river and north of the Ohio river are unreasonable and unduly prejudicial and illegal. Complainants beets are shipped as taken from the ground, except that the leaf stems are clipped off from 3 to 6 inches from the top, enabling them to be bunched, tied, and packed in baskets. Beets with "clipped tops" deteriorate considerably less in transit than when shipped "with tops." Loss and damage claims are negligent as compared with claims on other perishable commodities. Rates on beets from the valley to eastern destinations are constructed by adding a differential of 3c to the proportional commodity rate from Texas common points to East St. Louis, Ill., plus the established arbitraries beyond. Beets and carrots are rated class C in western classification, and the commission has approved commodity rates on such vegetables in that territory not to exceed the class C rates. With respect to the portion of the haul east of the river, beets "with tops" are rated fourth class in official classification, and the same vegetable "without tops" fifth class. The beets with "clipped tops" shipped by complainant do not come within the literal meaning of either des-

cription. In Beets and Carrots from Texas, 92 I. C. C. 141, the Commission found that the proposed schedules had not been justified, and held that beets shipped by these Texas growers are green vegetables, with their tender leafy tops removed, and are within the description of "beets, without tops." The Commission has generally recognized that potatoes should take rates lower than those on other vegetables, and there is no showing that the transportation characteristics of cabbage and beets are such as to demand any relationship in rates. In the absence of any such information the rates on cabbage do not afford a reliable guide. Considering the fact that the rates from the Rio Grande Valley apply for a large part of the haul through a territory of lower traffic density, the rates and ton mile earnings under such rates, distance considered, are not greatly out of line with rates from the adjoining Louisiana-Mississippi territory. The carload minimum in effect from most of the origin territories, including the valley, is 20,000 pounds, although complainants must load in excess of 24,000 pounds, because that minima applies in connection with the factor of the rate east of the Mississippi river. REFRIGERATION CHARGES. Valley points take group D rates. The same stated refrigeration charges, however, are applicable upon these vegetables whether shipped in the winter or summer months and complainants point to this fact as well as the fact that the farther north the commodity is shipped the colder the climate and naturally the smaller the amount of reicing necessary for its protection. No ice is placed in the baskets as is the practice in Louisiana and certain other territories, but instead the car is top iced with from 2 to 4 tons of ice. Complainants claim that the cost to the carrier of icing and reicing is necessarily reduced by this practice. The Commission would not be warranted in distributing these refrigeration rates. HELD, through transportation on beets and carrots with "clipped tops" in straight or mixed carloads, from the valley to destinations east of the Mississippi river and north of the Ohio river unreasonable to the extent the factors or arbitraries for the haul east of the Mississippi river in official territory exceeds the rates on beets or carrots "without tops," but not unduly prejudicial. In Consolidated Southwestern Cases 123 I. C. C. 203, the Commission prescribed maximum carload rates on fruits and vegetables, rated class C, including beets and carrots without tops, 27.5% of first class. Reparation awarded. Carfiel & Morris v. N. Y. C. R. R., 129 I. C. C. 658.

§3. Specific Commodity Rating.

See Tariffs §18.

(a) Commodity description "Soapstone manufactured and in slabs * * *" found to have been legally applied to shipments of soapstone furnace linings sawed on six sides to specific sizes. Although manufacturing process in case of furnace linings is not carried to as great an extent as in case of certain other soapstone products, process of sawing blocks on all six sides to specific sizes is clearly a manufacturing process. Moreover, fact that classification carried a more specific description "Soapstone or Talc: Linings, Fire Box or Furnace," did not prevent commodity rate from applying. See also 89 I. C. C. 395, 396. Thilmany Pulp & Paper Co. v. N. & A., 104 I. C. C. 186.

(b) Commodity tariff on tinware from Chicago, Rockford, and Waukegan, Ill., Milwaukee, Wis., and points taking same rates, made St. Louis basis of rates applicable to McIntosh, Mo. Such tariff carried an intermediate clause but index of stations named neither Burlington nor Keokuk, Iowa. HELD: That such tariff authorizes application of the McIntosh and St. Louis basis of rates to Keokuk and Burlington since routing from Milwaukee is specified through Chicago and from Waukegan through Chicago or Sterling, Ill., with no routing specified beyond these junction points. In absence of routing instructions over direct route such tariff therefore authorizes application of the McIntosh and St. Louis basis to Burlington and Keokuk as intermediate points over permissible routes through those points. Burlington Shippers' Asso. v. C., B. & Q., 112 I. C. C. 533, 536, 537.

(c) The commission's tariff rules provide that where a commodity rate is established between two points it removes application of the class rate between the same points without requiring cancellation of the class rate. Indian Refining Co. v. L. & N., 112 I. C. C. 732, 736.

(d) Class rate on "Salt, live stock, medicated," assessed on shipments of medicinal sheep salt found applicable

and not unreasonable. Lower commodity rate applied on salt and sulphurized rock salt, complainant contending for such lower rate upon ground that "Salt, livestock, medicated," is an item shown in classification under the general heading "Salt," that commodity not being specifically excepted in commodity tariff. FOUND: Commodity shipped was not salt within commonly accepted meaning of that word, could not have been substituted for common salt, and was more in the nature of a medicine. Commodity tariff covered only common salt and sulphurized rock salt, and if any salt mixtures had been intended to be covered by that tariff, it is reasonable to assume that sulphurized rock salt only of all the other kinds and combinations would not have been singled out for mention in addition to the general term "Salt." Yakima Grocery Co. v. O.-W. R. R. & N. Co., 112 I. C. C. 751.

(e) A commodity rate should be applied strictly; and where, in the original classification, provision is separately made for two articles, closely resembling each other in form and nature, and a commodity rate is subsequently established naming one of such articles, the commodity rate so established can not be applied on similar articles specifically named in classification, but not specifically named in commodity tariff. Great Northern Paper Co. v. B. & A., 113 I. C. C. 463, 465.

(f) Publication of a commodity rate removes commodity covered thereby from application of classification rules. Market Street Ry. Co. v. S. P. Co., 120 I. C. C. 654, 656.

III. REASONABLENESS AND DISCRIMINATION.

§5. In General.

See Advanced Rates §5 (3); Discrimination; Distance Rates; Reasonableness of Rates.

(a) Proposal to cancel commodity rate on clean rice from New Orleans to Bowling Green, Ky., thereby making effective by application of an intermediate rule, higher c. l. rate from New Orleans to Louisville, to which Bowling Green is intermediate, found justified. Higher rate compares favorably with rates from New Orleans and other points in Louisiana, Arkansas, Tennessee, and Texas, to a number of destinations for comparable distances, and will remove departures from long-and-short-haul provision of section 4 of the act. Rice from New Orleans, 104 I. C. C. 333.

(b) Rates on empty tight wooden barrels and kegs from St. Louis to Los Angeles found not unreasonable. Carmile earnings do not compare unfavorably with those under rates on numerous articles. Empty wooden barrels and kegs are light articles and generally move under class rates, and fact that carriers in certain territories have seen fit, under exceptions to classification, to apply lower bases to encourage movement can not be taken as a measure of reasonable rates. Coco-cola Co. v. A., T. &. S. F., 104 I. C. C. 377.

(c) Volume of movement is an important and not infrequently a determinative element in establishment of a commodity rate, and when a request for such a rate from a particular point is predicated upon existence of a commodity rate from another point volume of movement from both points should be made known. Griess-Pfleger Tanning Co. v. E., J. & E., 104 I. C. C. 464, 466.

(d) Commodity rates on fresh fruits and vegetables, c. l. and l. c. l., from San Francisco, Los Angeles, and related points, to Prescott, Ariz., found unreasonable to extent they exceeded lower contemporaneous class rates from and to same points. Reasonable rates prescribed for future on l. c. l. shipments and reparation awarded. Hill v. A., T. & S. F., 107 I. C. C. 101.

(e) Proposal to cancel commodity rates on cheese from southern Wisconsin points to Chicago and certain other destinations, leaving in effect higher class rates, designed for purpose of aligning rates on this traffic with general level of rates to Chicago, found not justified. Present earnings on cheese from and to points involved compare favorably with earnings on other commodities between points in western trunk-line territory. Moreover, many of the rates which it is proposed to cancel are those prescribed in 16 I. C. C. 85, as subsequently modified by general changes. Cheese to Illinois and Wisconsin, 107 I. C. C. 340.

(f) Peanuts: Proposal to cancel commodity rates on peanuts from Virginia and North Carolina points to destinations in southeastern and Mississippi Valley territories, leaving in effect higher class rates, found not justified. Proposed increase would result in increasing existing

discrimination against such destination points as are intermediate to river crossings, and create departures from long-and-short haul provision of section 4 of the act. Peanuts from Virginia and North Carolina, 107 I. C. C. 343.

(g) Joint commodity rates on newsprint paper from points in Maine and Vermont to points in Massachusetts, Rhode Island, Connecticut, and New York, found unreasonable to extent they exceeded lower contemporaneous class rates from and to same points. Reparation awarded. Hartford Times v. M. C., 107 I. C. C. 536.

(h) After establishment of joint commodity rates on paper when classified fifth class, carrier published an exception to classification providing a rating of sixth class from points on its line to destinations to which joint rates were published. Contention that this exception removed newsprint paper from fifth class rating and, therefore, rendered commodity rates inapplicable, not sustained. The exception did not change description of paper, nor did it have effect of canceling specific commodity rates applicable to commodities covered by that description. Hartford Times v. M. C., 107 I. C. C. 536, 537.

(i) Commodity rates on cabbage from South Carolina producing districts to interstate destinations found not unreasonable as compared with class rates. Commodity rates have been the rule from South Carolina and other southern producing points for long period of time and they are not made with relation to class rates. Moreover, from this territory along the coast of South Carolina class rates are on a relatively low basis due to influence of water competition. South Carolina Produce Asso. v. A. & R., 107 I. C. C. 613, 615, 618.

(j) Proposal to cancel commodity rates on coal tar and pitch based on a minimum of 60,000 pounds from Birmingham, Ala., and group points, to certain points in the Carolinas, leaving applicable higher commodity rates based on a minimum of 40,000 pounds, designed to forestall requests for publication of lower rates to intermediate points under rule 77 of Tariff Circular 18-A, found not justified. Extension of these lower rates to intermediate points for private consumption seems not only proper, but they should be extended further to all intermediate points to which these commodities move for road-building and roof-making purposes. Coal Tar and Pitch from Birmingham, 109 I. C. C. 73.

(k) A commodity rate applicable on l. c. l. traffic is a pronounced departure from usual practice. See 52 I. C. C. 439, 477. Given a reasonable level of class rates, under few, if any, circumstances will the commission be justified in requiring maintenance or establishment of l. c. l. commodity rates. Bananas from Gulf Ports. 109 I. C. C. 211, 218.

(l) Commodity rates on sheet-metal automobile parts from Detroit, Mich., to Ft. Worth Tex., found unreasonable to extent they exceeded lower class rates contemporaneously in effect from and to same points. The classification generally imposes highest rate which a particular commodity should bear under normal conditions, and commodity rate which is higher than class rates is an abnormality which on its face requires special justification. See 29 I. C. C. 18. Chevrolet Motor Co. v. C. & A., 109 I. C. C. 462.

(m) Volume of movement is not infrequently a determinative element in the establishment of a commodity rate. Chicago Hts. Mfrs. Asso. v. B. & O., 109 I. C. C. 545, 547.

(n) The general fabric of commodity rates in Illinois classification territory is low and a source of difficulty in dealing with relative adjustments in that territory and c. f. a. territory. Burlington Shippers Asso. v. A., T. & S. F., 109 I. C. C. 694, 699.

(o) Complainant attacked commodity rates charged on petroleum products, carloads, shipped since Dec. 17, 1922, from Kansas, Oklahoma, Texas and Wyoming to Colorado on the D. & R. G. W., as unjust and unreasonable. The general basis of rates to and from the points in question is combination of local rates to Pueblo or Walsenburg, Colo., and proportionals beyond. The attack is directed principally against the factors west of the gateways. HELD: Rates attacked unreasonable to extent they exceed from Augusta, Tulsa and Fort Worth to Delta and Montrose $1.01 and to Hotchkiss $1.10; to Monte Vista from Augusta 74.5c and from Tulsa and Fort Worth 77c; from Fort Worth to Glenwood Springs, Rifle and Grand Jct. 93c prior to Feb. 1, 1926; and from Casper to Delta and Montrose 74c, to Hotchkiss 83c, to Canon City 45c, to Westcliffe and Buena Cista 54c and to Salida 51c. Reparation awarded. White Eagle Refining Co. v. D. & R. G. W. Ry., 112 I. C. C. 605.

(p) Complainant attacked combination rates charged on canned meats, carloads, from Atlanta, Ga., to Chicago, Ill., as unreasonable. In 93 I. C. C. 360, division 3 found that the rates attacked were not unreasonable and dismissed the complaint. Charged fifth class of 83c to Ohio River and 31.5c beyond prior to July 1, 1922, and 74.5c and 28c thereafter. Component north of the Ohio River is not attacked. Complainant contended that the factor south of the river was unreasonable to extent it exceeded the proportional commodity rate of 39.5c prior to July 1, 1922, and 35.5c thereafter which applied on certain other canned goods, namely milk, oysters, fish, fruits, jellies, preserves, pork and beans, and vegetables. The omission of canned meats from the canned goods list under the rates from Atlanta to the Ohio River clearly was and is an exception to the general basis of commodity rates on canned goods in the southeast. No reason has been assigned for higher rates on canned goods or meats from Atlanta than from New Orleans to the Ohio River or to Chicago. The fact that canned meats are classified with other canned goods and that the proportional carload rate on canned meats exceeded both the local and proportional carload rate on other canned goods is prima facie evidence of the alleged unreasonableness. HELD: Rate attacked unreasonable to extent it exceeded 61c prior to July 1, 1922 and 54c thereafter from Atlanta to Ohio River crossings, reparation awarded. Armour & Co. v. L. &. N. R. R., 112 I. C. C. 695.

(q) Complainant attacked commodity rate charged on 87 cars of crushed stone shipped between March 1 and Aug. 1, 1923, from New Ulm, Minn., to Holstein, Ia., as unjust and unreasonable. Shipments moved C. & N. W., and C. St. P. M. & O., 263 miles charged 8.5c. Prior to March, 1923, the applicable rate was class E rate of 24.5c. At the request of a shipper in New Ulm who was interested in road building contract at Holstein, the rate was reduced on that date to 8.5c and has since remained unchanged. HELD: Rate attacked not unreasonable, complaint dismissed. Everist & Co. v. C. & N. W. Ry., 113 I. C. C. 267.

(r) A commodity rate which is higher than the class rate is an abnormality which on its face requires special justification. Lynchburg Chamber of Commerce v. N. Y. N. H. & H. R. R., 113 I. C. C. 270, 271.

(s) Rates on fresh tomatoes from Silver Creek, N. Y., district to Pittsburgh, Pa., found not unreasonable, and findings in 91 I. C. C. 358 reversed. Evidence does not indicate that rates assailed are too high to move traffic or that they are unreasonable per se. There are no commodity rates on this traffic from Silver Creek district to any destination, or from any point of origin to Pittsburgh. Assailed rates are those prescribed and approved in numerous cases, and while various commodity rates are in effect, both in c. f. a. and trunkline territories, but few apply for distances comparable to the haul here considered, ripe tomatoes generally moving short distances under commodity rates made with reference to truck competition. Here traffic moves in considerable volume only during an annual 60-day period, which fact does not entitle it to a commodity rate, since commodities may move in considerable volume and yet remain on a class-rate basis. Heinz Co. v. Director General, 112 I. C. C. 206.

(t) Class rates on tinware from Chicago, Rockford, and Waukegan, Ill., Milwaukee, Wis., and points taking same rates, to Burlington and Keokuk, Iowa, found not unreasonable, but maintenance of lower commodity rates from same points to St. Louis, Mo., and Quincy, Ill., would subject Burlington and Keokuk to undue prejudice and disadvantage, and give to St. Louis and Quincy an undue preference and advantage. Burlington Shippers' Asso. v. C., B. & Q., 112 I. C. C. 533.

(u) The difference in spread in class rates on common salt and medicated livestock salt applied to commodity rates on common salt does not of itself fix the measure of a proper commodity rate on medicated salt. Yakima Grocery Co. v. O.-W. R. R. & N. Co., 112 I. C. C. 751, 753.

(v) Proposal to cancel commodity rates on terne metal from Newark and Brills, N. J., to Buffalo, N. Y., and Buffalo rate points and destinations in c. f. a. territory, and to apply higher fifth-class rates, found not justified. Transportation and other characteristics do not justify different rates on this commodity than on other alloys of lead, and whatever may have been circumstances sur-

rounding establishment of commodity rates on this article, the small volume of traffic therein does not justify a continuance of commodity basis. Sixth-class rates found reasonable for application thereon. Federated Metals Corp. v. C. R. R. Co. of N. J., 113 I. C. C. 487.

(w) Complainant attacked commodity rates charged on anthracite silt, carloads, from Scranton and other Pennsylvania mines to Buffalo, N. Y., and Erie, Pa., for transshipment by lake to interstate destinations as unreasonable. Silt is coal which will pass through one sixteenth inch screen. The rates applicable on anthracite coal from Pennsylvania mines to Buffalo and Erie are grouped as to points of origin and destination. The rates to Buffalo are maintained to Erie because of carrier competition. Erie is in the extreme western portion and Buffalo in the extreme northern portion of the group. The average short line distance to Buffalo is about 300 miles. To Erie the average distance is 352 miles over D. & H. and Pennsylvania. Present rates on anthracite to Buffalo and Erie for local delivery or transshipment are $3.28 on prepared sizes and $2.77 on pea and smaller sizes, with the exception that f. o. b. vessel rates of $3.53 on prepared sizes and $3.28 on pea and smaller sizes are published to Buffalo by the D. & H. in connection with the Erie and L. V. Originally the f. o. b. vessel rates at Buffalo were 25c higher than those for local delivery, but after various changes the difference on pea and smaller sizes is now 51c. Defendants are willing to restore the 25c differential by reducing the f. o. b. vessel rate of $3.28 on those sizes to $3.02. From the facts of record it appears that washed silt is a variety of anthracite, but of extremely low value at the mine. Although used to some extent for other purposes, it has value as a domestic fuel only when manufactured into briquets. Furthermore the Commission is here dealing with transshipment rates which contemplate a movement beyond the ports, and such rates may reasonably be somewhat lower than those applicable on other traffic. HELD, rates attacked to Buffalo and Erie unreasonable to extent they exceed $2.50 per long ton, not including delivery on board vessel at those ports. Reparation awarded. Scott Briquet Co. v. Pennsylvania R. R., 113 I. C. C. 693.

(x) Complainant attacked commodity rates charged on wheat, carloads, from Missouri between Sept. 25, 1923, and July 5, 1924, milled at Jefferson City, Mo., and the resulting flour reshipped to destinations in Arkansas as unreasonable to extent they exceeded the rates which became effective from and to the same points on July 5, 1924. For a long time prior to Sept. 26, 1923, there was a spread of 6c between the proportional rate on grain from Kansas City, Mo., when from beyond, to Little Rock, Ark., and the local rate to Little Rock from the points of origin covered by the complaint. The local rates to the Arkansas destinations were obtained by adding named differentials to the Little Rock rate, and although the proportional rates from Kansas City were published in specific amounts, the differences over the rates to Little Rock were the same on shipments under the Kansas City proportional rates and under the local rates from the points of origin here concerned. The rate adjustment which became effective July 5, 1924, included increases as well as reductions in the rates up to Little Rock, and as the rates to the Arkansas destinations were based on differentials over Little Rock, this was equivalent to increases and reductions in the rates to the destinations of the shipments. HELD, rates attacked not unreasonable, complaint dismissed. Dulle Milling Co. v. M. P. R. R., 113 I. C. C. 742.

(y) Complainant attacked rates charged on 90 cars of paper strawboard and boxboard shipped between May 10, 1922, and Aug. 15, 1924, from New Haven and Windsor Locks, Conn., to Ridgefield, N. J., as unreasonable and in violation of the fourth section. Those from New Haven moved over New Haven to Danbury, Conn., C. N. E., to Campbell Hall, N. Y., and Erie to destination; those from Windsor Locks moved New Haven to New Haven and thence same route, distances from the two origin points being 195 and 244 miles, respectively, over the route of movement. Charged 27c prior to July 1, 1922, and 24.5c thereafter, 90% of sixth class rate. Subsequently a rate was established Aug. 16, 1924, of 20.5c. Ridgefield is about 9 miles north of Jersey City, N. J., on the Northern of New Jersey, a division of the Erie extending from Jersey City to Nyack, N. Y. HELD, rates attacked unreasonable to extent they exceeded 22.5c prior to July 1, 1922, and 20.5c thereafter, reparation awarded. Lowell Paper

Co. v. C. N. E. R. R., 115 I. C. C. 189.

(z) Complainant attacked rates charged on iron and steel pull and sucker rods from Marion, Ind., to Oklahoma and Texas as unjust and unreasonable. The shipments move in open top cars. Their transportation is practically free from hazard. Rates charged during the past were generally 92c to Oklahoma and $1.09 to Texas. Present rate to Texas destinations is 0.5c higher. These were and are specific commodity rates on iron pull and sucker rods. The class rates applicable in the absence of commodity rates were and are much higher than the rates charged. HELD, rates attacked not unjust or unreasonable, complaint dismissed. Marion Machine, Foundry & Supply Co. v. C., C., C. & St. L. Ry., 115 I. C. C. 327.

(aa) Complainant attacked rate of $1.05 on seven cars of iron beds shipped from Kenosha, Wis., to Meridan, Miss., during Dec., 1923, and Jan., 1924, as unreasonable to extent it exceeded 78c minimum 30,000 pounds. Following 64 I. C. C. 107, a rate of 71c minimum 30,000 pounds was published, increased on July 1, 1923, to $1.05, minimum 12,000 pounds, and on March 5, 1924, the present rate of 78c minimum 30,000 pounds was established. The rate attacked did not exceed the general level of rates applicable on iron beds from points in central territory to Mississippi valley and southeastern destinations. HELD, rate attacked not unreasonable, complaint dismissed. Hulett & Son v. C. & N. W. Ry., 115 I. C. C. 399.

(bb) Complainant attacked commodity rate charged on box board, carloads, from Halltown, W. Va., to Lynchburg, Va., as unreasonable, unjustly discriminatory and unduly prejudicial as compared with the rate on wood pulp board, carloads, from Covington, Va., to Richmond, Va. Halltown is on the B. & O., about 6 miles south of Harpers Ferry, W. Va., and about 4 miles north of Charlestown, W. Va. The short line route from Halltown to Lynchburg of 201 miles is over the B. & O., to East Lexington, W. Va., and C. & O. beyond. However, traffic generally moves over the initial line to Charlestown, W. Va., and N. & W. beyond, 269 miles. Average distance over all routes is 249 miles. Box board is a low grade commodity made from scrap paper, comparable with wood pulp board. Both commodities are used for similar purposes are included under the same general headings and given the same rating in the classification and exceptions thereto, and from a transportation standpoint are practically identical. Rate for C. & O. delivery is 28c, or 90% of sixth class. In connection with N. & W., delivery a specific commodity rate of 28c is published. A commodity rate of 16c applies from Covington to Richmond, 244 miles on wood pulp board for intrastate movement. Movement from Covington to Richmond is local over the C. & O., whereas the movement from Halltown to Lynchburg is over two or more roads. HELD, rate attacked not unreasonable or otherwise unlawful, complaint dismissed. Lynchburg Chamber of Commerce v. B. & O. R. R., 115 I. C. C. 465.

(cc) Complainant attacked commodity rate charged of $3.20 on agricultural limestone, carloads, from Buffalo, N. Y., to Troy and Canton, Pa., two years prior to July 15, 1925, as unreasonable, unjustly discriminatory and unduly prejudicial to extent it exceeded $1.70. The Pennsylvania does not publish commodity rates from Buffalo to Troy and Canton on agricultural limestone by that name, but does publish a rate of $3.20 applicable on both agricultural lime and ground limestone. Agricultural lime and agricultural limestone are used as fertilizers, are similar from a transportation standpoint, and between stations on the Pennsylvania usually take the same commodity rates. Troy and Canton are on the Pennsylvania 25 and 38 miles south of Elmira, N. Y., 272 and 259 miles from Buffalo and charged $3.20. No evidence was introduced tending to show that the Pennsylvania maintains rates on agricultural lime, or commodities comparable therewith, anywhere on its line lower for similar distances than it maintains from Buffalo to Troy and Canton. HELD, rate of $3.20 not unreasonable or otherwise unlawful, complaint dismissed. Case & Sons v. Pennsylvania R. R., 115 I. C. C. 694.

(dd) Complainant attacked commodity rates on finished oak staves and oak heading, carloads, from Mississippi and Louisiana to Pacific coast as unreasonable and unduly prejudicial as compared with rates on rough or dressed lumber. Rates charged $1.02 from Jackson and 96c from Winnsboro, rates on rough and

dressed lumber 85c from Jackson and 80c from Winnsboro. The governing western classification provides a rating of class D on wooden cooperage stock, including staves and heading. The record does not warrant a finding of undue prejudice. Neither is unjust discrimination established since staves and lumber do not constitute such "like traffic" that a different charge for their transportation is violative of section 2 of the act. HELD, rates attacked not unreasonable or otherwise unlawful, complaint dismissed. Chess Wymond Co. v. A. & V. Ry., 115 I. C. C. 703.

(ee) Complainant attacked commodity rates on pulpwood, car loads, shipped between Jan. 1, 1923, and Jan. 1, 1925, from Reedsport, Oreg., to Camas, Wash., as unjust and unreasonable to extent it exceeded $4 per cord. Reedsport is on a branch line of the S. P., 92.8 miles from Eugene, Ore., the junction with the main line. It is 120.9 miles from Eugene to East Portland, and 27.8 miles from East Portland to Camas, a total distance of 241.5 miles. Shipments moved S. P. to Portland and S. P. & S. beyond, charged $4.20. The rate attacked is a joint rate applying not generally for average conditions but between specific points through a country where transportation conditions are for much of the distance unfavorable and for a part of the distance extremely costly, and HELD, rate attacked not unreasonable, complaint dismissed. Crown Willamette Paper Co. v. S. P. Co., 118 I. C. C. 95.

(ff) Complainant attacked commodity rates charged on 34 cars of riveted steel conduit pipe shipped between June 10, and Nov. 15, 1920, from Duluth, Minn., to Howells, Calif., as illegal, unreasonable, unjustly discriminatory and unduly prejudicial to the extent they exceed rates on iron conduits. Original report 92 I. C. C. 692, division 3 found that the shipments consisted of riveted steel pipe and charges not unreasonable, unjustly discriminatory or unduly prejudicial. The evidence is not persuasive that the rates on riveted steel pipe should exceed the rates on pipe, wrought iron or steel, welded or seamless, boiler flues or large steel conduit. HELD, rates attacked unreasonable to extent they exceeded $1.125 between June 10 and August 25, 1920, and $1.50 from August 26, 1920, to Nov. 15, 1920, reparation awarded. Duluth Boiler Works v. A. T. & S. F. Ry., 118 I. C. C. 161.

(gg) There is a presumption against the reasonableness of a commodity rate higher than the corresponding class rate. Providence Exchange v. N. Y., N. H. & H. R. R., 118 I. C. C. 190, 191.

(hh) Commodity rate charged on sporadic shipments of phosphate rock from Milldale, Fla., to Shreveport, La., found not unreasonable. Milldale is not a producing point in the Florida group accorded lower rates; moreover, rate charged was actually less than contemporaneous rate from entire Florida phosphate rock group to Shreveport and such group rate was found not unreasonable in 78 I. C. C. 107. Meridian Fertilizer Factory v. A. C. L., 115 I. C. C. 226.

(ii) Complainant attacked commodity rate charged on hardwood lumber, including Oak, Hickory, and gum, in carloads, from Mississippi to Loudon and Harriman, Tenn.. as unreasonable. The distances from points of origin to Harriman range from 415 to 517 miles, to Loudon 2 miles greater. Present rate of 24.5c to Loudon and 27c to Harriman are joint rates. The record is not persuasive that the present rates are unreasonable as compared with the rates in the same general territory or those maintained in other territories, and the mere fact that they reflect voluntary reductions is not sufficient in and of itself to indicate that the prior rates were unreasonable. HELD, rates attacked not unreasonable, complaint dismissed. Jackson Traffic Bureau v. I. C. R. R., 120 I. C. C. 3.

(jj) Complainant alleged that rates on wet wood pulp, in carloads, shipped since Jan. 1, 1922 from Lockport, N. Y., to Wabash, Ind., was unreasonable, unjustly discriminatory and unduly prejudicial. Lockport is 22 miles northeast of Buffalo and is on the N. Y. C. and Erie. Wabash is on the Big Four and Wabash. Wood pulp is rated sixth class and by exception takes 90% of sixth class. Charged 25.5c prior to July 1, 1922 and 23.5c thereafter. Wet wood pulp is not susceptible of damage in transit and can be moved in any kind of closed equipment. So far as the record shows, the rates on wood pulp between points in central territory are, with few exceptions, on the basis of 90% of sixth class. HELD, rate attacked not unreasonable, unjustly discriminatory or unduly prejudicial, complaint dismissed. United Paperboard Co. v. C. & E. R. R., 120 I. C. C. 27.

(kk) Complainant attacked commodity rates of 15c prior to Feb. 17, 1924

and 14.5c subsequent, charged on cars of sand shipped over an interstate route from Provincetown, Mass., to Westfield, Mass., as unreasonable. Provincetown is a local point on defendants line at the extreme end of Cape Cod. Westfield is also served by defendant. Distance 294 miles, short line distance 243 miles, rate attacked as unreasonable to extent it exceeded 9c. The shipments do not require expedited service and no unusual operating difficulties are encountered over the route traversed. Sand, n. o. i. b. n. is rated sixth class. Defendant publishes a commodity rate of 9c on common run of bank or building sand for 200 to 360 miles. HELD, rate attacked unreasonable to extent it exceeded 12.5c, reparation awarded. Smith Co. v. N. Y. N. H. & H. Ry., 120 I. C. C. 43.

(ll) Complainant attacked commodity rates on brick, carloads from Perla and Fort Smith, Ark., to Texas between Nov. 27, 1923 and June 26, 1924 as unreasonable and in violation of section four. The case grows out of the failure of defendants to establish on Nov. 27, 1923 from Arkansas to Texas the same basis of rates on brick as they established generally in the southwest on that date. It was not made effective to Texas until June 5 and 27, 1924. HELD, rates attacked unreasonable to extent they exceeded those prescribed in 77 I. C. C. 473, reparation awarded. Acme Brick Co. v. A. & N. R. R. R., 120 I. C. C. 112.

(mm) Complainant attacked commodity rate of 25.5c charged on seven cars of zinc ore between Jan. 8 and Feb. 28, 1924 from Henryetta, Okla., to Caney, Kas., as unjust, unreasonable, unduly prejudicial and in violation of the fourth section. Henryetta is served by the Frisco and the K. O. & G. Caney by the Santa Fe and M. P. Zinc ore is rated class D although it generally moves on commodity rates. Shipments moved Frisco to Tulsa, Okla., and Santa Fe beyond. On Aug. 5, 1924 a joint commodity rate of 12c was established. HELD, rate attacked unreasonable to extent it exceeded 12c, reparation awarded. Weir Smelting Co. v. A. T. & S. F. Ry., 120 I. C. C. 155.

(nn) Complainant attacked commodity rate charged of $1.50 on 13 cars of hollow building brick and hollow building tile in 1924 from Haviland, O., to Fort Wayne, Ind., as unreasonable to the extent it exceeded $1.05. Shipments moved C. N. to Latty, O., and N. Y. C. & St. L., 33.7 miles. The $1.50 rate was applicable on hollow building tile only and was established in purported compliance with 68 I. C. C. 213. Building brick and hollow building tile are rated sixth class, carloads, sixth class rate being $2.30 on hollow building brick. The rate of $1.05 was established effective Aug. 18, 1924. HELD, rate charged on brick not applicable and that applicable rate was $2.30, unreasonable to extent it exceeded $1.05, reparation awarded. Haviland Clay Works Co. v. C. N. R. R., 120 I. C. C. 241.

(oo) Complainant attacked commodity rates charged on refined oils, carloads, from Oklahoma to Arkansas as unreasonable. Points of origin are in Group 3, destinations are in northwestern Arkansas intermediate to Memphis, Tenn., and Helena, Ark., distances ranging from 175 to about 300 miles. Rates charged 38.5c to 43.5c but in most instances a rate of 39c was charged on and after July 1, 1922. Since July 1, 1922 the rate to Memphis has been 28.5c. The 33c established after the shipments moved was published as a result of a request from complainant for a rate comparable with the rates from El Dorado, Ark. HELD, rates attacked unreasonable to extent they exceeded 36.5c prior to July 1, 1922 and 33c thereafter, reparation awarded. Bear State Oil Co. v. A. T. & S. F. Ry., 120 I. C. C. 301.

(pp) Complainant attacked commodity rate of 47c charged on 37 tank cars of petroleum crude oil shipped between July 14 and Aug. 3, 1922 from Currie, Tex., to Minneapolis, Minn., as unreasonable and unduly prejudicial to extent it exceeded 42.5c. Currie is on the H. & T. C. 92 miles south of Fort Worth, shipments moving as routed H. & T. C. to Fort Worth, C. R. I. & G. and C. R. I. & P. beyond. The 47c rate was cancelled on Oct. 10, 1924 and a combination rate of 53c became applicable. Defendants concede that the rate charged was unreasonable. HELD, rate attacked unreasonable to extent it exceeded 42.5c, reparation awarded. Pure Oil Co. v. C. R. I. & P. Ry., 120 I. C. C. 422.

(qq) Complainant attacked commodity rates and rules on rosin from south Atlantic and Gulf ports to Burlington, Ont. Can., as unreasonable and unduly prejudicial. In 104 I. C. C. 408 division 3 found the rules not unreasonable but rates from south Atlantic ports unreasonable to extent they exceeded 56.5c from April 15 to June 30, 1922 and 51c on and after July 1, 1922 and awarded

reparation. It is suggested that defendants herein give consideration to the matter of equalizing the Hamilton and Burlington rates, the rates so established to apply as maximum rates from interior intermediate producing points. The facts of record do not warrant disturbing the long established packing requirements of the carriers. HELD, former finding affirmed. Vera Chemical Co. v. A. C. R. R., 120 I. C. C. 434.

(rr) Complainant attacked joint commodity rate of $8.06 charged on six cars of scrap iron shipped between June 11, 1924 and Feb. 7, 1925 from East Radford, Va., to Brackenridge and Pittsburgh, Pa., and Steubenville, O., as unreasonable. Shipments moved N. & W. to Columbus, O., and Pennsylvania beyond. Effective March 20, 1925 the rate was reduced to $6.17. The record fails to show anything peculiar to the traffic in scrap iron from East Radford as related to that from main line points which warranted a rate on a higher relative basis than that accorded Hopewell. HELD, rate attacked unreasonable to extent it exceeded $6.17, reparation awarded. Dreifus Co. v. Pennsylvania R. R., 120 I. C. C. 680.

(ss) Complainant attacked commodity rates on crushed stone carloads, shipped since June 1, 1923 from Racine, Wis., to Chicago, Evanston and other points in Illinois as unreasonable. Shipments originated within switching limits of Racine on the C. N. S. & M. Ry., and moved over that road to Racine Jct., 2 miles, thence C. M. & St. P. to destinations. North Shore charged $5 per car for switching to Racine Jct, which was absorbed in whole or in part. From the record the rates attacked do not appear unreasonably high. HELD, rate attacked not unreasonable, complaint dismissed. Racine Crushed Stone Co. v. C. M. & St. P. Ry., 120 I. C. C. 717.

(tt) Commodity rates between official classification territory and western trunk-line territory, on one hand, and Fulton and Mayfield, Ky., on other not shown unreasonable, but found unduly prejudicial to extent that differences between these rates, on the one hand, and corresponding commodity rates to or from Paducah, Cairo, and Metropolis, on the other, will be greater than differences in rates from and to same points on the classes to which respective commodities belong in official classification when to or from points in official territory; and in western classification when to and from points in western trunk-line territory. Nonprejudicial basis of rates prescribed. Mayfield Chamber of Commerce v. A. & W., 120 I. C. C. 137, 145.

(uu) Complainant sought rates on cotton-pulp board from Nitro, W. Va., to Marcus Hook and Lewiston, Pa., and Roanoke, Norfolk, and Newport News, Va., lower than 90 per cent of sixth class, the basis prescribed for all kinds of paperboards in 52 I. C. C. 84, contending that rates therein were prescribed as maximum only, instances being cited where carriers have departed therefrom and published lower commodity rates on some of these articles. HELD: Rates established in case cited have been maintained quite generally throughout this territory and an effort to secure a lower rate on strawboard in 101 I. C. C. 273 was not sustained. As no exception was made in that case, an exception in favor of higher grade of pulpboard here involved would be still less justifiable. Viscose Co. v. N. Y. C., 120 I. C. C. 352.

(vv) Complainant attacked commodity rates charged on roasted zinc ore, carloads, from Moundsville, W. Va., to Newport, Del., as unreasonable and unduly prejudicial. Moundsville is 11 miles south of Wheeling, W. Va., on the B. & O. Newport is 4 miles south of Wilmington, Del., on the Penn., distance 418 miles, charged $3.30 prior to July 24, 1924 and $3.20 beyond. HELD, rate attacked not unreasonable, complaint dismissed. United Zinc Smelting Corp. v. B. & O. R. R., 120 I. C. C. 431.

(ww) It is a well-established principle of rate making that a regular and considerable movement of a given commodity between specified points may justify or require establishment of commodity rates lower than would otherwise be warranted. Russellville Compress Co. v. G., M. & N., 120 I. C. C. 481, 485.

(xx) Complainant attacked commodity rate of 12.5 cents charged on 10 cars of paving brick shipped between Sept. 11 and 17, 1924 from Murphysboro, Ill., to Hickman, Ky., as unreasonable to extent it exceeded 9 cents. Murphysboro is 92 miles south of St. Louis, Mo. Hickman is 125 miles south of Murphysboro and 218 miles south of St. Louis. Shipments moved M. & O., to Union City, Tenn., and N. C. & St. L., beyond. Rate attacked represents the rate originally established in compliance with the order in 64 I. C. C. 306, reduced 10% July 1,

1922. In accordance with 68 I. C. C. 213 the rate became 9 cents on Dec. 12, 1924. HELD, rate attacked not unreasonable, complaint dismissed. Murphysboro Paving Brick Co. v. M. & O. R. R., 122 I. C. C. 15.

(yy) Complainant attacked commodity rate of 17.5 cents charged on numerous carload shipments of petroleum products from Bayonne, N. J., to Fresh Pond, N. Y., between Jan. 24, 1924 and Jan. 10, 1925 and from Tremley Point, N. J., during the period of Sept. and Oct., 1924 as unreasonable and unduly prejudicial. Shipments moved Jersey Central to Jersey City thence via car float or ferry to Long Island City, thence Long Island to destination. HELD, rate attacked unreasonable to extent it exceeded 16 cents, reparation awarded. Transcontinental Oil Co. v. C. R. R. of N. J., 122 I. C. C. 61.

(zz) Complainant attacked commodity rates on silica sand in carloads shipped since March 21, 1923 from Ottawa and Utica, Ill., to St. Joseph and Benton Harbor, Mich., as unreasonable and unduly prejudicial. Ottawa is on the Burlington and the Rock Island, 81 miles south of Chicago. Rates on sand from Ottawa are combination commodity rates Prior to Oct. 15, 1924 St. Joseph and Benton Harbor were treated as a separate group, to which the rate was 214 cents. On that date it was reduced to 202 cents in order to conform to the fourth section at Buchanan, Mich., to which point the latter rate applied over the P. M. through Benton Harbor. In 73 I. C. C. 588 the commission found the rates attacked not unreasonable except to extent they exceeded the aggregate of intermediates. HELD, rates attacked not unreasonable or otherwise unlawful, complaint dismissed. Manufacturers Traffic Bureau v. B. Ry. of Chicago, 122 I. C. C. 188.

(3a) Complainant attacked commodity rates on window glass, carloads, from Fort Smith, Ark., to Texas as unreasonable, and unduly prejudicial to Fort Smith and unduly preferential of Shreveport, La. The issues properly before the commission will be deemed to embrace the rates on window glass from both Fort Smith and Okmulgee and on rough rolled glass from Okmulgee. Complainants are interested primarily in the relationship of their rates with those from Shreveport, at which point its principal competitor in Texas markets is located. Strong competition has to be met also with an import movement from Belgium through the Gulf ports. From certain Kansas producing points the rate is 45.5 cents to the Dallas-Fort Worth group and 56 cents to other Texas common points. From other Kansas producing points the rate to Texas common points is 64 cents. The average distance from Fort Smith and Okmulgee to the seven Texas points to which Shreveport has made shipments is 372 miles and from Shreveport 288 miles, or a difference of 84 miles. It is admitted that the transportation conditions from these three origin points to Texas are substantially the same. Under these circumstances a substantial difference in distance, can not be disregarded without trespassing upon the rights of the Shreveport competitor under section 3. HELD, attacked rates from Fort Smith and Okmulgee not unreasonable except that to Gainesville, Sweetwater and San Antonio unduly prejudicial to the extent they exceed to Gainesville 6 cents less than from Shreveport, to Sweetwater and San Antonio 4 and 5 cents higher than the rates from Shreveport. Harding Glass Co. v. A., T. & S. F. Ry., 122 I. C. C. 217.

(3b) Complainant attacked commodity rate charged of 66 cents prior to April 5, 1925 and 61 cents thereafter on specified paper and paper articles, carloads, shipped since Nov. 30, 1923 from Denver, Colo., to Oklahoma City, Okla., as unreasonable to extent it exceeds 52.5 cents. The evidence makes no mention of past or prospective future shipments of box board from Denver to Oklahoma City. HELD, rate attacked not unreasonable, complaint dismissed. Oklahoma Paper Co. v. M. K. T. R. R., 122 I. C. C. 229.

(3c) Complainant attacked commodity rate charged on wooden water pipe, carloads, during October and Nov., 1923 from Sather, Calif., to Ajo, Ariz., as unjust and unreasonable. Sather is within the switching limit of Oakland, Calif. Ajo is on the T. C. & G., 44 miles south of its junction with the S. P., at Gila, Ark., and about 880 miles from Oakland. Contemporaneously a rate of 64.5 cents applied on lumber and lumber products. The item carrying the lumber description did not include wooden water pipe although throughout Pacific coast territory it is the practice to apply the same rates as on those articles. They were reduced to the lumber basis March 20, 1925. HELD, rate attacked unreasonable to extent it exceeded 64.5 cents,

reparation awarded. Pacific Tank & Pipe Co. v. S. P. Co., 122 I. C. C. 284.

(3d) Complainant attacked commodity rate charged of $1.35 on four cars of wall paper shipped between Dec. 19, 1924 and May 9, 1925 from Joliet, Ill., to Dallas, Tex., as unreasonable as compared with rate of 78 cents on wrapping paper from Chicago, Ill., territory which includes Joliet, to Texas common points. Reparation to basis of 90 cents is sought. HELD, rate attacked not unreasonable, complaint dismissed. Pan American Wall Paper & Paint Co. v. C. R. I. & P. Ry., 122 I. C. C. 333.

(3e) Complainant attacked commodity rate of $1.24 on furniture, carloads, from Fort Smith, Ark., to Florence, Ala., and that as compared with a rate of 82 cents from Fort Smith to Birmingham, Ala., is prejudicial and in violation of section 1 of the act. Fort Smith is served by several lines, two of which, the Frisco and the M. P., are defendants. Florence is on the L. & N. and Southern. Sheffield and Tuscumbia are served by the L. & N., Southern and N. A. Birmingham is about 130 miles southeast of Florence, and is served by the L. & N., Frisco and Southern. No joint rate is in effect, rate attacked being combination of 68 cents to Memphis, Tenn., and 56 cents beyond. It is evident that the $1.24 rate is unduly prejudicial to the Florence group. HELD, rate attacked not unreasonable but unduly prejudicial to extent it exceeds the rate to Birmingham. Florence Chamber of Commerce v. L. & N. R. R., 122 I. C. C. 367.

(3f) Complainant attacked commodity rate of $4.48 charged on 37 cars of bituminous coal screenings from Harrisburg, Ill., to Sioux City, Ia., between Aug. 7 and 15, 1923 as unreasonable, unjustly discriminatory and unduly prejudicial to extent it exceeded $3.78. Cars were routed Big Four to Danville, Ill., N. Y. C. to Chicago, Ill., C., M. & St. P., to Sioux City, 831 miles, charged $4.48. A rate of $3.78 was applicable from southern Illinois on Big Four to Sioux City for distances of 814 to 829 miles over various routes, and effective Feb. 28, 1924, defendants published this rate over route shipments moved. HELD, rate attacked unreasonable to extent it exceeded $3.78, reparation awarded. Saline County Coal Corp. v. C., M. & St. P. Ry., 122 I. C. C. 467.

(3g) Complainant attacked commodity rate on common brick, carloads, from Harrisonville, Mo., to Kansas City, Kans., and Argentine, Kans., between Nov. 15, 1922 and Feb. 21, 1924, unreasonable and unduly prejudicial, in violation of section 6 and that they violated the order in 68 I. C. C. 213. Kansas City and Argentine are within the switching limits of Kansas City, Mo. Harrisonville is on the M. P., Frisco and K. C. C. & S. Complainants case seems to be based primarily on the fact that defendants, in compliance with that order, in respect of rates on common brick for distances of 150 miles and less, made the rates on common brick 80% of the rates on other brick from many other Kansas and Missouri points on Oct. 16, 1922 but delayed making that adjustment from Harrisonville until later dates. HELD, applicable rates unreasonable to extent they exceeded 5 cents for the 45 miles via M. P., 5.5 cents for 45 miles over Frisco plus switching service required, 6 cents for the 56 miles over K. C. C. & S. F., plus switching charge required, and 6.5 cents for 62 miles over the K. C. C. & S. F., when delivery is made to the Santa Fe for switching at Kansas City, and 7 cents over the latter route when delivery is made to the Santa Fe at Olathe, reparation awarded. Harrisonville Brick & Tile Co. v. A., T. & S. F. Ry., 122 I. C. C. 489.

(3h) Complainant attacked commodity rate charged on lumber, carloads, from Weir, Sallis, Kilmichael, Kosciusko, Sapa, Theadville and Brandon, Miss., to Mariemont, O., as unreasonable. Shipments were delivered by the N. & W. Mariemont is a station on that line outside the corporate limits and about 8 miles east of Cincinnati. It is about 3 miles east of Newburg, O., the last station within the eastern switching limits of the N. & W., at Cincinnati. Red Bank, O., on the Pennsylvania is 7.4 miles east of the station at Cincinnati, and within the corporate and switching limits of Cincinnati. The rates on lumber from Mississippi to Mariemont prior to June 22, 1924 were made on Cincinnati combination, subject to the combination rule. On June 22, 1924 the N. & W. established a proportional rate of 2 cents from Cincinnati to Mariemont on shipments originating in the south. HELD, rates attacked on and after June 22, 1924 not unreasonable but prior to that date unreasonable to extent they exceeded the rates established on that date, reparation awarded. Stanley Lumber Co. v. A. & V. Ry., 122 I. C. C. 506.

(3i) Complainant attacked rates charged on wood pulp, carloads, shipped prior to Feb. 12, 1925 from Wilmington, Del., to New England territory as unreasonable. Pulp is packed in laps or rolls, and averages about 55,000 pounds per car. Complainant has never filed a damage claim. Sixth class rates apply on pulp from Wilmington to all points in New England except Holyoke, Mass., where a 25 cent commodity rate applies. The general basis in central territory is 90% of sixth class and from eastern trunk line territory to New England it is sixth class, but wherever pulp actually moves it apparently receives the benefit of commodity rates which are considerably lower. Within central territory the applicable commodity rates are the equivalent of 80% of sixth class. HELD, rates attacked since Feb. 12, 1925 unreasonable to extent they exceed rates ranging from 17 cents for 160 miles to 29.5 cents for 600 miles, reparation awarded. Jessup & Moore Paper Co. v. B. & O. R. R., 122 I. C. C. 543.

(3j) Complainant attacked commodity rates on cement, carloads, during the period August 8, 1918 to Feb. 29, 1920, from Ilasco, Mo., to Illinois, Wisconsin, Michigan, Minnesota, Iowa, South Dakota, Nebraska, Kansas and Missouri as unjust, unreasonable and unduly prejudicial. The rates charged were established Aug. 8, 1918 following 48 I. C. C. 210, and 52 I. C. C. 225. While it is evident that the distances used by the carriers were not in all instances in accordance with a proper interpretation of the term "short line workable route" there is no soundness in the extreme view taken by complainant. Generally the record does not show the distances or routes upon which the rates attacked were based. While the distances are shown over the routes claimed by complainant to be the short line workable routes, such distances can not be accepted in many instances. Moreover, the record is lacking in other evidence regarding the circumstances and conditions which might affect the question of whether a particular route was "workable." It is obvious, therefore, that it would be impracticable for the commission to determine whether the rates to each of more than 1,200 destinations covered by the complaint were based on the proper distances under the original order. HELD, rates attacked not unreasonable or unduly prejudicial, complaint dismissed. Atlas Portland Cement Co. v. Director General, 122 I. C. C. 680.

(3k) Complainant attacked commodity rates on crude sulphur, carloads, to Mooar, Ia., from Sulphur Mine, La., and Bryanmound, Tex., since May 1, 1922 as unreasonable and unduly prejudicial. Mooar is located just west of the Mississippi River on the Burlington about 15 miles north of Keokuk, Ia. At the time of the hearing the rate to Mooar from Sulphur Mine and Bryanmound was 45.5 cents. The corresponding rates to St. Louis and Chicago were 36 and 39.5 cents. The short line distances are 887 and 940 miles to Mooar, 710 and 763 miles to St. Louis, and 980 and 1,047 miles to Chicago. The St. Louis rate applied to numerous points in Kansas, Missouri and southern Illinois. Chicago rate applied to numerous intermediate points in northern and central Illinois. The rates to Mooar do not apply over the short line. From Sept., 1905 to Dec., 1919 the rate from Sulphur Mine to Mooar and from Oct., 1919 to Feb., 1922 the rate from Bryanmound to Mooar was the same as the rates to Chicago and St. Louis rate points. By the increases in the rates to Mooar and reductions in the rates to Chicago and St. Louis rate points this parity was destroyed. On Jan. 10, 1926 some months after the hearing, the rates from Sulphur Mine and Bryanmound to the Chicago and St. Louis rate points were reduced to 35 and 32.5 cents, respectively. The rate of 35 cents was also established from Sulphur Mine to the Iowa points, including Mooar. The distance from the mines to Mooar is greater than to any point taking the St. Louis rate, and considerably greater than the average distance to St. Louis rate points. Crude sulphur is rated class C in the western classification. Mooar is in a somewhat higher rated territory than are the competing points in Illinois and Indiana. It is not directly intermediate to Chicago. The reduced rates established on Jan. 10, 1926 afford no gauge for the determination of reasonable maximum rates to Mooar. HELD, rates from Sulphur Mine and Bryanmound and Hoskins, Tex., to Mooar, not unreasonable, and that since Jan. 10, 1926 the rate from Sulphur Mine to Mooar has not been and is not unduly prejudicial; that prior to Jan. 10, 1926 the rates from Bryanmound, Hoskins and Sulphur Mine were unduly prejudicial to Mooar and unduly preferential of Chicago to extent they exceeded the rates to Chicago; that since

Jan. 10, 1926 the rates from Bryanmound and Mooar are unduly prejudicial to Mooar to extent they exceed the rates to Mooar by more than 4.5 cents, reparation denied. Du Pont de Nemours & Co. v. H. & B. C. Ry., 122 I. C. C. 729.

(3l) Complainant attacked commodity rate charged on 17 cars of drag line machinery from Dayton and Tippecanoe City, O., to Tarke, Calif., during July and August, 1923 as unreasonable. Shipments moved B. & O., C. & N. W., U. P., S. P., and S. N., at rate of $2.35. Complainant contends that there was contemporaneously in effect a rate of $2.03 on machinery and machines, carloads, from Mount Vernon and Villa Grove, Ill., to Seattle, Wash., for greater distances. HELD, rates attacked not unreasonable, complaint dismissed. Smith Bros., Inc. v. B. & O. R. R., 122 I. C. C. 745.

(3m) Complainant attacked rates on coke, bituminous coal and anthracite, from eastern points to Beaver Dam, Wis., as unreasonable and unduly prejudicial. The rates on coke are combinations of proportional rates to Milwaukee, Wis., plus the local rates beyond and that was true as to rates on soft coal until March 15, 1926 which was subsequent to the hearing herein, when joint rates equal to the combinations on Milwaukee were established. The rates on hard coal are the sums of the local rates to Black Rock, N. Y., to Milwaukee and thence to Beaver Dam. The attack is directed against the factors Milwaukee to Beaver Dam. The rates from Milwaukee to Beaver Dam appear to be in line with the general level throughout the state. Exceptions which obtain at competitive points within a short distance of one or more docks do not show unreasonableness of the rates to Beaver Dam. HELD, rates attacked not unreasonable or unduly prejudicial, complaint dismissed. Beaver Dam Chamber of Commerce v. C, M.. & St. P. Ry., 123 I. C. C. 5.

(3n) Complainant alleged as unreasonable commodity rates on linseed oil, carloads, from Fredonia, Kans., to Illinois, Indiana, Missouri, Michigan, Kentucky, Ohio, Pennsylvania, and New York. Fredonia is on the M. P., Santa Fe and Frisco in the southeastern part of Kansas about 150 miles southwest of Kansas City, Mo., and 385 miles southwest of St. Louis, Mo., in the gas belt district. Linseed oil is rated fifth class, but there are a number of commodity rates lower than the fifth class rates, principally to large distributing centers. The other vegetable oils also are rated fifth class. M. P. expressed willingness, so far as destinations on its line are concerned, to publish the vegetable oil scale of rates on linseed oil from Fredonia. If complainant finds it difficult to meet competition of manufacturers at other points because of the relatively higher freight rates from Fredonia, that in itself may be one of the contributing causes which prevent the growth and enlargement of its plant. It seems clear that the rates on linseed oil from Fredonia to points in Missouri, Illinois, and northern Michigan are unreasonable; that the vegetable oil scale, which was prescribed to that territory from origin territory contiguous to Fredonia, affords a reasonable basis of rates on linseed oil, although it will not give complainant rates as low as those from Minneapolis, which are not before the commission in this proceeding. HELD, rates on linseed oil from Fredonia to Missouri, Illinois and northern Michigan unreasonable to extent they exceed rates prescribed in 98 I. C. C. 183. To Indiana, lower Michigan, Ohio, Pennsylvania, Kentucky and New York rates are unreasonable to extent they exceed combinations made up of rates to points in the territory west of the Illinois-Indiana state line, constructed under the scale herein prescribed, plus the existing applicable rates beyond. Reparation awarded. Fredonia Linseed Oil Works Co. v. A., T. & S. F. Ry., 123 I. C. C. 153.

(3o) Complainant attacked commodity rate of 9.5 cents charged on clay, in carloads, from Calhoun, Mo., to Pittsburgh, Kans., between Nov. 6, 1923 and May 23, 1925 as unreasonable. Calhoun is on the M. K. T. The shipments moved over that line to Fort Scott, Kans., and Frisco beyond, 119 miles. Effective August 3, 1925 a rate of 6.25 cents was established at complainants request. That rate had previously been established over the M. K. T. and K. C. S. via Eve, Mo., and M. K. T. and M. P. via Nevada, Mo., on June 30, 1925 distances of 106 and 103 miles. HELD, rate attacked unreasonable to extent it exceeded 6.25 cents, reparation awarded. Pittsburgh Clay Products Co. v. M. K. T. R. R., 123 I. C. C. 605.

(3p) Complainant alleged carload rates on paraffin wax from Ponca City, Okla., and Casper, Wyo., sulphur from Gulf Hill, Tex., and Berkeley, Calif., and

nitrate of soda from New Orleans, La., Galveston and San Pedro and Wilmington, Calif., to Curtiss and Kennard, Ariz., are unreasonable and unduly prejudicial. Curtiss and Kennard, in southeastern Arizona, on a branch line of the S. P. PARAFFIN WAX. This commodity usually moves at the rates applicable on gasoline and other refined petroleum products. Rate from Ponca City is $1.135, which is the rate to the Pacific coast terminals applied intermediate. Rate from Casper to Curtiss, 1,283 miles is 89.5 cents same also being applicable to San Francisco 1,486 miles. In Associated Oil Co. v. A. E. R. R., 112 I. C. C. 350, rates of $1.035 prior to July 1, 1922 and 93 cents on and after that date were prescribed, and reparation awarded. HELD, rates from Ponca City should not exceed those prescribed in the Associated Oil case. Crude glycerin is rated fifth class, but commodity rates apply from and to the points here considered. The rates attacked are generally lower than the rates on many other fifth class commodities between the same points and are substantially lower than the rates to Bacchus, about the same distance from the producing points as Curtiss. HELD, rates attacked not unreasonable or unduly prejudicial. SULPHUR. Sulphur is rated class C but generally moves at commodity rates substantially lower than the class basis. Rate from Gulf Hill to Curtiss, 1,092 miles was 83.5 cents prior to July 1, 1922, reduced to 75 cents on that date and on April 2, 1926 reduced to 40 cents. The 83.5 cent rate also applied to San Francisco about 1,030 miles beyond Curtiss, and on Jan. 30, 1923 reduced to 55 cents, with permission to apply higher rates at intermediate points. This rate was reduced to 40 cents when the rate to Curtiss was made 40 cents. No reason appears on this record why the rate from Gulf Hill to Curtiss should be relatively higher than from San Francisco to Curtiss and Ogden, 58.5 and 56.5 cents. NITRATE OF SODA. Under exceptions rated class E but it usually moved under commodity rates substantially lower than the class basis. Rates of $1.28 and $1.13 applied from New Orleans and Galveston to Hercules, Calif., about 1,000 miles beyond Curtiss. HELD, rates on paraffin wax from Casper and crude glycerin from all points of origin were not and are not unreasonable, and present rate on sulphur from Gulf Hill is not unreasonable. HELD, rates attacked on sulphur from Gulf Hill and on paraffin wax from Ponca City and nitrate of soda from San Pedro, Wilmington, Galveston and New Orleans unreasonable to extent they exceeded, respectively, prior to July 1, 1922, 66.5 cents, 103.5 cents, 44.5 cents, 66.5 cents and 72 cents and on and after that date 60, 93, 40 and 60 and 65 cents, respectively, reparation awarded. Apache Powder Co. v. A., T. & S. F. Ry., 123 I. C. C. 639.

(3q) Complainant assailed commodity rate charged on wooden box shooks, carloads, shipped since August 14, 1922 from Baltimore to Jersey City, N. J., as unreasonable and unduly prejudicial. Present rate from Baltimore to Jersey City is 20.5 cents. A review of the record indicates that defendant relies principally upon the alleged water competitive character of the rates from the competing points in the southeast. HELD, rate attacked unreasonable and unduly prejudicial to extent it exceeded 18 cents, reparation awarded. Canton Box Co. v. P. R. R., 123 I. C. C. 663.

(3r) Complainant attacked commodity rate charged on scrap iron, carloads, from Fowler and Rensselaer, Ind., to Kewanee, Ill., and from Rensselaer to Gibson, Ind., over an interstate route, as unreasonable. From Rensselaer to Kewanee shipment moved C. I. & L., Chicago, C. B. & Q. Those from Fowler moved Big Four and Burlington. Rate charged $2.90, or 66% of the sixth class rate. That applicable through Indianapolis and Peoria was full sixth class rate. It is evident that distance has been largely disregarded by the carriers in making their rates on scrap iron. Shipments to Gibson moved C. I. & L., and I. H. B., distance 52 miles, charged $1.80. HELD, rates charged not unreasonable, complaint dismissed. Karnowsky v. C. B. & Q. R. R., 123 I. C. C. 749.

(3s) Commodity rates on cowpeas from various points in South Carolina to New Orleans, found unreasonable to extent they exceeded lower class D rates contemporaneously in effect. In 10 I. C. C. 281, the commission recognized propriety of class D ratings on this commodity in southern territory; moreover, the situation here presented is an abnormality requiring special justification. See 29 I. C. C. 18 and 101 I. C. C. 424. Reasonable rates prescribed for future, and reparation awarded. Gay, Sullivan & Co. v. A. G. S., 122 I. C. C. 201.

(3t) Circumstances and conditions surrounding the interstate transporta-

tion of cement from points in the Kansas gas belt, on the one hand, and interstate and intrastate transportation of like traffic from Cement City (Sugar Creek), Mo., and Bonner Springs and Sunflower, Kans., on the other hand, to destinations in the Kansas City, Mo.-Kans., switching district found to be substantially similar, and interstate rate from points in the Kansas gas belt, including Chanute, Fredonia, Mildred, Humboldt, Independence, and Iola, Kans., and Dewey, Okla., to said destinations found not unreasonable. Iola Cement Mills Traffic Asso. v. A., T. & S. F., 122 I. C. C. 337.

(3u) In arriving at the rates on cement prescribed in Western Cement Rates, 48 I. C. C. 201; 52 I. C. C. 225; 69 I. C. C. 644; and the related rates prescribed in various other cases, the commission has not been controlled by the general level of rates on other commodities, whether switching or line haul, but rates prescribed have been made with special regard to the conditions surrounding transportation and marketing of that particular commodity with the view to establishing, and securing the maintenance of, general levels of rates in and between the several scale territories not only reasonable per se as applied to that commodity but under which the rates from competing producing points are related to each other with close regard to distance. Iola Cement Mills Traffic Asso. v. A., T. & S. F., 122 I. C. C. 337, 347.

(3v) Commodity rate on packing-house products, in mixed carloads with fresh meats, from Jacksonville, Ill., to Detroit, Mich., found unreasonable to extent it exceeded fifth-class rate contemporaneously in effect on packing-house products for the same haul. Reparation awarded. Powers-Begg & Co. v. W. Ry., 122 I. C. C. 476.

(3w) On further hearing, original report 98 I. C. C. 352, prescribing reasonable and nonprejudicial rates for interstate transportation of fresh meats and packing-house products, from Duluth to St. Paul, Minn., affirmed. Transportation conditions being substantially same in both directions, there is a clear discrimination in charging lower rates from St. Paul to Duluth than from Duluth to St. Paul, and under circumstances, it is impossible to conclude that Duluth packing plant suffers no injury because of this discriminatory freight-rate situation, or that its competitive position would not be improved if such discrimination were removed. It is an unfair situation for which no justification has been offered and should be corrected. Duluth Chamber of Commerce v. C., St. P. M. & O., 122 I. C. C. 739.

(3x) Complainant alleged commodity rate of $2.37 charged on pig iron, in carloads, from Birmingham, Ala., and points taking same rates to Nashville, Tenn., were and are unreasonable and as compared with the rates from the same points to Chattanooga, Tenn., and other destinations in Tennessee, Georgia and Alabama, unduly prejudicial. Defendant expressed a willingness to establish a rate of $2.04, and it was established on March 27, 1926. The record indicates that the carriers which control the rates to the competitive destinations named do not control the rate to Nashville. It is clear, therefore, that there is no basis for a finding of undue prejudice. HELD, rate attacked not unduly prejudicial but prior to March 17, 1926 unreasonable to extent it exceeded $2.04 per long ton, reparation awarded. Allen Mfg. Co. v. A. G. S. Ry., 126 I. C. C. 515.

(3y) Complainant attacked commodity rates charged on petroleum crude oil, in tank cars, from Kentucky to Owensboro, Ky., for shipment by pipe line to Lawrenceville, Ill., during the period April 1, 1922 to Jan. 31, 1924 as unreasonable, unduly prejudicial, in violation of section 4 and unlawful in violation of section 6. Shipments were forwarded from Bowling Green, Memphis, Jct., Scottsville, Rodemer, and Petroleum, Ky., over the L. & N. to itself at Owensboro. At that point the oil was unloaded into storage tanks owned by complainant, whence with the exception of 58,387 barrels, it was shipped by pipe line of the Indiana Pipe Line Corporation to Lawrenceville. There was at no time any intention that Owensboro should be the destination of this traffic. It moved beyond that point through the pipe line in quantities equal to the average daily receipts owing to the limited storage facilities. Charged local rates to Owensboro. No request was ever made by complainant for the establishment of proportional rates to Owensboro for application in connection with the pipe line. No reason appears why proportional rates to that point, if they had been established, should have been higher than those to Louisville and Evansville. On the other hand, the local rates charged

appear not to exceed maximum reasonable rates for the service performed. The pipe line has been extended to the oil fields and no more shipments from the points of origin named to Lawrenceville will be made by rail. HELD, rates attacked not unreasonable, unduly prejudicial, or otherwise in violation of the act, complaint dismissed. Indian Refining Co. v. L. & N. R. R., 126 I. C. C. 543.

(3z) Complainant alleged that the commodity rate charged on newsprint paper, carloads, from Carthage, N. Y., to Newark, N. J., between April 24, 1924 and Dec. 5, 1924 was unreasonable, unjustly discriminatory and unduly prejudicial. Shipments moved 308 at commodity rate of 28.5c. When the shipments moved there was in effect over the N. Y. C. a rate of 25c from Carthage to New York, and it was also in effect from Glen Falls, N. Y., to New York and Newark in connection with the D. & H. With the exception of the rate of 25c via National Junction the rate from Carthage to Newark is 28.5c via all routes. Newsprint paper, carloads, is rated fifth class, but by exceptions the rating is reduced to sixth class from points on the New York Central in northern New York and to 90% of sixth class in New England territory. Sixth class rate is 30c or 1.5c higher than the rate attacked and 5c higher than the rate subsequently established over the route of movement. HELD, rate attacked not unreasonable, unjustly discriminatory or unduly prejudicial, complaint dismissed. Newark Call Printing & Publishing Co. v. C. R. R. of N. J., 126 I. C. C. 569.

(4a) Complainant attacked commodity rates charged on sand and gravel, carloads, prior to July 1, 1922 from Montgomery, Ala., to La Grange, Ga., as unreasonable. In the original report, Roquemore Gravel Co. v. A. & W. P. R. R., 85 I. C. C. 184, division 3 found the rates of $1 and $1.13 unreasonable to extent they exceeded $1 prior to July 1, 1922 and 90c on and after that date, reparation awarded. Subsequent to the further hearing the Commission rendered its decision in Rates on Chert, Clay, Sand and Gravel, 122 I. C. C. 133. The single line scale rate for 104 miles, the distance from Montgomery to La Grange is $1.10 or 20c per ton more than the rates prescribed in the previous decision in the present case. The rate for the future from Montgomery to La Grange has been determined in the case cited. HELD, rates attacked not unreasonable, complaint dismissed. Roquemore Gravel Co. v. A. & W. P. R. R., 126 I. C. C. 575.

(4b) Complainant attacked commodity rate charged on 14 cars of wrapping paper shipped between April 28, 1924 and July 31, 1925 from Bastrop, La., to Dallas, Tex., and on one car shipped Nov. 20, 1924 from Bastrop to Wichita Falls, Tex. Bastrop is on the A. & L. M., 23.4 miles north of Monroe, La. Dallas and Wichita Falls are in Texas common point territory. Shipments were routed and moved A. & L. M. to Monroe, V. S. & P. to Shreveport, La., L. R. & N. to Greenville, Tex., thence M. K. T. Charged 56c and there was contemporaneously in effect a rate of 42c from Elizabeth, La., to Dallas. On Jan. 23, 1926 the rate attacked was reduced to 42c. HELD, rate attacked not unreasonable, complaint dismissed. Dallas Paper Co. v. A. & L. M. Ry., 126 I. C. C. 739.

(4c) Complainant attacked commodity rate of 22.5c plus $2.25 per car, charged on 30 cars of paving brick shipped during Oct. and Nov. 1924 from Buffalo, Kans., to McCook, Nebr., as unreasonable. McCook is on the Burlington, and Buffalo is on the M. P. Rates to and beyond Superior, Nebr., were 14.5c and 10.5c, subject to combination rule or 22.5c. There was no direct track connection between these carriers at Superior and the combination rate was subject to an additional charge of $2.25 for a switching service by the C. & N. W. Some shipments moved M. P. to Kansas City and Burlington beyond, at rate higher than through Superior, but shipments were unrouted by shipper and Superior combination protected. A rate of 16.5c was subsequently established following Mason City Brick & Tile Co. v. Director General, 77 I. C. C. 22. HELD, rate attacked unreasonable to extent it exceeded 18.5c, reparation awarded. Buffalo Brick Co. v. M. P. Ry., 126 I. C. C. 744.

(4d) Commodity rates or rates published as exceptions to the classification are usually determined by peculiar conditions surrounding each situation, and elements entering into their adjustment are so numerous and varied that there is no presumption that on different articles such rates should be a fixed percentage of the class rates. American Maize Products Co. v. N. Y. C., 126 I. C. C. 137, 139.

(4e) Commodity rates cannot gener-

ally be considered upon manufactured products with fairness to both shipper and carrier, except in conjunction with the entire traffic and the completed process of collecting the raw material and subsequently distributing it as a finished product. Chicago, M. & St. P. Ry. Co. v. Public Utilities Commission of Idaho, (Idaho, 1925) 238 Pac. 970.

(4f) Rate on sand and gravel of 40 per cent. less than L. Virginia classification, is in a lettered class, and therefore can be considered as a commodity rate in constructing a combination rate. Norfolk Southern R. Co. v. Treeman Supply Corporation, (Va. 1926) 133 S. E. 817.

(4g) Proposed cancellation of commodity rates on dolomite and fluxing stone in box cars between specified points in c. f. a. territory, and restriction thereof to shipments in open-top cars, on ground that shipments in box cars should take higher rates because of nature of equipment and lighter loading, found not justified. Dolomite is crushed limestone and falls within description of "agricultural limestone." Carrier participates in Indiana intrastate rate applicable on both agricultural limestone and dolomite; rates on agricultural limestone were prescribed in 112 I. C. C. 7, from various points to c. f. a. territory equal to present rate on that commodity between points involved, and record is persuasive that latter rate will be reasonable for application on commodities in box cars here involved. Dolomite and Fluxing Stone, 128 I. C. C. 23.

(4h) Complainant attacked commodity rates charged on denatured alcohol, carloads, from New Orleans, La., to Oklahoma City, Lawton, Chickasha, McAlester, Muskogee, Tulsa, Enid, Cushing and Ardmore, Okla., as unreasonable and in violation of the fourth section. The commodity rates are pubished as such to enable the routes through Texas, which publish higher class rates from New Orleans to Oklahoma than do the routes through Arkansas, to participate in the traffic. Denatured alcohol is rated fifth class. HELD, rates attacked unreasonable to extent they exceed to Oklahoma City, Cushing, Lawton, McAlester, Muskogee, Chickasha, and Tulsa, 82c, Enid 90c, Ardmore 73c, reparation awarded. Rates for future to be column 38 rates fifth class, in Consolidated Southwestern cases, 123 I. C. C. 203. Oklahoma Traffic Asso. v. A. & V. Ry., 128 I. C. C. 89.

(4i) Complainant attacked commodity rate of 75c on infusorial earth in carloads, from Lovelock, Nev., to Chicago, Ill., unreasonable, unjustly discriminatory and unduly prejudicial to extent it exceeded a rate of 50c, value not to exceed $10 per net ton. Crude infusorial earth is a raw material used in the manufacture of insulating materials. Its value is approximately $8.92 per ton, which represents the cost of taking it from the ground and loading into the cars at Lovelock. Complainant competes with producers at Lompoc, Calif., and with manufacturers along the Atlantic seaboard who can obtain crude infusorial earth from Lompoc at a rate of 65c. HELD, rate attacked not unjustly discriminatory or unduly prejudicial but unreasonable to extent it exceeds 70c, minimum 60,000 pounds. Hylonite Products Co. v. A. T. & S. F. Ry., 128 I. C. C. 135.

(4j) Complainant attacked commodity rate charged on coke, coke dust and coke breeze, carloads, from Martins Ferry and Steubenville, O., to Moundsville, W. Va., as unreasonable, unjustly discriminatory and unduly prejudicial. Coke breeze or dust is the term applied to the screenings from beehive or by product coke rejected for use in steel making. It is shipped in open top cars and averages over 80,000 pounds per car. Shipments from Martins Ferry apparently moved over B. & O. 14 miles, charged commodity rates of $1.39 prior to Nov. 11, 1925 and $1.01 on and after that date. From Steubenville routes ranged from 34 to 36 miles, charged at commodity rate of $1.76. HELD, rate from Martins Ferry not unreasonable; rate of $1.76 from Steubenville not unreasonable prior to Nov. 11, 1925 but on and after that date unreasonable to extent it exceeded $1.60 reparation awarded. United Zinc Smelting Corp. v. Pennsylvania R. R., 128 I. C. C. 139.

(4k) Complainant attacked sixth class rate of $5.40 charged on 12 cars of scrap iron moving from Pedricktown, N. J., to Catasauqua, Pa., between August 13 and Sept. 2, 1923 as unreasonable. Shipments moved over Pennsylvania and C. R. R. of N. J. A commodity rate of $3.78 was established Dec. 1, 1923. Scrap iron is a heavy loading commodity, and the rate charged and earnings thereunder are out of line with the subsequently established commodity rate, as well as with other interstate rates in-

stanced. HELD, rate attacked unreasonable to extent it exceeded $3.78, reparation awarded. Davies & Thomas Co. v. C. R. R. of N. J., 128 I. C. C. 241.

(4l) Complainant attacked commodity rate charged on eight cars of rosin dross shipped from Jacksonville, Fla., to Pensacola, Fla., over an interstate route in Nov. 1925 as unreasonable to extent it exceeded a rate of 24.7c. Rosin and rosin dross are rated sixth class and generally take the same commodity rates. Shipments were tendered to the A. C. L. and moved over that line via Waycross, Valdosta and Thomasville, Ga., to River Jct., Fla., thence L. & N., charged 31c. A rate of 24.7c was applicable over S. A. L. to River Jct., thence L. & N., an intrastate route. A rate of 24.7c was made applicable over route of movement on July 1, 1926. Defendants expressed willingness to make reparation to the basis of the 24.7c rate, but were unwilling to pay interest. HELD, rate attacked unreasonable to extent it exceeded 24.7c, reparation awarded. Western Paper Makers Chemical Co. v. A. C. L. R. R., 128 I. C. C. 244.

(4m) Complainant attacked commodity rate charged on three cars of talc shipped during 1924 and 1925 from Emeryville, N. Y., to Dallas, Tex., as unreasonable to extent it exceeded rate of 60c. Distance 1,718 and 1,668 miles. A commodity rate of $1.195 was applicable. Talc and limestone, in carloads, are rated class C and class E, respectively, in the western classification. HELD, rate attacked not unreasonable, complaint dismissed. Sewall Paint & Glass Co. v. C. C. C. & St. L. Ry., 128 I. C. C. 247.

(4n) Class rate assessed and commodity rate subsequently established on gravel from Holliday, Kans., to Standish, Mo., found unreasonable and unduly prejudicial as compared with lower rate contemporaneously in effect to St. Joseph, Mo.; with those under distance scales prescribed in 77 I. C. C. 473 and 88 I. C. C. 1; and to extent they exceeded lower rates contemporaneously in effect from Grinter, Muncie, and Morris, Kans., competing producing points. Various other comparisons showed that rate charged and present rate were in excess of rates on sand and gravel for both interstate and intrastate hauls in same general territory of equal or greater length. Reasonable rate prescribed for future and reparation awarded. Spencer Co. v. A., T. & S. F., 128 I. C. C. 346.

(4o) Complainant attacked commodity rate charged on three cars of printing and wrapping paper, shipped June 5, July 6 and Sept. 16, 1922 from Appleton and Neenah, Wis., to Dallas, Tex., as unreasonable. Shipments moved C. & N. W., Belt, Wabash, St. L. S. W., charged $1.17 from Appleton and 98.5c from Neenah. Rate claimed 90c and 98.5c. HELD, rate of 98.5c charged on shipments of July 6 and Sept. 16, 1922 from Neenah and Appleton not unreasonable, rate charged on shipment of June 5, 1922 from Appleton unreasonable to extent it exceeded 90c, reparation awarded. Practical Drawing Co. v. C. & N. W. Ry., 128 I. C. C. 540.

(4p) Complainant attacked commodity rates charged on creosote oil, carloads, from Indianapolis, Ind., to Cincinnati, O., Louisville, Ky., St. Louis, Mo., East St. Louis, Granite City, Madison and Chicago, Ill., as unreasonable and unduly prejudicial. Commodity rates on creosote oil are a lower percentage of class rates in Illinois and southern territories than in central territory. It is pointed out that transportation conditions through central territory are substantially similar to those in Illinois territory and that conditions in southern territory are such as to warrant a higher level of rates than within central territory. The rates in Illinois and southern territories shown herein are considerably lower than those in central territory. HELD, rates from Indianapolis unreasonable to extent they exceed 14c to Cincinnati and Louisville, 17.5c to Chicago and 18.5c to St. Louis, East St. Louis, Granite City and Madison. Republic Creosoting Co. v. A. G. S. R. R., 128 I. C. C. 547.

(4q) Complainant attacked commodity rates charged on passenger automobiles, carloads, and on passenger and freight automobiles, in mixed carloads, from St. Louis, Mo., from March 19, 1922 to Dec. 9, 1923 to American Fork, Helper, Magna, Manti, Murry, Ogden, Provo, Richfield, Salt Lake City and Spanish Fork, Utah., as unreasonable and inapplicable. HELD, rates charged applicable, complaint dismissed. Chevrolet Motor Co. v. A. T. & S. F. Ry., 128 I. C. C. 638.

(4r) Complainant assailed charges on

two cars of wrought iron scrap shipped during Nov. and Dec. 1919 from Cincinnati, O., to Cleves, O., as unreasonable. Complainant, under a written contract, purchased the wrought iron scrap, from L. & N., F. O. B., L. & N. track at Cincinnati. This carrier was then under federal control. The scrap was sold on the basis of a delivered price to the Cincinnati Horseshoe & Iron Co., at Cleves. Cleves is a short distance outside of Cincinnati. One car was billed from Paris, Tenn., to Cincinnati. Complainant ordered the car reconsigned to the horseshoe company at Cleves and it was finally delivered there. No charges were made for the transportation to Cincinnati, but charges amounting to $15.06 were paid by the consignee for the movement to Cleves. The charges were made up of switching charge of 17.5c per long ton from Cincinnati to Cleves, plus a reconsignment charge of $5 and demurrage charges of $4. Later the L. & N. refunded the reconsignment and demurrage charges plus war tax, a total of $9.27, and admitted that their collection was caused by delay on their part. Director General promised to reimburse the L. & N. for the amount refunded, so this disposes of the complaint so far as that shipment was concerned. The second car was billed through from Etowah, Tenn., to the horseshoe company at Cleves. The applicable combination rate of $4.10 per ton to Cincinnati and 17.5c per long ton from Cincinnati to Cleves was charged and paid. The testimony shows that the material was purchased from the railroad administration; that it was received by the carrier at point of origin from an official of the railroad administration; and that the contract of carriage in effect called for delivery to the complainant by the railroad administration, free of transportation charges at Cincinnati. Collection of charges in excess of 17.5c per long ton was unauthorized. HELD, reparation awarded down to basis of 17.5c per long ton. Hyman Michaels Co. v. Director General, 128 I. C. C. 689.

(4s) Complainant attacked commodity rates charged on 37 cars of coal during May 1923 from Avoca, Carbondale, Olyphant and Parsons, Pa., to Fort Snelling, Minn., as unreasonable, unduly prejudicial and in violation of the Erie and D. & H. and moved over those lines and P. M. and car ferry to Milwaukee, Wis., thence C. M. & St. P. via St. Paul, Minn., and Minneapolis to destination, charged $7.34 the rate to Minneapolis and St. Paul. Fort Snelling was not named as a point to which that rate applied and defendants brought suit to collect outstanding undercharges based on the local rate of $1.22 over the C. M. & St. P. from Minneapolis to Fort Snelling. The $7.34 rate was subsequently established over route of movement. HELD, rate attacked unreasonable to extent it exceeded $7.34, reparation awarded, complaint dismissed. Hostler Coal & Lumber Co. v. P. M. Ry., 128 I. C. C. 731.

(4t) Complainant attacked as inapplicable commodity rate charged on two cars of clayed cotton bagging, in rolls, from Chickamauga, Ga., to St. Joseph, Mo., on Dec. 29, 1923 and Jan. 21, 1924 as inapplicable. Rate of 80.5c applied. Governing tariff published a joint rate of 70.5c applicable on bagging, brown cotton or clayed, in bales or rolls, when same is unbranded. HELD, applicable rate was 70.5c, shipments overcharged, complaint dismissed. Cleveland Akron Bag Co. v. C. of Ga. Ry., 128 I. C. C. 733.

(4u) Complainant attacked commodity rates on pig iron, carloads, from Roanoke, Pulaski, and East Radford, Va., on the N. & W., Jenkins, Iron Gate, Covington and Low Moor, Va., on the C. & O. and Buena Vista, Va., to Maryland, Pennslyvania, Delaware, New Jersey, New York and New England states as unreasonable and unduly prejudicial. The Virginia iron producing points named are within a comparatively close range, and the same rates apply on pig iron from all of them. To the destination territory here considered traffic originating at the furnaces served by the C. & O. moves via Potomac Yard, Va. HELD, rates attacked to Baltimore, Philadelphia, New York and Boston unreasonable to extent they exceed $3.88, $4.54, $4.87 and $5.21, respectively. Virginia Pig Iron Asso. v. C. & O. R. R., 128 I. C. C. 737.

(4v) Complainant attacked commodity rate charged on bituminous coal, carloads, from Clearfield, Meyersdale and Cumberland Piedmont districts in Pennsylvania, Maryland and West Virginia to Black Tom Pier, New York as unreasonable and unduly prejudicial. Black Tom Pier is in the upper harbor and is owned and served by the L. V. Except

from mines on the B. R. & P. complainant paid and pays a rate of $3.09 which is the rate applicable for local track delivery in Jersey City. Its competitors in upper New York harbor, operating from piers on both sides of complainant, pay a transshipment rate of $2.79 which applies on coal dumped into vessels for bunker use or for transshipment. The record is persuasive that the assailed rate was not and is not unreasonable in and of itself. HELD, assailed rate unduly prejudicial to extent it exceeeds the rates to other consignees in the upper harbor, reparation denied. Harbor Coaling Corp. v. B. & O. R. R., 128 I. C. C. 747.

(4w) Complainant attacked commodity rates charged on newsprint and wrapping paper, carloads, moving between July 5 and Dec. 19, 1922 from Camas, West Lynn, and Lebanon, Oreg., to Oregon, California, Nevada, Montana, Wyoming, Colorado, Arizona and Texas as unreasonable and unduly prejudicial to the extent they exceeded the rates subsequently established. HELD, rates charged not unreasonable or unduly prejudicial, complaint dismissed. Crown Willamette Paper Co. v. W. T. Co., 129 I. C. C. 79.

(4x) Complainant alleged that the interstate carload rates since Feb. 1, 1926 on lumber from points on the B. & A. R. R. to New England territory are unreasonable and unlawful. The rates under attack are based on rates found reasonable in New England Lumber Rates, 43 I. C. C. 641. In Oct. 1924 due to emergency in the lumber industry, defendants reduced the rates from 0.5c to 4c, and on Jan. 31, 1926 the rates were restored to the prior level. Lumber is rated sixth class in the official classification but from this territory moves on commodity rates much lower than the class basis. HELD, rates attacked not unreasonable or otherwise unlawful, complaint dismissed. Woodstock Lumber Co. v. B. & A. R. R.. 129 I. C. C. 255.

(4y) Complainants alleged that the all rail, rail water and rail and water and rail rates on finished wall paper, in carloads, from Illinois, Missouri, Pennsylvania, and New York to Dallas, and Fort Worth, Tex., were, and are, unjust and unreasonable. All rail shipments originated at York, Pa., Kansas City, Mo., Chicago, Galewood, Fordham and Joliet, Ill. Water and rail shipments originated at Brooklyn and New York and moved in vessels of S. P. to Galveston, Tex., and rail lines beyond. Rail water and rail shipments originating at New York and Philadelphia, Pa., and Brownville, Cortland and Hudson Falls, N. Y., and moved rail to New York or Philadelphia thence in vessels of S. P. to Galveston or Southern Steamship to Houston, Tex., and rail lines beyond. Commodity rates lower than class rates are in effect. Record shows that finished wall paper generally moved on fourth class. In Consolidated Southwestern Cases, 123 I. C. C. 203 the Commission prescribed reasonable maximum fourth class rates, for application in a territory of which the points here considered form a part, which are, with the exception of the rates from Kansas City and North Kansas City, higher than the rates assailed. HELD, rates assailed not unreasonable, complaint dismissed. Apex Co. v. A. & V. R. R., 129 I. C. C. 283.

(4z) Complainant attacked commodity rates charged on lard substitutes, carloads, since Dec. 2, 1922 from Greenville, Tex., to destinations in Oklahoma, Arkansas and Louisiana and to Joplin, Mo., as unreasonable. Greenville, 83 miles northeast of Fort Worth, Tex., is served by the M. K. T., L. R. & N., St. L. S. W. and T. M., charged on basis of rates equal in each instance to the rates applying from Fort Worth to the same destinations. In Texas Refining Co. v. A. & V. Ry., 32 I. C. C. 192, the Commission found that lard substitutes should take the same rates from points of origin in Texas as packing house products. HELD, rates assailed from Greenville to Arkansas, in Louisiana west of the Mississippi river and to Joplin, Mo., were and are unreasonable to the extent they exceed rates under the 1716 scale as modified, reparation awarded. Texas Refining Co. v. C. R. I. & G. Ry., 129 I. C. C. 304.

(5a) Complainant attacked commodity rates charged on liquid asphalt carloads, since April 24, 1924 from Mereaux, Destrehan, and New Orleans, La., to Mobile, Ala., as unreasonable. Liquid asphalt moves in tank cars furnished by the shipper on which the carriers pay rental, and is loaded while heated, solidifying when cool. It is not dangerous to transport and claims for loss or damage are negligible. Mereaux is 8 miles southeast of New Orleans. Destrehan is 18 miles west of New Orleans. HELD, rates attacked unreasonable to extent they ex-

ceed 14.5c from New Orleans and 16c from Mereaux and Destrehan to Mobile, reparation awarded. Continental Roofing & Mfg. Co. v. G. & S. I. Ry., 129 I. C. C. 313.

(5b) Respondents proposed the cancellation of commodity rates and the application of fifth class rates on soap and related articles, in carloads, from Missouri river points to various destinations in western trunk line territory and to Ohio river crossings and Memphis, Tenn., and between points in Illinois territory. Commodity rates on soap, in carloads, have been in effect from Kansas City to St. Paul and Minneapolis, Minn., Twin Cities. For many years, respondents have also maintained commodity rates on soap from Kansas City to many destinations in Iowa, Minnesota, and Wisconsin as well as to a few destinations in North Dakota, South Dakota, and Nebraska. Commodity rates have been in effect from Chicago and Milwaukee to St. Louis, Mo., and there are, in addition, commodity rates from those producing points to other destinations in Illinois territory and between other points in that territory. Soap is rated fifth class in official, western, and Illinois classifications and is transported at fifth class rates in central and Illinois territories, except from Chicago and Milwaukee and related points to St. Louis and related points, and from Burlington to Chicago and St. Louis and related points. Between points in old western trunk line territory, soap moves fifth class rates except from Missouri river points to the destinations in the territory involved in this case. HELD, proposed schedules have been justified except to the extent that the class rates resulting on the commodities in question in carload lots exceed 35% of the present first class rates from and to the same points. Soap and soap powder, 129 I. C. C. 392.

(5c) Respondents proposed certain changes in their carload commodity rates on scrap lead and zinc from Pittsburgh, Pa., group points to destinations in trunk line and New England territories. PENNSYLVANIA RATES. Pittsburgh is in the territory taking 60% of the Chicago-New York rates and the rate of 19c now in effect from Pittsburgh to New York on pig lead, slab zinc and scrap lead and zinc is 60% of the Chicago-New York rate of 32c. The rate from Pittsburgh to New York over the B. & O. is 23c. Pennsylvania proposed 23c to apply. These articles are rated sixth class in official but under exceptions scrap lead and zinc take 90% of sixth class. PITTSBURGH AND LAKE ERIE RAILROAD RATES. At present they take sixth class of 28.5c from Pittsburgh. A commodity rate of 23c is named but under the restriction in a reference note that rate is made inapplicable on lead and zinc and scrap lead and zinc. In the suspended schedule the restriction is eliminated as to scrap but not as to the primary metals. The result would be to make the commodity rate of 23c applicable on scrap lead and zinc and the sixth class rate of 28.5c on pig lead and slab zinc. HELD, suspended schedules justified. Scrap and zinc from Pittsburgh. 129 I. C. C. 541.

(5d) Complainants alleged that commodity rates charged on several carloads of school books from Chicago, Ill., to Dallas, Tex., and Oklahoma City, Okla., since July 15, 1923 were and are unreasonable, unlawful, unduly prejudicial. They are shipped in box cars, and the loss and damage claims are negligible, charged $1.54. Commodity rates of $1.065 and 84c were applicable on various paper articles such as paper drinking cups, school blanks or forms, including school copy books. Books, n. o. i. b. n., are rated third class whereas school blanks or forms, including school copy books, carloads, are rated fourth class. HELD, rates assailed not unreasonable, unjustly discriminatory, unduly prejudicial or otherwise unlawful, complaint dismissed. Wheeler Publishing Co. v. A. T. & S. F. Ry., 129 I. C. C. 672.

(5e) Complainant alleged commodity rates charged on bituminous coal, carloads, from Brazil-Clinton, Linton-Sullivan, Princeton and Booneville, Ind., groups to Hoopeston, Ill., were unreasonable. Original report 113 I. C. C. 606. In 102 I. C. C. 269, division 3 found not unreasonable or unduly prejudicial the rates on bituminous coal from certain mines in southern Illinois group to Hoopeston, interstate, and dismissed the complaint. HELD, rates assailed were, are and for future will be unreasonable to extent they exceed $1 from Clinton and Coal Bluff, Ind.; $1.25 from Latta, Midland, Seifert, Riley, Paxton and Sullivan, Ind.; $1.55 from Petersburg and Oakland City, Ind., $1.70 from Enos and Lincoln City, Ind., and from Harrisburg, Ledford, El Dorado, Carrier Mills, and Norris City, Ill., $2 prior to July 1, 1922

and $1.80 thereafter, reparation awarded. Illiff Bruff Chemical Co. v. C. & E. I. Ry., 132 I. C. C. 282.

(5f) Complainant alleged commodity rates on wrapping paper and paper bags from Camas, Wash., to Pendleton, Ore., and Lewiston, Ida., of 49 and 54.5c were unreasonable and unjustly discriminatory to the extent they exceeded a rate of 40c on newsprint and poster paper from Camas to certain destinations. Camas, on the north bank of the Columbia river 24 miles northeast of Portland, Oreg., is served by the S. P. & S. Pendleton is on the N. P., 260 miles east of Camas. These carriers connect at the intermediate point of Pasco, Wash. To Lewiston, in western Idaho the traffic moves over these lines to a point approximately equidistant between Pasco and Lewiston, and the Camas Prairie beyond, 355 miles. The 40c interstate rate on newsprint paper from Camas to Pendleton, and between other points, strongly relied upon by complainant, has been permitted to be canceled effective Nov. 8, 1926, following Paper between North Pacific coast and Spokane, 118 I. C. C. 123. The traffic here considered is not affected by competition such as compelled the temporary 35c intrastate rate on newsprint paper from Millwood to Seattle and Tacoma. HELD, rates assailed not unreasonable or unjustly discriminatory, complaint dismissed. Crown Willamette Paper Co. v. N. P. Ry., 132 I. C. C. 295.

(5g) Complainant alleged commodity rates charged on carloads of mine props, mine ties, and bars, shipped between Aug. 28, 1922 and May 30, 1924 from Missouri to Illinois were unreasonable. Complainant relies on Palmer v. M. P. R. R., 87 I. C. C. 622 and Collins Timber Co. v. B. & O. R. R., 102 I. C. C. 467. HELD, rates assailed unreasonable to extent they exceeded rates prescribed in Palmer supra, reparation awarded. Delano v. St. L. S. F. Ry., 132 I. C. C. 333.

(5h) Complainant alleged that the commodity rates on bituminous coal, carloads, from Dundon, W. Va., to destinations east of Cumberland, Md. eastern trunk line and New England territories and in Quebec are unreasonable, unjustly discriminatory and unduly prejudicial and also that it is denied through routes and joint rates. Widen, at which point complainants mine is located, is 18 miles from Dundon. The transportation between these points is over the Buffalo Creek & Gauley R. R., which is owned by complainant and, in connection with the B. & O. from Dundon, furnishes the only outlet for complainants coal shipments. Prior to Feb. 1920, Dundon was accorded the West Virginia district basis and the primary purpose of this complaint is to bring about the restoration of that adjustment. In character, grade and quality complainants coal is very much like the coals produced in the West Virginia-Pittsburgh-Youghiogheny, and and Westmoreland districts and competes with those coals. The record shows that in times of coal shortage the freight rate is a negligible factor. On the other hand, when demand for coal is light the freight rate is an important consideration and complainant sometimes has been compelled to absorb the difference between the rates from Dundon and lower rates from competing mines. HELD, rates assailed not unreasonable or unduly prejudicial, complaint dismissed. Elk River Coal & Lumber Co. v. B. & O. R. R., 132 I. C. C. 371.

(5i) Complainant alleged commodity rate of 66c charged on five cars of wrapping paper shipped between Dec. 26, 1924 and Oct. 17, 1925 from Bogulusa, La., to Dallas, Tex., was unreasonable. Bogalusa is on the N. O. G. N. about 71 miles north of New Orleans, La. The shipments moved over that line to New Orleans. Average distance over routes of movement 727 miles, short line distance 523 miles. The rate assailed also applied on wrapping paper to Dallas from St. Louis territory generally. On Dec. 12, 1925 the rate from Bogalusa to Dallas was reduced to 47c. HELD, rate assailed not unreasonable, complaint dismissed. Dallas Paper Co. v. T. & N. O. Ry., 132 I. C. C. 591.

(5j) Complainant alleged commodity rate of 68c charged on numerous carloads of gasoline shipped since Jan. 1, 1925 from Burkburnett, Tex., to Bluefield, W. Va., and Pearlsburg, Va., was unreasonable. Burkburnett is on the M. K. T., 14 miles north of Wichita Falls, Tex., Bluefield is on the N. & W. on the border of trunk line territory and southwestern territory and about 102 miles west of Roanoke, Va. Pearlsburg is on the N. & W. 33 miles east of Bluefield. Rate charged 68c, was a joint comodity rate composed of proportional rates to and from Vicksburg, Miss., of 17c and 51c. HELD, rates charged not un-

reasonable, complaint dismissed. Tidal Western Oil Corp. v. M. K. T. R. R., 132 I. C. C. 681.

(5k) Complainant alleged commodity rate charged on two cars of hollow building tile, one shipped from El Reno, Okla., to Spur, Tex., and the other from Wagoner, Okla., to Wellington, Tex., on May 7 and June 4, 1924 were unreasonable, unduly prejudicial, inapplicable and in violation of the fourth section. El Reno is on the Rock Island. Spur is in western Texas, and is the western terminus of the Wichita Valley. Shipment from El Reno moved over Rock Island to Waurika, Okla., and W. V. beyond, 329 miles, charged 36c, applicable rate 34.5c. In the absence of the commodity rate, a rate of 21c would have applied, constructed by the application of the socalled combination rule to the distance commodity rate of 16c from El Reno to Sagerton, Tex. and 7.5c beyond. Wagoner is about 16 miles north of Muskogee Okla., and Wellington is about 57 miles west of Altus. Shipment from Wagoner moved K. O. & G. to Denison, Tex., and M. K. T. beyond, 474 miles, charged 32c, applicable rate 33c. Under Memphis Southwestern Investigation, 77 I. C. C. 473, the rates for the distances would be 17c and 20.5c. HELD, rates charged unreasonable to extent they exceed 17c to Spur and 20.5c to Wellington, reparation awarded. Reliance Brick Co. v. K. O. & G. Ry., 132 I. C. C. 711.

(5l) Complainant alleged commodity rates charged on slack coal, carloads, shipped to Peru, Neb., from the Pittsburgh, Kas., district between Dec. 19, 1923 and Dec. 3, 1924 and to Wilber, Kas., from Pittsburgh and Arcadia, Kas., between April 24, 1923 and April 30, 1924 were unreasonable, unjustly discriminatory, and in violation of the fourth section. Points of origin are in the Pittsburg district about 140 miles south of Kansas City, Mo. Peru is on the Burlington which extends from Salem, Neb. to Nebraska City, Neb., and Wilber is on the same line which extends from Wyomore, Neb., to Crete, Neb., distances from Kansas City 155 and 215 miles. Charged $2.55 to Peru and $3.04 to Wilbur. On June 5, 1924 the rate to Omaha, Paul and Nebraska City was reduced to $2.25 and the rate to Wilbur was reduced to $2.55. On Dec. 15, 1924 the rate to Peru was likewise reduced to $2.25. These reductions were made under the adjustment prescribed in Southwestern Coal Operators Asso. v. A. W. Ry., 89 I. C. C. 73, and it was solely through oversight that the rate to Peru was not reduced on the same date as the others. HELD, rates assailed not unreasonable, except the rate of $2.55 to Peru was unreasonable between June 5, and Dec. 3, 1924 to extent it exceeded $2.25, reparation awarded. Nebraska v. C. B. & Q. R. R., 132 I. C. C. 717.

(5m) Commodity rates on cotton linters from Lakewood Station and Rome, Ga., to Chattanooga, Tenn., found unreasonable as compared with lower commodity rates from points in Mississippi to points in Tennessee for greater distances; and to extent they exceeded the contemporanous sixth-class rate which was applicable from points in Southeast to points in North Carolina, South Carolina, and Virginia; and from Carolina points and Mississippi Valley terriory to points in Alabama, Georgia, Florida, and Tennessee. Reparation awarded. Southern Cotton & Paper Co. v. A. & W. P., 129 I. C. C. 433.

(5n) Proposed cancellation of commodity rates on fluxing limestone in box cars between points in eastern trunkline territory and restriction thereof to shipments in open-top cars, found not justified. While respondents intended ground-limestone rates to become effective on this commodity in box cars by proposed cancellation, sixth-class rates would become applicable thereon. Ground-limestone rates are but 45 per cent of sixth class. Since in 112 I. C. C. 7, rates on fluxing lime were found unreasonable to the extent they exceeded 80 per cent of rates on common lime, hydrated, quick or slaked, and in 128 I. C. C. 23, increases to sixth-class rate resulting from proposal to restrict rates on fluxing limestone to shipments in box cars were found not justified, record is persuasive that rates on ground limestone will not be unreasonable for application on fluxing limestone in box cars. Fluxing Limestone, 129 I. C. C. 574.

(5o) Rates on beets and carrots with "clipped tops," in straight or mixed

carloads, from points in lower Rio Grande Valley of Texas to destinations east of Mississippi River and north of Ohio River, found not unduly prejudicial but unreasonable as compared with rates between the same and various other points for comparable distances, and to extent that factors or arbitraries east of Mississippi River exceeded rates contemporaneously applicable on same commodities "without tops." Reasonable rates prescribed for future and reparation awarded. Carfiel & Morris v. N. Y. C., 129 I. C. C. 658.

I. TEST OF STATUS.

§½. In General.

(a) Short line, in seeking a common-carrier status, contended that it was organized in the hope that upon completion of construction it would be purchased by another railroad, and that such an agreement was entered into. HELD: That a discussion of this phase of the case would serve no useful purpose for reason that such an agreement, if in fact entered into, is properly cognizable by the courts and not by the commission. American Fuel Co. v. A., T. & S. F., 123 I. C. C. 101, 109.

(b) A lumber company which owned and operated a rail road for transportation of its own products, but later extended it into an oil field and held itself out as willing to carry any freight offered under private contract, HELD, a common carrier, and subject to the jurisdiction of the Arkansas Railroad Commission, though not authorized by its charter to operate as a common carrier. Smitherman & McDonald v. Mansfield Hardwood Lumber Co., 6. Fed. (2d.) 29.

(c) When the relationship of shipper and carrier is established, there is a duty imposed by law arising out of the relation which the carrier sustains to the public, and no special contract is necessary. The Henry W. Breyer, 17 F. (2d.) 423.

(d) A "common carrier" of personal property is one who agrees for a specified compensation to transport such property from one place to another for all persons that may see fit to employ him. Gerhard & Hey, Inc., v. Cattaraugus Tanning Co., (N. Y., 1926) 150 N. E. 500.

(e) One employed by oil company to sell oil and gasoline on commission basis, and incidentally to deliver products sold, using own truck, on which employer's tank is mounted, and carrying nothing but employer's products, is not "carrier for hire," within the South Dakota law, relating to class C motor carriers. Griffin v. Murphy State Board of Railroad Com'rs. (S. D. 1927) 211 N. W. 804.

(f) Evidence that lumber company, not incorporated as a common carrier, transported passengers for hire on its line for accommodation of a separate railway company owned by it, and transported freight under contract for two companies only as a necessary part of its lumber business, HELD not to show that lumber company was a common carrier. Dawkins Lumber Co. v. L. Carpenter & Co., (Ky., 1926) 281 S. W. 1013.

(g) Existence or exercise of right of eminent domain is not essential to constitute a common carrier, if it can acquire right of way by purchase, in view of Kentucky law. Dawkins Lumber Co. v. L. Carpenter & Co., (Ky., 1926) 281 S. W. 1013.

(h) Maintenance of stations and depots is not necessary to make lumber company operating railway a common carrier. Dawkins Lumber Co. v. L. Carpenter & Co., (Ky., 1926) 281 S. W. 1013.

(i) Carriage of goods by lumber company maintaining railway only as required by contracts with two other companies does not make it a common carrier. Dawkins Lumber Co. v. L. Carpenter & Co., (Ky., 1926) 281 S. W. 1013.

(j) That railway lines maintained by lumber company are only temporary structures does not prevent them from being used for common carriage of goods. Dawkins Lumber Co. v. L. Carpenter & Co., (Ky., 1926) 281 S. W. 1013.

(k) Lumber company, possessing extensive powers to operate railway, may become common carrier, though it is not incorporated as such. Dawkins Lumber Co. v. L. Carpenter & Co., (Ky., 1926) 281 S. W. 1013.

(l) Lumber company, operating railway, is not required to receive and haul freight for others, unless it makes itself a common carrier. Dawkins Lumber Co. v. L. Carpenter & Co., (Ky., 1926) 281 S. W. 1013.

§3. Public offer to carry.

(a) The real criterion determinative of character of a carrier is right of the public to use its railroad facilities and to demand service. American Salt & Coal Co. v. C., R. I. & P., 126 I. C. C. 7, 10.

(b) To constitute one a common carrier, he must be engaged in a business necessarily involving a public interest. Gerhard & Hey, Inc., v. Cattarangus Tanning Co., (N. Y., 1926) 150 N. E. 500.

(c) One is not a "common carrier" unless he indicates to the public that he is ready and willing to do business for all that may see fit to employ him up to the capacity of his facilities. Gerhard & Hey, Inc., v. Cattarangus Tanning Co., (N. Y., 1926) 150 N. E. 500.

(d) Test of "public carrier is" whether he holds himself out as being ready and willing for hire to carry particular classes of goods for all who may desire transportation between places between which he professes to carry. State v. Washington Tug & Barge Co., (Wash., 1926) 250 Pac. 49.

(e) Whether carrier is a "public carrier" must be determined by business actually carried on, and not by secret intention or mental reservation of owners or operators. State v. Washington Tug & Barge Co., (Wash., 1926) 250 Pac. 49.

II. DETERMINATION OF STATUS.

§6½. In General.

(a) There are essential differences between a public utility and a common carrier such as a railroad, so that returns on the two classes of property are not necessarily to be the same. Rates on Hawaii Consolidated Ry., 118 I. C. C. 489, 492.

(b) Upon contention that the Ballard & Thompson, a single-track railroad connecting a coal mine with main line five miles distant, is a common carrier, HELD: As this line owns no equipment, publishes no tariffs, files no annual report with commission, and traffic handled over its line is exclusively coal traffic, it is not a common carrier but a plant facility. Moreover, an application for a certificate of public convenience and necessity for authority to become a common carrier was denied in 72 I. C. C. 644. American Fuel Co. v. A., T. & S. F., 123 I. C. C. 101, 109.

(c) The real criterion determinative of the character of a carrier is the right of the public to use its railroad facilities and to demand service. American Salt & Coal Co. v. C. R. I. & P. Ry., 126 I. C. C. 7, 10.

§7½. Who Are Common Carriers.

(a) The Cuyahoga Valley Ry. Co. found to be a common carrier subject to the act, which may lawfully participate in joint rates and have its switching charges on interstate shipments absorbed under proper tariff provision by carriers which perform the line haul. Otis Steel Co. v. C. V., 109 I. C. C. 238.

(b) Upon contention that the Ballard & Thompson, a single-track railroad connecting a coal mine with main line 5 miles distant, is a common carrier, HELD: As this line owns no equipment, publishes no tariffs, files no annual report with commission, and traffic handled over its line is exclusively coal traffic, it it not a common carrier but a plant facility. Moreover, an application for a certificate of public convenience and necessity for authority to become a common carrier was denied in 72 I. C. C. 644. American Fuel Co. v. A., T. & S. F., 123 I. C. C. 101, 109.

IV. ALLOWANCES.

§9. In General.

See Allowances.

(a) Divisions of through rates accorded certain short lines in lower Mississippi Valley by Illinois Central and other carriers on coal moving from Illinois and Kentucky districts, found not unlawful as compared with divisions accorded such short lines by carriers moving similar traffic from Birmingham district of Alabama. Illinois Central reserves same or about same amount of through rate at common junction points as is reserved by carriers serving, Alabama mines, and as long as this basis of equality is maintained, and divisions of the Illinois Central are not so low as to throw a burden upon other traffic, and weak short lines are beneficiaries of a liberal policy in respect of divisions, there is no undue prejudice or discrimination. Alabama Mining Institute v. I. C., 109 I. C. C. 740, 752, 755.

(b) Complainant alleged that certain agreements made by defendant Hutchinson & Northern Ry. with other defendants, whereby the former assesses switching charges at Hutchinson, Kas., of $4.25 and $5.25 per car, which are absorbed by the other defendants, constitutes an unlawful device by which a rebate was and is made on interstate shipments of salt from the plant of the Carey Salt Co. at Hutchinson, and that higher rates are thereby charged complainant on its salt shipped over the lines of the same line haul carriers, resulting in unjust discrimination and undue prejudice, and also that the switching charges are unreasonable. Complainant and Carey Salt Co. are competitors in the sale of salt. The Hutchinson & Northern and the Carey Salt Co. are owned by the same interests. The H. & N. serves the Carey Salt Co., but not complainant. No evidence was presented upon the issue of unreasonableness of the switching charges. These charges are the outgrowth of a conference between the H. & N. and M. P., Santa Fe and C. R. I. & P., the connecting line haul carriers and the latter carriers agreed to absorb those charges. This is the agreement referred to in the complaint and is embodied in the tariffs. The case resolves itself primarily into the question whether the H. & N. was and is a common carrier and may have its charges as such absorbed by line haul connections. The H. & N. operates a line of railroad extending from a point 1 mile east of the eastern boundary of Hutchinson in a general westerly direction to the junction with the tracks of the M. P. a distance of 4.731 miles. It appears that an occasional movement for individual shippers has been handled by the H. & N. and that it is willing and holds itself out to move traffic for any and all shippers. Several team tracks have been set aside for the use of the public and over these tracks shipments for independent shippers have been delivered. The record leaves no doubt that the H. & N. has held and is holding itself out as a common carrier and that the public has demanded, and has a right to demand, service from it. HELD, H. & N. was and is a common carrier engaged in interstate commerce, and that the absorption of its switching charges as alleged was not and is not unjustly discriminatory or unduly prejudicial, complaint dismissed. American Salt & Coal Co. v. C. R. I. & P. Ry., 126 I. C. C. 7.

(c) Absorption by trunk-line carriers of switching charges of Hutchinson & Northern Ry., at Hutchinson, Kans., on salt shipments, found not unjustly discriminatory or unduly prejudicial. Hutchinson & Northern is a common carrier engaged in interstate commerce; files its tariffs and reports with the Kansas Public Utilities Commission and with this commission; is recognized by connecting lines as a common carrier, and as such may have its charges absorbed by line-haul connections. American Salt & Coal Co. v. C., R. I. & P., 126 I. C. C. 7.

V. CONTROL AND REGULATION.

See Control and Regulation.

§10. In General.

(a) Where a line of railroad is not a common carrier, but a plant facility, commission is without jurisdiction to prescribe rates from a point thereon or compel common carriers subject to commission's jurisdiction to perform transportation service over that line or grant an allowance for performance of that service. American Fuel Co. v. A., T. & S. F., 123 I. C. C. 101, 112.

VI. RELATION TO TRUNK LINES.

§11. In General.

(a) Refusal of carriers to pay interest on complainant's investment in a privately owned or plant-facility track

does not constitute a violation of the act. No such interest is paid to owners of other private lines in same district, and the fact that carriers have purchased and now own certain branch lines which formerly had a similar status is not sufficient to bring this phase of the complaint within the purview of the law administered by commission. American Fuel Co. v. A., T. & S. F., 123 I. C. C. 101, 113.

COMPARATIVE RATES

II. REASONABLENESS OF CHARGES.

See Reasonableness of Rates.

(a) Upon contention of port interests that as many interior shippers of cotton are stockholders in interior compress companies, profits from carriers' compression allowance gives them an unreasonable and unlawful advantage over port shippers and compress companies, and that such companies render services to interior shippers either free or at less than reasonable charges, HELD: Since selection of compress point rests entirely with carriers, shippers whether stockholders or not can secure no favor or advantage not accorded any other shipper. If they direct carriers to compress their cotton at a point beyond the first compress point in route, they must not only bear compression charge but are assessed a higher rate on the uncompressed cotton. Prior reports 77 I. C. C. 388; 100 I. C. C. 159. Rates on Cotton to Gulf Ports, 123 I. C. C. 685, 700, 701.

I. ACTIONS.

§1. In General.

See Actions at Law; Discrimination §16; Reparation §23.

(a) It is a familiar principle of equity jurisprudence that equity courts alone have power to reform contracts, and that this power is exercisable only in the case of fraud or mutual mistake. However, this equitable principle applies only to private contracts, of concern only to parties thereto. But other considerations enter into a contract, impressed with

public interest, entered into between carriers or between them and a State or municipality, provisions of which encroach upon latent or exerted authority of Congress under commerce clause of the Constitution. No such contract can be placed beyond the reach of a competent exercise of such authority merely by inclusion therein or relation thereto of outside interests not themselves subject to the act, however cautiously the power should be exercised in such cases. Nor does fact that franchise grants are among mutual convenants make it immune, as was settled in New York v. U. S., 257 U. S. 591. M.-K.-T. v. K. C. T., 104 I. C. C. 203, 222.

II. APPEAL.

§6. In General.

(a) Where freight charges claimed by plaintiff were made up by adding together balances due on various shipments, none of which were within jurisdiction of lower court, but complaint stated total as one debt, appellate court must assume that parties treated account as continuing one and debt due at any time as total of various charges that had been incurred. New York, N. H. & H. R. Co. v. Salter, (Conn., 1926) 134 Atl. 220.

(b) Reasonableness of rates and charges in interstate commerce cannot be considered by Appellate Division without preliminary resort to Interstate Commerce Commission. Erie R. Co., v. F. Kreser & Son Co., (1926) 215 N. Y. S. 576.

(c) Where defendant, in railroad's action to collect special tariff, tried by court without jury, under the Federal Law did not present to trial court any question of law as to whether there was any evidence to support judgment for plaintiff, HELD, such question was not reviewable by Circuit Court of Appeals. Oyler v. Cleveland, C. C. & St. L. Ry. Co., 16 Fed. (2d.) 455.

(d) In railroad's action to collect special tariff, tried without jury, question of exclusive preliminary jurisdiction of Interstate Commerce Commission HELD reviewable on error, where question was raised by bill of exceptions containing all the evidence, though there was no special finding. Oyler v. Cleveland, C. C. & St. L. Ry. Co., 16 Fed. (2d.) 455.

(e) In appellate court, evidence adduced before Interstate Commerce Commission in hearing as to railroad's overcharge, if offered on trial in District Court in action on Commission's reparation order, and any additional evidence properly received, may be considered in support of or to correct findings stated in order. Krauss Bros. Lumber Co. v. Mellon, 18 Fed. (2d.) 369.

(f) Under the Federal Law, suits to review order of Interstate Commerce Commission authorizing Louisiana railroad corporations to lease their lines to Texas corporation, made on petition of Texas corporation domiciled in Southern district of Texas, must be brought in the federal District Court in district in which Texas railroad resides, and neither state nor federal courts in Louisiana have jurisdiction. State of Louisiana v. Morgan's Louisiana & T. R. & S. S. Co., 18 Fed. (2d.) 645.

III. UNITED STATES COURTS.

§6½. Jurisdiction in General.

See Commodities Clause (a).

(a) Federal courts have jurisdiction of suits by citizens of one state to enjoin officers of another from enforcing unconstitutional statutes, such not being suits against state, forbidden by Const. Amend. 11. Wrigley Pharmaceutical Co. v. Cameron, 16 Fed. (2d.) 290.

(b) Suit by lumber company, to recover of railroad penalty exacted for detention of car containing interstate shipment of lumber awaiting reconsignment being one arising under a law regulating commerce, is within jurisdiction of District Court, under Judicial Code, § 24, par. 8 (Comp. St. § 991), irrespective of amount involved. Turner, Dennis & Lowry Lumber Co. v. Chicago, M. & St. Paul Ry. Co., 46 Sup. Ct. 530.

§7. Concurrent Jurisdiction.

See Interstate Commerce Commission §2, §16.

(a) Upon contention that filing of suit in district court constituted an election of remedies under section 9 of the act and requires dimissal of the case before commission, HELD: Instant proceeding was filed prior to and was still pending at time of filing suit in district court, and would certainly have been considered such an election of remedies as to

result in dismissal of the suit in court had that action come on for hearing. Filing in the court was, therefore, a practical nullity from the beginning and case has since been dismissed. Burns & Knapp v. B. S. & K. R., 126 I. C. C. 410, 411, 412.

IV. UNITED STATES SUPREME COURT.

§10. In General.

(a) It is not province of the Supreme Court to consider the weight of evidence before the Interstate Commerce Commission, the soundness of its reason by which its conclusions are reached, or whether its findings are consistent with those made in other cases. Virginian Ry. Co. v. United States. United States v. Virginian Ry. Co., 47 Sup. Ct. 222.

V. STATE COURTS.

See Actions at Law; Discrimination §16; Interstate Commerce Commission §2; Loss and Damage §5; Overcharges; State Rates and Regulation; Undercharges §7½; War Legislation.

§11. In General.

(a) Action for total amount of freight charges on various shipments HELD within jurisdiction of lower court, though no individual shipment was large enough, where parties treated account as continuing one and debt due at any time as total of various charges that had been incurred. New York, N. H. & H. R. Co. v. Salter, (Conn., 1926) 134 Atl. 220.

(b) Remedy which must be pursued in state courts alone is not adequate, where plaintiff has constitutional right to resort to federal courts. Standard Oil Co. of Ky. v. Atlantic Coast Line R. Co., 13 Fed. (2d) 633.

(c) State court is without jurisdiction to set aside, modify or nullify finding and order of Interstate Commerce Commission, since such jurisdiction is vested solely in federal courts, in view of Judicial Code, §§ 208, 211 (U. S. Comp. St. §§ 997, 1004), and Act Cong. Oct 22, 1913 (38 Stat. 219). St. Louis Connecting R. Co., v. Blumberg, (Ill., 1927) 156 N. E. 298, 299.

(d) If there be no issue of fact involved in the charge or controversy between the shipper and carrier as to its reasonableness or unreasonableness, the question is one for trial by a court of competent jurisdiction, and not a question for the Interstate Commerce Commission, as the function of the latter is to try and settle issues or questions of fact which relate to the reasonableness or unreasonableness of the charge or service. Chicago, R. I. & P. Ry. Co. v. Howe-McCiertain Coal & Coke Co., (Okla., 1926) 247 Pac. 986.

(e) State Court has jurisdiction of action against carrier to recover overcharge on freight shipment, involving only question of fact relative to lawful and prescribed commission rate and not the reasonableness of the rate or an administrative discretion, without first resorting to the Interstate Commerce Commission. W. L. Shepherd Lumber Co. v. Atlantic Coast Line R. Co., (Ala., 1927) 112 So. 333.

(f) In absence of evidence of custom or usage giving it a different meaning, "rate" HELD used in Interstate Commerce Act, and carrier's tariffs, in its common meaning as a proportional estimation according to some standard, and not in any peculiar sense, such as to deprive court of jurisdiction of action to recover overcharges. Lothrop v. Spokane, P. & S. Ry. Co., 10 Fed. (2d.) 225. Same v. Oregon-Washington R. & Nav. Co., 10 Fed. (2d) 225. Same v. Southern Pac. Co., 10 Fed. (2d.) 225.

(g) In action for excessive demurrage charges paid, receipted freight bills of connecting carrier, by which goods were shipped to reconsignment point after delay for which excessive charges were made, HELD admissible as best evidence, where identified by officer of plaintiff company as originals paid by it. Buschow Lumber Co. v. Union Pac. R. Co., (Mo. 1925), 276 S. W. 409.

(h) Consignee of interstate shipment being entitled to sue in state court for excessive demurrage charges, in view of proviso in Interstate Commerce Act, § 22, saving existing remedies, court did not err in striking from answer allegations as to reconsignment tariffs set up as defense, on theory that rulings of Interstate Commerce Commission were controlling and prevented defendant from accepting and acting on reconsignment order without subjecting itself to penalties of the act. Buschow

Lumber Co. v. Union Pac. R. Co., (Mo. 1925), 276 S. W. 409.

(i) In view of proviso in Interstate Commerce Act, § 22, saving existing remedies, section 9 of such act does not supersede jurisdiction of state courts in matters not calling for exercise of administrative power and discretion of Interstate Commerce Commission, or relating to subject of which federal courts have exclusive jurisdiction. Buschow Lumber Co. v. Union Pac. R. Co., (Mo. 1925), 276 S. W. 409.

VI. PRACTICE AND EVIDENCE.

See Evidence; Procedure Before Commission; Reparation §23.

§12. In General.

(a) Plaintiff submitted to defendant a proposed statement of facts as a basis for settlement of accounts relating to demurrage charges. Defendant assented to the facts, subject to the proviso that plaintiff, by likewise assenting, would waive certain other claims, and asked if this was what plaintiff wished to do. Plaintiff never replied, and dropped the whole matter. HELD that, as the stipulation was not unqualifiedly assented to by both parties, it was ineffective as an admission of facts. Lehigh Valley R. Co., v. Maas & Waldstein Co., (N. J., 1926) 131 Atl. 884.

(b) District Court of certain circuit is bound by rulings of Circuit Court of Appeals of such circuit as to validity of exclusive franchise to operate interstate ferry. McNeily v. Mayor and Board of Alderman of Town of Vidalia, 6 Fed. (2d.) 21.

(c) Decisions of Interstate Commerce Commission relating to construction of tariffs are helpful guidance to courts in arriving at correct conclusions in such matters. Empire Refining Co. v. Davis, Director General 6 Fed. (2d.) 305.

(d) Court is not charged with duty, and has not power, to fix value of railroad property on which rates are authorized to be fixed by Interstate Commerce Commission, but only to suspend, enjoin, or annul action of Commission itself in proper cases. Los Angeles & S. L. R. Co., v. United States, (Interstate Commerce Commission, Interveners) 8 Fed. (2d.) 747.

(e) Generally remedy in equity as to matters of complicated accounting is regarded as more adequate and efficient than remedy at law. Standard Oil Co., of Ky. v. Atlantic Coast Line R. Co., 13 Fed. (2d.) 633.

(f) Equity HELD to have jurisdiction of cause of action for recovery of excess charges on freight shipments in Florida by nonresident corporation against nonresident railroad company. Standard Oil Co., of Ky. v. Atlantic Coast Line R. Co., 13 Fed. (2d.) 633.

(g) Common-law action permitted in Florida for recovery of excess of freight charges over just and reasonable rates does not preclude equity jurisdiction of suit to recover excess over rates fixed by railroad commissioners, since plaintiff would be required to establish that rates charged were unreasonable, and complicated accounting would be involved, where shipments were numerous. Standard Oil Co. of Ky. v. Atlantic Coast Line R. Co., 13 Fed. (2d.) 633.

(h) Under Judicial Code, § 24 (Comp. St. § 991), giving District Courts jurisdiction of "all suits and proceedings arising under any law regulating commerce," such court has jurisdiction of an action to recover freight on an interstate shipment, without regard to the amount involved. Gulf, C. & S. F. Ry. Co., v. Beatty Brokerage Co., 13 Fed. (2d.) 950.

(i) Notice of claims against railroad is insufficient to destroy any estoppel established by laches of shipper, but may be considered as an element bearing on question of laches. Spiller v. St. Louis & S. H. R. Co., 14 Fed. (2d.) 284.

(j) General appearance of Director General of Railroads in actions to enforce reparation awards of Interstate Commerce Commission constituted general appearance as to all carriers involved, and could not be limited by him to certain carriers. World Pub. Co., v. Davis, Agent; Tulsa Paper Co., v. Same. Democrat Printing Co., v. Same. 16 Fed. (2d) 130.

(k) Director General of Railroads, by filing answers and other pleadings in actions to enforce reparation awards of Interstate Commerce Commission, made general appearance, and cases were properly before court, notwithstanding defective service of process on him. World Pub. Co., v. Davis, Agent; Tulsa Paper Co., v. Same. Democrat Printing Co., v. Same. 16 Fed. (2d) 130.

(l) Remedy at law, which will preclude bringing of suit in federal court of equity, must be remedy on law side of federal court, and not remedy in state courts. Wrigley Pharmaceutical Co., v. Cameron, 16 Fed. (2d.) 290.

(m) To defeat jurisdiction of equity on ground of adequate remedy at law, remedy at law must be as complete, practical, and efficient to ends of justice, and its prompt administration, as remedy in equity. Wrigley Pharmaceutical Co. v. Cameron, 16 Fed. (2d.) 290.

(n) Trial court's determination on facts not in serious dispute that tug company was public carrier HELD not a finding of fact which Supreme Court would not disturb. State v. Washington Tug & Barge Co., (Wash. 1926) 250 Pac. 49.

(o) Rules of Interstate Commerce Commission, which have force and effect of public statutes, are not required to be pleaded. Houston Belt & Terminal Ry. Co., v. Davis, (Tex., 1925) 273 S. W. 676, 677.

(p) Though, under U. S. Comp. St. § 8584(12), and Ky. St. §§ 1635-1637, certified copies of carrier's tariffs and freight classifications must be received as evidence, they are not evidence until offered, and attaching them to answer, does not prevent plaintiff from denying allegations of answer, in view of Civ. Code Prac. §§ 120, 128. Gardner v. Louisville & N. R. Co., (Ky., 1926) 279 S. W. 947.

(q) Court cannot substitute its judgment for that of Interstate Commerce Commission finding that similar circumstances and conditions prevailed as basis for order to remove discrimination against electric railroad. Chicago, I. & L. Ry. Co. v. United States, 46 Sup. Ct. 226.

(r) Effect of order of Interstate Commerce Commission dismissing pending proceeding must be determined by its terms, unless and until modified by formal action of the Commission, and cannot be affected by informal declaration of member therof. Minneapolis & St. L. R. Co. v. Peoria & P. U. Ry. Co., 46 Sup. Ct. 402.

(s) Jurisdiction of lower court depends on facts existing when suit was brought, and appeal from decree dismissing for want of jurisdiction, suit to enforce compliance with order of Interstate Commerce Commission not in fact in force will not be remanded, with instructions to allow filing of supplemental bill in nature of bill of review, because of matters arising after filing of record in appellate court, nor will court treat record as supplemented by statement of facts of such later occurrences. Minneapolis & St. L. R. Co. v. Peoria & P. U. Ry. Co., 46 Sup. Ct. 402.

(t) Reasons for decree of federal court, restraining enforcement of orders of state authorities, should be fully disclosed by an opinion of the court. Arkansas Railroad Commission v. Chicago R. I. & P. R. Co., 47 Sup. Ct. 724.

(u) Shipper may not, in suing carrier, ignore the Hepburn Act, where its terms apply, and bring his suit at common law. Williams v. New York, P. & N. R. Co., 11 Fed. (2d.) 363.

(v) While order of Interstate Commerce Commission is necessary in most instances before recovery of railroad's overcharges may be had, it is not conclusive, but only prima facie evidence of facts therein stated, establishing rebuttable presumption. Krauss Bros. Lumber Co. v. Mellon, 18 Fed. (2d.) 369.

(w) Carrier cannot plead strike as reason for failure to carry out contract of carriage and diversion order, so as to entitle it to charge demurrage and war tax for resulting delay in transportation; there being presumption of negligence, entitling shipper to damages, in absence of legal explanation or excuses. Buschow Lumber Co. v. Union Pac. R. Co., (Mo. 1925), 276 S. W. 409.

§14. Injunctions.

See Injunctions.

(a) Suit in federal court to enjoin state officers from enforcing law HELD premature, where court could not determine that intention of state authorities was to undertake direct interference with interstate commerce. Wrigley Pharmaceutical Co., v. Cameron, 16 Fed. (2d.) 290.

(b) Citizens of another state HELD entitled to maintain bill in equity to restrain state officers from enforcing provisions of Pennsylvania Securities Act (Pa. St. Supp. 1924, §§ 19867a1-19867-

a36), as not having adequate remedy at law. Wrigley Pharmaceutical Co. v. Cameron, 16 Fed. (2d.) 290.

(c) Notwithstanding Const. Amend. 11, suit by citizens of another state may be prosecuted against state officer to enjoin enforcement of an unconstitutional enactment, or illegal application of such enactment, by officers of state. Wrigley Pharmaceutical Co. v. Cameron 16 Fed. (2d) 290.

(d) In suit, under Transportation Act Feb. 28, 1920, §402, par. 20 (Comp. St. Ann. Supp. 1923, § 8563), to enjoin a railroad's construction of an alleged "extension" of its line without the certificate of public convenience and necessity required by paragraph 18, on denial by defendant that line is an extension, court may proceed to determine such fact essential to the cause of action, and is not required to dismiss for want of jurisdiction, or postpone pending determination by Interstate Commerce Commission of that question. Texas & P. Ry. Co., v. Gulf, C. & S. F. Ry. Co., 46 Sup. Ct. 263.

(e) In suit to enjoin enforcement and set aside in part order of Interstate Commerce Commission, where all evidence before Commission is introduced in trial court and in substance incorporated in record on appeal, Supreme Court must consider objections that essential findings were not made, and that essential findings made were not supported by evidence. State of Colorado v. United States, 46 Sup. Ct. 452.

(f) In suit to enjoin enforcement of order of Interstate Commerce Commission, force and effect of a decree of a federal court dismissing bill and dissolving interlocutory injunction is not suspended by an appeal to the Supreme Court, even if a supersedeas be allowed. Virginian Ry. Co., v. United States. United States v. Virginian Ry. Co., 47 Sup. Ct. 222.

(g) Injunction in terms, dissolved by decree dismissing suit of which has expired by limitation cannot be revived to take effect during pendency of appeal, except by a new exercise of power by a court having the authority. Virginian Ry. Co., v. United States. United States v. Virginian Ry. Co., 47 Sup. Ct. 222.

(h) Under Act Oct. 22, 1913, c. 32, 38 Stat. 208, 220, and in view of Judicial Code, § 266 (Comp. St. § 1243), and Act June 26, 1906, § 5 (Comp. St. § 8584), District Court, in suit to restrain enforcement of order of Interstate Commerce Commission, has the power to stay enforcement of Commission's order pending appeal from decree dismissing suit. Virginian Ry. Co., v. United States. United States v. Virginian Ry. Co., 47 Sup. Ct. Ct. 222.

(i) The Supreme Court, or a justice thereof, has power to stay enforcement of order of Interstate Commerce Commission pending appeal from decree dismissing suit to enjoin enforcement. Virginian Ry. Co., v. United States. United States v. Virginia Ry. Co., 47 Sup. Ct. 222.

(j) Disregard of requirement of U. S. C. tit. 28, § 383 (Comp. St. § 1243c), to effect that every order for an injunction shall set forth reasons for issuance thereof, does not necessarily render an interlocutory decree void. Lawrence v. St. Louis-San Francisco Ry. Co., 47 Sup. Ct. 720.

(k) U. S. C. tit. 28, § 381 (Comp. St. 1243a), providing that temporary restraining order shall define injury and state why it was irreparable, or why order was granted without notice, HELD applicable to suits brought under Judicial Code, 266, as amended (Comp. St. § 1243), requiring applications for interlocutory injunctions affecting the state statutes to be heard before three judges. Lawrence v. St. Louis-San Francisco Ry. Co., 47 Sup. Ct. 720.

(l) Injunction HELD erroneously issued, setting aside order of Arkansas Railroad Commission suspending for examination intrastate commodity tariff, filed by railroad on theory that Interstate Commerce Commission had found existing intrastate class and commodity tariff discriminated unjustly against interstate commerce, where such commission considered propriety of ordering higher rates, but refused to so order. Arkansas Railroad Commission v. Chicago, R. I. & P. R. Co., 47 Sup. Ct. 724.

(m) Suits in state courts to enjoin domestic railroad corporations from leasing their lines to foreign corporations because of possible violation of Louisiana law, commenced by state after application to Interstate Commerce Commission for authority to make leases was made, HELD to involve controversy under laws of United States, removable to federal District Court where leases were not to be effective until approved by Commission,

notwithstanding state is not a citizen, as respects removal for diversity of citizenship. State of Louisiana v. Morgan's Louisiana & T. R. & S. S. Co., 18 Fed. (2d.) 645. Same v. Franklin & A. Ry. Co., 18 Fed. (2d.) 645. Same v. Lake Charles & N. R. Co., 18 Fed. (2d.) 645. State of Louisiana v. Louisiana Western R. Co. 18 Fed. (2d.) 645.

(n) Injunction of state court restraining domestic railroad corporations from leasing their lines to a foreign corporation conflicts with order of Interstate Commerce Commission authorizing such leases, even if order authorizing leases is permissive only, and not mandatory, and involves power of Commission and legality of its order, determination of which is vested in federal courts, and in which United States is necessary party. State of Louisiana v. Morgan's Louisiana & T. R. & S. S. Co., 18 Fed. (2d.) 645. Same v. Franklin & A. Ry. Co., 18 Fed. (2d.) 645. Same v. Lake Charles & N. R. Co., 18 Fed. (2d.) 645. State of Louisiana v. Louisiana Western R. Co., 18 Fed. (2d.) 645.

CRATE ICING

See Refrigeration.

(a) Upon contention that assessment of commodity rates on top ice in lettuce crates was unjustly discriminatory and unduly prejudicial to shippers of vegetables and unduly preferential of shippers of packing-house products, fresh meats, and analogous commodities in that tariffs provide for free transportation of ice and salt for preservation of latter commodities, HELD: Vegetables are not sold in competition with fresh meats and fish and transportation conditions surrounding the two are dissimilar. Moreover, mere showing that a practice exists with respect to transportation of ice with shipments of certain commodities which differs from that applicable to transportation of ice with lettuce, is not sufficient to establish unjust discrimination or undue prejudice. Hulsey-Bessent Co. v. D. & R. G. W., 118 I. C. C. 707, 709.

CREDIT ACCOUNT

See Crimes §3; Discrimination §5; Evidence §19.

(a) Complainant alleged that refusal of defendant to accept a carload of watermelons at Barnwell S. C., for transportation to Potomac Yard, Va., without the prepayment of freight charges as published in the tariff was unlawful and unjustly discriminatory. A mail carrier at Barnwell, tendered a carload of watermelons to defendant at that station for billing to Potomac Yard, charges collect, complainant to be named as consignor and consignee. The shipment was refused on that date because the records at Barnwell did not show that the required bond had been furnished. On the following day defendants agent learned that the bond had been filed, and the shipment was again tendered to him, but he refused to accept it, charges collect, because Harris' authority to ship on complainants bond was not satisfactory. The application for the bond, the bond itself, and the tariff specifically set forth that the privilege of shipping watermelons "collect" is subject to the carriers right to require prepayment of the freight charges at any time. The right of a carrier to demand prepayment of charges is well settled. The record indicates that the agent at Barnwell had reason to believe that it was not unusual for unauthorized persons to attempt to ship on bonds of other parties, and that he had been instructed to be cautious in accepting shipments. The determination of what constitutes sufficient evidence of authority must necessarily be left to the sound discretion of agents at points of origin unless shippers take the precaution to have the agents advised before tender of the shipments that the persons tendering them are authorized to ship on their bonds. Clearly it was not the abuse of discretion on the part of the agent to refuse to accept the telegram presented by Harris as a general authority to ship watermelons on complainants bond. There is no evidence of record indicating that the agent acted arbitrarily. On the contrary, he appears to have acted in good faith. HELD, complaint dismissed. Edgerton & Beers, v. A. C. L. R. R., 126 I. C. C. 422.

I. THE ELKINS ACT.

See Elkins Act.

§2. Construction.

(a) Administrative rulings cannot add to terms of an act of Congress and make conduct criminal which such laws leave untouched. United States v. Zenith Radio Corporation, 12 Fed. (2d.) 614.

VI. REBATING.

A. Elements of Offense.

§7. In General.

See Allowances VII; Crimes §18; Discrimination §5; Evidence §48; Water Carriers II.

(a) Grain elevators, receiving export wheat from lake vessels, and thereafter loading it into railroad cars as part of through shipment which receive compensation for such service from the carrier, violate Elkins Act if they in turn rebate or refund to consignees a part of the elevating charge so collected, though there be no connivance or collusion between elevators and carriers; the act being applicable to "any person or corporation." United States v. Spencer Kellogg & Sons, Inc., 12 Fed. (2d.) 612. Same v. Great Eastern Elevator Corp., 12 Fed (2d.) 612. Same v. Buffalo Elevating Co., 12 Fed. (2d.) 612.

(b) A railroad company was required by city ordinance to elevate its tracks from 12 to 15 feet to avoid grade crossings, and manufacturers and other shippers in interstate commerce, who had built plants with reference to the old grade, some on ground leased from the company and some not, made claims for damages because of the change. On advice of competent counsel that it was probably liable for damages, the company compromised and settled all claims, paying as much as $50,000 to one claimant, who was not a lessee. HELD that, under such facts, the settlements could not be considered a device

to indirectly grant concessions on freight rates to its tenants, in violation of Elkins Act. United States v. Northern Pac. Ry. Co., 18 Fed. (2d.) 299.

(c) A railroad company leased sites on its unoccupied right of way for buildings to be erected by manufacturers and others who were shippers in interstate commerce. The leases were for long terms, the rentals being based on a valuation of the ground, and provided for revaluation at the end of 10 years and at intervals of five years thereafter. HELD that, after the 10 years had expired or was about to expire, and before any revaluations had been made, the United States could not maintain a suit against the company and certain of its tenants under Elkins Act, § 3 to compel discontinuance of the granting of concessions in rates to the tenants, and discrimination against other shippers, alleged to arise from the device of leasing at substantially less than fair and reasonable rentals; the court being without jurisdiction to grant relief with respect to the 10-year period which had passed, or to direct what future rentals shall be. United States v. Northern Pac. Ry. Co., 18 Fed. (2d.) 299.

VII. INDICTMENT.

A. Charging Elements of Offense.

§17. In General.

See Allowances VII; Discrimination §5; Evidence §48; Water Carriers II.

(a) Indictment under Criminal Code, § 37 (Comp. St. § 10201), for conspiracy to assault or interfere with employee of Bureau of Animal Industry of Agricultural Department in execution of duties, denounced by section 62 (Comp. St. § 10230), need not allege that the cattle being dipped by employees were subject-matter of interstate commerce; it being sufficient to describe generally that they were performing their duties under Act May 29, 1884 (23 Stat. 31), in supervision and dipping of cattle, without further definition. Thornton v. United States, 46 Sup. Ct. 585.

(b) Indictment under Criminal Code, § 37 (Comp. St. 10201), for conspiracy to commit offense denounced in section 62 (Comp. St. § 10230), by assaulting or interfering with employees of Bureau of Animal Industry of Agricultural Department in execution of duties, need not allege that regulations of Secretary of Agriculture for suppression and extirpation of disease among live stock were certified to executive authority of state and accepted, since under provisions of Act May 29, 1884 (23 Stat. 31), Act Feb. 9, 1889 (Comp. St. § 789 et seq.), Act Feb. 2, 1903 (Comp. St. §§ 8698-8700), and Act March 3, 1905 (Comp. St. § 8701 et seq.), authority of Secretary of Agriculture to direct employees of Bubureau of Animal Industry to engage in quarantine measures and inspection of animals is not limited to cases where there is co-operation by the United States and state authorities. Thornton v. United States, 46 Sup. Ct. 585.

B. Joinder of Defendants.

§24. Principal and Agents.

(a). Under Elkins Act, § 1, as amended by Hepburn Act, § 2 (Comp. St. § 8597), declaring it unlawful to receive any concession in respect to the transportation of property in interstate commerce whereby any advantage is given or discrimination practiced, guilty knowledge of carrier is not necessary to offense, and coal company, which, by misrepresentation obtained preference in coal shipments to which it was not entitled under Interstate Commerce Commission's order issued under Transportation Act 1920, § 402, par. 15 (Comp. St. Ann. Supp. 1923, § 8563), was guilty, though no collusion between it and carrier existed. United States v. P. Koenig Coal Co., 46 Sup. Ct. 392.

VIII. DEFENSES.

See Courts §2.

§26½. In General.

(a) Delivery of coal to common carrier, consigned to purchasers outside state, or sale and delivery thereof to another corporation in state, which sold and shipped it to purchasers outside state, would not be in violation of Hepburn Act. Sisters of Providence of St. Mary's of the Woods v. Lower Vein Coal Co., (Ind. 1926) 154 N. E. 659, 660.

XII. ALLIED OFFENSES.

§34. In General.

See Anti-Trust Act.

(a) Indictment, under section 10 of

Interstate Commerce Act Feb. 4, 1887, as amended (Comp. St. § 8574), of employee of Pullman Company for accepting less than legal fare for transportation between points over three railroads, HELD not subject to charge of duplicity, notwithstanding fare involved service of transportation and sleeping car accommodations; service rendered being a single one, involving several elements for which a certain specific rate had been prescribed. United States v. Estes, 6 Fed. (2d) 902. Same v. Kinnett, 6 Fed. (2d) 902.

(b) Indictment, under section 10 of Interstate Commerce Act Feb. 4, 1887, as amended (Comp. St. § 8574), of agent of Pullman Company for accepting less than legal rate for transportation in sleeping car, HELD not required to allege that accused was employed by railroad companies transporting the sleeping cars, or state the exact relations between defendant and carriers or the proportions of fares collected chargeable to transportation, sleeping car accommodations, and surcharge. United States v. Estes, 6 Fed. (2d) 902; Same v. Kinnett, 6 Fed. (2d) 902.

(c) Violation by carrier's agent of section 10 of Interstate Commerce Act Feb. 4, 1887, as amended (Comp. St. § 8574), by the transportation of passenger for less than legal fare, HELD not to require collusion between carrier and accused agent; purpose of act being to establish a reasonable and uniform rate for service, making all other rates unlawful and any violation a misdemeanor, irrespective of any collusion. United States v. Estes, 6 Fed. (2d) 902; Same v. Kinnett, 6 Fed. (2d) 902.

(d) Open Port Law 1925 (Pen. Code 1925, arts. 1904-1100), making it felony to use physical violence or threats thereof to interfere with any person engaged in movement of commerce, HELD violative of Fourteenth Amendment of federal Constitution as class legislation for failure of article 1094, defining nature of crime to make specific intent to hinder commerce essential element thereof, as act provides penalty for ordinary assult on employee of common carriers in excess of penalty for assault on other classes of persons. Ratcliff v. State, (Tex., 1926) 289 S. W. 1072.

(e) Under Elkins Act, § 1, as amended by Hepburn Act, § 2 (Comp. St. § 8597), declaring it unlawful to receive any concession in respect to the transportation of property in interstate commerce whereby any advantage is given or discrimination practiced, it is not necessary that preference in distribution of cars under order of Interstate Commerce Commission violate a published tariff. United States v. Michigan Portland Cement Co., 46 Sup. Ct. 395.

§35. False Accounts or Claims.

See Claims.

(a) In a prosecution for presenting false claims for damages in shipping coal, evidence by bookkeeper of coal company as to price of coal was not prejudicial; amount of claim being unimportant, and actual purchase price of coal being conclusively established, in view of other testimony. Michael v. United States, 7 Fed. (2d) 865.

(b) In a prosecution for presenting false and fraudulent claims for damages sustained in interstate shipment of coal, where indictment was on several counts, conviction sustainable, where defendant was shown to be consignee named in bill of lading as to one or more of charges, and whether or not he was consignee, within meaning of Interstate Commerce Act, §10, par. 3 (Comp. St. § 8574), as to other charges, need not be determined. Michael v. United States, 7 Fed. (2d.) 865.

§36. Theft.

(a) The Dyer Act prohibiting transportation in interstate commerce and sale of stolen automobile, HELD not unconstitutional, if interpreted as covering automobile moving under its own power. Hagan v. United States, 9 Fed. (2d.) 562.

(b) Indictment for transportation and sale of stolen automobile in violation of Dyer Act describing automobile as a Marmon four-passenger touring automobile, bearing designated motor and body numbers and being property of named person, HELD sufficientiy to describe car. Hagan v. United States, 9 Fed. (2d.) 562.

XIII. APPEAL FROM CONVICTION.

§37. In General.

(a) Whether accused is prejudiced by any particular language in charge of court can only be ascertained by an examination of entire charge, and, where bill of exceptions did not contain all instructions given, appellate court is unable to say whether or not defendant was preju-

diced. Michael v. United States, 7 Fed. (2d.) 865.

CUMMINS AMENDMENT

See Loss and Damage I, §2½; Released Rates.

CUSTOMS

See Blanket Rates §5.

(a) The commission has no jurisdiction over transportation of shipments moving in bond from points in adjacent foreign countries through United States to foreign destinations or Porto Rico. Fernandez & Co. v. S. P., 104 I. C. C. 193.

(b) Shipments moved in bond from points in Mexico to points in United States where they were stored in bonded warehouses and subsequently forwarded, in bond, to New Orleans and exported to foreign destinations or Porto Rico. Contention that inasmuch as shipments came to a temporary rest in bond at New Orleans, the transportation should be considered as ended there found without merit. Fernandez & Co. v. S. P., 104 I. C. C. 193, 195.

(c) Shipment of whiskey was consigned to shippers' order c/o collector of customs, El Paso, notify a drug store at Juarez, Mex. Upon arrival at El Paso consignee was notified but shipment remained unclaimed and was subsequently stored. Thereafter, by command of United States court, customs collector was notified to detain shipment in his custody. This was done until dismissal of court proceedings when, upon payment of accrued storage charges, shipment was returned to point of origin. Tariff rule provided that no storage charges should be collected for detention due to delay by U. S. customs and that free time lost through such delay shall be allowed. FOUND: While detention here was for purposes other than those incident to customs inspection and clearance for export, terms of the rule, which clearly comprehend any delay by U. S. customs, are sufficiently broad to preclude assessment of storage charges under circumstances. Refund of overcharges directed. Sunny Brook Distillery Co. v. A., T. & S. F., 107 I. C. C. 77.

CROSS REFERENCES

See Detention Charges; Embar-

goes; Export Rates and Facilities VI; Lighterage VI; Storage.

I. CONTROL AND REGULATION.

See Control and Regulation.

§1. Jurisdiction of Commission.

See Interstate Commerce Commission I; Jurisdiction of Commission.

(a) Shipper's resort to Interstate Commerce Commission, preliminary to action against railroad to recover penalty exacted for detention of car containing interstate shipment of lumber awaiting consignment, HELD unnecessary; no administrative question being presented. Turner, Dennis & Lowry Lumber Co. v. Chicago, M. & St. Paul Ry. Co., 46 Sup. Ct. 530.

II. RIGHT TO ASSESS.

§2. In General.

(a) Upon arrival of shipment at originally billed destination it was accepted by consignee who unloaded and paid freight and demurrage charges. Becoming dissatisfied with goods they were reloaded and forwarded to a new destination, carrier advancing such consignee demurrage, unloading, and reloading charges. These were collected from new consignee who deducted them in settlement with consignor. FOUND: Later movement being separate and distinct under a new bill of lading, and governing tariff providing that no charges of any description be advanced, the advancement made to original consignee was illegal. Moreover, in Conf. Ruling 249, commission ruled that outbound charges may not be refunded by a carrier and charged back against consignor. Refund of overcharges directed. Heineman Lbr. Co. v. C., St. P., M. & O., 107 I. C. C. 62.

(b) Placement tracks, from standpoint of tariff description, are either public or private; there is no middle ground. A plug track used for inspection of hay and leased to a hay exchange for that purpose could not be described as a public delivery track on which any or all shippers could receive or ship any or all freight. Consequently it falls into the general category of private tracks. Brown & Co. v. E. R. R., 109 I. C. C. 109, 111.

(c) During an acute car shortage the American Ry, Asso. issued an order requiring certain carriers, including defendant, to discontinue local loading of western-owned cars and move such cars toward western junctions for delivery to owning lines. Defendant's agents construed this order as prohibiting either the eastbound movement of western-line equipment after arrival at original destination or its reconsignment or diversion in transit. Upon contention that defendants refusal to permit reconsignment or diversion of western-owned cars when under load consigned to complainant resulted in assessment of unreasonable demurrage charges. HELD: A carrier may not arbitrarily set aside its tariff provisions without due notice in proper form. However, while defendant's agents misconstrued the order, complainant was unable to point out any car on which reconsignment was requested and refused and on which demurrage accrued. Assessment of demurrage charges found not unreasonable. Lexington Elevator & Mill Co. v. B. & O., 109 I. C. C. 542.

(d) Failure of carrier to furnish cars promptly and in sufficient number for outbound loading of grain or feed at Lexington, Ohio, thereby preventing unloading of inbound cars until additional room could be provided in elevators and warehouses which were filled to capacity, found not to have resulted in assessment of unreasonable demurrage charges. To allow assessing of demurrage on inbound shipments to depend upon the furnishing of cars for outbound movement, a separate transaction, opens the way to abuses not necessary in order to protect a shipper from unlawful acts of the carrier. See also 57 I. C. C. 398. Lexington Elevator & Mill Co. v. B. & O., 109 I. C. C. 542, 544.

(e) Demurrage charges are no part of the rate or through charges in effect at the time the shipment is forwarded from point of origin. Although they may follow the shipment and be collected together with the transportation charges, they are for a distinct and separate service. Manassa Timber Co. v. L. & N. R. R., 115 I. C. C. 421, 425.

(f) Demurrage charges have nothing to do with transportation rates. Before a shipment is made it can not possibly be known what the demurrage charges will amount to or whether there will be any at all. If the cars are unloaded or reconsigned within the free time there will be none. In every case the question of whether or not there will be car service depends upon the consignee or own-

er or upon conditions which can not possibly be known in advance. Demurrage charges are not part of and are separate from and distinct from transportation charges and do not arise, if at all, until the transportation is ended. Manassa Timber Co. v. L. & N. R. R., 115 I. C. C. 421, 425.

(g) Complainant attacked charges collected on a car of lumber shipped Jan. 15, 1920 from White Sulphur, W. Va., to Harrisburg, Pa., and reconsigned to Hershey, Pa., were inapplicable and unreasonable. Shipment was tendered without routing instructions to the C. & O., consigned to Harrisburg, moving over C. & O., to Durbin, W. Va., W. M., to Lurgan, Pa., and P. & R., beyond. Request for reconsignment to Hershey was made by complainant in a letter addressed to and received on Jan. 20, 1920 by the agent of the N. & W., at Hagerstown, Md., who referred it on the same date to the agent of the W. M. at Hagerstown Jct., Md. The car passed Hagerstown on Jan. 25, five days after the agent of the W. M. at Hagerstown Jct. had received the reconsigning instructions, was held at Harrisburg beyond the free time provided by the tariffs, and was then reconsigned to Hershey. Charged 21 cents to Harrisburg and 9 cents beyond, plus $8 demurrage, $30 penalty charge and $5 reconsigning charge. The request was not confirmed in writing to the general freight agent of the W. M. at Baltimore in accordance with the tariffs. Demurrage charges and storage which accrued at Harrisburg were applicable. HELD, complaint dismissed. Shreiner Lumber Co. v. Director General, 123 I. C. C. 551.

(h) Where railroad having contract with tie-creosoting company requiring it to furnish for treatment more ties than it needed annually, and to itself unload incoming ties or pay creosoting company therefor, made contract with another road for treatment of ties for it on payment of proportionate share of cost, and thereafter elected to have unloading done by creosoting company, but retained exclusive control and supervision thereof, it was not entitled to charge such other company demurrage on cars loaded with its ties and detained for unloading beyond tariff free time. Cleveland, C. C. & St. L. Ry. Co. v. New York, C. & St. L. Ry. Co., 11 Fed. (2d) 850.

(i) Contract between railroads, if construed as not allowing one of them having charge of unloading of ties at creosoting plant to charge demurrage on cars loaded with ties of the other and retained for unloading beyond tariff free time, HELD not to result in discrimination, in violation of Interstate Commerce Act, inasmuch as transaction was independent of railroad's duty to public as common carrier. Cleveland, C. C. & St. L. Ry. Co. v. New York, C. & St. L. Ry. Co., 11 Fed. (2d) 850.

(j) "Demurrage" is charge against consignee for detention of cars. James v. Norfolk & W. Ry. Co., (Va. 1925) 129 S. E. 321.

(k) A railroad company has the right to impose a reasonable charge, called "demurrage," for the detention of cars beyond a reasonable time for the loading or unloading thereof, and it has a lien therefor on the goods transported in such cars while it retains the dominion and control thereof. Vanderbilt v. Planters' Oil Mill & Gin Co., (Miss., 1925) 106 So. 14.

(l) The payment of demurrage, claimed by a railroad company because of the unreasonable detention of cars, discharges any lien securing the payment thereof which the railroad company may have had on cars or their contents. Vanderbilt v. Planters' Oil Mill & Gin Co., (Miss., 1925) 106 So. 14.

(m) Supreme Court held that a tariff rule requiring a written notice to furnish cars to load, could not be waived by the carrier; and therefore, a verbal notice made by the shipper and accepted by the carriers agent was insufficient ground upon which to base a claim for damage. Turner Lumber & Investment Co. v. C. & N. W. Ry., 129 I. C. C. 84, 85.

§2¼. Commandeering of Vessels, or Customs Delay.

(a) Demurrage charges on import shipments held under constructive placement between docks and a warehouse at Seattle, Wash., found legally assessed. Tariff provided that no demurrage would be assessed where delay is caused by United States Customs and that free time lost through such delays will be allowed. Complainant urges that detention while cars were under constructive placement was caused by United States Customs ordering goods into cars while tracks at the warehouse were congested. It admits, however, that by payment of import duty to collector of customs, these shipments could have been released

at docks and demurrage avoided, and that this course was not taken because food administration desired goods to remain in bond so that upon submission to customs collector of a certificate of landing there would be no duty to pay. Western Import Co. v. Director General, 104 I. C. C. 396.

§3½. Embargo as Reason.

See Embargoes.

(a) Refusal of director general, due to an embargo, to reconsign to Syracuse, N. Y., a carload of lumber shipped from Sweetwater, Ala., to Cincinnati, Ohio, necessitating ultimate reconsignment to Detroit, Mich., found to have resulted in collection of reconsignment, demurrage, and storage charges that were unreasonable and inapplicable. Shipment was tendered for transportation without complete routing instruction and while an embargo did exist over certain routes, others over which no embargo existed were open via which shipment could have moved from Cincinnati to Syracuse which would have been consistent with routing instruction given. Reparation awarded. Thames v. Director General, 112 I. C. C. 677.

(b) Complainant attacked demurrage charges collected during April and May, 1923 at Louisville, Ky., and Detroit, Mich., on 5 cars of yellow pine lumber shipped during March, 1923 from Lugo, Ala., to Louisville, thence reconsigned to Detroit and Cambria, Ill., as inapplicable; also that the provisions of the tariffs with respect to the time allowed for the filing of claims for refund of demurrage collected on account of bunching of cars is unreasonable. Shipments were consigned by complainant to itself at Louisville and moved between March 23 and 30, 1923, but, due to an embargo at Louisville, the cars were bunched at Nashville, Tenn., and all arrived at Louisville on April 9, 1923. The first three cars were reconsigned to Detroit, April 20, 1923. In view of the language of the rule and the fact that the arrival notice was duly received by complainant it seems clear that the carriers action in notifying complainant, who was the consignee of the shipments, at St. Louis constituted compliance with the tariff rule. The 30 day rule attacked as unreasonable is a tariff provision which must be complied with as a condition precedent to refund on account of bunching. The present record contains nothing to indicate that complainant was unable to prepare and file a claim for refund within the 30 day period, or to warrant a finding that the provision here attacked is unreasonable. HELD, rule attacked not unreasonable, demurrage attacked not unreasonable, complaint dismissed. Manassa Timber Co. v. L. & N. R. R., 115 I. C. C. 421.

(c) Coal moving during Federal control was consigned to a car pool and due arrival notices furnished. After expiration of free time shipments were held under constructive placement and demurrage accrued. Thereafter an embargo was placed against consignee and consignor ordered shipments reconsigned upon ascertaining that they were refused by consignee. Upon contention that failure of carrier to make delivery on or before effective date of the embargo and acceptance by carrier of other shipments for transportation to consignee after that date without advising complainant of the embargo constituted railroad error, HELD: Governing tariff made no provision for notice to consignor of refused or unclaimed shipments and no part of the demurrage accrued before complainant had knowledge of the situation. Its position was same as if there had been no embargo. It therefore follows that demurrage did not accrue because of observance of the embargo and thus because of railroad error. Superior Coal Co. v. Director General, 115 I. C. C. 710.

(d) Shipment of lumber from Charleston, S. C., to Boston, Mass., moved as routed by shipper. Certain routes were embargoed but not route of movement, and upon request for diversion of shipment to Armory, Mass., complainant was notified that same could not be effected on shipments moving under permits. Shipment moved through to Boston, where demurrage accrued. HELD: As shipment moved via an unembargoed route over which no permit was necessary and delivering carrier at Boston was in possession of diversion instructions prior to arrival of car, a reconsignment charge less than that assessed was applicable, and demurrage assessed was illegal due to erroneous detention at Boston. Reparation awarded. National-American Wholesale Lbr. Asso. v. A. C. L., 120 I. C. C. 665.

(e) To evade an embargo, complainant consigned shipment to its agent. Upon arrival at destination carrier's

agent recognized consignee as complainant's employee and wired arrival notice to complainant. Shipment was held as unclaimed, and pending its disposition demurrage charges accrued which complainant contended were unlawfully assessed because of carrier's failure to comply with tariff governing furnishing of notice of refused and unclaimed shipments, under which consignor is not held liable for demurrage charges between date notice should have been sent and date actually sent. HELD: Contention is without merit. Tariff rule does not require carrier, which has given notice to consignee, later to notify the same party as consignor that it has not claimed its own shipment, the law not requiring the performance of a vain act. See 74 I. C. C. 461. Milne Lbr. Co. v. D., T. & I., 123 I. C. C. 573.

(f) Complainant consigned shipment to its agent. Carrier's agent recognized consignee as complainant's employee, and upon arrival of car wired arrival notice to complainant. Pending disposition of shipment demurrage accrued, which complainant contended was inapplicable because of carrier's failure to notify consignee in writing of arrival of car, in accordance with demurrage tariff. HELD: Contention is without merit, since evidence is conclusive that shipment was consigned to complainant's agent for purpose of evading an embargo. In reality, complainant was both consignor and consignee, and written notice to complainant instead of its agent, whose address was same as complainant's, was a substantial compliance with tariff provision respecting notice of arrival. Milne Lbr. Co. v. D., T. & I., 123 I. C. C. 573.

(g) Since carrier, knowing of wheat embargo, was under duty to prevent shipper from loading cars in ignorance of embargo, failure to warn shipper estopped carrier from setting up embargo as bar to shipper's recovery of demurrage charges paid. Davis, Director General, v. Martin, (Tex., 1926) 287 S. W. 113.

§4. Failure of Consignee to Accept.

See Consignor and Consignee.

(a) Shipment was routed for Erie delivery in New York City without any particular point being specified. Upon arrival at Croxton, N. J., the point at which such shipments destined to New York are held, consignee was notified and car ordered to Duane Street, New York. Due to congestion at that station, carrier requested and consignee acquiesced in elimination of shipment from its order. Car remained on hand and subsequently an order for Duane Street delivery was received and executed. Demurrage and extra refrigeration charges for the hold period during which shipment awaited disposition orders found applicable under tariffs providing for their assessment under above circumstances. Northwestern Fruit Exchange v. E. R. R., 112 I. C. C. 29.

(b) Complainant attacked demurrage charges in amount of $163 for detention at Roselle, N. J., of a car of lumber originating at Pontotoc, Miss., on August 24, 1922 as illegal to extent it exceeded $13. Shipment was originally billed to complainant at Marine, Ill., and on Sept. 15, 1922 after arrival at East St. Louis, Ill., it was reconsigned to Roselle, arriving there Oct. 25, 1922 over the defendant and consignee was so notified. Defendant states that on Oct. 30 it advised complainant by letter that the car was on hand at destination unclaimed, and requested prompt and definite disposition orders. Complainant avers that it never received the letter. On Nov. 18 complainant learned that the consignee was in financial difficulty and wired defendant not to make delivery of the shipment but to hold pending further instructions. By wire of Nov. 20 defendant advised complainant that disposition orders must be furnished immediately or the shipment would be stored. Complainant replied by wire on the following day not to store the shipment and it would arrange disposition as soon as possible. On Dec. 8, 1922 complainant ordered the car reconsigned to East New York, and it was waybilled from Roselle on Dec. 18, 1922. The consignee did not claim the shipment herein considered, and it was therefore defendants duty after the expiration of five days following the giving of notice of arrival of the car, to notify complainant by wire that it was unclaimed. It is immaterial whether complainant received defendants letter of Oct. 30 advising that the shipment was unclaimed, for the tariff requirement that consignor be advised by wire could not be waived, such notice being a prerequisite to the accrual of demurrage after the expiration of the five days mentioned in rule 4, section E 2 b. Defendants telegram of Nov. 20 was sufficient compliance with

the rule providing that when a shipment is unclaimed the consignor must be notified to that effect by wire and the shipment was subject to demurrage from that date. It is apparent from the evidence of record, particularly the fact that orders reconsigning the shipment from Roselle were not furnished until several days after the charges were corrected that the detention of the car from Nov. 23 to Dec. 2 the period over which the dispute concerning overcharges extended, was not due to the demand for such charges. The demurrage charges applicable for the detention of the car at Roselle was $83. HELD, shipment overcharged $80, which should be refunded, complaint dismissed. Milne Lumber Co. v. C. R. R. of N. J., 122 I. C. C. 67.

(c) The term "unclaimed" implies in the absence of an actual refusal, the failure of the consignee of the shipment to claim or accept it. The mere advice to the carrier that it expects to accept at some time is not the equivalent of claiming the shipment, which would contemplate a demand for delivery and a readiness to pay the charges. Milne Lumber Co. v. S. Ry., 122 I. C. C. 113, 114.

(d) Upon arrival of shipment at originally billed destination due notice of arrival was sent consignee. At various times thereafter such consignee advised carrier that he was making arrangements to dispose of shipment. Five days after such arrival notice, carrier notified consignor by letter that the car was on hand unclaimed and disposition orders requested, similar notice being subsequently sent by wire. HELD: Under interpretation of the term "unclaimed" in 85 I. C. C. 331, consignee did not claim shipment, and it is immaterial whether or not consignor received the letter originally sent. Requirement of applicable tariff that consignor be advised by wire within five days from date of notice of arrival to consignee was a prerequisite to the accrual of demurrage and could not be waived. However, carrier's telegram subsequently sent was sufficient compliance with the tariff and the shipment was subject to demurrage from that date. Refund of overcharges directed. Milne Lbr. Co. v. C. R. R. Co. of N. J., 122 I. C. C. 67.

(e) Shipment of lumber was placed for unolading on consignee's private track and all accrued freight and demurrage charges were paid. Thereafter, shipment was refused and due notice thereof was given by carrier to consignor. Additional demurrage accrued and eventually consignee unloaded shipment and deducted accrued demurrage charges in making settlement with consignor. Upon contention that shipment was "unclaimed" and that detention was due to carrier's failure to notify consignor to that effect by wire as provided by demurrage rule, HELD: There was no duty of carrier to assume that, or inquire whether, consignee intended from day to day to refuse the shipment, delivery of which had been effected. Since there was a valid acceptance and payment of charges, shipment was not "unclaimed" within definition of that term laid down in 85 I. C. C. 331. Primary cause of detention having resulted from failure of consignee to unload or to notify carrier it would not accept it, demurrage charges assailed were applicable. Milne Lbr. Co. v. S. Ry. Co. 122 I. C. C. 113.

(f) Complainant sought refund of demurrage charges which accrued on a shipment held pending disposition orders, contending that order releasing the car had gone forward by mail, and under the demurrage tariff, whether or not it was actually received, car should be considered released as of date order should have been delivered. HELD: Record fails to substantiate contention that release order was mailed on date claimed, and fact that delivery was not made until subsequent to actual receipt of order was due to fact that consignee refused to accept shipment until demurrage charges had been paid. However, since there is no evidence that carrier failed to tender shipment for delivery promptly upon receipt of order, demurrage charges assessed were applicable. Milne Lbr. Co. v. C., T. & I., 123 I. C. C. 573.

(g) Alleged failure of carrier to promptly notify complainant in accordance with demurrage rule that shipments of cabbage were held unclaimed at destination thereby resulting in loss said to be equal to invoice price of shipments, found not in violation of section 6 of the act. In 112 I. C. C. 567, similar complaint based upon same tariff rule was found to be a loss and damage claim not covered by provisions of the act but

cognizable only in the courts. See also 91 I. C. C. 611. Independent Produce Shippers Inc. v. N. & W., 129 I. C. C. 747.

§5¾. Diversion Orders.

See Reconsignment §5½.

(a) After shipment had received one reconsignment, complainant directed further reconsignment but was advised by carrier that same could not be effected at through rate. Thereafter, complainant, in prolonged correspondence insisted upon reconsignment at through rate and in one letter directed that shipment be not held pending reply. Carrier, however, continued to request disposition orders and finally upon directions from complainant desired delivery was effected. Governing tariff permitted only one change in destination and provided that any subsequent change necessitating movement would be treated as a reshipment. FOUND: Combination to and from second reconsignment point was legally applicable but demurrage and track-storage charges assessed on and after date of receipt by carrier of the letter directing that delivery be not withheld were illegal. Reparation awarded. Milne Lbr. Co. v. C. & N. W., 107 I. C. C. 653.

(b) Complainant alleged that demurrage charges collected on two cars of lumber at Detroit, Mich., were inapplicable. Shipment in I. C. 172155 from Ripley, Miss., on August 6, 1924 consigned to complainant at Marine, Ill., reconsigned to complainant at Detroit and arrived there Aug. 27, 1924 on which date a postal card giving notice of arrival and showing $220.30 in freight charges due was mailed addressed to the Milne Lumber Co., Detroit, Mich. Also on that date defendant telegraphed the same information to complainant at St. Louis, stating further that the car was on hand unclaimed and asking disposition. On the following day, Aug. 28, defendant confirmed its telegram by a letter. In due course the postal card was returned by the Post Office Department for better directions. No response to its telegram was received by defendant until Sept. 4, 1924 when a telegram, sent the day before by complainant from St. Louis, instructed defendant to deliver the shipment to the Hughes Lumber & Wrecking Co., Detroit stated that complainant was mailing defendant a check for $234.60. and requested that if the amount was not correct complainant be notified. Check was received Sept. 5. The amount represented $220.30 freight charges, $6.60 reconsignment charges and $8 demurrage charges for the first four days ending Sept. 3, at $2 per day following the free time. Defendant declined to deliver the shipment as requested and on the same date, Sept. 5, telegraphed complainant that additional demurrage charges of $10 were due, that the car was being held, and to forward check for sufficient amount to cover any demurrage accruing between that date and the date check would be received by defendant. On Sept. 6, defendant received a telegram from complainant disputing the additional charges of $10. On the same date defendant telegraphed complainant to forward a check for $15 to cover additional demurrage. On Sept. 11, defendant telegraphed complainant car was still on hand and also the check for $234.60 that $30 additional charges for demurrage were due as of that date. The following day, Sept. 12, Hughes Lumber & Wrecking Co. paid defendant demurrage charges of $35 whereupon the car was released to that company on Sept. 13, 1924. HELD, shipment undercharged $5 which should be collected, complaint dismissed. Shipment in 17694 moved on May 22, 1923 from Sumrall, Miss., to Marine, Ill., consigned to complainant and reconsigned to itself at Detroit, arriving there June 19, 1923. Demurrage charges in amount of $73 were collected. The bill of lading showed the Wabash as the delivering line, but car arrived over D. T. & I. It does not appear that any different demurrage rules applied over the Wabash. The circumstances are somewhat similar to those set out above. HELD, correct demurrage $63, which overcharge should be refunded, complaint dismissed. Milne Lumber Co. v. D. T. & I. R. R., 120 I. C. C. 488.

§8. Pending Dispute or Demanding Charges.

See Infra §9.

(a) When the delivering carrier demands more than the legal rate, the consignee is released from the obligation to pay demurrage charges accruing during the pendency of the dispute as to the legal rate. If the delivering carrier had demanded only the legal rate, the refusal of the consignee to pay more than what he claimed to be the legal rate would have relieved the carrier of responsibility for detention of the car. Miller v. P. M. R. R., 115 I. C. C. 461, 463.

(b) When a delivering carrier demands more than legal rate, the consignee is released from obligation to pay demurrage charges accruing during pendency of dispute as to legal rate. See Conf. Ruling 32. Miller v. P. M. Ry., 115 I. C. C. 461, 463, 464.

§9. Prior to Actual Delivery.

See Supra §8; Infra §12.

(a) Shipment was routed for Erie delivery in New York City without any particular point being specified. Upon arrival at Croxton, N. J., the point at which such shipments destined to New York are held, consignee was notified and car ordered to Duane Street, New York. Due to congestion at that station carrier requested and consignee acquiesced in elimination of shipment from its order. Car remained on hand and subsequently an order for Duane Street delivery was received and executed. Demurrage and extra refrigeration charges for the hold period during which shipment awaited disposition orders found applicable under tariffs providing for their assessment under above circumstances. Northwestern Fruit Exchange v. E. R. R., 112 I. C. C. 29.

(b) Demurrage charges assessed for detention of various shipments at Maurer, N. J., found not unreasonable or otherwise unlawful. Shipments were constructively placed with shipper's acquiescence because of a strike at its plant and detention was due to inability to unload rather than to carrier's failure to place cars actually instead of constructively. Barber Asphalt Paving Co. v. L. V., 112 I. C. C. 41.

(c) Demurrage charges on sand and gravel held short of destination by carrier under claim of constructive placement, found inapplicable. Tariff provided that notice of arrival should be sent in writing or as otherwise agreed to in writing; and that cars consigned to other than a public delivery track which could not be received by consignee would be held at nearest hold point, that written notice should be sent to consignee that cars were being so held, and that this would constitute constructive placement. Here, carrier assigned a portion of its team track for complainant's exclusive use. When this track became full, cars were held elsewhere but no written notices were sent to consignee nor was agreement made in writing for verbal notice in lieu of written notice, and while consignee had actual notice that cars were being so held, rule requiring written notice was a part of the tariff and could not be waived. See 266 U. S. 92; 95 I. C. C. 603, and other cited cases. Cynthiana Construction Co. v. L. & N., 129 I. C. C. 122.

§10. Private and Trap Cars.

See Private Cars; Trap Cars.

(a) Shipper's loading and unloading track was occupied when empty private tank cars leased from a private car line arrived, resulting in their being held on carrier's tracks. Notice of arrival was given and as space on shipper's track became available cars were placed thereon for loading. Demurrage charges were collected for detention on carrier's tracks prior to loading, carrier contending that cars were constructively tendered when arrival notice was given. HELD: Fact that such notice was sent is immaterial since demurrage tariffs specifically provided that empty private cars stored on carrier's tracks would not be subject to demurrage if not placed or tendered for loading on orders of a shipper, and here shipper gave no orders for placement for loadings. Reparation awarded. Jones Bros. & Co. v. Director General, 104 I. C. C. 413.

(b) Privately owned cars are subject to demurrage for any unreasonable time they remain on the railroad track through the fault of the shipper or consignee thereof. Vanderbilt v. Planters' Oil Mill & Gin Co., (Miss., 1925) 106 So. 14.

§10½. Reasonableness and discrimination.

See Discrimination; Reasonableness of Rates.

(a) Additional demurrage charges on cars containing interstate shipments of lumber awaiting reconsignment, though imposed only on shippers of lumber, does not result in a denial of equal protection of the laws, there being no constitutional requirement that such charges or reconsignment privileges shall be the same for all commodities. Turner, Dennis & Lowry Lumber Co. v. Chicago, M. & St. Paul Ry. Co., 46 Sup. Ct. 530.

(b) Complainant alleged demurrage charges and rules applicable to shipments of cotton consigned to them are

unreasonable and unduly prejudicial. Complainant located at Galveston, Tex., preferenced point New Orleans, La. A large amount of cotton moves from points in Texas and other states to Galveston for reshipment chiefly by water in export and coastwise trade. Little if any cotton is consumed there. Some of the cotton moves on through export billing or local billing marked for export or outbound coastwise movement and is carried by the rail lines directly to the docks, where it is unloaded within reach of the ships tackle or stored in warehouses on the piers to await the arrival of vessels. Complainants warehouses are some distance away from the water front, and the cotton which they handle for reshipment by water must be drayed to the piers. The demurrage charges and rules complained of are those provided by the uniform demurrage code, applicable on domestic traffic throughout the United States. Shipments of cotton on through export bills of lading are given 10 days free time at Galveston. Complainants make no averment of undue prejudice based on the difference between the two sets of rules at Galveston. The record indicates that the heavy demurrage charges assessed against complainants in the past have been occasioned by a volume of business, perhaps abnormal, which was in excess of the capacity of their facilities, and that they may have been due in part to individual operating difficulties. The differences between demurrage rules on domestic and export traffic have long been recognized as proper, and the rules here complained of can not be condemned because different rules are in force at Galveston on traffic definitely destined for further water movement at the time of its arrival. HELD, demurrage charges and rules not unreasonable or otherwise unlawful, complaint dismissed. Merchants & Planters Co. v. G. H. & H. R. R. 129 I. C. C. 477.

(c) Demurrage rules and charges applicable to shipments of cotton to Galveston, Tex., assessed under uniform demurrage code, found not unreasonable or otherwise unlawful as compared with lower charges on certain cotton traffic to New Orleans, nor with lower charges on shipments to Galveston moving on local bills of lading marked for export or coastwise movement under special demurrage rules. None of carriers participating in New Orleans tariff are defendants herein, and since complainants are unable to comply with provisions of special demurrage tariff, rules complained of can not be condemned because different rules in force on traffic definitely destined for further water movement at time of arrival. Merchants & Planters Co. v. G., H. & H., 129 I. C. C. 477.

(d) Demurrage charges were assessed under uniform demurrage code on cotton moving on domestic bills of lading. Contemporaneously more free time and a lower demurrage charge applied to shipments on local bills of lading marked for export or coastwise movement, or provided consignee within 48 hours after arrival gave notice that traffic was intended for export or coastwise movement. Contention made that lower demurrage rates should have applied since water shipments were made known to carriers through their inspection bureau which secured this information from steamship offices for another purpose, but this fact found not sufficient to constitute a compliance with rules governing export or coastwise movement. Rates charged were therefore applicable. Merchants & Planters Co. v. G., H. & H., 129 I. C. C. 477, 478, 479.

(e) Differences between demurrage rules on domestic and export traffic have long been recognized as proper. Merchants & Planters Co. v. G., H. & H., 129 I. C. C. 477, 481.

§10⅝. Strikes.

See Strikes.

(a) Demurrage charges assessed for detention of various shipments at Maurer, N. J., found not unreasonable or otherwise unlawful. Shipments were constructively placed with shipper's acquiescence because of a strike at its plant and detention was due to inability to unload rather than to carrier's failure to place cars actually instead of constructively. Barber Asphalt Paving Co. v. L. V., 112 I. C. C. 41.

III. PUBLICATION AND TARIFFS.

See Storage §3; Tariffs.

§10¾. In General.

(a) Demurrage charges assessed under tariff provisions from end of free time until coal was ordered out by tidewater shipper HELD legal, though

certain substitutions of cars among members of coal exchange were made by authority of exchange agreement; no special service being given shippers into pool, nor any discrimination made against other shippers in violation of Interstate Commerce Act, § 6. James v. Norfolk & W. Ry. Co., (Va., 1925) 129 S. E. 321.

(b) An additional demurrage charge on cars containing interstate shipment awaiting reconsignment, being a tariff provision and not penal law, the duly filed tariff is sufficient notice to shipper, and exaction of charge so provided without further notice is not invalid as taking of property without due process. Turner, Dennis & Lowry Lumber Co. v. Chicago, M. & St. Paul Ry. Co., 46 Sup. Ct. 530.

IV. DEMURRAGE RULES.

See Freight Charges.

§12. Construction in General.

(a) Complainant sought refund of demurrage charges which accrued on a shipment held pending disposition orders, contending that order releasing the car had gone forward by mail, and under the demurrage tariff, whether or not it was actually received, car should be considered released as of date order should have been delivered. HELD: Record fails to substantiate contention that release order was mailed on date claimed, and fact that delivery was not made until subsequent to actual receipt of order was due to fact that consignee refused to accept shipment until demurrage charges had been paid. However, since there is no evidence that carrier failed to tender shipment for delivery promptly upon receipt of order, demurrage charges assessed were applicable. Milne Lbr. Co. v. D., T. & I., 123 I. C. C. 573.

(b) Complainant alleged that demurrage charges on numerous cars of coal shipped from West Virginia and Kentucky during Dec. 1923 and Jan. 1924 were illegal. Defendant maintains a yard at Cincinnati known as its Water St. yard, which contains nine tracks, designated respectively by numbers 1 to 9, all of which are used for public delivery or for various other carrier purposes. It also maintains a track leading from the yard to complainants plant which is situated several hundred feet west of the yard. This latter track connects with the yard tracks numbered 1 and 2, but in handling traffic between the yard and the plant it is necessary to use a portion of the Pennsylvania tracks over which defendant possesses trackage rights. It appears to have been the practice, prior to and during the period involved, in accordance with a mutually satisfactory understanding, for defendant to place complainants cars on any of the yard tracks and for complainant to accept delivery thereon and haul the cars with its own locomotive to its plant and return the empty cars to the yard. The record shows that complainant received oral as well as written notices of arrival, the latter generally bearing a notation to the effect that the cars were placed in the yard at a certain hour, but no separate notices of placement were given. The tracks in the yard were used by defendant for public delivery and for various other carrier purposes. There is no evidence of any lease or written agreement designating one or more of the tracks for the separate or joint use of complainant or any other shipper or receiver of freight, and the mere fact that it was a mutually satisfactory practice for defendant to place the cars, and for complainant to accept delivery, in the yard did not change the status of the tracks therein. Complainants position in the instant case was similar to that of a team track receiver, except that it did not take delivery from the side of the tracks, although such delivery might have been taken from some of the tracks, but it entered upon the tracks themselves and removed the cars. HELD, demurrage accrued on all cars herein concerned held after the expiration of free time, computed as provided by the team track demurrage rule, complaint dismissed. Union Gas & Electric Co. v. C. &. O. Ry., 126 I. C. C. 566.

(c) Tariff rules, authorizing substitution of cars in respect to members of coal exchange and demurrage charges thereon against owner, determinable on basis of delay in delivery, in absence of substitution agreement HELD reasonable. Emmons Coal Mining Co., v. Norfolk & W. Ry. Co., 47 Sup. Ct. 254.

(d) Refund of demurrage charges directed because of carrier's failure to make authorized deductions for intervening Sundays. Ash v. C., R. I. & P., 128 I. C. C. 734.

(e) Complainant alleged demurrage charges of $88 collected on one car of

pine lumber shipped on or about Nov. 14, 1925 from Spokane, Wash., to Aberdeen, S. D., and thence reconsigned to Sweet Springs, Mo., as illegal. The address of the consignee not appearing on the bill of lading, and being unkown to defendants agent at that point, notice of arrival was given by postal card deposited in the mail on Nov. 23, addressed to the complainant at that point. Notice was returned to defendants agent at Aberdeen on Nov. 27, stamped "undeliverable" and has been preserved on file. It is not claimed by complainant that the failure to enclose the notice of arrival in a stamped envelope bearing return address, in strict compliance with the tariff rule, in any way affected the detention for which the charges in issue were assessed. On the contrary the evidence clearly shows that complainant was unable to give disposition of the car until several days after its agent at Kansas City was notified by defendant on Dec. 11. Reparation is claimed based on the fact that notice of arrival was not enclosed in an envelope. The undelivered notice was returned by the postal authorities to the carrier and held in the latters file. All other tariff requirements were observed by defendant. No claim is made that the shipment was detained due to improper notice. HELD, charges assailed applicable, complaint dismissed. Turner Lumber & Investment Co. v. C. & N. W. Ry., 129 I. C. C. 84.

(f) Complainant alleged demurrage and storage charges assessed for detention of two cars of lumber at St. Louis, Mo., shipped on Dec. 31, 1921 from Bernice, La., were unlawful in violation of section 6. Shipments consigned by complainant to Powe Lumber Co., East St. Louis, Ill., arrived at St. Louis on Jan. 6 and 8, 1922 over the Frisco, where they were held until Jan. 30, 1922 for disposition orders from complainant. Complainants name and address were shown in the bills of lading and also in the freight bills for each shipment. Upon arrival at St. Louis the Frisco notified the consignee, which promptly refused the shipments and advised that disposition of the shipments should be taken up with complainant whose name and address were given. Tariff provided notice of refusal would be sent by wire to consignor. Defendant wired agent at point of origin who telephoned the consignor. From the facts disclosed the Commission concludes that telegraphic notice addressed to complainant was required by the rule, and compliance therewith was essential for the accrual of demurrage charges. HELD, charges assessed inapplicable, reparation awarded. Louisell Pine & Hardwood Co. v. C., R. I. & P. Ry., 132 I. C. C. 341.

(g) Commission has declined to order modifications of uniform demurrage rules solely because of desire of certain shippers and consignees to obtain such free time as they deem necessary to meet exigencies and demands of their businesses, and has held that existence of unique or exceptional transportation conditions in certain localities furnishes no ground for exceptions to uniform code in favor of such localities, unless it be made to appear clearly that unlawful discrimination would otherwise result. See 31 I. C. C. 329. Merchants & Planters Co. v. G., H. & H., 129 I. C. C. 477, 480.

(h) Where the consignee of an interstate shipment is prevented by civil war from unloading the car, he is not liable for demurrage. Chesapeake & O. Ry. Co. v. Board, (W. Va. 1925), 130 S. E. 524.

§12½. Act of God.

(a) The duty of a consignee to unload cars within the free time given by the tariffs of a carrier, and the obligation to pay demurrage for their detention, are classified with those imposed by law, and, where the failure of a consignee to unload within the free time is caused entirely by the intervention of a vis major, the consignee is not liable for demurrage. Chesapeake & O. Ry. Co. v. Board, (W. Va. 1925), 130 S. E. 524.

§14. Bunching.

(a) Upon contention that 30-day time limit within which claims may be presented to carriers for refund of demurrage charges collected on account of bunching of cars is unreasonable and violates section 16 of the act, HELD: Refund to which shippers are entitled upon compliance with provisions of bunching rule is in no sense an overcharge. The 30-day rule is a tariff provision which must be complied with as a condition precedent to refund on account of bunching, whereas section 16 referred to limits the time within which complaints may be filed with com-

mission for recovery of overcharges. The 30-day provision is national in scope, is satisfactory to practically all shippers, and there is nothing here to indicate that complainant is unable to prepare and file its claims within that period. Moreover, a similar rule containing but a 15-day time limit was found not unreasonable in 66 I. C. C. 553. Manassa Timber Co. v. L. & N., 115 I. C. C. 421, 423.

(b) Upon contention that demurrage accrued because carriers did not keep themselves sufficiently informed as to complainants' ability to receive cars before making constructive placements, as cars were so placed at times when warehouse tracks would have accommodated additional cars. FOUND: While in 69 I. C. C. 711, it was stated that duty of carrier is to see that no cars are constructively placed unless actual disability exists on part of consignee to receive them, in 95 I. C. C. 222, 226, "inability of consignee to receive" was construed to mean more than mere track capacity. Where carriers may reasonably assume that complainants' actual performance during demurrage period reflects its inability to unload and release cars, constructive placement is warranted. Merchants & Planters Co. v. G., H. & H., 129 I. C. C. 477, 481.

§14½. Congestion.

(a) In computing demurrage charges consignee should be allowed credit for time necessary to transport cars from point of constructive placement to point of final placement. See 69 I. C. C. 711; 74 I. C. C. 34. Merchants & Planters Co. v. G., H. & H., 129 I. C. C. 477, 482.

§15. Free Time.

(a) Complainant alleged demurrage charges collected for the detention of a car of lumber at Hope, Ark., were unreasonable and inapplicable. Car was forwarded on April 2, 1923 from Grant, La., over L. & A. and arrived at Hope on April 4, 1923. It remained at that point until reconsigned on May 5, 1923 to Shidler, Okla. Allegation of unreasonableness was barred. Postal card was mailed to complainant at Hope advising him of arrival April 4, 1923. The record shows that the defendant failed to make authorized deductions for intervening Sundays collecting demurrage based on 31 instead of 25 days for the time the car was at Hope. Overcharge $30 to be refunded. Complaint dismissed. Ash v. C., R. I. & P. Ry., 128 I. C. C. 734.

(b) The Commission has heretofore declined to order modification of the uniform demurrage rules solely because of the desire of certain shippers and consignees to obtain such free time as they deem necessary to meet the exigencies and demands of their respective businesses and have held that the existence of unique or exceptional transportation conditions in certain localities furnishes no ground for exceptions to the uniform code in favor of such localities, unless it be made to appear clearly that unlawful discrimination would otherwise result. Merchants & Traders Co. v. G. H. & H. R. R., 129 I. C. C. 477, 480.

(c) Consignee should be allowed credit for the time necessary to transport cars from the point of constructive placement to the point of final placement. Merchants & Traders Co. v. G. H. & H. R. R., 129 I. C. C. 477, 482.

(d) Demurrage charges were assessed under uniform demurrage code on cotton moving on domestic bills of lading. Contemporaneously more free time and a lower demurrage charge applied to shipments on local bills of lading marked for export or coastwise movement, or provided consignee within 48 hours after arrival gave notice that traffic was intended for export or coastwise movement. Contention made that lower demurrage rates should have applied since water shipments were made known to carriers through their inspection bureau which secured this information from steamship offices for another purpose, but this fact found not sufficient to constitute a compliance with rules governing export or coastwise movement. Rates charged were therefore applicable. Merchants and Planters Co. v. G., H. & H., 129 I. C. C. 477, 478, 479.

§15½. Legal Rates.

See Legal Rates.

(a) Complainant alleged that a portion of the demurrage charges assessed for the detention at Evansville, Ind., of a carload of lumber from West Green, Ga., were illegal. Shipment was consigned by complainant to itself at Evansville and moved Southern, arriving June 10, 1922. On June 24th complainant instructed Southern's agent at Evansville to deliver the shipment to the Luhring

Lumber Co. The car was placed on the private track of that company by C. & E. I., June 28. On July 3 the Luhring Co. paid to the Southern all freight and demurrage demanded. On July 17 shipment was refused by the Luhring Co. and on the following day complainant received a letter from the agent of the defendant notifying it thereof. The car was unloaded by the Luhring Co. on July 22 apparently through some agreement between the two lumber companies. Demurrage charges of $83 were collected from the Luhring Co. for that portion of the detention between June 28 and July 22, 1922. There is no contention that demurrage did not lawfully accrue after notice of refusal was given by defendant. The placement of the car on the industry track of the consignee constituted an actual delivery while the payment of the charges by the consignee was acceptance. Since there was a valid acceptance of the shipment it can not be said that it was unclaimed. There was no duty of defendant to notify complainant under the socalled unclaimed rule. HELD, demurrage charges applicable, complaint dismissed. Milne Lumber Co. v. S. Ry., 122 I. C. C. 113.

§16. Placement or Arrival Notices.

See Notice.

(a) Demurrage charges on import shipments held under constructive placement between docks and warehouse at Seattle, Wash., found legally assessed. Tariff provided that no demurrage would be assessed where delay is caused by United States Customs and that free time lost through such delay will be allowed. Complainant urges that detention while cars were under constructive placement was caused by the United States Customs ordering goods into cars while tracks at warehouse were congested. It admits, however, that by payment of import duty to collector of customs, these shipments could have been released at docks and demurrage avoided, and that this course was not taken because food administration desired goods to remain in bond so that upon submission to customs collector of a certificate of landing there would be no duty to pay. Western Import Co. v. Director General, 104 I. C. C. 396.

(b) Demurrage and penalty charges for detention of unclaimed shipments of lumber at Alliance, Nebr., found illegally assessed. Consignor was notified by telephone that shipments were unclaimed, whereas tariffs laid upon defendants duty of sending notice by wire either to consignor or agent at point of shipment, failing in which no demurrage accrued after lapse of five days from first 7 a. m. after day on which notice of arrival was sent or given consignee. See also 95 I. C. C. 603. Reparation awarded. Central West Coal & Lumber Co. v. C., B. & Q., 104 I. C. C. 452.

(c) Demurrage rules provided that if contents of car are transferred in transit, notice of arrival shall contain, among other things, initials and number of original car. Such notice on a shipment so transferred contained initials and number of car into which shipment was transferred but failed to show that contents of the car had been transferred or initials and number of original car. After correspondence concerning identity of shipment, carrier telegraphed complainant both old and new car numbers and initials, whereupon complainant directed delivery. FOUND: Although carrier's telegram showed incorrect initials of cars it sufficed to enable complainant to dispose of shipment. Demurrage accruing subsequent to date such telegram was sent complainant was lawfully assessed, but prior thereto illegal. Reparation awarded. Milne Lbr. Co. v. C. & N. W. Ry., 107 I. C. C. 653, 656, 657.

(d) Complainant attacked combination rate charged on a mixed car of sacked oats and corn chop shipped Feb. 8, 1922, from Superior, Neb., to Roswell, N. M., reconsigned to Carlsbad, N. M., as unreasonable and inapplicable. The car was consigned to shippers order, notify a consignee at Roswell, and upon arrival there was placed on the private track of the consignee. The shipment was eventually refused and without surrender of the bill of lading was reforwarded to Carlsbad at request of complainant. Charged combination to Roswell, plus local rate beyond. Complainant states that prior to arrival of the shipment at Roswell consignee telephoned defendants local office at Roswell that the car would not be accepted on arrival. Defendant does not deny the receipt of this notice but states that it has no record of its receipt nor can any of its employees recall its receipt. HELD, notice of refusal was given the defendant by consignee before arrival of the car at Roswell and that the placement of

the car on consignees private track was unauthorized. HELD, shipment overcharged to extent the charges collected exceeded those which would have accrued on basis of through rate from Superior to Carlsbad plus a reconsigning charge of $7 and demurrage charges which lawfully accrued at Roswell, and defendants should refund to that basis, complaint dismissed. Scoular Bishop Co. v. A. T. & S. F. Ry., 118 I. C. C. 501.

(e) It is immaterial whether complainant received notice otherwise that the shipment was unclaimed, for the tariff requirement that consignor be advised by wire could not be waived, such notice being a prerequisite to the accrual of demurrage after the expiration of the five days mentioned in rule 4 section E 1. Milne Lumber Co. v. M. C. R. R., 118 I. C. C. 580, 582.

(f) The absence of written notice, notwithstanding complainant had actual notice, rendered the demurrage charges assessed inapplicable. Western Bridge & Construction Co. v. St. L., S. F. Ry., 118 I. C. C. 607, 609.

(g) Upon arrival of shipments notices thereof were mailed consignee. Subsequently consignee was advised by telegram that cars were being held for disposition and demurrage was accruing, and upon request was furnished with a statement of amount of accrued charges. These were disputed, due to inclusion of alleged overcharges, but subsequently they were all paid and shipments delivered. The refund here claimed is based on a tariff rule which provides that no demurrage shall be collected when carrier demands payment of transportation charges in excess of tariff authority, but carriers argue that demurrage charges are not transportation charges and that the rule relied upon has no application, citing in support thereof 92 I. C. C. 450 and 171 Ill., App. 302, the latter affirmed in 235 U. S. 371. Complainant on other hand questions this interpretation of the term "transportation charges." HELD: That accrued charges assessed were applicable under the tariffs. Manassa Timber Co. v. L. & N., 115 I. C. C. 421.

(h) Complainant, whose offices were located at a point other than origin or destination, was advised by telegram of the arrival of one of its shipments, the notice being acknowledged on the day following its receipt. Upon contention that under the tariff rule which provides that arrival notice shall be sent or given consignee, or party entitled to receive same, in writing * * * notice should have been sent to consignee at destination, HELD: Rule relied upon does not provide that arrival notice must be sent to consignee at destination, and in view of the language of the rule and fact that the notice was duly received by complainant who was the consignee of the shipment, the carrier's action in notifying him constituted a compliance with the tariff rule. Manassa Timber Co. v. L. & N., 115 I. C. C. 421, 422.

(i) Notice of arrival of car was given to and acknowledged by consignee. Upon contention that demurrage charges accruing thereon were inapplicable, HELD: Shipment was subject to demurrage prior to date on which accuracy of freight charges was disputed for first time, but demurrage charges assessed on and after that date were illegal. Reparation awarded. Miller v. P. M. Ry., 115 I. C. C. 461, 463, 464.

(j) Shipment of lumber arriving at Detroit, Mich., was constructively placed for delivery to Greeley Coal & Lbr. Co. Demurrage accrued and subsequently, when that company refused shipment, it was ordered delivered to F. M. Pauli Co., who accepted it and paid all charges thereon, including demurrage. Upon contention that demurrage charges assessed were without tariff authority, inasmuch as notice by wire that car was unclaimed was not given consignor after expiration of five days, in accordance with provisions of governing tariff, HELD: That such tariff requirement was a prerequisite to accrual of demurrage, could not be waived by carrier, and fact that consignor received notice that shipment was unclaimed in another manner than by wire, was immaterial. See 266 U. S. 92; 95 I. C. C. 603. Refund of overcharges directed. Milne Lbr. Co. v. M. C., 118 I. C. C. 580.

(k) Upon arrival of shipment of lumber at Detroit, Mich., reconsigned from Marine, Ill., delivery was requested to the Greeley Coal & Lbr. Co., but no room being available on tracks of that company, shipment was constructively placed and due notice thereof furnished. Later shipment was refused and in accordance with instructions was delivered to F. M. Pauli Co., who accepted it and paid all charges thereon. Upon contention that reconsignment charge made for attempted movement to the Greeley Company was without tariff authority,

HELD: Such charge was applicable under governing reconsignment tariff which provided for its assessment where, as here, a single change is made in name of consignee subsequent to 24 hours after arrival of car at destination. Milne Lbr. Co. v. M. C., 118 I. C. C. 580.

(l) Upon arrival of shipment of lumber at Detroit, notice of arrival was mailed to complainant at address shown in bill of lading at that point and confirmed by telegraph to complainant's general office at another point. Mail was returned by post office for better directions, and no response to telegram was received until after demurrage accrued, when complainant telegraphed disposition order. Check forwarded by complainant to cover accrued charges was short two days' demurrage and delivery requested was refused pending payment of additional demurrage. HELD, Mailing of notice by carrier constituted compliance with applicable tariff rule in effect and it was no fault of carrier that such notice was not received. Refusal to execute disposition instructions was also warranted by a tariff rule under which carrier had the option of accepting complainant's guaranty of charges or requiring payment thereof and carrier elected to pursue the latter course. Under the circumstances charges assessed were applicable. Milne Lbr. Co. v. D., T. & I., 120 I. C. C. 488.

(m) Applicable tariff provided that "notice of arrival shall be sent or given consignee, or party entitled thereto, in writing * * *." Upon arrival of shipment of lumber at Detroit, no written notice was sent to complainant at that point. Carrier asserted that it telegraphed notice by private wire to complainant at another point but was unable to produce evidence that this notice was so transmitted. Subsequently a second telegram was dispatched stating that car was unclaimed and asking for disposition order which complainant furnished the following day. HELD, evidence not being clear that complainant had arrival notice prior to date on which second telegram was dispatched, demurrage should not have commenced until expiration of free time from that date. Milne Lbr. Co. v. D. T. & I., 120 I. C. C. 488.

(n) Complainant alleged demurrage charges on a car of yellow pine lumber shipped on March 7, 1923 from Calcasieu, La., to Marine, Ill., and thence reconsigned to Detroit, Mich., were unreasonable and inapplicable. Shipment was reconsigned to E. J. Kell, Detroit, routed I. C., L. E. & W. and D., T. & I. Arrived May 3, 1923. Defendant, knowing E. J. Kell to be an agent of complainant, located at its headquarters in St. Louis, notified complainant there by wire on May 3 of the arrival of the car and asked disposition. The evidence discloses that at the time of movement there was an embargo at Detroit against certain shippers, among which was complainant Therefore, in order to get its shipment through complainant consigned it to E. J. Kell, who was manager of its yellow pine department. Complainant on May 3 replied by wire to the notice of arrival asking date of arrival and charges. On May 5 defendants agent wired this information to complainant. On May 11 defendant again wired asking for disposition of the car. On May 15 defendant mailed a letter to complainant stating that it was holding the car in its yard at Detroit and requested disposition. On May 16 it again wired complainant. The car was finally released to the United Wrecking Co. on June 20. The evidence is conclusive that the shipment was reconsigned at Marine to the agent of complainant for the purpose of evading an embargo against its shipments to Detroit. In reality the Milne Lumber Co. was both consignor and consignee of this shipment. The fact that written notice was given to complainant instead of to its agent, whose address was the same as that of his principal, was a substantial compliance with the tariff provision respecting notice of arrival. Rule 4 did not require a carrier which has given notice of arrival to the consignee later to notify the same party as the consignor that it has not claimed its own shipment. The law does not require the performance of a vain act. HELD, demurrage charges collected applicable and not unreasonable, complaint dismissed. Milne Lumber Co. v. D. T. & I. R. R., 123 I. C. C. 573.

(o) Shipments were placed upon tracks used for public delivery and other carrier purposes and by mutual understanding were accepted by complainant and hauled with its own locomotive to its plant. Oral and written notices of arrival but no notice of placement were furnished. Upon contention that demurrage was illegally assessed due to noncompliance with a note which provided for computation of time from first 7:00

a. m. after notice of placement on interchange tracks, HELD: Complainant's position was similar to that of a team-track receiver. It was merely a user of the track the same as any other party taking delivery from public team tracks. Its election to receive shipments in above manner subjected them to provisions of a demurrage rule providing for computation of time from first 7:00 a. m. after placement on public delivery tracks and after day on which notice of arrival was sent. Union Gas & Electric Co. v. C. & O. Ry., 126 I. C. C. 566.

(p) Upon contention that demurrage charges on car of lumber held pending disposition orders were inapplicable in that postal-card notice of arrival did not adequately describe shipment nor comply with tariff rule providing that when address of consignee does not appear on billing and is not known, notice of arrival must be deposited in mail enclosed in stamped envelop, FOUND: As address of consignee was shown on waybill, provision requiring notice of arrival merely in writing applied and was complied with, and demurrage tariff provided that when such notice does not contain all information required consignee shall not have the right to call in question sufficiency thereof unless within prescribed free time written statement of omitted information shall be served upon carriers' agent. Complainant did not comply with this provision. Moreover, consignor was advised by telegram on date of arrival that shipment was unclaimed but as no diversion orders were received until demurrage accrued, charges assessed therefor were applicable. Ash v. C., R. I. & P., 128 I. C. C. 734.

(q) Complainant attacked demurrage charges collected on certain carloads of sand and gravel received at Independence, Ky., during May and June 1924 as unlawful. The cars on which demurrage charges were collected were loaded at Cleves, a station on the Big Four about 16 miles north of Cincinnati. Defendant assigned a portion of its team track at Independence for complainants exclusive use; and, when this portion of track was full, other cars consigned to complainant were held by defendant elsewhere under what it contends was constructive placement. This proceeding deals only with the legality of any charge for detention while the cars were so held elsewhere. It is conceded that the track assigned for complainants exclusive was "other than a public delivery track," and that delivery on that assigned track of the cars here considered could not be made on account of complainants inability to receive them. Not until June 13, 1924 was agreement in writing made by the parties for verbal notice of arrival in lieu of notice in writing. The record shows that complainant had actual notice of the holding of these cars under claim of constructive placement but the rule requiring written notice was part of the tariff and could not be waived. HELD, demurrage charges collected for the detention between May 23 and June 9, 1924 of 25 cars held elsewhere by defendant as being constructive placed were inapplicable and should be promptly refunded, complaint dismissed. Cynthiana Construction Co. v. L. & N. R. R., 129 I. C. C. 122.

(r) Complainant alleged demurrage charges assessed at Detroit, Mich., on six cars of lumber shipped from Mann Spur, Ga., Pickering, La., Sumrall and Holly Springs, Miss., and Elkhart, Tex., to Illinois and reconsigned to Detroit, Mich., were inapplicable. Complainant was consignor and consignee of all the shipments. A. C. L. 35067 arrived at Detriot Nov. 3, 1922 and on that date defendants telegraphed complainant at St. Louis of the arrival. The tariff provided that notice of arrival should be sent or given the consignee, or party entitled to receive the same, by the railroads agent in writing, or in lieu thereof as otherwise agreed to by the railroad and consignee, within 24 hours after arrival of car and billing at destination. Complainant contends with respect to this and all the other shipments that defendant should have mailed notices of arrival to it as consignee at Detroit, notwithstanding the fact that it admits it had no office there. But the rule referred to does not provide that arrival notice must be sent to the consignee at destination. In view of the language of the rule referred to and the fact shown of record that defendant knew that complainant did not have an office at Detroit, and was aware of complainants location at St. Louis, it seems clear that defendant's action in telegraphing notice of arrival to St. Louis constituted a compliance with the rule. As complainant was both consignor and consignee of the shipments, defendant did all that was required of it when it sent notices of arrival. The rule does not contemplate

sending an "unclaimed" notice to a party who is both the consignor and the consignee, since it is apparent that accrual of demurrage is attributable to such a party's neglect of its shipments. HELD, with exception of certain overcharges due to computation of time, charges assessed applicable, complaints dismissed. Milne Lumber Co. v. D. T. & I. R. R., 129 I. C. C. 324.

(s) Complainant alleged demurrage charges collected on 11 cars of hay shipped between Sept. 2 and 14, 1921 from Pleasant Hills, Ind., and Continental, O., to Townley, N. J., and reconsigned to Bushwick, Brooklyn, N. Y., were unreasonable and inapplicable. Townley is a local station on the L. V. Defendant L. V. did not comply with rule 4, section E2B of the demurrage tariff in respect of giving notice that shipments were unclaimed within five days from the first 7 a. m. after the date on which notice of arrival was sent to consignee. Demurrage properly accrued on the shipments in the order of their arrival at Townley after the first 48 hours free time allowed by rule 2, section A, of the applicable demurrage tariff, up to the time when unclaimed notice or notice of refusal should have been sent as provided for by paragraph 2b of section E of rule 4 of the tariff. The correspondence passing between Chas. Schafer & Sons and Kimmel is not indicative of a definite refusal of the shipments prior to the carriers notice of refusal, and defendants have not proved that the giving of notice in accordance with the provisions of their demurrage tariff would have been useless. Moreover, it is immaterial whether complainant received notice otherwise that the shipments had been refused, for the tariff requirement that the consignor be advised by telegram could not be waived, such notice being a prerequisite to the accrual of demurrage after the expiration of the five day period mentioned in the rule. HELD, charges assailed for detention of the shipments at Bushwick were applicable, but charges for detention at Townley between the dates on which notice that the shipments were unclaimed or were refused, as the case may be, should have been sent by telegram, were inapplicable, reparation awarded. Williams v. L. V. R. R., 132 I. C. C. 573.

(t) Demurrage charges on lumber at originally billed destination found applicable. Address of consignee not appearing on bill of lading, and being unknown to agent, notice of arrival was given by postal card addressed to complainant at that point, but was returned stamped "undeliverable." Complainant was duly located and notified, but was unable to give disposition of unclaimed car for several days. Complainant relied upon 266 U. S. 92; 95 I. C. C. 603, in its contention that no demurrage charges were applicable due to fact that notice of arrival was not inclosed in an envelope in compliance with tariff. All other tariff requirements were observed by carrier, and no claim was made that shipment was detained due to improper notice. Moreover, in 120 I. C. C. 488, the commission found that notice by postal card constituted a compliance with a tariff provision similar to rule here considered. Turner Lbr. & Investment Co. v. C. & N. W., 129 I. C. C. 84.

(u) Demurrage charges on sand and gravel held short of destination by carrier under claim of constructive placement, found inapplicable. Tariff provided that notice of arrival should be sent in writing or as otherwise agreed to in writing; and that cars consigned to other than a public delivery track which could not be received by consignee would be held at nearest hold point, that written notice should be sent to consignee that cars were being so held, and that this would constitute constructive placement. Here, carriers assigned a portion of its team track for complainant's exclusive use. When this track became full, cars were held elsewhere but no written notices were sent to consignee nor was agreement made in writing for verbal notice in lieu of written notice, and while consignee had actual notice that cars were being so held, rule requiring written notice was a part of the tariff and could not be waived. See 266 U. S. 92; 95 I. C. C. 603, and other cited cases. Cynthiana Construction Co. v. L. & N., 129 I. C. C. 122.

(v) Name of grower was erroneously substituted by carrier in waybill in lieu of consignee's name, thereby necessitating the obtaining of telegraphic advice from originating carrier as to correct consignee before placement of car could be made. Upon contention that

failure to follow shipping instructions violated section 15 of the act and resulted in delay and deterioration in transit, FOUND: Due to congestion at destination it is not shown that any undue delay was caused by holding car while awaiting proper shipping instructions. Evidence is therefore insufficient to show that failure to follow instructions was proximate cause of alleged damage. Pearce v. G. N., 129 I. C. C. 253.

(w) Upon arrival of car at Detroit, carrier telegraphed notice of arrival to complainant at St. Louis, who was both consignor and consignee of shipment. Upon complainant's contention that because carrier failed to mail written notice of arrival to it at Detroit as consignee, in accordance with tariff rule providing for written notice of arrival and further notice within five days thereafter that shipment was unclaimed, demurrage charges which accrued up until car was actually released were inapplicable. FOUND: Rule does not provide that arrival notice must be sent to consignee at destination. See 115 I. C. C. 421. Since carrier knew complainant did not have an office at Detroit but was aware of its location at St. Louis, telegraphic notification of arrival constituted compliance with the rule. Moreover, rule does not contemplate sending an "unclaimed" notice to a party who is both consignor and consignee, since it is apparent that accrual of demurrage is attributable to such party's neglect of its shipments. Milne Lbr. Co. v. D., T. & I., 129 I. C. C. 324.

(x) Upon contention that as no telegraphic notice of arrival was received, demurrage charges assessed were inapplicable. FOUND: Whether or not notice was received is not controlling as all that carrier was required to do was to send it. Milne Lbr. Co. v. D., T. & I., 129 I. C. C. 324, 325, 326.

(y) In absence of definite proof as to date notice of arrival was sent, demurrage charges will accrue from date such notice is received. Milne Lbr. Co. v. D., T. & I., 129 I. C. C. 324, 326.

(z) Upon contention that demurrage accrued because carriers did not keep themselves sufficiently informed as to complainants' ability to receive cars before making constructive placements, as cars were so placed at times when warehouse tracks would have accommodated additional cars. FOUND: While in 69 I. C. C. 711, it was stated that duty of carrier is to see that no cars are constructively placed unless actual disability exists on part of consignee to receive them, in 95 I. C. C. 222, 226, "inability of consignee to receive" was construed to mean more than mere track capacity. Where carriers may reasonably assume that complainants' actual performance during demurrage period reflects its inability to unload and release cars, constructive placement is warranted. Merchants & Planters Co. v. G., H. & H., 129 I. C. C. 477, 481.

(aa) Alleged failure of carrier to promptly notify complainant in accordance with demurrage rule that shipments of cabbage were held unclaimed at destination thereby resulting in loss said to be equal to invoice price of shipments, found not in violation of section 6 of the act. In 112 I. C. C. 567, similar complaint based upon same tariff rule was found to be a loss and damage claim not covered by provisions of the act but cognizable only in the courts. See also 91 I. C. C. 611. Independent Produce Shippers Inc. v. N. & W., 129 I. C. C. 747.

§16a. Notice to Shipper.

(a) Upon arrival of car at Detroit, carrier telegraphed notice of arrival to complainant at St. Louis, who was both consignor and consignee of shipment. Upon complainant's contention that because carrier failed to mail written notice of arrival to it at Detroit as consignee, in accordance with tariff rule providing for written notice of arrival and further notice within five days thereafter that shipment was unclaimed, demurrage charges which accrued up until car was actually released were inapplicable. FOUND: Rule does not provide that arrival notice must be sent to consignee at destination. See 115 I. C. C. 421. Since carrier knew complainant did not have an office at Detroit but was aware of its location at St. Louis, telegraphic notification of arrival constituted compliance with the rule. Moreover, rule does not contemplate sending an "unclaimed" notice to a party who is both consignor

and consignee, since it is apparent that accrual of demurrage is attributable to such party's neglect of its shipments. Milne Lbr. Co. v. D., T. & I., 129 I. C. C. 324.

(b) Alleged failure of carrier to promptly notify complainant in accordance with demurrage rule that shipments of cabbage were held unclaimed at destination, thereby resulting in loss said to be equal to invoice price of shipments, found not in violation of section 6 of the act. In 112 I. C. C. 567, similar complaint based upon same tariff rule was found to be a loss and damage claim not covered by provisions of the act but cognizable only in the courts. See also 91 I. C. C. 611. Independent Produce Shippers, Inc., v. N. & W., 129 I. C. C. 747.

(c) Provisions of railroad's demurrage tariff, requiring notice to consignor when carload freight is refused at destination and unclaimed perishable carload freight is not disposed of shortly after notice of arrival is given consignee, adopted as basis for charges against shippers for demurrage, does not impose liability on carrier, or definitely fix its duty to notify shipper for his benefit in case of consignee's failure to accept, but person familiar with tariff might have right to rely on such notice. Porter v. Pennsylvania R. Co., 215 N. Y. S. 727.

§17. Railroad Errors or Omissions.

(ab) Lumber from Aberdeen Miss., to Chicago was routed "% C. M. & St. P." Originating line, the M. & O., changed routing instruction to "Wabash-C. M. & St. P. Dely." The Milwaukee, receiving no road haul, refused to accord the Chicago rate and demanded its applicable switching charge. Consignee declined, demurrage accrued, and shipment was reconsigned. Shipment could have been routed by M. & O. over available routes consistent with routing instructions over which the Milwaukee would have received a line haul and desired delivery made at Chicago rate. While governing tariff erroneously showed that consignee was located on a private track connecting with the Milwaukee such error did not relieve the M. & O. of its responsibility to observe routing instructions. See 23 I. C. C. 84 and 83 I. C. C. 490. The M. & O.'s error prevented proper delivery and where a shipper is compelled to pay demurrage charges through fault of a carrier, such charges must be refunded. See 41 I. C. C. 723 and 46 I. C. C. 365. Hector Lbr. Co. v. C., M. & St. P., 112 I. C. C. 418.

(c) Where a shipper is compelled to pay demurrage charges through fault of carrier, such charges must be refunded. See 41 I. C. C. 723 and 46 I. C. C. 365. Hector Lbr. Co. v. C., M. & St. P., 112 I. C. C. 418, 419.

(d) Complainant attacked demurrage, switching and reconsignment charges collected at Detroit, Mich., on August 4, 1922, on a car of lumber originating at Linville, La., on June 10, 1922, as illegal. Shipment was billed to Marine, Ill., reconsigned to complainant at Detroit. Complainant was notified of arrival at Detroit June 27. On June 30 M. C. received orders from complainant for delivery to Greeley Coal & Lumber Co. on the G. T. tracks at Detroit and the car was transferred to that line on July 4. On July 5 the G. T. sent a notice of arrival to the Greeley Co. There was no room for placement on the private siding of that company, and a notice of constructive placement was sent on July 10. Shipment was refused July 17. On that date complainant ordered it delivered to the Pauli Co. at Detroit. Such delivery was effected by the G. T. on July 18. Latter company paid all charges, including reconsignment charge of $7 assessed by M. C. for attempted movement to the Greeley Co., demurrage of $18 assessed by G. T. for detention from July 11 to July 17, and a switching charge of $8.10 for movement to Pauli Co. Under rule 5, section A1 this car was not constructively placed until July 10 when notice of constructive placement was sent. Under rule 3 section D demurrage did not begin to run until 7 a.m. July 11. As the shipment was unclaimed, and it became the duty of the G. T. on July 12 to send the consignor notice by wire to that effect, as provided by rule 4 section E. Such notice was not sent. HELD, shipment overcharged $15.10 by G. T., which is to be refunded, complaint dismissed. Milne Lumber Co. v. M. C. R. R., 118 I. C. C. 580.

(e) Demurrage charges accruing on shipment held at originally billed destination due to failure of connecting line to transmit instructions that such shipment was to be reconsigned, found inap-

plicable and erring carrier found liable therefor. Stuckey-Odom Lbr. Co. v. L. & N., 115 I. C. C. 403.

(f) Coal moving during Federal control was assigned to a car pool and due arrival notices furnished. After expiration of free time shipments were held under constructive placement and demurrage accrued. Thereafter an embargo was placed against consignee and consignor ordered shipments reconsigned upon ascertaining that they were refused by consignee. Upon contention that failure of carrier to make delivery on or before effective date of the embargo, and acceptance by carrier of other shipments for transportation to consignee after that date without advising complainant of the embargo, constituted railroad error, HELD: Governing tariff made no provision for notice to consignor of refused or unclaimed shipments and no part of the demurrage accrued before complainant had knowledge of the situation. Its position was same as if there had been no embargo. It therefore follows that demurrage did not accrue because of observance of the embargo and thus because of railroad error. Superior Coal Co. v. Director General, 115 I. C. C. 710.

§20a. Waiver.

(a) Lumber from White Sulphur, W. Va., to Harrisburg, Pa., ordered reconsigned to Hershey, Pa., by letter addressed to agent of Norfolk & Western who referred it to agent of Western Maryland at Hagerstown Junction, Md., was held by latter carrier at Harrisburg beyond free time and demurrage and storage charges accrued. Upon contention that detention of car and handling of request amounted to negligence on part of Western Maryand, HELD: Carrier's reconsigning tariff provided that request for reconsignment must be made or confirmed in writing to its general freight agent at Baltimore, and under doctrine laid down in 266 U. S. 92, tariff regulations could not be waived by acceptance of reconsignment order by its agent at Hagerstown Junction. As request was not made in accordance with tariff provisions no duty was placed upon carrier to reconsign shipment and storage and demurrage charges assessed were therefore applicable. Shreiner Lbr. Co. v. Director General, 123 I. C. C. 551.

V. REPARATION.

See Reparation.

§21. In General.

(a) Shipment originating on nonfederally controlled line moved to a point on carrier under Federal control. Originating carrier billed illegal demurrage charges as advances and received settlement therefor in interline accounts, director general collecting such charges from shipper at destination. Complainant names as defendant only director general, who contends that because illegal charges were retained by originating carrier after interline settlement, at which time he was unaware of controversy regarding charges, there is no overcharge so far as he is concerned; that he can not be held liable for illegal charges accruing because of action of carrier not under Federal control; and, that proper party has not been named defendant. HELD: Shipper entitled to recover illegal charges from carrier who collects them, whose duty it is then to ascertain, and charge them back to, carrier responsible for their assessment. See also 17 I. C. C. 330. Yellow Pine Co. of Phila. v. Director General, 104 I. C. C. 371.

(b) Demurrage charges accruing on shipment held at originally billed destination due to failure of connecting line to transmit instructions that such shipment was to be reconsigned, found inapplicable and erring carrier found liable therefor. Stuckey-Odom Lbr. Co. v. L. & N., 115 I. C. C. 403.

(c) Demurrage paid on ocean-going vessels by shipper because of unreasonable delay of railroad in transporting grain for export is proper element of damages. Pennsylvania R. Co. v. Wm. H. Muller & Co., Inc., 15 Fed. (2d) 535.

§22. Actions at Law.

See Actions at Law.

(a) Evidence of a witness for the plaintiff, the railroad company, that the correct demurrage charges were certain specified amounts, where it appeared that his testimony was based solely upon a schedule of charges furnished by him by the plaintiff, which the witness stated contained correct charges for demurrage to be made upon freight cars covering the period during which demurrage charges had accrued against the car on which demurrage charges were claimed in this suit, was insufficient to establish the charges for demurrage authorized by the state Public Service Commission. Seaboard Air Line Ry. Co. v. Trask, (Ga., 1926) 136 S. E. 106.

(b) In a suit by a railway company against a shipper to recover demurrage charges arising out of an intrastate shipment, a written schedule of demurrage charges, identified by a witness as "furnished" by the plaintiff, which was not shown to be a schedule of demurrage charges authorized by the state Public Service Commission, but which contained on its face a statement that it was "national car demurrage rules and charges," was insufficient as proof of a schedule of demurrage charges authorized by the state Public Service Commission, and was properly rejected when offered in evidence. Seaboard Air Line Ry. Co. v. Trask, (Ga., 1926) 136 S. E. 106.

(c) National Car Demurrage Rules and Charges, effective December 1, 1919, HELD inadmissible because irrelevant and immaterial to issue involved in suit for recovery of September and October, 1919, demurrage charges. Davis, Director General, v. Martin, (Tex., 1926) 287 S. W. 113.

VI. LIABILITY TO PAY.

§23. In General.

(a) Coal exchange, voluntarily organized by tidewater shippers to keep records of cars to credit of various members in each pool, and give orders, through its general manager, to carrier, to dump equivalent of coal received by each into vessel berthed to receive and transport coal of such consignee, HELD not consignee liable for demurrage. James v. Norfolk & W. Ry. Co., (Va., 1925) 129 S. E. 321.

(b) As between the shipper and the consignee, the one liable for the payment of demurrage is the one through whose fault the demurrage was incurred. Vanderbilt v. Planters' Oil Mill & Gin Co., (Miss., 1925) 106 So. 14.

(c) Shipper of coal to coal exchange pool, under agreement to be responsible to railway for demurrage and to ship coal in its own name in care of exchange pool, HELD liable for demurrage charges, rather than exchange. Emmons Coal Mining Co. v. Norfolk & W. Ry. Co. 47 Sup. Ct. 254.

§24. Actions to recover.

(a) The lien of a carrier for demurrage cannot be sold or assigned, and is lost if the carrier surrenders possession of the property on which the lien is claimed. Vanderbilt v. Planters' Oil Mill & Gin Co., (Miss., 1925) 106 So. 14.

I. ESTABLISHMENT AND CONTROL

See Control and Regulation.

§1. In General.

(a) In equalizing rates a percentage difference in distance is preferable to a fixed mileage difference for all distances. Galveston Commercial Asso. v. G., H. & S. A., 128 I. C. C. 349, 388.

II. APPLICATION.

See Application of Rates; Classification §17.

§2½. In General.

(a) Differentials generally are made to fit particular situations, and circumstances and conditions may vary in different cases, but commission may not

disregard differentials prescribed in other cases or voluntarily established for comparable distances, especially those from same origin territory to other destinations. Lake Cargo Coal Rates, 1925, 126 I. C. C. 309, 343.

(b) Compliance with carriers' request that differentials should be applied only over the short-line routes would deprive shippers of the natural advantage of the lower-rate routes through central territory; would result in many rates as high as the full combination on the gateways and give rise to further long-and-short-haul departures and unwarranted increases in the rates prescribed. Southern Class Rate Investigation, 128 I. C. C. 567, 580.

§2½a. Between Commodities.

(a) Shipper requested that commission modify its conclusions in the Salt Cases of 1923, 92 I. C. C. 388, wherein it was held that all kinds of salt should be accorded a common rate and minimum weight, contending that lower rates on crude than on refined salt are justified. It was stated that crude salt is of low grade, is dirty and discolored, and about one-third or one-fourth the value of refined salt used for curing meats. Also that damage claims are practically unknown and that the two grades of salt do not compete. HELD: Finding in the general cases was based largely upon a practical unanimity of opinion between carriers and salt producers and commission is not prepared to depart from previous conclusion that refined and crude salt should take the same rate. Salt from Ludington Group, 112 I. C. C. 255, 258.

(b) Rate on shipments of paper boxes, k. d., in bundles, from Chicago to Salt Lake City found unreasonable to extent it exceeded by more than 10 per cent the rate contemporaneously in effect on newsprint paper from and to same points, established under readjustment prescribed in the Paper case, 66 I. C. C. 571, for application on boxes or cartons, k. d., binder board, wrapping paper, paper bags, etc. Reparation awarded. Chicago Carton Co. v. C., B. & Q., 115 I. C. C. 215.

(c) All-rail rates on newsprint paper from Berlin, N. H., to Birmingham, Ala., which exceeded or exceed by more than 1 cent per 100 pounds the all-rail rates contemporaneously maintained to Nashville, found unreasonable and to subject Birmingham to undue prejudice. Reparation awarded and undue prejudice ordered removed. Birmingham News Co. v. A., B. & A., 118 I. C. C. 205.

(d) Following 95 I. C. C. 181; 107 I. C. C. 182, rates on rig irons in straight carloads should be about 15 per cent lower than those on oil-well supplies. Consolidated Southwestern Cases, 123 I. C. C. 203, 331.

(e) Rate on unfinished broom handles from Pellston, Mich., to Wichita, Kans.; found unreasonable as compared with rates on sleigh wood, agricultural-implement wood, and vehicle wood, all in the rough, and various other lumber articles, and to extent it exceeded contemporaneous lumber rates by more than 1.5 cents. See 92 I. C. C. 574. Reasonable rate prescribed for future and reparation awarded. Wichita Chamber of Commerce v. A., T. & S. F., 123 I. C. C. 520.

(f) Rates on broom handles found unreasonable to extent they exceeded by 1.5 cents those contemporaneously maintained on lumber. Oklahoma Traffic Asso. v. A., T. & S. F., 129 I. C. C. 403.

III. PURPOSE.

§5. To Equalize Conditions.

See Equalization of Rates.

(a) The fundamental purpose of the act is "to compel the carrier as a public agent to give equal terms to all," "to cut up by the roots every form of discrimination, favoritism, and inequality," and to "place all shippers upon equal terms." See 200 U. S. 361, and other cited cases. Service on K., O. & G. Ry., 118 I. C. C. 412, 418.

(b) Interstate rates on cement from Cement City (Sugar Creek), Mo., and Bonner Springs and Sunflower, Kans., to destinations in the Kansas City, Mo.-Kans., switching district, to extent they are lower by more than 4.5 cents than interstate rate contemporaneously maintained on like traffic from points in the Kansas gas belt found unduly prejudicial to said Kansas gas-belt points and shippers therefrom and unduly preferential of Cement City (Sugar Creek), Bonner Springs, and Sunflower, and shippers therefrom. Iola Cement Mills Traffic Asso. v. A. T. & S. F., 122 I. C. C. 337.

(c) Fact that ex-lake differentials are constructed on quite a different basis from all-rail differentials negatives the

idea that there is any close competitive relation between the two. Maritime Asso., Boston Chamber of Commerce v. A. A. R. R. 126 I. C. C. 199, 208.

§6. To Equalize Consuming Points.

See Equalization of Rates §3.

(a) All-rail rates on newsprint paper from Berlin, N. H., to Birmingham, Ala., which exceeded or exceed by more than 1 cent per 100 pounds the all-rail rates contemporaneously maintained to Nashville, and rail-water-and-rail rates which exceeded or exceed similar rates contemporaneously maintained to Memphis and Nashville, found unreasonable and to subject Birmingham to undue prejudice. Reparation awarded and undue prejudice ordered removed. Birmingham News Co. v. A., B. & A., 118 I. C. C. 205.

§7. To Equalize Producing Points.

See Equalization of Rates.

(a) Rates on barytes from Cartersville, Ga., to various eastern destinations, found not unreasonable or otherwise unlawful as compared with lower rates from Sweetwater, Tenn., to same destinations. Present rates from Sweetwater were established to enable shippers at that point to compete with shippers at Cartersville; distances from Cartersville over short-line routes to eastern destinations are substantially greater than from Sweetwater; moreover, the commission has approved higher rates on this traffic from Cartersville than from Sweetwater in 43 I. C. C. 334, 50 I. C. C. 429, and 59 I. C. C. 173. Thompson, Weinman & Co. v. A. C. Ry., 118 I. C. C. 21.

(b) Rate on sand from Lawrence, Kans., to Kansas City, Mo.-Kans., found unreasonable and unduly prejudicial to extent it exceeds by more than 1 cent per 100 pounds the rate from points within Kansas City switching limits and Muncie and Grinter, Kans., to points in Kansas City switching district. Taking into consideration low grade of sand and keen competition in its sale, the difference in rate from Lawrence is too high as compared with those from Kansas City district points. Reasonable rate prescribed for future. Jackman & Jackman v. A., T. & S. F., 118 I. C. C. 560.

IV. REASONABLENESS AND DISCRIMINATION.

§8. In General.

See Advanced Rates §5 (½) (e); Classification §17; Discrimination; Ex-Lake Rates (c); Reasonableness of Rates.

(a) Rates on prepared roofing and asphalt shingles from Chicago, St. Louis, Cairo, Evansville, Louisville, and Cincinnati, to Florence, Sheffield, and Tuscumbia, Ala., found not unreasonable, but, in view of level of rates in Mississippi Valley territory and circumstances under which they were established in comparison with contemporaneous rates in Southeast at points adjacent to that territory, the spread between rates that have for many years prevailed at Corinth, Miss., and rates at Florence, Sheffield, and Tuscumbia found too great, subjecting jobbers at latter points to undue prejudice in competing with Corinth jobbers for trade in same common territory. Differentials prescribed for removal of undue prejudice. Florence Chamber of Commerce v. L. & N., 104 I. C. C. 459.

(b) Rates on crushed oyster shells and oyster-shell dust from Apalachicola, Fla., to Mississippi and Ohio River crossings, and points beyond, found not unreasonable, but unduly prejudicial to extent they exceed by a fixed differential rates contemporaneously maintained on like traffic from Pensacola, Fla., and Mobile, Ala., to same destinations. Nonprejudicial basis of rates prescribed and reparation denied. Gulf City Mfg. Co. v. A. N. R. R., 107 I. C. C. 29.

(c) Rates on grain and products from points in Washington and Oregon south of Snake River to Portland, Seattle, Tacoma, and other north Pacific ports, established as a result of commission's decision in Inland Empire Shippers League, 59 I. C. C. 321, found not unreasonable or unduly prejudicial. While competition from Puget Sound ports for purchase of wheat in the basin south of Snake River has been to a large extent destroyed, Portland enjoying a virtual monopoly of wheat from that territory, only by continuance of present differential in favor of Portland can that point be accorded benefits to which it is entitled by reason of its natural advantages. Walla Walla County Farm Bureau v. N. P., 107 I. C. C. 110.

(d) Rates on articles in uniform brick list from Danville, Ill., to points in Wisconsin, Michigan, Minnesota and North Dakota, found not unreasonable

but unduly prejudicial to Danville and unduly preferential of other competing Illinois origin points. Nonprejudicial differential relationship of rates prescribed for future and reparation denied. Western Brick Co. v. N. Y. C., 107 I. C. C. 245.

(e) Rates on coal from Ohio and Crescent districts to certain points in lower Peninsula of Michigan and to Elkhart, Ind., found not unreasonable or otherwise unlawful as compared with rates to Toledo, Detroit, and Jackson. Spreads between assailed and compared rates are not sufficiently out of line to warrant finding of undue prejudice and complainant's case, built entirely on distance, fails to take into consideration different conditions which render compared rates unacceptable as the foundation upon which to construct rates on a distance basis. Radical changes are sought in group adjustment which has existed for many years with commission's approval. However, evidence adduced deals with only a relatively small portion thereof and record fails to indicate how proposed changes will react on the group adjustment as a whole. Kalamazoo Chamber of Commerce v. C. & O., 107 I. C. C. 291.

(f) Rates on sugar from New Orleans, Gramercy, Reserve, and Three Oaks, La., to Texarkana, Ark.-Tex., Hope, Ashdown, and Nashville, Ark., found not unreasonable, but unduly prejudicial to such destination points and unduly preferential of Shreveport, La., to extent they exceed rates to Shreveport by fixed differentials. Four States Grocery Co. v. K. C. S. Ry., 107 I. C. C. 485.

(g) Rates on baled hay from Arizona points to Mississippi River crossings, Memphis and south thereof, found unduly prejudicial to extent they exceed contemporaneous rates from El Paso to same crossings by more than 6 cents from Thatcher group, 10 cents from Phoenix group, and 13 cents from Yuma group. Arizona Hay Traffic Asso. v. A. E., 107 I. C. C. 591, 599.

(h) Upon complaint seeking rates on lettuce, spinach, and asparagus from South Carolina producing districts to interstate destinations, made 18.5 cents over contemporaneous rates on potatoes. FOUND: Rates proposed are on a decidedly low basis and are conspicuously low as compared with contemporaneous rates from producing points in Virginia, North Carolina, and Florida, with which present rates compared favorably. South Carolina Produce Asso. v. A. & R., 107 I. C. C. 613, 618, 623.

(i) Interstate rates on drain tile from Rockford, Sheffield, and Hampton, Iowa, to destinations in Iowa, Nebraska, South Dakota, and Minnesota, found unreasonable to extent they exceeded by more than 1 cent per 100 pounds the rates contemporaneously maintained on brick and related articles. Mason City Brick & Tile Co. v. Director General, 107 I. C. C. 702, 718.

(j) Rates on vegetables from Jacksonville, Fla., to Wichita, Kans., except cabbage and potatoes, found unreasonable and unduly prejudicial to extent the factors, Jacksonville to Wichita, exceeded the factors, Jacksonville to Kansas City, by more than 10 per cent. Reasonable and nonprejudicial rates prescribed for future and reparation awarded. Wichita Chamber of Commerce v. A. & V., 109 I. C. C. 368.

(k) Rates on plumbago and graphite from New York Harbor, N. Y., free lighterage limits to Delano Junction, N. Y., destined to Ticonderoga, N. Y., over an interstate route, found unreasonable to extent they exceeded rate contemporaneously in effect from Jersey City, N. J., by more than 3 cents. Reparation awarded and reasonable rate prescribed for future. Dixon Crucible Co. v. D. & H., 109 I. C. C. 380.

(l) Class C rates on excelsior cushions, mats, or pads, from Oshkosh and Rice Lake, Wis., to Fort Smith, Ark., found unreasonable as compared with rates contemporaneously applicable to to Chicago, St. Louis, Kansas City, and other competing cities in western classification territory to which excelsior pads from Wisconsin move at commodity rates lower than class C, and to extent they exceeded rates constructed by application of the rates prescribed in 100 I. C. C. 274 for distance here involved, with the addition of an arbitrary, excelsior pads over excelsior, of 3.5 cents. Reasonable rates for the future prescribed and reparation awarded. Ballman-Cummings Furniture Co. v. C. & E. I. Ry., 109 I. C. C. 413.

(m) Rates on sand and gravel from La Fayette, Ind., to destinations in Illinois, found unduly prejudicial to extent

they exceed corresponding rates from Attica, Ind., by more than 10 cents per net ton. Findings in La Fayette Gravel Co., 62 I. C. C. 729, modified. Western Indiana Gravel Co. v. N. Y. C. & St. L., 109 I. C. C. 727.

(n) Upon complaint seeking differential on coal moving from Birmingham district to Memphis, under rates on like traffic moving from Kentucky and Illinois districts based on shorter haul from former. FOUND: Whatever equities of situation at Memphis may be, commission can not, under the law, make a finding of undue prejudice, since no one line serves Memphis at base rate from Alabama field on one hand and Kentucky and Illinois fields on other, independent carriers serving this common market. See 22 I. C. C. 115, and cases based thereon. Differential adjustment in favor of Birmingham district found not justified. Alabama Mining Institute v. I. C., 109 I. C. C. 740, 748.

(o) Rail-and-water rates on plain iron wire, c. l. and l. c. l., from Fostoria, Ohio, to Savannah, Ga., and Jacksonville, Fla., found unduly prejudicial to Fostoria and unduly preferential of Cleveland, Ohio, to extent they exceed by more than 2.5 cents the rail-and-water rates contemporaneously maintained on like shipments from Cleveland, Ohio, to same destinations. Seneca Wire & Mfg. Co. v. B. & O., 112 I. C. C. 95, 97.

(p) Rates on paper boxes from Chicago to Oklahoma City, Denver, Topeka, and Lincoln, found unreasonable to extent they exceeded 110 per cent of rates on newsprint paper subsequently established in conformity with those prescribed in 66 I. C. C. 571. Reparation awarded. Beatrice Creamery Co. v. A., T. & S. F., 112 I. C. C. 113.

(q) Joint rates on newsprint paper from Espanola, Ontario, Canada, to points in Wisconsin, Minnesota, Illinois, Missouri, and Iowa, and to Omaha, Nebr., in which carriers subject to the act participate, found, in so far as transportation takes place within the United States, to be unreasonable and unduly prejudicial to extent they exceed or may exceed by more than 4 cents per 100 pounds the rates contemporaneously applicable from Sault Ste. Marie, Ontario, Canada, to same destinations. Spanish River Pulp & Paper Mills v. A. & W., 113 I. C. C. 343.

(r) Following Washington Publishers' Asso., 98 I. C. C. 339, rates on printing and wrapping paper from points in New England to Baltimore, Md., found not unreasonable, but rates from same origin points to Washington, D. C., found unreasonable to extent they exceeded corresponding rates to Baltimore by more than 2 cents per 100 pounds. Measure of reasonable rates prescribed for future and reparation awarded. New England Paper & Pulp Traffic Asso. v. M. C., 113 I. C. C. 353.

(s) Certain so-called short or weak lines in southern territory accorded arbitraries or a percentage over rates prescribed for standard lines on fertilizer and fertilizer materials. Fertilizers between Southern Points, 113 I. C. C. 389.

(t) Rates on lumber, egg-case material, box lumber, and shooks, from Caruthersville, Mo., to points in Iowa, South Dakota, Minnesota, Wisconsin, and Illinois, found unreasonable and unduly prejudicial in comparison with rates contemporaneously maintained from Cairo to same destinations. Similar rates to Kansas and Nebraska destinations found not unreasonable or otherwise unlawful as compared with those from Memphis, average distances and rates from Caruthersville and Memphis appearing to be substantially the same. Reasonable and nonprejudicial rates, Caruthersville differentially over Cairo, prescribed and reparation awarded. Dillman Egg Case Co. v. A. T. & S. F., 113 I. C. C. 447.

(u) Rates on sugar from New Orleans, or points taking same rates, to Superior or Norfolk, Nebr., found unreasonable and unduly prejudicial to extent they exceed rates to Kansas City and St. Joseph, Mo., Omaha, Nebr., and Sioux City, Iowa, or to either of them as the through routes may run, by more than 8 cents to Superior, or by more than 15 cents to Norfolk. Nonprejudicial rates prescribed for future. Nebraska State Ry. Comm. v. A. & W., 113 I. C. C. 467.

(v) Rates on sugar from New Orleans, or points taking same rates, to Rapid City, Deadwood, or Lead, S. Dak., found not unreasonable but unduly prejudicial to extent they exceed the rates to Omaha, Nebr., and Sioux City, Iowa, or to either of them, by more than 31 cents to Rapid City or by more than 33 cents to Deadwood or Lead. Nebraska State Ry. Co. v. A. & W., 113 I. C. C. 467.

(w) Rates on sugar from New Orleans, or points taking same rates, to Hastings or Grand Island, Nebr., found unreasonable and unduly prejudicial to extent they exceed rates to Kansas City and St. Joseph, Mo., Omaha, Nebr., and Sioux City, Iowa, or to either of them as the through routes may run, by more than 10 cents to Hastings, or by more than 12 cents to Grand Island. Nonprejudicial rates prescribed for future. Nebraska State Ry. Comm. v. A. & W., 113 I. C. C. 467.

(x) Rates on sugar from New Orleans, or points taking same rates, to Hastings, Columbus, Kearney, Norfolk, North Platte, Scottsbluff, or Crawford, Nebr., found unreasonable and unduly prejudicial to extent they exceed rates to Kansas City and St. Joseph, Mo., Omaha, Nebr., and Sioux City, Iowa, or to either of them as the through routes may run, by more than 10 cents to Hastings, 13 cents to Columbus or Kearney, 15 cents to Norfolk, 17 cents to North Platte, 23 cents to Scottsbluff, or by more than 27 cents to Crawford. Nonprejudicial rates prescribed for future. Nebraska State Ry. Comm. v. A. & W., 113 I. C. C. 467.

(y) Rates on sugar from New Orleans, or points taking same rates, to Fairbury, Hastings, Grand Island, Columbus, or Kearney, Nebr., found unreasonable and unduly prejudicial to extent they exceed rates to Kansas City and St. Joseph, Mo., Omaha, Nebr., and Sioux City, Iowa, or to either of them as the through routes may run, by more than 8 cents to Fairbury, 10 cents to Hastings, 12 cents to Grand Island, and 13 cents to Columbus or Kearney. Nonprejudicial rates prescribed for future. Nebraska State Ry. Comm. v. A. & W., 113 I. C. C. 467.

(z) Upon further consideration former report, 102 I. C. C. 641, finding rates on iron and steel from Birmingham to Nashville unduly prejudicial to extent it exceeds 3 cents per 100 pounds more than contemporaneous rate on like traffic from Birmingham to Chattanooga, and 4 cents less than from Birmingham to Knoxville, modified to extent of permitting the establishment, under agreement by parties, of a rate from Birmingham to Nashville of 4 cents more than rate contemporaneously in effect from Birmingham to Chattanooga. Nashville Traffic Bureau v. L. & N., 113 I. C. C. 673.

(aa) In 92 I. C. C. 699, division 3 found rates on lumber, in carloads, from Flinn, Va., to certain destinations in central, trunk line and New England territories, not unreasonable, but were since June 29, 1922, unduly prejudicial and unduly preferential of its competitors at Marlinton, W. Va., and other points on the Greenbrier division of the C. & O., to the extent of their excess over rates from Marlinton. In complying with the order defendant established the same rates from the Greenbrier division and the Warm Springs Valley branch, thus placing the two branches on a parity. This was accomplished by reducing a few of the rates from the Warm Springs Valley branch and increasing many of the rates from the Greenbrier division. The rates now proposed are accepted by all interested parties as satisfactory for application in the future. They are in many instances lower than the rates now in effect from points on the N. & W., for comparable distances. HELD, rates attacked not unreasonable but unduly preferential of Marlinton to extent they exceed: on eastbound traffic rates 2c lower than rates from Marlinton; and on westbound traffic rates 2c higher than like rates from Marlinton, reparation denied. Freehold Lumber Co. v. C. & O. Ry., 118 I. C. C. 463.

(bb) The measure of the differential determines the relationship of rates from the various origins and is obviously of prime importance to the producers. Chicago Gravel Co. v. A. T. & S. F. Ry., 118 I. C. C. 633, 644.

(cc) Rates on spelter by-products from points in c. f. a. territory, and from western termini points, not including Pittsburgh, to Trenton, N. J., found not unreasonable or otherwise unlawful. Trenton takes rates 2 cents higher than to Philadelphia, Palmerton, and Phillipsburg, this basis being in accordance with the general group adjustment between c. f. a. and eastern trunk-line territories which has obtained for many years. In the adjustment of class and commodity rates from Pittsburgh and points west thereof, Philadelphia, Palmerton, and Phillipsburg are located in Philadelphia group, to which rates are generally based on a differential of 2 cents under New York group, in which Trenton is located, and commission has hitherto refused to disturb this adjustment. See 23 I. C. C. 195, 198; 23 I. C. C. 684, 686. Lissberger & Co. v. P. R. R., 115 I. C. C. 521.

(dd) Rate on crushed slate from Whiteford, Md., and Slate Hill, Pa., to New Orleans, La., and Mobile, Ala., found not unreasonable but unduly prejudicial to extent they exceeded contemporaneous rate from Esmont, Va., a competing point, by more than $1.50 per net ton. Reparation denied. Staso Milling Co. v. M. & P., 115 I. C. C. 605.

(ee) Rates on coal from Clinchfield and Dante, Va., to Toledo and Toledo Dock, Ohio, for transshipment by vessel, found unduly prejudicial to extent they exceed rate from Clinchco, Va., by more than a 15-cent differential. Clinchfield Coal Corp. v. C. C. & O., 118 I. C. C. 79.

(ff) Prior to the 1920 increases, rate on bulk corn from Blue Island and Chicago, Ill., and Hammond, Ind., to various points contiguous to Portland, Me., carried a 2-cent differential over rate to New York. In applying horizontal increases the 2-cent differential was continued to Portland and other points in this territory, whereas to destinations here involved, a 40 per cent increase was applied, disrupting the rate parity. Subsequently the equalization was restored. Upon complaint seeking damages on shipments moving during the interim, HELD: The general increases resulted in disturbances to rate relationships and differentials in various instances, but neither that fact nor showing here made establishes unreasonableness of rate charged. Nor did complainant establish damages by reason of discrimination or prejudice which was removed by voluntary reduction. Paris Flouring Co. v. N. Y., C. & St. L., 118 I. C. C. 291.

(gg) Rates on lumber from Flinn, Va., on Warm Springs Valley branch of the C. & O. Ry. Co., to destinations in c. f. a.. trunk-line, and New England territories, found not unreasonable but unduly prejudicial to extent they exceed on eastbound traffic rates 2 cents lower, and on westbound traffic rates 2 cents higher, than like rates contemporaneously maintained from Marlinton and other points on Greenbrier division of C. & O. Original report, 92 I. C. C. 699, modified. Freehold Lbr. Co. v. C. & O., 118 I. C. C. 463.

(hh) Following 96 I C. C. 136, rates on gasoline and naptha from Beckett, Wilson, Bristow, Okmulgee, and Tulsa, Okla., to Blue Creek, W. Va., found unreasonable in their relation to rates to Charleston, W. Va.. no warrant being found for the spread in the rates maintained between these two destinations. Reasonable rate prescribed for future and reparation awarded. Transcontinental Oil Co. v. B. & O., 118 I. C. C. 518.

(ii) Rates on sand from Lawrence, Kans., to destinations within a radius of 150 miles east of Kansas City, Mo.. found unreasonable and unduly prejudicial to extent they exceed by more than 20 cents per ton rates from Turner, Muncie, Grinter, Sirridge, and Armourdale, Kans., competing points accorded Kansas City basis of rates. Reasonable and nonprejudicial rates prescribed for future. Jackman & Jackman v. A., T. & S. F., 118 I. C. C. 547.

(jj) Rate on sand from Lawrence, Kans., to Kansas City, Mo.-Kans., found unreasonable and unduly prejudicial to extent it exceeded by more than 1 cent per 100 pounds the rate from points within Kansas City switching limits and Muncie and Grinter, Kans., to points in Kansas City switching district. Taking into consideration low grade of sand and keen competition in its sale, the difference in rate from Lawrence is too high as compared with those from Kansas City district points. Reasonable rate prescribed for future. Jackman & Jackman v. A. T. & S. F., 118 I. C. C. 547, 560.

(kk) An adjustment under which arbitraries confine shipments largely to single-line deliveries has been condemned by commission. See 26 I. C. C. 192; 62 I. C. C. 731. Chicago Gravel Co. v. A., T. & S. F., 118 I. C. C. 633, 647

(ll) Complainant attacked class and combination rates charged on sulphate of alumina, carloads, from Kokomo, Ind., to Wisconsin as unreasonable, unduly prejudicial as compared with rates from Joliet and Chicago Heights, Ill., to the same destinations. The rates from Kokomo are either 90% of sixth class or combinations of the rate to Milwaukee, which is upon that basis, and proportional commodity rates beyond. Chicago Heights and Joliet take the same rates as Chicago. A rate of 18.5c is applicable from these points to a large number of destinations in Wisconsin for distances ranging from 149 to 400 miles. To the same destinations generally a proportional rate of 8.5c is in effect from Milwaukee, and this, added to the rate from Kokomo to Milwaukee results in a combination rate of 26.5c. The rates from Kokomo are in no instance shown to be less than 5.5c higher than the rates from the Chicago group, which is the difference in the rates to Milwaukee. The record does not show that increases in

the rates from Chicago Heights and Joliet are justified. HELD, attacked rates from Kokomo to Wisconsin unreasonable to extent they exceed the aggregate of intermediate rates, and unduly prejudicial to extent they exceed the rates on like traffic from Chicago Heights and Joliet by more than 5.5c. Como Chemical Co. v. A. T. & S. F. Ry., 120 I. C. C. 517.

(mm) Class rates between Kansas City, Mo., Omaha, Nebr., and St. Paul and Minneapolis, Minn., on one hand, and Fulton and Mayfield, Ky., on other, found unreasonable and unduly prejudicial in favor of Ohio River crossings to extent they exceeded corresponding rates contemporaneously maintained from or to Cairo or Metropolis, by more than specified amounts herein prescribed. Reasonable maximum rates and nonprejudicial basis of rates prescribed for future and reparation denied. Mayfield Chamber of Commerce v. A. & W., 120 I. C. C. 137, 144.

(nn) Class rates between official classification territory, on one hand, and Fulton and Mayfield, Ky., on other, found unduly prejudicial in favor of Ohio River crossings to extent they exceed corresponding rates contemporaneously maintained from or to Cairo or Metropolis, via whichever crossing the traffic moves from and to Fulton and Mayfield, by more than 24 cents on first class, and on the other classes by amounts bearing same percentage relationships to 25 cents as contemporaneous rates on the corresponding classes bear to first-class rates from or to Cairo or Metropolis, as the case may be, on the one hand, and points in official classification territory, on the other, resulting rates to be governed by official classification. Mayfield Chamber of Commerce v. A. & W., 120 I. C. C. 137, 144.

(oo) Rates on potatoes and vegetables from Colorado, Idaho, Montana, Nebraska, Wyoming, and Utah, to points in southern Arkansas, and Louisiana, found unduly prejudicial to such destination points and shippers there located and unduly preferential of Little Rock, Pine Bluff, and Helena, points in northern Arkansas, and Memphis, Tenn., and shippers there located, to extent they exceed contemporaneous rates to latter points by more than 8 cents from points in Colorado, Nebraska, and Wyoming, and 7 cents from points in Utah, Idaho, and Montana. Arkansas Jobbers & Mfrs. Asso. v. C., R. I. & P., 120 I. C. C. 245.

(pp) Finding in prior report, 113 I. C. C. 343, that joint rates on newsprint paper from Espanola, Ontario, Canada, to destinations in Wisconsin, Minnesota, Illinois, Missouri, Iowa, and Nebraska, are and for future will be, in so far as transportation takes place within United States, unreasonable and unduly prejudicial to extent they exceed or may exceed by more than 4 cents per 100 pounds the rates contemporaneously applicable from Sault Ste. Marie, Ontario, to same destinations, affirmed on reconsideration. Spanish River Pulp & Paper Mills v. A. & W., 120 I. C. C. 251.

(qq) Carrier in defending reasonableness of petroleum rates to destinations on the Missouri & North Arkansas Ry., stressed the poor financial condition of above-named road. HELD, that rate herein found reasonable as maximum includes the usual arbitrary for that carrier because of its poor financial status. Bear State Oil Co. v. A., T. & S. F., 120 I. C. C. 301, 303, 304.

(rr) In 85 I. C. C. 270, commission prescribed specific rates on lumber and forest products from points in southeastern and Carolina territories and Virginia cities to various New Jersey points. Upon complaint contending that rates prescribed do not reflect proper spreads under the New York rates and seeking establishment of rates to Trenton, N. J., on same basis as those to Philadelphia, with relatively higher rates to Jersey City. HELD, it is not unusual for a general rate adjustment such as that resulting from above-cited case to include increases as well as reductions, and fact that spread in rates to Jersey City and Trenton under New York is less than that formerly existing, does not demonstrate that rates assailed are unreasonable. Moreover, rates assailed compare favorably with those on lumber from Georgia and Alabama points to c. f. a. territory. New Jersey Lumbermen's Committee v. A. C. L., 120 I. C. C. 329.

(ss) Joint rates on scrap car wheels from Windsor, Ontario, Canada, to Michigan City, Ind., and Pullman, Ill., found unreasonable and unduly prejudicial, in so far as the transportation takes place within United States, to extent they exceeded or may exceed 72 and 55 cents, respectively, higher than corresponding rates from Detroit, Mich. Reparation awarded. Hyman-Michaels Co. v. B. & O., 120 I. C. C. 417.

(tt) Rates on sugar from New Orleans and points taking same rates to Marshall and Jefferson, Tex., found unreasonable in past to extent they exceeded present rates. Present rates found just and reasonable maximum rates for future but unduly prejudicial to extent they exceed those contemporaneously in effect to Shreveport by more than 3 cents from Marshall and 4 cents from Jefferson. Marshall and Jefferson v. T. & P., 120 I. C. C. 455.

(uu) Rates on sulphate of alumina from Kokomo, Ind., to Wisconsin destinations, found unreasonable to extent they exceed aggregate of the intermediate rates contemporaneously in effect, and unduly prejudicial to extent they exceed the contemporaneous rates on like traffic from Chicago Heights and Joliet, Ill., by more than 5.5 cents. Reasonable and nonprejudicial rates prescribed for future. Como Chemical Co. v. A., T. & S. F., 120 I. C. C. 517.

(vv) Upon reargument, statement in original report, 104 I. C. C. 104, that fresh-meats rate from St. Louis to New York is a marked exception to the adjustment prevalent and that 117 per cent is the standard relationship on almost every other commodity, found to be in error. Finding that local and proportional rates on fresh meats from St. Louis and other Mississippi River crossings to destinations in trunk-line and New England territories should be based upon 117 per cent of the Chicago-New York rate, withdrawn, and rates based upon specific differentials over Chicago prescribed for future. Morrell & Co. v. N. Y. C., 120 I. C. C. 537.

(ww) Upon reargument, differentials which may be added to rates on salt under scale prescribed in original report, 102 I. C. C. 540, from Louisiana mines to local points on certain Mississippi short-line carriers, increased from 50 to 60 cents per net ton, and equidistant clause of fourth section of the act not required to be observed by these short lines in meeting more distant junction-point rates. Mississippi R. R. Comm. v. A. & V., 120 I. C. C. 569.

(xx) Complainant attacked commodity rates on cement interstate of 11c from Kansas gas belt to points within the Kansas City, Mo., switching district as unreasonable and as compared with the carload rates on cement from Cement City (Sugar Creek), Mo., Sunflower and Bonner Springs, Kas., to points within the Kansas City switching district unduly prejudicial. The Santa Fe serves all of the cement producing points in the Kansas gas belt except Mildred. M. P. serves Independence, Fredonia and Iola. M. K. T. serves Dewey, Mildred, Chanute, Humboldt, and Iola and Frisco serves Fredonia. The Santa Fe also serves Bonner Springs through a switching arrangement with the K. C. K. V. & W., Cement City and Sugar Creek. Bonner Springs is also served by the U. P., and Sunflower by the Kaw Valley. Except from Dewey to points in Kansas intermediate to Kansas City, Mo., the interstate rates on cement from the Kansas gas belt and from other cement producing points through western trunk line territory from Buffington, Ind., on the east, to and including Colorado on the west, are on the basis prescribed in 48 I. C. C. 201, and in the supplemental reports therein, 52 I. C. C. 225 and 69 I. C. C. 644. The original decision divided western trunk line territory into four rate territories with different mileage scales of interstate rates for application in each. Scale II rates were prescribed for that portion of Missouri generally north of the M. P. from St. Louis to Kansas City and in Iowa, southern and eastern Minnesota and portions of Wisconsin and Michigan. Scale III rates, somewhat higher than scale II, were prescribed for that part of Missouri generally south of the M. P. and north of the Frisco from St. Louis to Joplin, Mo., eastern Kansas, Nebraska, and South Dakota and portions of Minnesota not included in scale II territory. Sugar Creek, Bonner Springs, and Sunflower are on the boundary between scale II and scale III territories and the Kansas gas belt is in scale III territory. In arriving at the rates on cement as prescribed, and the related rates in the various other cases, the Commission has not been controlled by the general level of rates on other commodities, whether switching or line haul, but the rates prescribed have been made with special regard to the conditions surrounding the transportation and marketing of that particular commodity with the view to establishing, and securing the maintenance of, general levels of rates in and between the several scale territories not only reasonable per se as applied to that commodity but under which the rates from competing cement producing points are related to each other with close re-

gard to distance. This record discloses no sound transportation reason which would justify any substantially lower cement rate for the average haul of 15 miles from Sugar Creek, Bonner Springs and Sunflower to destinations in the Kansas City switching district than would result under the scale prescribed for interstate application to hauls of similar length in scale II territory, which scale forms the basis for the present key point rate of 11c from the Kansas gas belt. Kansas City is one of complainants largest markets for cement and they actively compete at that point with cement from Sugar Creek, Bonner Springs and Sunflower. The rates to Kansas from these competing mills should be on substantially the same basis, distance considered, and no other basis will remove the cause of these complaints. HELD, interstate rates on cement, in carloads, from Cement City (Sugar Creek), Bonner Springs and Sunflower to points within the Kansas City switching district that are lower by more than 4.5c, the rates from the Kansas gas belt points will result in undue prejudice, 11c to remain in effect from Kansas gas belt points and 6.5c from Sunflower, Bonner Springs and Sugar Creek. Iola Cement Mills Traffic Asso. v. A. T. & S. F. Ry., 122 I. C. C. 337.

(yy) Complainant alleged commodity rates on pig iron, carloads, from Alabama, Kentucky and Tennessee to Ansonia, Conn., as unreasonable and unjustly discriminatory, in that they exceeded the rates to Derby and Shelton, Conn. Rates on pig iron from southern territory to New York and destinations in New England are made with relation to the rates from Birmingham, Ala., being differentials over or under Birmingham rates. Ansonia is not on navigable water, but is within the switching district of Derby and Shelton, and rather than have delivery taken at Derby the carriers established the rate of $8.77 to Ansonia. The lower rates to Derby were originally predicated upon the rates published by the northern lines in 1904 from Norfolk to points on Long Island sound to meet water competition. HELD, rates attacked not unreasonable or otherwise unlawful, complaint dismissed. Farrell Foundry & Machine Co. v. A. B. & A. Ry., 123 I. C. C. 127.

(zz) Rates on window glass from Fort Smith, Ark., and Okmulgee, Okla., and on rough-rolled glass from Okmulgee to destinations in Texas, found not unreasonable, discriminatory, or unduly prejudicial as compared with those contemporaneously in effect from Shreveport, La., a competing point, to same destinations; except that such rates are unduly prejudicial to Fort Smith and Okmulgee and unduly preferential of Shreveport, to extent that rates from Fort Smith and Okmulgee to Gainesville exceed 6 cents less than the contemporaneous rates from Shreveport, and to extent that rates from Fort Smith and Okmulgee to Sweetwater and San Antonio exceed 4 and 5 cents, respectively, higher than the contemporaneous rates from Shreveport. Nonprejudicial bases of rates prescribed. Harding Glass Co. v. A., T. & S. F., 122 I. C. C. 217.

(3a) Intrastate rates on cement from Cement City (Sugar Creek), Mo., and Bonner Springs and Sunflower, Kans., to destinations in the Kansas City, Mo.-Kans., switching district, to extent they are lower by more than 4.5 cents than interstate rates contemporaneously maintained on like traffic from points in the Kansas gas belt, found unduly prejudicial to the Kansas gas-belt points and shippers therefrom, unduly preferential of Cement City (Sugar Creek), Bonner Springs, and Sunflower, and shippers therefrom, and unjustly discriminatory against interstate commerce. Iola Cement Mills Traffic Asso. v. A., T. & S. F., 122 I. C. C. 337.

(3b) Rates on grain and products from Ohio and Mississippi River crossings and Mount Vernon, Ind., to Florence, Sheffield, and Tuscumbia, Ala., found unreasonable to extent they exceed rates found reasonable in 118 I. C. C. 732 and other cited cases, and unduly prejudicial to extent they exceed by more than 2 cents per 100 pounds the rates contemporaneously applied on like traffic to Corinth. Reasonable and nonprejudicial rates prescribed for future and reparation denied. Florence Chamber of Commerce v. I. C., 122 I. C. C. 653.

(3c) Rates on grain and products from points of origin in Utah, and on the Oregon Short Line and Utah Idaho Central railroads in Idaho and Oregon to points in Nebraska, Kansas, Oklahoma, Texas, Minnesota, Iowa, Missouri, Arkansas, Louisiana, Wisconsin, Illinois, Indiana, Kentucky, Tennessee, Mississippi, and Alabama, found unduly pre-

judicial in favor of Colorado common points to extent they exceed contemporaneous rates from Denver to same destinations by more than reasonable differentials. Ogden Grain Exchange v. A. & S., 122 I. C. C. 691, 718.

(3d) Rates on crude sulphur from Sulphur Mine, La., Hoskins and Bryanmound, Tex., to Mooar, found not unreasonable but unduly prejudicial to extent they exceeded rates contemporaneously in effect to Chicago; and subsequent to reduction of rates assailed, rates from Hoskins and Bryanmound to Mooar, found unduly prejudicial to extent they exceeded those contemporaneously in effect to Chicago by more than 4.5 cents. Earnings under rates attacked compare favorably with those yielded by rates prescribed or found not unreasonable in previous cases, and fact that rates were subsequently reduced affords no gauge for determination of reasonable maximum rates to Mooar, earnings under such rates indicating that they are on a low basis. Nonprejudicial rates from Bryanmound and Hoskins prescribed for future. Du Pont de Nemours & Co. v. H. & B. V., 122 I. C. C. 729.

(3e) Rates on coal from Thompson, Utah, to destinations in Utah, Nevada, and California west of Castle Gate, Utah, during Federal control, found not unreasonable as compared with those from Castle Gate, and Rock Springs, Wyo., to same destinations, and from Montana points for comparable distances, except to destinations on Nevada Northern, Western Pacific, and Los Angeles & Salt Lake. The more favorable transportation conditions from Rock Springs was recognized in 89 I. C. C. 666, which tends to offset somewhat longer average distances from Castle Gate or Thompson; a differential of 10 cents in favor of Castle Gate can not be considered an unreasonable charge for the 94-mile haul from Thompson, and Montana coal rates are on a somewhat lower level than those in other western States. American Fuel Co. v. A., T. & S. F., 123 I. C. C. 101.

(3f) Findings in previous report on reargument, 89 I. C. C. 137, that interstate rates on anthracite and bituminous coal from various producing regions to Chicago switching district, higher to some delivery points therein than to Chicago proper, were not unreasonable but were unduly prejudicial to extent that rates to higher-rated points exceeded the flat Chicago rates, modified so as to provide that rates will not be unduly prejudicial to such points except to extent they exceed nonprejudicial basis of differentials prescribed. Original report 73 I. C. C. 161. Chicago Coal Merchants Asso. v. Director General, 123 I. C. C. 169.

(3g) Upon further consideration, authority to charge for transportation of fertilizers and materials, an arbitrary of 50 cents per net ton in addition to standard-line rates between points on certain additional so-called short or weak lines in the Southeast not considered in original report 113 I. C. C. 389, and between points on those lines and points on standard lines, such arbitraries to accrue solely to weak lines, found justified. Fertilizers Between Southern Points, 123 I. C. C. 193.

(3h) Rates on flaxseed from points in South Dakota to Fredonia, Kans., constructed by adding proportionals to local rates to Missouri River, found unreasonable and unduly prejudicial as compared with rates contemporaneously in effect to Minneapolis, Des Moines, Chicago, and St. Louis, competing points, and to extent they exceeded corresponding rates to Omaha, Nebr., by more than 16 cents. Reparation awarded. Fredonia Linseed Oil Works Co. v. A., T. & S. F., 123 I. C. C. 525.

(3i) Respondents proposed increased and reduced joint rates on fruits, melons and vegetables, in carloads and less carloads, from points on the L&N in Alabama, Florida, Louisiana and Mississippi to Memphis, Tenn. Points of origin are on both main and branch lines of the L&N south of Montgomery, Ala. Present and proposed rates apply over the L&N to Birmingham, Ala., and thence I. C. or Frisco. L&N reaches Memphis but by a route so circuitous that it is not practicable for this traffic. Respondents present rates from this Gulf coast territory are generally lower than those from intermediate points north thereof and south of Montgomery. They are also lower than the rates from the same points of origin to Nashville, Tenn., for single line hauls considerably shorter than those to Memphis. The publication of those rates was due in large part to a clerical error. Only from the Mobile districts were reduced rates contemplated when the rates were established in 1925. The proposal here made is for the purpose of correcting

the error, removing the departures from the long and short haul clause, and putting the rates on a consistent and logical basis. The readjustment would bring about increases from the Gulf Coast territory and reductions from points farther north. In many instances the proposed rates from the Gulf Coast territory would exceed the class rates considerably, but those from the other points would be lower than the present class basis. The movement at the rates proposed to be canceled, except possibly those on potatoes, from the points here considered to Memphis would be negligible. Memphis is ordinarily supplied from other sources. No good reason appears for requiring respondents to meet the rates of their short line competitors. HELD, schedules not justified, without prejudice to filing of schedules of rates which shall not exceed those to Nashville by more than 5%. This is not to be construed as approval of establishment of less carload commodity rates. Fruits and Vegetables to Memphis, 126 I. C. C. 226.

(3j) Complainant attacked commodity rates charged on cottonseed, in carloads, from points in Louisiana on the V. S. & P., L. & A. and M. P, and from Arkansas on the M. P. to Jackson and Newton, Miss., unreasonable to extent they exceed by more than 3.5c and 5c the rates in effect to Vicksburg, Miss. Because of the difference in the general level of cottonseed rates in the southwest and southeast, the scale of rates prescribed in Oklahoma case, 98 I. C. C. 183, should not be extended without modification east of the Mississippi river. No system of basing point arbitraries will do substantial justice to all. HELD, rates attacked unreasonable to extent they exceeded specific rates required to be published, reparation awarded. Tallulah Cotton Oil Co. v. A. & V. Ry., 126 I. C. C. 723.

(3k) It is not sound to test reasonableness of a differential by consideration of the ton-mile earnings produced by it for the difference in distance, independent of measure of the entire rate. Lake Cargo Coal Rates, 1925, 126 I. C. C. 309, 342.

(3l) Rate on newsprint paper from New Orleans, La., to El Dorado, Ark., FOUND not unreasonable, but unduly prejudicial as compared with lower rates from New Orleans to other destinations in Arkansas, Oklahoma, and Louisiana for comparable distances, and to extent it exceeded rate to Shreveport, La., appliable on interstate or foreign commerce, by more than 7 cents per 100 pounds. Nonprejudicial basis of rates prescribed. El Dorado Chamber of Commerce v. C., R. I. & P. Ry., 126 I. C. C. 443.

(3m) Rates on sand and gravel from Muscatine, Iowa, to destinations in central Illinois found unreasonable and unduly prejudicial as compared with rates on crushed stone under distance scale prescribed in 49 I. C. C. 681, from Birdsboro and Devault, Pa., and Port Deposit, Md., to various eastern destinations; with rates on chert, clay, sand and gravel prescribed in 122 I. C. C. 133, for application in the Southeast; and to extent they exceeded by more than 10 cents per ton rates contemporaneously maintained on crushed stone, prescribed in 89 I. C. C. 110, from Buffalo and Linwood, competing Iowa points with which Muscatine is grouped, to same destinations. Reasonable and nonprejudicial rates required for future. Automatic Gravel Products Co. v. C., R. I. & P. 126 I. C. C. 487.

(3n) Rates on zinc concentrates from points in the Joplin, Mo.-Miami, Okla., ore field to Terre Haute, Ind., found unduly prejudicial in favor of Danville, Hillsboro, and East St. Louis, Ill., to extent they exceeded rates contemporaneously maintained to Danville, or rates contemporaneously maintained to East St. Louis and Hillsboro more than 3.5 cents per 100 pounds. Nonprejudicial basis of rates prescribed and reparation denied. United Zinc Smelting Corp. v. B. & O. 126 I. C. C. 677, 696.

(3o) Rates on broom handles in the white, turned to shape with a hole bored through one end, found unreasonable to extent they exceeded by more than 3 cents the contemporaneous rates on lumber. Reasonable rates prescribed for future and reparation awarded. Nat'l. Broom Co. v. A., T. & S. F., 128 I. C. C. 98.

(3p) Rates on coal from mines in the Birmingham district of Alabama, on the one hand, and western Kentucky and southern Illinois districts, on the other, to destinations in the Mississippi Valley, found unduly prejudicial to Alabama mine operators and unduly preferential of mine operators in western Kentucky and southern Illinois districts to extent that rates from the latter exceed those from the former by less amounts in cents per net ton than those prescribed in zone

adjustment described in the report. Previous report 109 I. C. C. 740. Coal from Illinois, Kentucky, and Alabama, 128 I. C. C. 113.

(3q) Proposal to add a differential to the intrastate rate at Mobile, Ala., in order to place that port on a parity with Gulfport, Miss., and New Orleans, found justified. Similar differential was adopted at Gulfport in favor of Alabama, the same as prescribed at New Orleans, in order to preserve this rate parity on coal from Illinois-Kentucky mines, and on this long-haul traffic for substantially equal distances, it is believed the parity of these ports should be maintained. Coal from Illinois, Kentucky and Alabama, 128 I. C. C. 113, 120.

(3r) Proposed increased rates on grain and products from Montana points on Great Northern Ry. to destinations on the Goldendale branch of Spokane, Portland & Seattle Ry., found not justified. The Goldendale branch points are part of a large destinations group. Respondents propose to cancel blanket rate to Goldendale branch points and to establish rates made by addition of arbitraries to the junction-point rate. No arbitraries now apply on traffic from Montana to this branch and in 66 I. C. C. 330, 336, it was stated that when blanket rates apply over an extensive area, fact that branch-line points lie within that blanket does not argue as strongly that there should be a branch-line differential as when rates are applied upon a graded basis, for in an extensive blanket a branch-line haul loses its significance unless it is much more expensive than main-line operations. Here, although operating conditions are more difficult and expensive than on main line, the markedly shorter total haul required with higher earnings, and fact that rates to other more distant branch lines will continue to be accorded the group basis, greatly offsets this showing. Grain from Montana, 128 I. C. C. 123.

(3s) Rates on bituminous coal from mines in Illinois and Indiana to points in Illinois, Indiana, Michigan, Wisconsin, Minnesota, North Dakota, South Dakota, Nebraska, and Iowa found not unreasonable but relationship between rates from said mines in Illinois and Indiana, on the one hand, and mines in western Kentucky, on the other, found unduly prejudicial to Illinois and Indiana mines due to maintenance of unreasonably low rates from western Kentucky mines. Prejudice should be removed by increasing rates from latter mines in amount of 10 cents per net ton to all destinations in States named to which existing differential of the western Kentucky over the southern Illinois group is 25 cents per net ton. See 89 I. C. C. 170; 263 U. S. 515. Illinois-Indiana Coal Cases, 128 I. C. C. 265.

(3t) All-rail rates on refined sugar from New Orleans and other Louisiana refining points to points in Arkansas, found unreasonable as compared with lower rates contemporaneously in effect to numerous points in southern territory; to various points on the Mississippi and Ohio Rivers for comparable distances; and to extent they exceed rates that will result from application of distance rates prescribed in Consolidated Southwestern Cases, 123 I. C. C. 203. Although evidence is inadequate to determine maximum reasonable river-and-rail rates, unless there are circumstances and conditions not revealed by the record, river-and-rail rates related differentially to all-rail rates on usual basis should be established. Sugar Between Louisiana and Texas Points, 128 I. C. C. 309.

(3u) Upon contention that since differentials of New Orleans and other Gulf ports and south Atlantic ports under New York and other north Atlantic ports are now in effect on all European and African import traffic destined to points north of Ohio River, in order to allow Gulf ports to compete on a fair basis because of superior steamship service at north Atlantic ports, differentials at Texas ports under New Orleans are justified for same reason, FOUND: While such commercial advantages can not be determinative of rate relationships and ordinarily can not be taken into consideration when passing upon question of undue prejudice, they serve to show that advantages of New Orleans are superior to those of Texas ports and that differentials mentioned would not likely cause serious injury to New Orleans. Galveston Commercial Asso. v. G., H. & S. A., 128 I. C. C. 349, 368.

(3v) Contention that establishment of differentials against New Orleans and in favor of Texas ports would violate both the letter and spirit of the Constitutional prohibition against preference by any regulation of commerce to the ports of one State over another not sustained, following 209 U. S. 56 and 95 I. C. C.

539. Galveston Commercial Asso. v. G., H. & S. A., 128 I. C. C. 349, 378.

(3w) Original report 126 I. C. C. 255, prescribing same rates and bases on flour as on wheat from points in Idaho, Montana, Oregon, Utah, Wyoming, and Colorado to destinations in California and Arizona, modified so as to provide that rates on flour shall not exceed the contemporaneous rates on wheat by more than 5 cents per 100 pounds to California destinations and by more than 7 cents per 100 pounds to destinations in Imperial Valley of California and Arizona. Complainant and carriers contended that establishment of rates prescribed in original report would break down the differential relationship between flour and wheat between many if not most points between which assailed rates were found not unreasonable. As differentials are generally in effect on flour over wheat between points involved, no valid objection appears to modify original report in conformity therewith. Ogden Grain Exchange v. A. E. R. R., 128 I. C. C. 490.

(3x) Compliance with carriers' request that differentials should be applied only over the short-line routes would deprive shippers of the natural advantage of the lower-rate routes through central territory; would result in many rates as high as the full combinations of the gateways and give rise to further long-and-short-haul departures and unwarranted increases in the rates prescribed. Southern Class Rate Investigation, 128 I. C. C. 567, 580.

(3y) Commission is not convinced that there is any greater necessity for uniform differentials, New York over Baltimore to all southern groups, for example, than for uniform differentials as between any other competitive points in official territory, such, for example, as Chicago over Cincinnati, or Pittsburgh over Baltimore. Southern Class Rate Investigation, 128 I. C. C. 567, 592.

(3z) Complainant alleged that commodity rates on millet seed, carloads, from Colorado, Kansas, Nebraska, North Dakota and South Dakota to Minneapolis, Minn., were and are unjust, unreasonable and discriminatory. Millet seed is given the flaxseed rate. At the time of hearing rates on flaxseed were higher than wheat rates, but bore no fixed relationship thereto. From a traffic standpoint millet seed resembles flaxseed in many respects and is of less value. In the past the two seeds have been maintained on the same rate basis and for convenience this relationship should be preserved. Certainly rates on millet seed should not be higher. HELD, assailed rates unreasonable to extent they exceed 112% of the wheat rates, reparation awarded. Northrup King & Co. v. A. T. & S. F. Ry., 129 I. C. C. 125.

(4a) Complainant alleged that the rates on strawboard, in carloads, from Cincinnati territory, Chicago territory, Dayton South Bend territory, Detroit Cleveland territory, Louisville territory and Omaha Davenport territory to Texas common point territory are unjust, unreasonable and unduly prejudicial. The present rates from the origin territories concerned to Texas common points are based on differentials over the rate of 66c from St. Louis, Mo. While there is no complaint against the rate from St. Louis and complainants specifically stated at the hearing that they found no fault with the present differentials, if the rates sought by them were established and the present differentials maintained, the resulting rate from St. Louis would be 48c minimum 60,000 pounds and 60c minimum 40,000 pounds. Strawboard is rated fourth class when corrugated and fifth class when plain. HELD, assailed rates were not and present rates are not unreasonable or unduly prejudicial, complaints dismissed. United Paperboard Co. v. A. & R. R. R., 129 I. C. C. 131.

(4b) Complainant alleged that the rates on lumber and other forest products, in carloads from several points in the Puget Sound district of Washington to points on the O. S. L. in southern Idaho and Northwestern Utah are unreasonable, unjustly discriminatory and unduly prejudicial compared with those on the socalled coast group basis from Portland, Ore., to the same destinations. The origin points are Seattle, Tacoma, and certain other points on the lines of the C. M. St. P., G. N., N. P., and/or O. W. R. R. & N. The destinations are all on the O. S. L. those in Idaho being between Caldwell and McCammon and on the branch extending north from Pocatello, and those in Utah being Ogden and a few points north thereof. Taking Tacoma as a typical origin point, the rates to main lines destinations are generally 45 or 47.5c, depending largely on the distance, but to branch line destinations they range as high as 58c. From Bellingham and a few other extreme northwestern Wash-

ington points, the rates are generally somewhat higher than those from Tacoma. The distances range from about 600 to 1,350 miles. HELD, rates assailed not unreasonable or unjustly discriminatory but are and will be unduly prejudicial to extent they exceed from Tacoma, Seattle, Everett, Fairfax, Frederickson, Selleck and Union Mills, Wash., the rates from Portland to the same destinations by more than 5c to points taking rates of less than 45c on fir lumber from Portland, by more than 2.5c to points taking a rate of 45c from Portland, by any amount to points taking rates of more than 45c from Portland; and to extent the rates from Bellingham and National, Wash., exceed the rates from Portland to the same destinations by more than the amounts above described plus 2.5c from Bellingham and 1.5c from National to points taking rates of less than 51c from Portland and Portland rates to other destinations covered by the complaint. Buflein Lumber & Mfg. Co. v. O. W. R. R. & N. Co. 129 I. C. C. 336.

(4c) Upon contention that carriers were never authorized to increase the differential existing on coal from anthracite fields in Pennsylvania to destinations in the metropolitan district of Boston over those to latter point. FOUND: In dealing with similar situation in 113 I. C. C. 161, it was stated that previous approval of a differential is no indication that change in conditions which brought about general increases and reductions, did not warrant a subsequent change in the differential. Chadwick Coal Yard Co. v. N. Y., N. H. & H., 129 I. C. C. 165, 168.

(4d) Upon further hearing, finding in 96 I. C. C. 208, that commodity rates on canned goods from Middleton, Wis., to lower Mississippi Valley destinations were unreasonable to extent they exceeded the contemporaneous rates from Madison, Wis., by more than 2 cents, affirmed. Commodity rates from Richland Center, Chilton, Berlin, Sparta, Neillsville, and any other Wisconsin points no farther from Madison or Milwaukee, whichever is nearer, are and for future will be unreasonable to extent they exceed the contemporaneous rates from Madison and Milwaukee to same destinations by more than 8 cents per 100 pounds. Rates throughout balance of territory under consideration found not unreasonable or otherwise unlawful. Reasonable basis of rates prescribed for future. National Canners Asso. v. B. & O., 129 I. C. C. 269.

(4e) Fact that spread between rates to more distant destinations increases instead of decreases in accordance with the general principle may be offset by fact that a higher level of rates is justified in a territory of relatively low traffic density. National Canners Asso. v. B. & O., 129 I. C. C. 269, 278.

(4f) All-rail and water-and-rail rates on canned goods from San Francisco, and points taking same rates to Missoula, Mont., found not unreasonable as compared with rates contemporaneously maintained to various other Montana, Idaho, and Utah points for comparable distances, but unduly prejudicial to extent they exceed those contemporaneously in effect to Spokane, Wash., by more than 20 cents per 100 pounds. McClintock-Trunkey Co. v. McCormick S. S. Co., 129 I. C. C. 591.

(4g) Divisions of joint rates on anthracite coal from Pennsylvania points to destinations in Illinois beyond Chicago switching district, found unreasonable, inequitable, and unduly prejudicial to extent they exceed applicable arbitraries over Chicago, plus 20 cents per ton, subject to defendant's local rates as maxima, to accrue to defendants, with balance of through rates to accrue to complainants. In 73 I. C. C. 161, arbitraries over Chicago were prescribed to remove undue prejudice which arbitraries carriers established by reducing through rates so as to maintain the arbitraries. Here, divisions claimed by complainants would stand no portion of a similiar reduction; those claimed by defendants only a portion of it; and no consideration would be given to divisions accruing to connecting lines. Erie Railroad Co. v. C. & N. W., 129 I. C. C. 743.

V. REPARATION.

See Reparation.

§9. In General.

(a) In original report, 104 I. C. C. 183, rates on broom handles (wooden) in the white, turned to shape, were found unreasonable and rates 1.5 cents over contemporaneous lumber rates prescribed, reparation being awarded to that basis. Upon further hearing, carriers

pointed out that tariffs naming rates on articles taking arbitraries over lumber rates provided rates equal to 1.5 cents over lumber rates when higher than 31.5 cents prior to July 1, 1922, and higher than 28.5 cents thereafter and rates equal to 2 cents over lumber rates when such rates are 31.5 cents or less prior to July 1, 1922, and 28.5 cents thereafter, original finding modified, reasonable rates prescribed, and reparation awarded accordingly. Deshler Broom Factory v. A., T. & S. F., 115 I. C. C. 437.

I. CONTROL AND REGULATION.

See Control and Regulation.

§1. Construction of the Act.

See Act to Regulate Commerce II.

(a) Maintenance of different rates by two different groups of competing carriers over their respective routes be-

tween same points does not constitute unjust discrimination within meaning of the act. Liquid Carbonic Co. v. C. & E. R. R., 104 I. C. C. 446, 447.

(b) The language of section 3 of the act is broad enough to cover any kind of discrimination. See 17 I. C. C. 361, 370 and other cited cases. York Mfrs. Asso. v. P. R. R., 107 I. C. C. 219, 229.

(c) The inhibition of section 3 of the act against undue prejudice applies to localities as well as to shippers at those localities. Sioux Falls Live Stock Exchange v. A., T. & S. F., 109 I. C. C. 501, 512.

(de) No matter how numerous the territories are to which complainant has access from its mines, it is entitled to ship its coal to any market at nonprejudicial rates. Clinchfield Coal Corp. v. C. C. & O. Ry., 118 I. C. C. 79, 81.

(fg) The act forbids the existence of undue prejudice regardless of the degree thereof. Phosphate Rock from Florida, 115 I. C. C. 299, 235.

(h) The fundamental purpose of the act is "to compel the carrier as a public agent to give equal terms to all," "to cut up by the roots every form of discrimination, favoritism, and inequality," and to "place all shippers upon equal terms." See 200 U. S. 361, and other cited cases. Service on K., O. & G. Ry., 118 I. C. C. 412, 418.

(i) Common law did not prohibit mere unjust discrimination between localities, through prohibiting such discrimination between individual shippers. McGrew Coal Co., v. Mellon, Federal Agent, (Mo. 1926) 287 S. W. 450.

(j) The fact that the law declares unlawful only discrimination that is unjust and only prejudice that is undue indicates that it was the intent to give the carriers some latitude in fixing rates, and that distance or cost of service need not be the sole criterion by which rates shall be measured. But there are limits beyond which a carrier may not go, even in meeting competition. Galveston Commercial Asso. v. G. H. & S. A. Ry., 128 I. C. C. 349, 379.

(k) A mere difference in rates does not constitute undue prejudice. Beatrice Creamery Co. v. C. M. & St. P. Ry., 129 I. C. C. 375, 381.

(l) The Commission has repeatedly recognized that mere differences in rates do not necessarily result in prejudice which is undue, and complainants evidence is of the most general character. West Texas Chamber of Commerce v. H. & T. C. Ry., 129 I. C. C. 546, 555.

(m) Disparity of rates, however, does not necessarily result in undue prejudice and complainant offered no other evidence on that issue. National Tube Co. v. A. T. & S. F. Ry., 129 I. C. C. 692, 695.

(n) The Act does not prohibit every preference and prejudice but only those that are undue or unreasonable. Preference or prejudice under section 3, to be undue or unreasonable must ordinarily be such that the difference in rates is in itself a source of advantage to the party alleged to be favored and a disadvantage to the other party. Lynchburg Chamber of Commerce v. Pennsylvania R. R., 132 I. C. C. 708, 710.

(o) The Interstate Commerce Act should be reasonably interpreted to accomplish purpose intended, to wit, reasonable charges without unjust discrimination or preference. Berwind-White Coal Mining Co. v. United States, (Pa., 1925) 9 Fed. (2d.) 429, 430.

(p) The Interstate Commerce Act, §3, does not require that all shippers shall be treated alike under any and all circumstances, and every discrimination is not illegal, but only that which is unjust and unreasonable. Berwind-White Coal Mining Co. v. United States, (Pa., 1925) 9 Fed. (2d.) 429, 430.

§2. Jurisdiction of Commission.

See Interstate Commerce Commission I; Jurisdiction of Commission.

(a) While ordinarily, in undue prejudice or discrimination cases, commission enters an alternative order leaving carrier an option as to how such discrimination shall be removed, section 15 (1) of the act authorizes and empowers commission to prescribe the rate, charge, regulation, or practice to be thereafter followed. This provision of the act applies with respect to control of practices of carriers that result in undue prejudice or other violations of the act, in that the commission is empowered thereunder to determine "what * * * regulation or practice is or will be just, fair, and reasonable, to be thereafter followed." York

Mfrs. Asso. v. P. R. R., 107 I. C. C. 219, 231.

(b) The commission can not make a finding of undue prejudice against one producing district in favor of another, both serving a common market, where lines serving such common markets are independent carriers, no one of which serves both producing districts. See 22 I. C. C. 115 and cases basing thereon. Alabama Mining Institute v. I. C. C. 109 I. C. C. 740, 748.

(cde) Under transportation act, 1920, the commission has power where warranted by record to prescribe specific rates to remove undue prejudice. See 59 I. C. C. 662; 107 I. C. C. 219; 113 I. C. C. 629. Chicago Gravel Co. v. A., T. & S. F., 118 I. C. C. 633, 647.

(f) It is commission's duty to prescribe maximum reasonable rates and to remove any existing undue prejudice and preference of which complaint is made. Consolidated Southwestern Cases, 123 I. C. C. 203, 374.

(g) Where unjust discrimination by railroad exists, order to remove it may issue, and extend to every carrier participating, regardless of whether by its own act it can remove the inequality. Chicago, I. & L. Ry. Co., v. United States, 46 Sup. Ct. 226.

(h) Order of Interstate Commerce Commission, directing railroad to remove discrimination, which was rescinded by an order dismissing the proceeding in which it was entered, HELD not restored by subsequent order reopening such proceedings, notwithstanding Commission's authority, under Interstate Commerce Act. § 16, par. 6, as amended to modify its orders. Minneapolis & St. L. R. Co. v. Peoria & P. U. Ry. Co., 46 Sup. Ct. 402.

(i) Order of Interstate Commerce Commission to remove discrimination by its terms and under Interstate Commerce Act, § 15, par. 2, as amended to remain in force until further order of Commission, HELD rescinded by a later order of the Commission, dismissing the proceeding in which it was entered, such proceeding having been reopened after entry of the order for further consideration, in connection with other proceedings to investigate tariff established to remove discrimination in compliance with such order. Minneapolis & St. L. R. Co. v. Peoria & P. U. Ry Co., 46 Sup. Ct. 402.

(j) Order of Interstate Commerce Commission, directing railroad to remove discrimination, which was in fact rescinded by action of Commission, HELD not restored by telegram from chairman of division of Commission, stating order "still stands unrescinded." Minneapolis & St. L. R. Co. v. Peoria & P. U. Ry. Co., 46 Sup. Ct. 402.

§2½. State and Interstate Rates.

See Infra §4¾; State Rates and Regulation.

(a) Shipper contends that rates maintained over a short intrastate route control and uphold to an unreasonable level rates via interstate routes, thereby imposing an unjust burden upon interstate commerce, and seeks as a remedy to have commission reduce the intrastate rate, on theory that, this being the basing rate, such action will result in establishment of reasonable and nondiscriminatory interstate rates. HELD: Since no showing made that intrastate commerce is favored or interstate commerce prejudiced by the rate adjustment, and no claim made that intrastate rate fails to produce its just share of revenue as compared with level of interstate rates, no situation is presented which would bring intrastate rates under the commission's jurisdiction. In such case commission can merely determine whether interstate rates are unreasonable or otherwise in violation of the act. Hammond Iron Works v. P. R. R., 107 I. C. C. 473, 475.

(b) Contention that commission has no jurisdiction to require carriers to increase intrastate rates in order to remove alleged undue prejudice where complainants do not specifically allege a violation of section 13 of the act, not sustained where complaints sufficiently set forth facts putting both defendant carriers and State authorites, as required by the act, upon notice that maintenance of lower intrastate rate as compared with interstate rate is challenged, and where State authorities are also notified of hearings. Four States Grocery Co. v. K. C. S. Ry., 107 I. C. C. 485, 489.

(c) The coexisting federal power over the relationship of interstate and intrastate rates may be exercised in direct operation upon intrastate rates only to the extent necessary for effective regulation of interstate or foreign commerce. Mutual Creamery Co. v. American Ry. Express Co., 132 I. C. C. 207, 211.

(d) The authority of the Commission to deal directly with intrastate rates and fares in order to remove undue prejudice to or unjust discrimination against interstate commerce has been upheld by the Supreme Court. Mutual Creamery Co. v. American Ry. Express Co., 132 I. C. C. 207, 211.

II. DETERMINATION OF DISCRIMINATION.

§3. In General.

See Allowances §7.

(a) Interstate rates on lumber and products from Westwood, Calif., Portland, Grants Pass, Medford, and Klamath Falls, Oreg., and points taking same rates to Sacramento and other California points, found not unreasonably low, or to result in discrimination or undue prejudice to San Pedro. While some of these rates are on a low basis they are not unjustifiably low, as they yield to carriers something in excess of out-of-pocket cost, in addition to making possible a profitable traffic in transcontinental lumber and inbound supplies. Lumber industries of Oregan and California are dependent upon maintenance of existing adjustment, which has developed in view of many competitive forces. Moreover, present rate basis is satisfactory to all producing sections except San Pedro, from which intrastate rates are properly related to similar rates from other California producing sections. Los Angeles Lbr. Products Co. v. S. P. Co., 104 I. C. C. 297.

(b) Maintenance of different rates by two different groups of competing carriers over their respective routes between same points does not constitute unjust discrimination within meaning of the act. Liquid Carbonic Co. v. C. & E. R. R., 104 I. C. C. 446, 447.

(c) Alabama points: Rates on prepared roofing and asphalt shingles from Chicago, St. Louis, Cairo, Evansville, Louisville, and Cincinnati, to Florence, Sheffield, and Tuscumbia, Ala., found not unreasonable, but, in view of level of rates in Mississippi Valley territory and circumstances under which they were established in comparison with contemporaneous rates in Southeast at points adjacent to that territory, the spread between rates that have for many years prevailed at Corinth, Miss., and rates at Florence, Sheffield, and Tuscumbia found too great, subjecting jobbers at latter points to undue prejudice in competing with Corinth jobbers for trade in same common territory. Differentials prescribed for removal of undue prejudice. Florence Chamber of Commerce v. L. & N., 104 I. C. C. 459.

(d) Marinette, Wis.: Rate on coal from docks in Menominee, Mich., to complainant's paper mill in Marinette found not unreasonable or unduly prejudicial. The service is regarded as a line-haul movement, rather than a switching service, and rate applicable compares favorably with intrastate rates on like traffic in various States for corresponding distances. Marinette & Menominee Paper Co. v. C. & N. W., 107 I. C. C. 21, 26, 28.

(e) A case of undue prejudice is not made out by mere showing of lower rates on a competitive commodity. American Clay Products Co. v. P. R. R., 107 I. C. C. 153, 154.

(f) Cincinnati, Ohio: Through charges on blackstrap molasses from New Orleans and points taking same rates to, there converted into denatured alcohol, and reshipped as such to interstate destinations, found not unduly prejudicial or otherwise unlawful as compared with through rates contemporaneously maintained from same points to and from Pekin, Ill. Transit arrangements are maintained at Pekin but not at Cincinnati, and since carrier which serves Pekin does not serve Cincinnati it is powerless to remove alleged undue prejudice by establishment of a similar arrangement at latter point. Federal Products Co. v. I. C. R. R., 107 I. C. C. 271.

(g) Rates on grain and products from Iowa producing points to Chicago found not unreasonable, but unduly prejudicial to Chicago and preferential of St. Louis and Kansas City. Chicago Board of Trade v. A., T. & S. F., 107 I. C. C. 319.

(h) Rates on sewer pipe and wall coping from Brazil and Mecca, Ind., to destinations in Wisconsin not included in the Illinois classification territory and to destinations in Minnesota, except St. Paul and Duluth found unreasonable and unduly prejudicial to extent that rates therefrom to Duluth group exceeded contemporaneously applicable rates from St. Louis to that group; that rates therefrom to points in St. Paul group exceed by more than 1 cent contemporaneously applicable rates to same group from St.

Louis; and that rates therefrom to remaining territory exceed contemporaneously applicable rates thereto from St. Louis. Reasonable and nonprejudicial rates prescribed and reparation denied. Chicago Fire Brick Co. v. A. & W., 107 I. C. C. 399, 406.

(i) Arizona points: Rates on baled hay from Arizona points to Mississippi River crossings, Memphis and south thereof, found unduly prejudicial to extent they exceed contemporaneous rates from El Paso to same crossings by more than 6 cents from Thatcher group, 10 cents from Phoenix group, and 13 cents from Yuma group. Arizona Hay Traffic Asso. v. A. E., 107 I. C. C. 591, 599.

(j) Memphis, Tenn.: Upon complaint alleging that brick rates to, from points in Texas, Oklahoma, and Arkansas are unduly prejudicial and unduly preferential of shippers in States east of the Mississippi River. FOUND: that carriers serving the southwestern producing points do not serve points east of the river and do not control rates from those points to river crossings. Undue prejudice or preference may not be said to exist as between shippers or communities unless same carrier serves them or participates in their traffic and transportation conditions are shown to be substantially similar. See 41 I. C. C. 181, 190. Southwestern Brick Cases, 107 I. C. C. 681, 694, 695.

(k) Rate on lumber from Nashville, Mich., to Toledo, Ohio, found not unreasonable but unduly prejudicial to extent it exceeds lower contemporaneous rate from Saginaw, Mich., to Toledo. Nonprejudicial basis of rate prescribed for future. Liberty Cooperage & Lbr. Co. v. M. C., 109 I. C. C. 1.

(l) It is proper to find a violation of the second or third section of the act where trunk lines unlawfully discriminate in their practices toward different industries, but an adverse finding under section 1 should not rest upon an artificial ground. Pressed Steel Car Co. v. Director General, 109 I. C. C. 75, 78.

(m) Undue prejudice to one locality connotes undue preference of another. Galveston Commercial Asso. v. A. & S., 109 I. C. C. 114, 122.

(n) Undue prejudice can hardly be predicated upon observance of a properly graded distance scale of rates. Galveston Commercial Asso. v. A. & S., 109 I. C. C. 114, 124.

(o) Preference and prejudice may be found even though there is no movement to prejudiced point, since it must be assumed that complainant would not have undergone expense of litigation unless prepared to make use of the rates sought, if established. See also 21 I. C. C. 558 and other cited cases. Southern Agricultural Chem. Corp. v. C., C. C. & St. L., 109 I. C. C. 227, 229.

(p) Keokuk, Iowa: Rates on molding sand from Ottawa and Utica, Ill., to, found improperly related to rates to Burlington, Iowa, Quincy, Ill., and other Mississippi River crossings, resulting in undue prejudice to Keokuk in favor of such other crossings. Relationship of rates prescribed for future and reparation denied. Keokuk Shippers' Asso. v. B. & O., 109 I. C. C. 346.

(q) A mere showing of difference in ratings between different commodities is not sufficient to establish discrimination, nor does it of itself prove that higher ratings are unreasonable. Union Metal Mfg. Co. v. A., C. & Y., 109 I. C. C. 490, 491.

(r) The inhibition of section 3 of the act against undue prejudice applies to localities as well as to shippers at those localities. Sioux Falls Live Stock Exchange v. A., T. & S. F., 109 I. C. C. 501, 512.

(s) Ashland, Wis.: Rates on lumber from Ashland, Wis., located in Duluth, group to points in Illinois, c. f. a., and trunk-line territories, found not unreasonable, discriminatory, or unduly prejudicial as compared with rates from Wisconsin points located in adjacent Hurley group. Schroeder Lbr. Co. v. A., C. & Y., 109 I. C. C. 553.

(t) Mere showing of differences in inbound rates to competing jobbing points does not establish existence of undue prejudice. Burlington Shippers' Asso. v. A., T. & S. F., 109 I. C. C. 694, 699.

(u) Rates on meat animals from points in Alabama to Moultrie, Ga., found not unreasonable, but the relationships of rates on hogs from southeastern Alabama to Moultrie on the one hand, and Montgomery and Birmingham, Ala., on the other, found unduly prejudicial and preferential and unjustly discriminatory against interstate commerce. Nonprejudicial relationship prescribed for future. Swift & Co. v. G. N., 109 I. C. C. 733.

(v) Comparisons based merely upon differences in distance do not constitute sufficient justification for a finding either of unreasonableness or of undue prejudice. Bos Sand Co. v. A., T. & S. F., 112 I. C. C. 121, 123.

(w) A mere reference to lower rates to common points of destination is not sufficient to establish undue preference and prejudice. South Carolina Penitentiary v. A. & R. R. R., 113 I. C. C. 584, 586.

(x) Disparity of rates does not necessarily result in undue prejudice. Nashville Machine & Supply Co. v. L. & N. R. R., 118 I. C. C. 577, 579.

(y) A showing of a disparity of rates between different points does not necessarily make out a case of, or result in, undue prejudice, but it must also appear that shipments are made or prevented because of the rate relationship. Nashville Machine & Supply Co. v. L. & N., 118 I. C. C. 577, 578, 579.

(z) Unjust discrimination under section 3 of the act ordinarily requires that the prejudice suffered by one person shall be a source of positive advantage to another and that a competitive relation shall exist between the persons, localities, or commodities concerned. Duluth Chamber of Commerce v. C. St. P. M. & O. Ry., 122 I. C. C. 739, 742.

(aa) Fact that rates are relatively low does not alone justify existence of an unduly prejudicial situation. See 263 U. S. 515. Clinchfield Coal Corp. v. C., C. & O., 122 I. C. C. 37, 41, 42.

(bb) No carrier has the right to so adjust rates on its own lines as unduly to prejudice shippers on other lines, or to deprive such shippers of reasonable and just rates, merely through a desire to serve shippers on its own lines. See 51 I. C. C. 250. White Eagle Oil & Refining Co. v. A., T. & S. F., 122 I. C. C. 223, 224.

(cc) Twenty cents per ton lower rate from Hermiston, Ore., to Portland, than from Touchet, Wash., to Portland, HELD not to create unlawful discrimination against interstate commerce, considering difference in length of two hauls. Oregon-Washington R. & Nav. Co. v. Corey, (Ore., 1927) 252 Pac. 955, 956.

(dd) While each community is entitled to benefits arising from its natural advantages, a carrier may meet competition so long as it is not guilty of undue prejudice, does not charge rates which are so low as to burden other traffic, and does not contravene the declared policy of Congress to foster and preserve in full vigor both rail and water transportation. Fact that the law declares unlawful only discrimination that is unjust and only prejudice that is undue indicates that it was the intent to give carriers some latitude in fixing rates, and that distance or cost of service need not be the sole criterion by which rates shall be measured. However, there are limits beyond which a carrier may not go, even in meeting competition. Galveston Commercial Asso. v. G., H. & S. A., 128 I. C. C. 349, 379.

(ee) To be undue the prejudice suffered by one person must ordinarily be such that it shall be a source of positive advantage to another. Indianapolis Board of Trade v. B. & O. R. R., 129 I. C. C. 675, 679.

(ff) To be undue in violation of section 3 of the act, preference and prejudice must result in injury to the prejudiced party. Bunker Hill & Sullivan M. & C. Co. v. N. P., 129 I. C. C. 242, 246.

(gg) Mere difference in rates does not constitute undue prejudice. Beatrice Creamery Co. v. C., M. & St. P., 129 I. C. C. 375, 381.

(hh) Order of Interstate Commerce Commission, based on discrimination by carrier, must be restricted in its scope to discrimination actually shown. Berwind-White Coal-Mining Co. v. United States, (Pa., 1925) 9 Fed. (2d.) 429, 430.

§3½. Previous Decision of Commission.

See Previous Decision of Commission.

(a) In 62 I. C. C. 194, commission found rates on iron ore from Ironwood, Mich., and Baraboo, Wis., to Granite City, Ill., unreasonable and awarded reparation. Upon complaint alleging discrimination as to like traffic from same points to Carondelet, Mo., on ground that Granite City and Carondelet have long been accorded same rates from and to points 100 miles distant, which can only be corrected by an award of reparation to complainant. HELD: In cited case delivery in northern East St. Louis switching district was involved, whereas here a greater haul, crossing the Mississippi River, and transportation through congested St. Louis district are

involved. These facts can not be considered as transportation "under substantially similar circumstances and conditions" as contemplated by section 2 of the act. Mississippi Valley Iron Co. v. C. & N. W., 104 I. C. C. 243, 245, 246.

(b) Following 22 I. C. C. 155 and other cited cases no undue prejudice found to exist due to maintenance of different rates from competing points of origin to competing destinations served by different lines of railroad. Union Bag & Paper Corp. v. B. & M., 104 I. C. C. 327, 329.

(c) North Pacific Coast ports: Rates on grain and products from points in Washington and Oregon south of Snake River to Portland, Seattle, Tacoma, and other north Pacific ports, established as a result of commission's decision in Inland Empire Shippers League, 59 I. C. C. 321, found not unreasonable or unduly prejudicial. While competition from Puget Sound ports for purchase of wheat in the basin south of the Snake River has been to a large extent destroyed, Portland enjoying a virtual monopoly of wheat from that territory, only by continuance of present differential in favor of Portland can that point be accorded benefits to which it is entitled by reason of its natural advantages. Walla Walla County Farm Bureau v. N. P., 107 I. C. C. 110.

(d) Carrier presented in evidence a prior report of commission for purpose of establishing that certain rates were not unduly prejudicial. HELD: Present case must be disposed of upon conditions shown to have existed during the period covered by complaint, and since former case related to a different period it was not given consideration. Northern W. Va. Coal Asso. v. P. R. R., 109 I. C. C. 604, 608.

(e) Rates on potatoes from Wisconsin, Minnesota, and North Dakota, to points in c. f. a. and trunk-line territories, found unreasonable to extent they exceeded those prescribed in 74 I. C. C. 448, for removal of undue prejudice. While no order was entered with respect to findings in that case, carriers were advised that they would be expected to file rates in conformity therewith. The specific manner provided for constructing prescribed rates was tantamount to stating a reasonable basis on and after date of finding and rates charged in excess of those prescribed on shipments moving after that date were therefore unreasonable. Beggs & Co. v. B. & O., 120 I. C. C. 115.

(f) Rates on green salted hides from El Paso, Tex., to Los Angeles and San Francisco, and points taking same rates, higher than rates from Utah points to same destinations and to points generally in the west for similar and greater distances, found not unduly prejudicial to El Paso. The rates from Utah points represent considerable reductions made during pendency of 101 I. C. C. 258, in which rates in effect prior to the reductions were found not unreasonable. Moreover, comparisons based on distance alone are of little probative value. See also 87 I. C. C. 319. Peyton Packing Co. v. A. & S., 122 I. C. C. 3.

(g) Rates on furniture from Fort Smith, Ark., to Florence, Sheffield, and Tuscumbia, Ala., found not unreasonable or discriminatory as compared with lower rates to Birmingham, Ala., from Florence to Fort Smith, or from Fort Smith to eastern seaboard cities, but unduly prejudicial to extent that rate to Florence exceeds that contemporaneously maintained to Birmingham. Rates assailed compare favorably with those prescribed in 100 I. C. C. 127 and 112 I. C. C. 302, for comparable distances, and considering fact that a portion of the haul from compared points is through territory taking a lower level of rates, comparisons indicate that rates assailed are not unduly high. Undue prejudice ordered removed and reparation denied. Florence Chamber of Commerce v. L. & N., 122 I. C. C. 367.

(h) Rates on prepared sizes of anthracite coal from Wyoming, Lehigh, and Schuylkill mines in Pennsylvania, to points in Albany-Utica-Syracuse group and other points taking same rates over one or more routes considered as a whole, found unjust, unreasonable, and unduly prejudicial and preferential in relation of such rates to each other. Rates to Rochester, N. Y., found unreasonable to extent they exceed those contemporaneously in effect via other routes for comparable distances, and rates to Carthage and Clayton, N. Y., found unreasonable to extent they exceed rates contemporaneously maintained to Buffalo and Watertown, N. Y. Just and reasonable rates prescribed for future and findings in 104 I. C. C. 514, reversed in so far as inconsistent with

findings herein. Anthracite Coal Investigation, 122 I. C. C. 527.

(i) Upon reconsideration, former report 115 I. C. C. 667, modified so as to provide that rates on rosin and turpentine, and articles taking same rates from producing points in southwestern group to Kansas City, Mo., are and will be unreasonable to extent rates on rosin and turpentine exceed those approved in 87 I. C. C. 740; 89 I. C. C. 634; and to destinations in c. f. a. territory unreasonable and unduly prejudicial to extent they exceed maximum reasonable and nonprejudicial rates prescribed in original report. Turpentine & Rosin Producers Asso. v. A. & V., 122 I. C. C. 549.

(j) Rates on grain and products from Ohio and Mississippi River crossings and Mount Vernon, Ind., to Alabama points found unreasonable to extent they exceeded rates found reasonable in 118 I. C. C. 732 and other cited cases, and unduly prejudicial to extent they exceeded by more than 2 cents per 100 pounds the rates contemporaneously applied on like traffic to Corinth. Reasonable and non-prejudicial rates prescribed for future and reparation denied. Florence Chamber of Commerce v. I. C., 122 I. C. C. 653.

(k) Citing 36 I. C. C. 259, 261; 181 Fed. 403, 411, carriers contended that to sustain a finding of undue preference and prejudice under section 3, a competitive relation must exist between persons, companies, or localities concerned, and this competition must be in the same market. HELD: While it is "ordinarily" true that a competitive relation must exist as a prerequisite to such a finding and that injury can more readily be shown where preference or advantage relates to the "same market," it does not follow that it can only be shown under such conditions. Duluth Chamber of Commerce v. C., St. P., M. & O., 122 I. C. C. 739, 742, 743.

(l) Rates on metal beds from New Orleans, La., to destinations in western Louisiana, Arkansas, Oklahoma, and Texas, found not unreasonable or unduly prejudicial as compared with rates contemporaneously in effect from St. Louis, Atlanta, Chicago, Kenosha, and New York, to same destinations, except to extent that rates to Oklahoma exceed rates based on distance scale prescribed herein; that rates to Texas common points exceed Table 14 rate prescribed in 77 I. C. C. 473; and that rates to Texas differential territory exceed rates constructed in accordance with method prescribed, all subject to a minimum of 30,000 pounds. Reasonable rates prescribed for future. Crescent Bed Co. v. C., R. I. & P., 123 I. C. C. 41.

(m) Rate on lumber from Nashville, Tenn., to Toronto, Ontario, found not unreasonable, but unduly prejudicial to extent it exceeded those contemporaneously maintained from Chattanooga. Rate assailed is as low or lower than those from other lumber producing points to Toronto, from points in the Southeast to c. f. a., trunk-line, and New England destinations, and as low or lower than those prescribed in 85 I. C. C. 270 and 102 I. C. C. 611, for comparable distances. However, rates from Nashville and Chattanooga to Buffalo, N. Y., Hamilton, Ontario, and various other points are the same and no reason appears for a difference in rates to Toronto. Farris Harwood Lbr. Co. v. L. & N., 123 I. C. C. 587.

§3½a. Relation of Rates.

See Relative Rates.

(a) Maintenance of different rates by two different groups of competing carriers over their respective routes between same points does not constitute unjust discrimination within meaning of the act. Liquid Carbonic Co. v. C. & E. R. R., 104 I. C. C. 446, 447.

(b) Rate of coal from docks in Menominee, Mich., to complainant's paper mill in Marinette, Wis., found not unreasonable or unduly prejudicial. The service is regarded as a line-haul movement, rather than a switching service; and rate applicable compares favorably with intrastate rates on like traffic in various States for corresponding distances. Marinette & Menominee Paper Co. v. C. & N. W., 107 I. C. C. 21, 26, 28.

(c) Apalachicola, Fla.: Rates on crushed oyster shells and oyster-shell dust from, to Mississippi and Ohio River crossings, and points beyond, found not unreasonable, but unduly prejudicial to extent they exceed by a fixed differential rates contemporaneously maintained on like traffic from Pensacola, Fla., and Mobile, Ala., to same destinations. Gulf City Mfg. Co. v. A. N. R. R., 107 I. C. C. 29.

(d) Rates on flaxseed from South Dakota points to Minneapolis, Duluth,

Chicago, Milwaukee, Des Moines, Omaha, and Kansas City, found unduly prejudicial and preferential. Nonprejudicial basis of rates bearing a uniform percentage relationship to corresponding wheat rates prescribed. South Dakota R. R. Commrs. v. C. & N. W., 107 I. C. C. 35.

(e) Atlanta & St. Andrews Bay Ry. points: Rates on lumber and forest products taking same rates, prescribed in original report, 85 I. C. C. 270, from points on the Atlanta & St. Andrews Bay Ry., a short-line carrier in southern territory, to destinations in trunk-line and New England territories, found unduly prejudicial to extent they exceed rates contemporaneously applied from Dothan by more than 3 cents from points north of Cottondale and 4 cents from Cottondale and points south thereof. Nonprejudical basis of rates prescribed. North Carolina Pine Asso. v. A. C. L., 107 I. C. C. 190.

(f) Rates on lumber and related commodities from Washington, Oregon, Idaho, Montana, and California, to destinations in Iowa, found unreasonable and unduly prejudicial as compared with rates to Missouri River cities, the Twin Cities, and Chicago, Ill. Burlington Shippers' Asso. v. A., T. & S. F., 107 I. C. C. 198.

(g) Rates on sewer pipe and wall coping from Brazil and Mecca, Ind., to points in Illinois classification territory found unreasonable and unduly prejudicial to extent they exceeded contemporaneously applicable rates for like distances from St. Louis to same destinations. Reasonable and nonprejudicial rate for future prescribed and reparation denied. Chicago Fire Brick Co. v. A. & W., 107 I. C. C. 399, 406.

(h) Rates on sewer pipe and wall coping from Brazil and Mecca, Ind., to destinations in Wisconsin not included in the Illinois classification territory and to destinations in Minnesota, except St. Paul and Duluth, found unreasonable and unduly prejudicial to extent that rates therefrom to Duluth group exceeded contemporaneously applicable rates from St. Louis to that group; that rates therefrom to points in St. Paul group exceed by more than 1 cent contemporaneously-applicable rates to same group from St. Louis; and that rates therefrom to remaining territory exceed contemporaneously-applicable rates thereto from St. Louis. Reasonable and nonprejudicial rates prescribed and reparation denied. Chicago Fire Brick Co. v. A. & W., 107 I. C. C. 399, 406.

(i) Arkansas points: Rates on sugar from New Orleans, Gramercy, Reserve, and Three Oaks, La., to Texarkana, Ark.-Tex., Hope, Ashdown, and Nashville, Ark., found not unreasonable, but unduly prejudicial to such destination points and unduly preferential of Shreveport, La., to extent they exceed rates to Shreveport by fixed differentials. Four States Grocery Co. v. K. C. S. Ry., 107 I. C. C. 485.

(j) Bainbridge and Brunswick, Ga.: Rates on crate and box material from, to destinations in Florida on Florida East Coast Ry., found unduly prejudicial to complainants and unduly preferential to their competitors shipping intrastate in Florida to extent that the factors from Jacksonville exceed rates contemporaneously maintained on like traffic for equal distances moving intrastate from points in Florida to same destinations. Elberta Crate Co. v. A. C. L., 107 I. C. C. 499.

(k) Rates on bar iron, including angle and channel bar, from Nashville, Tenn., to destinations on L. & N. in Kentucky and Tennessee, and to Ohio and Mississippi River crossings, and points in c. f. a. territory, found not unreasonable, discriminatory, or unduly prejudicial in their relation, distance considered, with rates from Pittsburgh and other points in c. f. a. territory. Knoxville Iron Co. v. L. & N., 107 I. C. C. 627.

(l) Columbus, Miss.: Rates on cabbage from San Benito and Donna, Tex., to, found not unreasonable or discriminatory, but unduly prejudicial to extent they exceeded contemporaneous rates on like traffic from same points of origin to Artesia, West Point, Corinth, Tupelo, and Okolona, Miss. Nonprejudicial basis of rates prescribed for future and reparation denied. Northeast Miss. Traffic Bureau v. N. O., T. & M., 107 I. C. C. 673.

(m) West-bank Mississippi River points: Relation of rates on canned goods from Illinois freight association territory to certain west-bank Mississippi River points in that territory on the one hand, and from Illinois territory to Chicago, Peoria, and St. Louis, on the other, found not unduly prejudicial to river cities. While general level of rates to alleged preferred points is lower, mere showing of differences in inbound rates to competing jobbing points does not establish undue prejudice. No definite

showing is here made with respect to character or intensity of competition encountered, the specific effect of rate relationship upon competition, or extent to which conditions affecting transportation to the respective jobbing points are properly comparable. Burlington Shippers' Asso. v. A., T. & S. F., 109 I. C. C. 694.

(n) Rates on fish scrap from Port St. Joe, to destinations in southern c. f. a., and trunk-line territories, found not discriminatory or unduly prejudicial as compared with rates on the same commodity from Fernandina, Fla., St. Marys, Ga., and Wilmington, N. C., to same destinations, or with rates on fertilizer and fertilizer materials from New Orleans, La., and Bayou La Batre, Ala., to Ohio and upper Mississippi River crossings and points in c. f. a. territory. Rate comparisons submitted do not show any undue advantage to Fernandina and St. Marys to disadvantage of St. Joe, and fertilizer rates instanced are shown to be on a very low basis. Southern Menhaden Corp. v. A. N., 112 I. C. C. 108.

(o) Rate on burlap bags, in bales, l. c. l., from New Orleans, to Tuscaloosa, Ala., found not unreasonable, but unduly prejudicial to Tuscaloosa and unduly preferential of Birmingham to extent it exceeds lower contemporaneous rate on like traffic from New Orleans to the latter named point. Nonprejudicial rate prescribed. Dixie Peanut Mills v. A. G. S., 112 I. C. C. 167.

(p) Relationship of fuel-oil rates from southern California to Arizona with those from the mid-continent field to the same destinations found not unduly prejudicial, with exception of rates from Galveston and other Texas points to Douglas and Bisbee, Ariz. If rates from California and mid-continent fields into Arizona were constructed strictly according to relative distances, as California would have them, the only logical result would be to deprive mid-continent producers from competing in this territory, provided the price of fuel oil in the two fields is anywhere near same. Associated Oil Co. v. A. E. R. R., 112 I. C. C. 350.

(q) Rates on cast-iron pipe and fittings from points in Alabama, Georgia, Tennessee, and North Carolina to Wichita, Kans., found not unreasonable but unduly prejudicial to Wichita and unduly preferential to Oklahoma points and Kansas City to extent they exceed contemporaneous rate to Enid. Nonprejudicial basis of rates prescribed and reparation denied. Wichita Chamber of Commerce v. A. & V., 112 I. C. C. 569.

(r) Rates on prepared roofing, asphalt shingles, roofing and building paper, and certain other related articles, from various producing points in c. f. a., Buffalo-Pittsburgh, and trunk-line territories to southern territory, and from points in trunk-line territory to Virginia and West Virginia, found unreasonable and unduly prejudicial to extent they exceed rates determined on basis of those prescribed in Southern Class Rate Investigation, 109 I. C. C. 300. Reasonable and nonprejudicial rates prescribed for the future. Standard Paint Co. v. Director General, 112 I. C. C. 589.

(s) Rates on coal from mines in Kansas, Missouri, Arkansas, and Oklahoma to Lincoln and Havelock, Nebr., found unreasonable and unduly prejudicial to extent they exceed contemporaneous rates to Omaha. Reasonable and nonprejudicial bases of rates prescribed and findings in 89 I. C. C. 73 affirmed, and those in 101 I. C. C. 759 reversed in part. Lincoln Chamber of Commerce v. A. C. R. R., 113 I. C. C. 161.

(t) Rates on fresh meat and packinghouse products, c. l. and l. c. l., from Pueblo, Colo., to points in New Mexico, found unreasonable and unduly prejudicial as compared with rates on like traffic from El Paso and Fort Worth, Tex., Oklahoma City, Okla., Witchita, Kans., and Cactus, Ariz., to same destinations. Reasonable scale of distance rates based on the so-called Cactus-El Paso scale laid down in 81 I. C. C. 115 and 100 I. C. C. 4, for application in same general territory for like distances prescribed and reparation awarded. Nuckolls Packing Co. v. A., T. & S. F., 113 I. C. C. 229.

(u) Rates on newsprint paper from Merrill, Wis., and other producing points in Wisconsin and from points of production in Minnesota to Keokuk, Iowa, found not unreasonable but found unduly prejudicial to extent they exceeded or exceed the rates contemporaneously in effect to Fort Madison, Iowa, a competing point. Keokuk Shippers' Asso. v. B. Ry. Co. of Chicago, 113 I. C. C. 286.

(v) Rates on grain from points in northern Illinois and southern Wisconsin on certain lines of the Illinois Central and C., B. & Q. railroads to Chicago,

Ill., district, and on feed in the reverse direction, found not unreasonable or unduly prejudicial as compared with rates on those commodities from same origin points to other Illinois, Missouri, Indiana, Kentucky, and Ohio destinations. Disadvantage of Chicago district is primarily one of location, shippers there located seeking to market feed against the flow of the ingredients, in competition with manufacturers shipping with it. Moreover, rates assailed are for most part local rates, and under circumstances of this case their reasonableness may not be tested by comparisons with proportional rates, and fact that local rates on feed lower than on grain are maintained to a few points is not convincing that same basis should be extended to all points. Chicago Board of Trade v. C., B. & Q., 113 I. C. C. 295.

(w) Rates on lumber, egg-case material, box lumber and shooks, from Caruthersville, Mo., to points in Iowa, South Dakota, Minnesota, Wisconsin, and Illinois, found unreasonable and unduly prejudicial in comparison with rates contemporaneously maintained from Cairo to same destinations. Similar rates to Kansas and Nebraska destinations found as compared with those from Memphis, not unreasonable or otherwise unlawful average distances and rates from Caruthersville and Memphis appearing to be substantially the same. Reasonable and nonprejudicial rates, Caruthersville differentially over Cairo, prescribed and reparation awarded. Dillman Egg Case Co. v. A., T. & S. F., 113 I. C. C. 447.

(x) Rates on sugar from California points to Rapid City, Deadwood, or Lead, S. Dak., found not unreasonable but unduly prejudicial to extent they exceed rates contemporaneously applicable from same origin points to Omaha, Nebr., and Sioux City, Iowa, or to either of them. Nonprejudicial rates for future prescribed. Nebraska State Ry. Co. v. A. & W., 113 I. C. C. 467.

(y) Rates on eggs from points in Oklahoma, Kansas, Missouri, and Nebraska, to Laredo, Tex., located in Texas differential territory, found not unreasonable, discriminatory, or unduly prejudicial as compared with rates contemporaneously maintained to Houston, San Antonio, Corpus Christi, and other destinations in Texas common-point territory. Present rates to Laredo were established as part of a general adjustment voluntarily made to meet rates to Brownsville and other points in the Rio Grande Valley and were found to be just and reasonable as maxima in 81 I. C. C. 703. Moreover, voluntary reduction of a rate is not of itself evidence of the unreasonableness of the rate so reduced, nor does record support a finding that Laredo is entitled to a rate adjustment different from that now accorded other points in differential territory. Sames, Moore & Co. v. A., T. & S. F., 113 I. C. C. 501.

(z) Rates on cement from Harrys and Eagle Ford, Tex., moving interstate to certain destinations in Texas and to destinations in Oklahoma, found unduly prejudicial as compared with rates from Ada, Okla., to destinations in Texas for like distances. Nonprejudicial rates prescribed. Texas Portland Cement Co. v. A. W. Ry., 113 I. C. C. 536.

(aa) Rates on pulpboard, not corrugated or indented, from Hartsville, S. C., and Canton N. C., to eastern destinations, found unduly prejudicial to manufacturers at those points and unduly preferential of competing manufacturers at Gordon, Ga., and Roanoke Rapids, N. C. Sonoco Products Co. v. A. C. L. R. R., 113 I. C. C. 553.

(bb) Rates on coke from Appalachia, Stonega, and other producing points in Virginia and from Birmingham, Ala., to destinations in California found not unreasonable or unduly prejudicial as compared with rates from Chattanooga. Similar rates from Chattanooga found not unreasonable or discriminatory but following 104 I. C. C. 483, were unduly prejudicial to extent they exceed the rates from the Birmingham district to the same destinations. Romann & Bush Pig Iron & Coke Co. v. I. R. R., 113 I. C. C. 622.

(cc) Upon further hearing, original report, 88 I. C. C. 273, affirmed and rates on pickles from Colorado producing points to Oklahoma destinations found unduly prejudicial and unduly preferential of Kansas points to extent that they yield earnings per ton-mile higher than those yielded by rates contemporaneously maintained to Kansas destinations computed upon average distances. Ridenour-Baker Mercantile Co. v. A., T. & S. F., 113 I. C. C. 629.

(dd) Rates on evaporated milk from Pecatonica, Ill., to points in trunk-line

territory, found not unreasonable, discriminatory, or unduly prejudicial as compared with lower rates from Wisconsin points to same destinations. Points in Wisconsin enjoying rates lower than Pecatonica, are located near Lake Michigan; such rates are influenced by carferry routes, and compare favorably with rates assailed. Milk Producers Cooperative Co. v. B. & O., 113 I. C. C. 721.

(ee) Rates on paper, not printed, and on waxed wrapping paper, printed and not printed, l. c. l., from Cincinnati, Ohio, to Lynchburg, Va., found not unreasonable or unduly prejudicial as compared with rates to South Boston and Danville, Va., and other points. Rate on printed paper found unreasonable to extent it exceeded third class, the basis found reasonable in official classification territory in 96 I. C. C. 280. Reasonable rate prescribed for future and reparation awarded. Lynchburg Chamber of Commerce v. N. & W., 115 I. C. C. 27.

(ff) Rates on corrugated strawboard boxes, k. d., from Baltimore, Ohio, to Durham, Winston-Salem, and Reidsville, N. C., found not unduly prejudicial as compared with rates from Louisville, Ky., to same destinations. The general basis of making rates from points in c. f. a. territory to Carolina destinations is by combination on Ohio River crossings or the Virginia cities. Baltimore, however, takes the Columbus rate, which is not made by usual method, but is on a differential basis over Ohio River rate, having been established in order to secure traffic in competition with Cincinnati. Moreover, the line which serves Baltimore meets the Columbus rate at Columbus, and applies it to intermediate points, and none of these lines serve Louisville. Fairfield Paper Co. v. A. C. L., 115 I. C. C. 43.

(gg) Combination rate on lime from Woodville, Ohio, to Fulton Station, Baltimore, Md., on the Western Maryland Ry., found unreasonable and unduly prejudicial for the future to extent it exceeded lower rate contemporaneously in effect from same point of origin to deliveries in Baltimore on the Pennyslvania R. R., and from other Ohio points to Fulton Station. Woodville Lime Products Co. v. P. R. R., 115 I. C. C. 131.

(hh) Rates on cotton-factory sweepings from Mobile, Ala., to Columbus, Ga., found not unduly prejudicial merely because lower rates were in effect from Mobile to Athens, Atlanta, Augusta, and Macon over considerably longer routes. No competition with dealers in alleged preferred cities being shown, clearly there is no undue prejudice within meaning of the act. See 29 I. C. C. 438, 443. Julius Friedlander Co. v. S. Ry., 115 I. C. C. 589.

(ii) Rates plus reconsignment or switching charges applicable on lime from Woodville, Ohio, to stations on Western Maryland in Baltimore, Md., east of Walbrook station, found unreasonable and unduly prejudicial to extent they exceeded rates without the addition of such charges contemporaneously maintained to Walbrook and other destinations in Baltimore. Reparation awarded. Washington Bldg. Lime Co. v. P. R. R., 115 I. C. C. 618.

(jj) Rates on potatoes from points in the Carolinas on Atlantic Coast Line R. R. to Kalamazoo, Jackson, Battle Creek, and Sturgis, Mich., found unreasonable and unduly prejudicial to extent they exceed corresponding rates contemporaneously in effect to Grand Rapids, Mich. Distance scale of rates prescribed for future and reparation denied on past shipments because the evidence on which the adjustment prescribed is based is general in character and savors of a general readjustment. Taylor Produce Co. v. A. C. L., 115 I. C. C. 633.

(kk) Rates on agricultural limestone from Buffalo, N. Y., to Troy and Canton, Pa., found not unreasonable or otherwise unlawful. Rates assailed compare favorably with those on same and related commodities for similar distances on carrier's lines. Fact that lower rates are maintained from Buffalo to competitive destinations by nonparticipating carriers not serving Troy or Canton does not establish discrimination or prejudice, as undue prejudice or preference does not exist as between shippers or communities unless same carriers serve them or participate in their traffic. Moreover, carrier showed that to meet rates applicable over competing lines would create prejudice against lime-producing districts served by it; also that rates assailed compare favorably with those prescribed in 85 I. C. C. 341. Case & Sons v. P. R. R., 115 I. C. C. 694.

(ll) Rates on small-arms ammunition l. c. l. from New York and Baltimore to Lynchburg, Va., found not unreasonable or unduly prejudicial as compared with lower rates contemporaneously maintained to farther distant points immediately east and west of Lynchburg. Rates

to Lynchburg on this commodity are governed by the southern classification, whereas rates to the alleged preferred points are governed by the official classification and although lower rates would apply if the official classification governed on this traffic moving to Lynchburg, the record shows that on other commodities lower rates would apply if governed by the southern classification. The fourth-section departures instanced are protected by appropriate applications, and in view of a general investigation covering class rates within and between southern and eastern territories, no attempt will be made here to adjust the disparity brought about by the application of rates governed by the different classifications as above described. Lynchburg Chamber of Commerce v. B. & O., 115 I. C. C. 721.

(mm) Rates on brick machinery from Lancaster, Pa., to Deacon, Va., found not unreasonable or unduly prejudicial as compared with lower rates contemporaneously in effect to Lynchburg, Va., a farther distant point. Rates to Deacon are governed by the official classification, whereas those to Lynchburg are governed by the southern classification. The fourth-section departure is protected by an appropriate application, and in view of a pending general investigation covering class rates within and between southern and eastern territories no attempt will be made here to adjust the disparity brought about by the application of rates governed by the different classifications as above described. Lynchburg Chamber of Commerce v. B. & O., 115 I. C. C. 721.

(nn) Rates on brick and hollow building tile from Vale, Mo., a point outside Kansas City switching district, to Kansas City, Mo.-Kans., found not unreasonable or unduly prejudicial as compared with other rates on same and related products for comparable distances to same destination from points both within and without the district, or as compared with distance rates for similar hauls in effect on intrastate and interstate traffic in Kansas, Nebraska, Missouri, Texas, Arkansas, Illinois, and Iowa. Kansas City Brick Co. v. C., R. I. & P., 115 I. C. C. 750.

(oo) Rates on coal from Clinchfield, Dante, and Clinchco, Va., to Toledo and Toledo Dock, Ohio, for transshipment by vessel, found unduly prejudicial to extent rate from Clinchco exceeds rate contemporaneously maintained on lake-cargo coal from Big Sandy district to same destinations, and those from Dante and Clinchfield exceed a differential of 15 cents over the Clinchco rate. Nonprejudicial rate relationship prescribed for future. Clinchfield Coal Corp. v. C., C. & O., 118 I. C. C. 79.

(pp) Relationship between interstate rates on hay from points in Texas differential territory and New Mexico, to points in southern Arkansas and northern Louisiana, and intrastate rates applying from Texas differential points to Texarkana, Tex., found unduly prejudicial to interstate shippers, unduly preferential of shippers at Texarkana, and unjustly discriminatory against interstate commerce. Arkansas Jobbers & Mfrs. Asso. v. A., T. & S. F., 118 I. C. C. 238.

(qq) Rates on hay from points in Texas differential territory and New Mexico to destinations in southern Arkansas and northern Louisiana, found unduly prejudicial to extent that differences between such rates and corresponding rates to Monroe, La., are more favorable to last-named point than would result by application of distance scale of rates prescribed in 101 I. C. C. 116, extended beyond 800 miles at same rate of progression as for the last 300 miles in that scale, plus differentials for hauls in differential territory and New Mexico. Nonprejudicial basis of rates prescribed for future. Arkansas Jobbers & Mfrs. Asso. v. A., T. & S. F., 118 I. C. C. 238.

(rr) Allegation of undue prejudice between rates on wrought-iron pipe from Bowling Green, Ky., to Florence, Ala., and rates contemporaneously in effect between other points for comparable distances, not sustained. Disparity of rates does not necessarily result in undue prejudice. It must also appear that shipments are made or prevented because of the rate relationships. Nashville Machine & Supply Co. v. L. & N., 118 I. C. C. 577, 578, 579.

(ss) A showing of a disparity of rates between different points does not necessarily make out a case of or result in undue prejudice, but it must also appear that shipments are made or prevented because of the rate relationship. Nashville Machine & Supply Co. v. L. & N., 118 I. C. C. 577, 578, 579.

(tt) Rates on grain and products from points in Missouri, Kansas, Nebraska, the Dakotas, Minnesota, Iowa, Wisconsin, Illinois, and Indiana to Montgomery, Ala., found unreasonable and unduly prejudi-

cial as compared with rates contemporaneously maintained to Meridian, Miss., Mobile, Ala., and Pensacola, Fla., Mississippi Valley points. Reasonable and nonprejudicial rates prescribed for future and reparation denied. Capital Grain & Feed Co. v. I. C., 118 I. C. C. 732.

(uu) Complainant attacked commodity rates applicable on agricultural limestone from West Stockbridge, Mass., to points in New York, New Jersey and Pennsylvania as unreasonable and unduly prejudicial. West Stockbridge is on the New Haven 2.5 miles south of State Line, Mass., an interchange point with the N. Y. C. Limestone is not subject to damage in transit, except when shipped in paper bags, and then only to the extent that the bags may be damaged by water admitted by leaky roof cars. Claims are small. In 1922 the 40% increase of Aug. 26, 1920 was removed from this commodity from all producing points in New York state, by all lines, except the Pennsylvania, for single line hauls. Later the reduced rates were extended to two line hauls in connection with the N. Y. O. & W., D. & H. and Erie. The reductions left the rates from West Stockbridge to the destinations concerned considerably higher than those from Buffalo, notwithstanding the lesser distance from West Stockbridge. HELD, rates unduly prejudicial to extent they exceed the rates from Buffalo, that rates for future be unreasonable to extent they exceed certain specific rate named to typical points of destination, reparation denied. Grangers Mfg. Co. v. N. Y. C. R. R., 120 I. C. C. 648.

(vv) Following 96 I. C. C. 682, fifth-class rates on steel castings from Attica, Ind., to St. Louis, Mo., Chicago, Peoria, Streator, and Mount Vernon, Ill., found unreasonable and unduly prejudicial as compared with rates from various competing points in Illinois, Indiana, and Missouri. Distance scale of rates prescribed for future and reparation awarded. Nat'l Car Coupler Co. v. A., T. & S. F., 120 I. C. C. 37.

(ww) Class rates between official classification territory, on one hand, and Fulton and Mayfield, Ky., on other, found unduly prejudicial in favor of Ohio River crossings to extent they exceed corresponding rates contemporaneously maintained from or to Cairo or Metropolis, via whichever crossing the traffic moves from and to Fulton and Mayfield, by more than 24 cents on first class, and on the other classes by amounts bearing the percentage relationships to 25 cents as contemporaneous rates on the corresponding classes bear to first-class rates from or to Cairo or Metropolis, as the case may be, on the one hand, and points in official classification territory, on the other, resulting rates to be governed by official classification. Mayfield Chamber of Commerce v. A. & W., 120 I. C. C. 137, 144.

(xx) Complainant attacked as unreasonable, unjustly discriminatory and unduly prejudicial rates on green salted hides from El Paso, Tex., to Chicago, Ill., St. Louis, Mo., East St. Louis, Ill., Kansas City, Mo., and points basing thereon; also Los Angeles, San Diego and San Francisco, Calif.; glue stock to Chicago, Ill., St. Louis, Mo., also New Orleans, La., and Kansas City, Mo.; tankage and dried blood to Los Angeles and San Diego, Calif.; soap stock, inedible tallow and edible tallow to Los Angeles, San Diego, San Francisco, Calif., and tin cans to El Paso from St. Louis, Mo., and points basing thereon. GREEN SALTED HIDES. Carload shipments of green salted hides are made in ordinary box cars. El Paso is located in the western portion of Texas in Texas differential territory. This is recognized as territory of comparatively light traffic density in which the carriers require higher level of rates than in Texas common point territory to the east thereof. The disparities between the basis of rates from El Paso and Fort Worth on traffic to the north, and from El Paso and Utah on traffic to the west, are considerable. The mere showing of such disparities, however, does not establish the existence of undue prejudice. The more favorable transportation conditions in the territory in which Forth Worth is located than in the territory in which El Paso is located are well recognized. HELD, hide rates attacked not unduly prejudicial. GLUE STOCK. Glue stock is a low grade by-product of the packing house business, is usually marketed at Chicago, moves in bulk, in ordinary box cars and loads heavily. HELD, rates on glue stock from El Paso are unreasonable to extent they exceed 67.5c to Chicago and 59.5c to St. Louis, and that those rates will not result in undue prejudice to El Paso. The record is insufficient to warrant findings with respect to the rates to points other than St. Louis and Chicago. TANKAGE AND DRIED BLOOD.

Tankage and dried blood, also low grade by-products, are used in the manufacture of fertilizer, are generally shipped together, and are worth about $22 to $40 per ton, delivered at Los Angeles. HELD, rates not shown to have been or to be unreasonable or unduly prejudicial. SOAP STOCK AND INEDIBLE TALLOW. Soap stock and inedible tallow have been shipped by complainant to Chicago and eastern points and occasionally to Los Angeles. HELD, rate on soap stock to San Francisco not unreasonable, but to Los Angeles unreasonable to extent it exceeds 65c and on inedible tallow unreasonable to extent they exceed 80c to San Francisco and 65c to Los Angeles. EDIBLE TALLOW. Edible tallow is used in the manufacture of certain food products and is from 25 to 40% higher in value than inedible tallow. It is usually included in the list of commodities taking rates on packing house products. HELD, rate to Los Angeles unreasonable to extent it exceeded $1.15. TIN CANS. Purchases have been made principally at Kansas City. Rates of $1.64 from Kansas City for 947 miles, $1.765 from St. Louis for 1,226 miles, and $1.63 from New Orleans for 1,212 miles are illustrative. HELD, rates attacked not unreasonable or unduly prejudicial. Peyton Packing Co. v. A. & S. Ry., 122 I. C. C. 3.

(yy) Rates on green salted hides, from El Paso, Tex., to St. Louis, Kansas City, and Chicago, and points basing thereon, higher than rates from Fort Worth, Tex., to same destinations, found not unduly prejudicial to El Paso or unduly preferential of Fort Worth. The more favorable transportation conditions in Fort Worth territory than in El Paso territory are well recognized and mere showing that rate disparities obtain does not establish existence of undue prejudice. Peyton Packing Co. v. A. & S., 122 I. C. C. 3.

(zz) Fact that rates are relatively low does not alone justify existence of an unduly prejudicial situation. See 263 U. S. 515. Clinchfield Coal Corp. v. C. C. & O. 122 I. C. C. 37, 41, 42.

(3a) Rates on gravel from Montgomery, Ala., and Chattanooga, Tenn., to destinations in Georgia and Mississippi found unduly prejudicial to extent they exceed, distance considered, the rates contemporaneously maintained on slag from Birmingham and certain other Alabama points to same destinations. Rates on Chert, Clay, Sand, and Gravel, 122 I. C. C. 133, 166.

(3b) Class rates on wrapping paper and paper articles from Cincinnati, Ohio to destinations in Missouri, Kansas, Iowa, Nebraska, and Colorado, found unreasonable and unduly prejudicial as compared with lower commodity rates contemporaneously in effect from Fox River group prescribed in 66 I. C. C. 571, to same destinations. However, as practice of basing interritorial rates on a combination of factors to and from the Mississippi River has been in effect for many years and rates assailed, judged as combination rates, do not produce excessive earnings, they were not unreasonable in the past and no damage has been shown as a result of undue prejudice which may have existed. Reasonable and nonprejudicial rates prescribed for future. Fox Paper Co. v. A., T. & S. F., 122 I. C. C. 399.

(3c) Rates on grain and products from points of origin in Utah, and on the Oregon Short Line and Utah Idaho Central railroads in Idaho and Oregon to points in Nebraska, Kansas, Oklahoma, Texas, Minnesota, Iowa, Missouri, Arkansas, Louisiana, Wisconsin, Illinois, Indiana, Kentucky, Tennessee, Mississippi, and Alabama, found unduly prejudicial in favor of Colorado common points to extent they exceed contemporaneous rates from Denver to same destinations by more than the respective differentials herein prescribed. Ogden Grain Exchange v. A. & S., 122 I. C. C. 691, 718.

(3d) Rates on pig iron from points in Alabama, Kentucky, and Tennessee to, Ansonia, Conn., found not unreasonable or otherwise unlawful as compared with lower rates to Derby and Shelton, Conn., and to other nearby destinations in Connecticut, New York, and Rhode Island. No evidence was introduced showing competition between these points in marketing of southern pig iron. Carriers showed that lower rates were predicated upon rates established by northern lines to meet water competition and while admitting that there never was water competition on traffic from and to this origin and destination territory, urged that the normal rate is a higher rate blanketed over New England. Moreover, in 87 I. C. C. 102, the commission found not unreasonable a higher rate on pig iron from Birmingham to Weehawken, N. J., involving a

shorter distance than from and to points here involved. Farrell Foundry & Machine Co. v. A., B. & A., 123 I. C. C. 127.

(3e) All-rail class and commodity rates on various articles from Mississippi River gateways, Missouri River cities, Kansas-Missouri territory, and defined territories to Texas, Oklahoma, Arkansas, and western Louisiana found to result in undue prejudice to northeast Texas cities and in undue preference of points in Oklahoma, Arkansas, and western Louisiana. Consolidated Southwestern Cases, 123 I. C. C. 203, 342.

(3f) Class and commodity rates on various articles between Oklahoma and designated portions of Kansas and Missouri, in their relations to relatively lower intrastate rates within those portions of Kansas and Missouri, found to result in undue prejudice and preference and in unjust discrimination against interstate commerce. Consolidated Southwestern Cases, 123 I. C. C. 203, 350, 351.

(3g) Class and commodity rates on various articles between Oklahoma and Texas, and from Little Rock, Ark., to Texas, in their relations to relatively lower rates between Shreveport, La., and Texas, and from Shreveport to Texas, respectively, found to result in undue prejudice and preference. Consolidated Southwestern Cases, 123 I. C. C. 203, 354.

(3h) Class and commodity rates on various articles between Oklahoma and northeast Texas cities, in their relations to relatively lower intrastate rates in Oklahoma, and between Oklahoma and points in Texas commonpoint territory, in their relations to relatively lower intrastate rates within latter territory, found to result in undue prejudice and preference and in unjust discrimination against interstate commerce. Consolidated Southwestern Cases, 123 I C. C. 203, 355.

(3i) Class and commodity rates on various articles (a) between northeast Texas cities and points in western Louisiana other than New Orleans and Shreveport, in their relations to relatively lower rates between western Louisiana, on the one hand, and Memphis, Tenn., and St. Louis and Kansas City, Mo., on the other, and (b) between such northeast Texas cities and Arkansas in their relations to relatively lower rates between Arkansas, on the one hand, and Memphis, Kansas City, St. Louis, and New Orleans, on the other, found to result in undue preference and prejudice. Consolidated Southwestern Cases, 123 I. C. C. 203, 359, 360.

(3j) Class and commodity rates on various articles (a) between Oklahoma and Arkansas, in their relations to relatively lower rates between Arkansas, on the one hand, and St. Louis, Mo., Memphis, Tenn., and New Orleans, La., on the other; (b) between Oklahoma and western Louisiana, on the one hand, and St. Louis and Kansas City, Mo., and Memphis, on the other; and (c) between Oklahoma and Texas, in their relations to relatively lower rates between Texas, on the one hand, and St. Louis and Memphis, on the other, found to result in undue prejudice and preference. Consolidated Southwestern Cases, 123 I. C. C. 203, 359, 360.

(3k) Fifth-class rates on paper tablets and papeteries from East Hartford, Conn., to Baltimore, Md., and Washington, D. C., found not unreasonable but unduly prejudicial to extent they exceeded lower commodity rates contemporaneously in effect from Holyoke, Mass., a farther distant point. Carriers showed that New England points of origin are grouped with respect to class rates to Baltimore and Washington and that distance is, therefore, not a controlling factor. Commodities involved move generally from this territory under fifth-class rates and since class rates from Holyoke and East Hartford are the same, it is carrier's intention to place rates from Holyoke on the class basis. Taylor-Atkins Paper Co. v. N. Y., N. H. & H., 123 I. C. C. 583.

(3l) Rates on pig iron from Buffalo, N. Y., and Punxsutawney and Du Bois, Pa., to destinations in New England, found unduly prejudicial to Buffalo or unduly preferential of Punxsutawney and Du Bois. While complainants contend that their business has decreased because their competitors, situated a greater average distance from same general market, pay the same rates, records indicate that complainant's shipments have increased for several years. While Buffalo has a longer haul at same rate on traffic to New York, Du Bois, and Punxsutawney have a longer haul at same rate on traffic to New England. Moreover, three points named are and always have been grouped as to pig-iron rates to New England destinations

and New York rate points and no reason appears for disturbing this adjustment. Hanna Furnace Co. v. N. Y. C., 123 I. C. C. 627.

(3m) Fifth-class rates on manufactured iron and steel articles from Youngstown, Newton Falls, and Niles, and points grouped therewith, to Buffalo and other western New York and northwestern Pennsylvania points, found unreasonable as compared with lower rates contemporaneously in effect between points in c. f. a. territory; from Pittsburgh district to St. Louis under distance scale prescribed in 96 I. C. C. 682; from Buffalo to destinations in Youngstown district; with aggregate of intermediate rates; and to extent they exceeded distance rates prescribed, and unduly prejudicial to extent they exceed the contemporaneous rates from Buffalo to same destinations. Reasonable and nonprejudicial distance rates prescribed for future and reparation awarded. Concrete Steel Co. v. B. & O., 123 I. C. C. 677.

(3n) Proposed increased interstate rates on milk and cream between New England points and from New York points to points in New England, in passenger and freight-train service, found not justified, except that rates for distances up to, but not including, 100 miles, should be increased as proposed, but for distances 100 miles and over, rates equal to those now in effect under distance scale to New York City and Philadelphia prescribed in 45 I. C. C. 371 and 45 I. C. C. 412, respectively, should be established, with continued maintenance of rates on milk in freight cars moving in freight trains at not to exceed 75 per cent of corresponding rates when moving in passenger-train service. Milk and Cream Between New England Points 126 I. C. C. 38.

(3o) Rates on lumber and products from points in Pennsylvania on the Indian Creek Valley Ry., to destinations in trunk-line and c. f. a. territories, found unreasonable and unduly prejudicial as compared with those contemporaneously in effect from Baltimore to various New York destinations for comparable distances, and to extent they exceeded those contemporaneously maintained from Group 3 points to same destinations. Latter rates are not depressed since they compare favorably with those from adjacent groups, and nothing of record warrants a differential from points on the Indian Creek Valley Ry. over Group 3 rates. Reasonable and nonprejudicial rates prescribed for future and reparation awarded. Indian Creek Valley Lbr. Co. v. B. & O., 126 I. C. C. 161.

(3p) Contention that rates on grain and products from origin points on specified lines in Idaho, Montana, Oregon, Utah, Wyoming, and Colorado, to destinations, in California and the Pacific Northwest, higher than contemporaneous rates for like distances from Montana points of origin to same destinations result in undue prejudice and preference, not sustained. Record is not convincing that transportation conditions are as favorable from origin territory here involved to the north Pacific coast as from the lower rated Montana points. Moreover, low rates from Montana points were established to meet competition with Canadian lines and record does not warrant a finding that competition at north Pacific coast markets between shippers in origin territory involved and Montana shippers is as severe as that at same markets between Montana and Canadian shippers. Ogden Grain Exchange v. A. E. R. R. Co., 126 I. C. C. 255, 270, 271, 281.

(3q) Rates on scrap copper and brass from New York, N. Y., to New England destinations found not to have been unreasonable, discriminatory, or unduly prejudicial in the past, but for the future found unreasonable to extent they exceed the contemporaneous sixth-class rates from and to same points, and unduly prejudicial to extent they exceed rates contemporaneously maintained from Pittsburgh and Cleveland group points to same destinations. Sixth-class basis will provide uniformity in rating of scrap copper and brass, and earnings thereunder appear adequate even for the generally higher rated New England territory. Reasonable and nonprejudicial rates prescribed for the future. Federated Metals Corp. v. N. Y., N. H. & H. 126 I. C. C. 439.

(3r) Rate on newsprint paper from New Orleans, La., to El Dorado, Ark., found not unreasonable, but unduly prejudicial as compared with lower rates from New Orleans to other destinations in Arkansas, Oklahoma, and Louisiana for comparable distances, and to extent it exceeded rate to Shreveport, La., applicable on interstate or foreign commerce, by more than 7 cents per 100 pounds. Nonprejudicial basis of rates prescribed.

El Dorado Chamber of Commerce v. C., R. I. & P. 126 I. C. C. 443.

(3s) Rates on furniture from St. Louis to Paris, Texas found unduly prejudicial to Paris and unduly preferential of Texarkana, Tex., to extent they exceeded or may exceed, the maximum reasonable rates or bases of rates prescribed in 123 I. C. C. 203, for application on furniture from St. Louis to the Southwest. No damage shown to have resulted from existing rate situation and reparation denied. Rodgers-Wade Furniture Co. v. A. C. & Y., 126 I. C. C. 460.

(3t) Combination rates on lumber and products from points in Puget Sound district of State of Washington to Montana, North Dakota, South Dakota, and Minnesota destinations, found not unreasonable or unjustly discriminatory but unduly prejudicial to extent they exceed joint rates contemporaneously maintained from Tacoma, Wash., and other points in the coast group. Since absorption by complainants of differentials over coast-group rates is generally difficult or impracticable, resulting rates are prohibitive and buyers tend to deal with complainant's competitors in the coast group who can ship at lower rates. Nonprejudicial rates required for future. Pacific States Lbr. Co. v. G. N. Ry, 126 I. C. C. 471.

(3u) Combination rates on lumber and products from Elk River, Idaho to Montana, North Dakota, South Dakota, and Minnesota destinations, found not unreasonable, discriminatory, or unduly prejudicial except that rates to points east of the Montana-Dakota State line are unduly prejudicial as compared with joint rates contemporaneously in effect from Spokane, a competing point; with rates prescribed in 50 I. C. C. 591, and 77 I. C. C. 156, from Winchester, Idaho, a point south of Elk River, and points southeast of Spokane, respectively, to same destinations; and to extent indicated in report. Nonprejudicial rates required for future. Pacific States Lbr. Co. v. G. N. Ry. 126 I. C. C. 471, 473, 474.

(3v) Rate on crude phosphate rock, from Tilphosco and Brewster, Fla., to Meridian, Miss., found not unduly prejudicial as compared with lower rate to New Orleans, La., and Gulf ports, for greater distances. Carriers show that rate to the Gulf ports is depressed by reason of water competition, much phosphate rock being transported in tramp steamers which maintain no regular rates. Moreover, in 101 I. C. C. 165, the influence of water competition over these rates was recognized by commission and record in instant case substantiates the view there expressed. Meridian Fertilizer Factory v. A. C. L., 126 I. C. C. 478.

(3w) Rates on sand and gravel from Muscatine, Iowa to destinations in central Illinois, found unreasonable and unduly prejudicial as compared with rates on crushed stone under distance scale prescribed in 49 I. C. C. 681, from Birdsboro and Devault, Pa., and Port Deposit, Md., to various eastern destinations; with rates on chert, clay, sand, and gravel prescribed in 122 I. C. C. 133 for application in the Southeast; and to extent they exceed by more than 10 cents per ton rates contemporaneously maintained on crushed stone, prescribed in 89 I. C. C. 110, from Buffalo, and Linwood, competing Iowa points with which Muscatine is grouped, to same destinations. Reasonable and nonprejudicial rates required for future. Automatic Gravel Products Co. v. C., R. I. & P. 126 I. C. C. 487.

(3x) Rate on pig iron from Birmingham, Ala., and points taking same rate to Nashville, Tenn., found not unduly prejudicial as compared with lower rates contemporaneously in effect to Chattanooga, Tenn., and other destinations in Tennessee, Alabama, and Georgia, with which Nashville comes into competition. Since carriers which control rates to competitive destinations named do not control rate to Nashville, it is clear that there is no basis for a finding of undue prejudice. See 22 I. C. C. 115. Reparation awarded. Allen Mfg. Co. v. A. G. S., 126 I. C. C. 515.

(3y) Proposed rates on hay between points in Texas and between those points and points in the Shreveport, La., group, based on a composite scale observing as minima the rates prescribed in 48 I. C. C. 312 or those under distance scale prescribed in 101 I. C. C. 116, whichever are higher, plus differentials when through Texas differential territory, using as maximum a rate now applicable as a maximum blanket rate between points in Texas common-point territory, found not justified. In 101 I. C. C. 116, commission stated that whatever rates would be ultimately prescribed between Texas points should be applied between Texas points and Shreveport, but because of loss involved respondents have been unwilling

to extend this intrastate adjustment beyond 350 miles. The proposed rates are in nature of a compromise, are apparently satisfactory to no one, and to extent they exceed those constructed in accordance with distance scale prescribed in last cited case, would be unreasonable and many of them unduly prejudicial. Hay Between Points in Tex., La., and Ark., 126 I. C. C. 524.

(3z) Rate on newsprint paper from Carthage, N. Y. to Newark, N. J., via National Junction, N. J., found not unreasonable, discriminatory, or unduly prejudicial as compared with lower rate contemporaneously in effect to New York, or from Glens Falls, N. Y., to New York, over another route also applicable to Newark, and subsequently established via route of movement. Rate from Glens Falls was established to avoid fourth-section departures because of fact that Newark is intermediate to New York. However, rate to Newark, except on traffic via National Junction, is the same as rate assailed in connection with all other delivering carriers, and mere fact that carriers voluntarily reduced the latter rate does not establish unreasonableness of the rate so reduced. Newark Call Printing & Publishing Co. v. C. R. R. of N. J., 126 I. C. C. 569.

(4a) Rates on zinc concentrates from points in the Joplin, Mo-Miami, Okla., ore field to De Pue, La Salle, and Peru, Ill., found unduly prejudicial to extent they exceeded rates contemporaneously maintained to Danville, Ill. Nonprejudicial basis of rates prescribed and reparation denied. United Zinc Smelting Corp. v. B. & O., 126 I. C. C. 677, 696.

(4b) Rates on zinc concentrates from points in the Joplin, Mo.-Miami, Okla., ore field to Terre Haute, Ind., found unduly prejudicial in favor of Danville, Hillsboro, and East St. Louis, Ill., to extent they exceeded rates contemporaneously maintained to Danville, or rates contemporaneously maintained to East St. Louis and Hillsboro by more than 3.5 cents per 100 pounds. Nonprejudicial basis of rates prescribed and reparation denied. United Zinc Smelting Corp. v. B. & O., 126 I. C. C. 677, 696.

(4c) Rates on zinc concentrates from points in the Joplin, Mo.-Miami, Okla., ore field to Grasselli, Ind., found unduly prejudicial to extent they exceeded rates contemporaneously maintained to Danville, Ill., by more than 3 cents per 100 pounds. Nonprejudicial basis of rates prescribed and reparation denied. United Zinc Smelting Corp. v. B. & O., 126 I. C. C. 677, 696.

(4d) Rates on solder and certain other alloys of lead, including terne metal, found not unreasonable but unduly prejudicial to extent they exceeded lower rates contemporaneously maintained on tin. Undue prejudice ordered removed and reparation denied. Former decisions in 92 I. C. C. 319 and 113 I. C. C. 487, modified. Federated Metals Corp. v. C. R. R. Co. of N. J., 126 I. C. C. 703.

(4e) Rates on refined petroleum from Hearne, located on extreme southern rim of north-central Texas group, to Baytown, Tex., for export and for coastwise movement to points in the United States, found not unreasonable or unduly prejudicial as compared with rates from Shreveport, La. Carriers participating in rates from Shreveport do not participate in rates from Hearne, therefore the record does not sustain a finding of undue prejudice. Moreover, construction of the refinery at Hearne was a mistake of judgment resulting in financial loss for which complainant seeks reimbursement at carriers' expense. It can not be successfully argued that complainant did not know the group adjustment in the territory in which it operated and fact that it requested establishment of a rate from Hearne the same as applied from north-central Texas group, is prima facie evidence that it considered that point as being located in that group. Humble Oil & Rfg. Co. v. B. S. L. & W., 126 I. C. C. 717.

(4f) A manufacturer may be unduly prejudiced and a competitor unduly preferred by an improper relationship of inbound rates on the raw or unfinished material which they both use. Kawneer Co. v. C. & N. W. Ry., 132 I. C. C. 643, 645.

(4g) Rates on newsprint and wrapping paper from Camas, Wash., and West Linn and Lebanon, Oreg., to Oregon, California, Nevada, Montana, Wyoming, Colorado, Arizona, and Texas found not unreasonable or unduly prejudicial as compared with rates contemporaneously in effect from competitive producing points in Fox River territory in Wisconsin and Atlantic Seaboard territory. While complainants base their claim upon disruption of rate relationships which they allege formerly existed between Fox

River and Pacific Northwest territories, examination of rates indicates no definite or constant rate relationship over a period of years and carriers show that transportation conditions are not similar. Moreover, disregarding all elements but distance, rate to Texas common points from Camas and West Linn is only 13.5 per cent greater than from Stevens Point, Wis., for a 100 per cent longer haul. Crown Willamette Paper Co. v. W. T. Co., 129 I. C. C. 79.

(4h) Rates on anthracite coal from anthracite region of Pennsylvania to destination within the district of metropolitan Boston, but outside Boston switching district, found not unreasonable as compared with lower rates to Boston and destinations within or just outside the switching district, but unduly prejudicial to extent they exceeded the contemporaneous rates to adjacent points in metropolitan Boston outside the switching limits but not on tidewater, where distances are not greater than those to complainants' plants. Fourth-section situation is protected by an order. Undue prejudice ordered removed and reparation denied. Chadwick Coal Yard Co. v. N. Y., N. H. & H., 129 I. C. C. 165.

(4i) Rates on bed springs or spring beds, compressed, from Carthage, Mo., to points in Oklahoma and Texas, found unreasonable and unduly prejudicial as compared with lower rates contemporaneously in effect from Chicago, Kansas City, St. Louis, and various other points and to extent they exceeded 55 and 41 per cent of first-class rates to Oklahoma and Texas, respectively, prescribed in 123 I. C. C. 203, between same points. Reasonable maximum basis of rates prescribed for future and reparation awarded. Leggett & Platt Mfg. Co. v. A., T. & S. F., 129 I. C. C. 219.

(4j) Rate on paving brick from Buffalo, Kans., to Dodge Street (Irvington), Nebr., found not unreasonable but unduly prejudicial to extent it exceeded lower rate contemporaneously in effect from Galesburg, Ill., a competitive producing point, and subsequently established over route of movement. Complainant showed that Galesburg has set price on Nebraska brick for years and that selling price of brick shipped was based on rate from Galesburg, difference being absorbed by complainant, and cited 61 I. C. C. 185 and other cases in which reparation was awarded under similar circumstances. Reparation awarded. Buffalo Brick Co. v. C. & N. W., 129 I. C. C. 294.

(4k) Local rates from Dawkins, Ky., a point on the C. & O. Ry., to points in central and eastern trunk-line territories on lumber originating at Royalton, Ky., a branch-line point, found not unreasonable but unduly prejudicial to shippers at Royalton and unduly preferential of competing shippers located on the Sewell Valley R. R., which connects with C. & O. at Meadow Creek, W. Va., to extent they exceeded rates made the same differential under contemporaneous local rates from Dawkins as proportional rates to same destinations from Meadow Creek are made under contemporaneous local rates from latter point. Undue prejudice ordered removed. Dawkins Lbr. Co. v. C. & O., 129 I. C. C. 415.

§4. Similar Conditions.

See Equalization of Rates §3; Evidence §56; Through Routes and Joint Rates §8.

(a) In adjustment of rates it is well settled that unless conditions of transportation are substantially similar at two points no unlawful discrimination may properly be predicated upon different rates and practices. See 37 I. C. C. 225. The very terms of the statute that discrimination must not be unjust, and that preference or advantage to any particular person, firm, corporation, or locality must not be undue or unreasonable, necessarily imply that strict uniformity is not always to be enforced; but that all circumstances and conditions which reasonable men would regard as materially affecting welfare of shippers and carriers should be considered. See 162 U. S. 197. Ayrshire Coal Co. v. S. Ry., 118 I. C. C. 531, 536.

(b) Complainant attacked the commodity rate of 23c on linseed oil, carloads, from Fredonia, Kas., to Kansas City, Mo., as unreasonable and unduly prejudicial. Fredonia is about 30 miles north of the Kansas-Oklahoma state line, and is served by the Santa Fe, M. P., and Frisco. Shipments moved via M. P. 155 miles, distance via Santa Fe 153 miles. Linseed and cottonseed oils

are rated fifth class in carloads in western classification. Their transportation characteristics are similar. The rate under the scale in 98 I. C. C. 183 would be 22c. HELD, rate not unduly prejudicial but unreasonable to extent it exceeded 22c, reparation awarded. Fredonia Linseed Oil Works Co. v. A. T. & S. F. Ry., 122 I. C. C. 291.

(c) Rates on grain from points in Indiana on the Chicago, Indianapolis & Louisville Ry. to Chicago, when reshipped over lake or lake-and-rail lines, found not unreasonable or otherwise unlawful because lower than rates on similar traffic from same origin points to Indianapolis, Ind. Complainant contended that assailed rates are unduly low as a result of which traffic is diverted by way of Chicago instead of moving by way of Indianapolis. However, local rates to Chicago are upon a much higher level than rates assailed and evidence of shippers is to effect that the bulk of their grain moves to interior destinations and Ohio River markets and that greater quantities of grain are shipped to Indianapolis than to Chicago, the latter market being desirable principally for off-grade grain. Indianapolis Board of Trade v. C., I. & L., 122 I. C. C. 289.

(d) On further hearing, original report 98 I. C. C. 352, prescribing reasonable and nonprejudicial rates for interstate transportation of fresh meats and packing-house products, from Duluth to St. Paul, Minn., affirmed. Transportation conditions being substantially same in both directions, there is a clear discrimination in charging lower rates from St. Paul to Duluth than from Duluth to St. Paul, and under circumstances, it is impossible to conclude that Duluth packing plant suffers no injury because of this discriminatory freight-rate situation, or that its competitive position would not be improved if such discrimination were removed. It is an unfair situation for which no justification has been offered and should be corrected. Duluth Chamber of Commerce v. C., St. P., M. & O., 122 I. C. C. 739.

(e) Rates on anthracite coal from Lehigh, Schuylkill, and Wyoming regions in Pennsylvania to complainant's siding within corporate limits of Providence, R. I., found not unreasonable but unduly prejudicial to extent they exceeded rates contemporaneously maintained to Providence and Olneyville, R. I., farther distant points. Carriers showed that rates to latter points were depressed and that rates assailed were subsequently reduced because fourth-section relief was denied in 49 I. C. C. 744. However, complainant was at a disadvantage in competing with other dealers located within the corporate limits of Providence because of higher rates assessed on its shipments, but no damage was shown to have resulted therefrom. Undue prejudice ordered removed and reparation denied. City Coal Co. v. N. Y., N. H. & H., 123 I. C. C. 309.

(f) Rate assessed, and present rate, on lumber from, Angora, Minn., to Chicago Heights, Ill., found not unreasonable or unduly prejudicial as compared with rates contemporaneously in effect for comparable distances from Wisconsin and Minnesota points to destinations in c. f. a. territory; from Arkansas points to St. Louis and Chicago; and from Kansas City, Mo., to Chicago; or unduly prejudicial as compared with those from Tower, Minn., to Chicago. Carriers showed that rate assessed was based on the water-compelled rate from Duluth and compares favorably with those from various northern Minnesota points made on same basis. Moreover rate subsequently established places Angora on same basis as Tower. Chicago Heights Mfrs. Asso. v. B. & O. C. T. 123 I. C. C. 638.

(g) Rates on wooden box shooks from, Baltimore, Md., to Jersey City, N. J., found unreasonable and unduly prejudicial as compared with rates contemporaneously in effect from Norfolk and other competing points in Virginia and North Carolina. While rates from latter points are depressed due to water competition, it was not shown that they are less than reasonable. Moreover narrow spread in rates as compared with great difference in length of haul under substantially the same transportation conditions, can not be ignored. Reparation awarded. Canton Box Co. v. P. R. R., 123 I. C. C. 663.

(h) Complainant attacked commodity rates on crushed stone, in carloads, from Thornton, Ill., to destinations in northern Indiana southwestern Michigan as unreasonable and unduly prejudicial to complainant, and unduly preferential of Monroe, Mich., and Middlepoint, O. HELD, rates attacked un-

reasonable to extent they exceed 120c to Kalamazoo, 125c to Ft. Wayne and Battle Creek, 135c to Grand Rapids, 140c to Lansing and Muskegon and 145c to Pentwater. Brownell Improvement Co. v. B. & O. C. T. R. R., 126 I. C. C. 414.

(i) Rates on coal from mines in the Birmingham district of Alabama, on the one hand, and western Kentucky and southern Illinois districts, on the other, to destinations in the Mississippi Valley, found unduly prejudicial to Alabama mine operators and unduly preferential of mine operators in western Kentucky and southern Illinois districts to extent that rates from the latter exceed those from the former by less amounts in cents per net ton than those prescribed in zone adjustment described in the report. Previous report 109 I. C. C. 740. Coal from Illinois, Kentucky, and Alabama, 128 I. C. C. 113.

(j) Rates on blank wall paper from Thomson, N. Y., to destinations in c. f. a. territory, found not unreasonable or unduly prejudicial as compared with those contemporaneously in effect from Watertown, N. Y., in the Ogdensburg, N. Y., group; Brunswick, Me., in the Boston group; and Appleton, Wis., in the Fox River, Wis., group; but rates on newsprint paper between same points found unreasonable to extent they exceed rates contemporaneously maintained on blank wall paper. Earnings under rates on wall paper to Chicago and Joliet, Ill., destinations in which complainant is particularly interested, do not appear excessive. However, rates on newsprint paper and blank wall paper from Glens Falls and Warrensburg, N. Y., are the same, and in 38 I. C. C. 120, it was stated that rates on blank wall paper should be no lower than rates on newsprint paper. Reasonable rates prescribed for future. Iroquois Pulp & Paper Co. v. A. A. R. R., 128 I. C. C. 187.

(k) Fifth-class rates on window glass from Hartford City, Ind., to destinations in western trunk-line territory found not unreasonable or unduly prejudicial as compared with rates from southwestern points to destinations in western trunk-line and c. f. a. territories, or from Hartford City to c. f. a. southwestern and southern territories. The compared rates were generally upon the fifth-class basis. Carriers urge that rates from the southwest are unduly low and that observance of those rates as a basis for adjustment of rates from Hartford City would result in a general disruption of the basis in effect from points in c. f. a. territory. The disturbance of the class-rate adjustment applicable to the numerous destinations involved is not warranted upon the present record, nor is it shown to what extent, if any, carriers handling complainant's traffic control rates from the southwest. American Window Glass Co. v. A., T. & S. F., 128 I. C. C. 222.

(l) Rates on cabbage and potatoes from lower Rio Grande Valley of Texas to Cincinnati, Ohio, found unreasonable and unduly prejudicial as compared with rates from same points of origin to certain destinations in Illinois, Wisconsin, and Indiana, from various other points to Cincinnati for comparable distances, and to extent they exceeded lower rates contemporaneously in effect to Chicago. Reasonable rates prescribed for future and reparation awarded. Leonard, Crosset & Riley v. A., T. & S. F., 128 I. C. C. 225.

(m) Complainant attacked rates on cabbage and potatoes, in carloads, from the lower Rio Grande valley of Texas to Cincinnati, O., as unreasonable and unduly prejudicial as compared with the rates maintained from the same points of origin to Illinois, Wisconsin and Indiana and in violation of section four. Rates attacked are joint commodity rates of $1.12 on cabbage and $1.05 on potatoes. HELD, rate attacked unreasonable and unduy prejudicial to extent they exceed 95c on cabbage and 87c on potatoes, reparation awarded. Leonard Crosset & Riley v. A. T. & S. F. Ry., 128 I. C. C. 225.

(n) Rates on lumber from southern points of origin to Reading, Ohio, a point within Cincinnati switching limits, higher than rates to Cincinnati and other points within switching limits taking same rates found not unreasonable but unduly prejudicial to extent rates to Reading exceeded those contemporaneously maintained to Cincinnati. Switching charges are assessed on shipments to Reading, whereas to points more distant such charges even though higher are absorbed on all carload traffic. Reading is practically the only point within switching district to which Cincinnati rates on lumber do not apply, or where a distinction is made between lumber and other traffic. Moreover, in 85 I. C. C. 197, rates to Madisonville, Ohio, which bore same relationship to

Cincinnati as those here assailed were found unduly prejudicial. Nonprejudicial basis of rates prescribed for future. Nivison-Weiskopf Co. v. A. & V., 128 I. C. C. 233.

(o) Compainant assailed commodity rates on brick and articles taking brick rates, in carloads, from Wooster, O., to New England and eastern states, as unreasonable and unduly prejudicial. Canton and Massillon, O., are also located on the Pennsylvania and B. & O. Wooster is 34 miles west of Canton and 26 miles west of Massillon over the Pennsylvania. The rates to Emporium, Pa., Rochester and Utica, N. Y., and points similarly located are 1.5c higher from Wooster than from Canton. To Virginia cities and also to points in eastern Canada the same rates are applicable from both points; and to other eastern points the rates are generally 0.5c higher from Wooster than from Canton. With respect to rates on eastbound traffic Canton is in a 71% group adjoining 60 and 66% groups. Wooster is the principal point in a small group known as the 73% group, surrounded by and lying approximately in the center of the 71% and 76% groups, which are substantially larger. HELD, rates attacked are not unreasonable but are unduly prejudicial to extent they exceed the rates from Canton and Massillon. Medal Brick & Tile Co. v. B. & O. R. R., 128 I. C. C. 241.

(p) Rates on furniture from Memphis, Tenn., to points in c. f. a., Buffalo-Pittsburgh, and southern territories found unduly prejudicial to extent that rates from Memphis to competing points in said territories exceed rates contemporaneously maintained in the reverse direction; and unduly preferential of competing points in southern territory to extent that relations of rates to common destinations in said territories are less favorable to Memphis than those which would result from establishment of rates from Memphis and Southern territory competing points made on bases of rates herein found reasonable. Nonprejudicial bases of rates prescribed for future. Memphis Freight Bureau v. A. G. S., 128 I. C. C. 445.

(q) Rates on furniture from Memphis, Tenn., to points in c. f. a. and Buffalo-Pittsburgh territories found unduly prejudicial to Memphis and unduly preferential of Little Rock, Pine Bluff, and Fort Smith, Ark., to extent that a rate relation substantially less favorable to Memphis exists than would result from establishment Memphis of rates on furniture herein found reasonable and from Arkansas points to points involved rates made on basis found reasonable as a maximum in Consolidated Southwest Cases, 123 I. C. C. 203. Memphis Freight Bureau v. A. G. S., 128 I. C. C. 445.

(r) Rates on furniture from Memphis, Tenn., to Ohio River crossings and St. Louis, Mo., found unduly prejudicial to Memphis and unduly preferential of Chicago to extent that a rate relation substantially less favorable to Memphis exists than would result from establishment of rates therefrom herein found reasonable and establishment from Chicago to destinations involved of class rates applicable on furniture under official classification. Nonprejudicial basis of rates prescribed for future. Memphis Freight Bureau v. A. G. S., 128 I. C. C. 445.

(s) Rates on furniture from Memphis, Tenn., to Birmingham, Ala., found not unduly prejudicial as compared with those from Little Rock, Ark. While complainants contend that undue prejudice results from fact that ton-mile earnings to Birmingham from Memphis are higher than from Little Rock notwithstanding that the haul therefrom is through higher-rated territory, this does not take into consideration an appropriate regression in ton-mile earnings because of the longer haul from Little Rock, nor fact that rates from Memphis are lower in amount than from Little Rock. Memphis Freight Bureau v. A. G. S., 128 I. C. C. 445, 461.

(t) Rates on anthracite and bituminous coal from points in Illinois, Indiana, Pennsylvania, and West Virginia, to complainant's siding between Mayfair and Peterson Avenues in the Chicago switching district applicable to Peterson Avenue but in excess of the flat Chicago rate applicable to Mayfair, found not unreasonable, but maintenance of rates applicable to Peterson Avenue higher than rates to destinations here in question found unduly prejudicial to extent they exceeded the flat Chicago rate. See 73 I. C. C. 161; 89 I. C. C. 137. Reparation denied, there being no satisfactory proof of damage. Chicago Coal Merchants Asso v. C. & N. W., 128 I. C. C. 519.

(u) Rates on creosote oil from Indianapolis, Ind., to Louisville, Ky., Cincin-

nati, Ohio, St. Louis, Mo., East St. Louis, Granite City, Madison and Chicago, Ill., and points in Chicago switching district found unreasonable but not unduly prejudicial as compared with lower rates contemporaneously in effect from Birmingham, St. Louis and Chicago switching districts, competitive producing points, to same destinations. Movement from Birmingham to Cincinnati, Louisville, and St. Louis, is, for most part, in southern territory, and while rates in southern and Illinois territories are lower percentages of class rates than those in c. f. a. territory, from which complainant's shipments move, since transportation conditions throughout that territory are substantially similar to those in Illinois territory, and conditions in southern territory are such as to warrant a higher level of rates, no reason appears for the wide differences in existing percentages between the various territories. Reasonable rates prescribed for future. Republic Creosoting Co. v. A. G. S., 128 I. C. C. 547.

(v) Rates on pine lumber from points in Oregon, Idaho, and Montana to Bayport, Minn., found not unreasonable or unduly prejudicial as compared with lower rates contemporaneously in effect to St. Paul. Outside of irregularities in the construction and filing of tariffs, complainant showed that rates to Bayport exceeded those to St. Paul; that it sold frames made from lumber from same origin points in competition with dealers at that point and Minneapolis; and that carriers conceded error in publishing rates assailed and sought authority to make reparation. However, consent of carriers to an award of reparation is not proof of unreasonableness of rates charged; mere fact that rates assailed exceeded those to St. Paul has little probative force as evidence of unreasonableness; nor is competition with dealers in St. Paul and Minneapolis, standing alone, proof of undue prejudice. Moreover, a subsequent increase in rates to St. Paul would seem to indicate that those rates were out of line. Andersen Lbr. Co. v. N. P., 128 I. C. C. 633.

(w) First-class rates on black powder, moving interstate from Oriental siding, Fairchance, Pa., to destinations on the Western Maryland Railway, found not unreasonable or discriminatory but unduly prejudicial as compared with lower second-class rates contemporaneously maintained from Youngstown, Ohio. Circumstances and conditions surrounding transportation from Youngstown and Fairchance to trunk-line destinations are similar and no justification appears for maintaining a higher classification rating from Fairchance than from Youngstown. Undue prejudice ordered removed. Du Pont De Nemours & Co. v. B. & O., 128 I. C. C. 705.

(x) Rate on bituminous coal from mines in Clearfield, Meyersdale, and Cumberland-Piedmont districts of Pennsylvania, Maryland, and West Virginia, to Black Tom Pier, Jersey City, N. J., found not unreasonable but unduly prejudicial, except as maintained by the Pennsylvania, to extent it exceeded lower transshipment rates contemporaneously in effect to its competitors operating from piers on both sides of complainant. While latter is clearly at a rate disadvantage it does not follow that transshipment rate is reasonable maximum or that rate assailed is more than reasonable maximum. However, same rate to complainant applicable under substantially similar transportation circumstances and conditions can not be withheld merely because volume of business handled does not overtax piers on which its competitors operate, for complainant is entitled to share in the business on an equal basis. Undue prejudice ordered removed. Harbor Coaling Corp. v. B. & O., 128 I. C. C. 747.

(y) Complainant attacked commodity rates on anthracite coal, in carloads, from Pennsylvania to destinations in the metropolitan district of Boston, Mass., as unreasonable unduly prejudicial as compared with the rates from the same producing region to Boston and destinations within or just outside of the Boston switching limits which take the Boston rate. Destinations are local points upon the New Haven, B. & A. and B. & M. A joint rate of $4.54 applies to each of the destinations. The rate to Boston over the same routes is $4.16. Complainants points are intermediate to Boston and the fourth section situation is protected as to Boston and points within the Boston switching limits by fourth section order 9320 and as to points outside of these limits is under consideration in proceedings pending before the Commission. It is admitted that the movement of coal to Boston is normally by water and more than one witness for complainants stated on cross examination that his real com-

petition was not from his nearest competitor but from the large Boston dealers at Tidewater. The receivers of coal by the rail and water route fix the selling price of anthracite at Boston and the determinative factor in that selling price is the rail and water rate. The record leaves no room for doubt that the principal cause for the alleged prejudice to which complainants may be subjected by reason of their present rates is the existence of the rates on water borne coal and not the all rail rate to Boston. HELD, rates not unreasonable but unduly prejudicial to extent they exceed the rates to adjacent points in metropolitan Boston and not on tidewater, where the distances are no greater than those to complainants plant, reparation denied. Chadwick Coal Yard Co. v. N. Y. N. H. & H. R. R., 129 I. C. C. 165.

(z) Complainant assailed rates maintained on grain and grain products, carloads, originating at points on the I. C. in Iowa, Illinois, Minnesota and Wisconsin and moving to Memphis, there elevated, milled or mixed, and thence shipped to points on lines of defendants in Arkansas and Texas south of Brinkley, Ark., are unreasonable and unduly prejudicial as compared with the rates maintained on like traffic to and from the same points via East St. Louis and Gale, Ill., under which transit is accorded at East St. Louis and Cairo, Ill. The Commission is asked to prescribe joint rates via Memphis with transit thereat, the same as those applying through East St. Louis and Cairo. Defendants publish joint rates from the points of origin via East St. Louis or Gale to the destinations concerned. Through Memphis the applicable rates are made by combination of the rates to Memphis and the proportional rates beyond. The distances via the three markets are substantially the same. HELD, rates assailed unduly prejudicial. American Grain & Hay Co. v. I. C. R. R., 129 I. C. C. 225.

(aa) Complainant alleged that commodity rates charged on wine grapes, carloads, from Madison, Calif., to Portland and East Portland, Ore. between July 10 and Dec. 4, 1925, was unreasonable, unjustly discriminatory and unduly prejudicial. Complainants base their case solely upon the ground that the rate in effect subsequent to July 10, 1925 was in violation of New Italian Importing Co. v. S. P. Co., 95 I. C. C. 611. A rate of 94.5c became effective Dec. 4, 1925 from all of the points of origin considered to Portland and East Portland. HELD, rates assailed not unreasonable or unjustly discriminatory but unduly prejudicial to extent it exceeded rates on like traffic from South Vallejo, Napa, and points on defendants San Ramon and Walnut Grove branches, reparation denied, complaint dismissed. Italian Fruit & Produce Co. v. Southern Pacific Co., 132 I. C. C. 27.

(bb) Complainants alleged that the rates from Omaha, Chicago, Libertyville, Joliet, Milwaukee, Cleveland and Battle Creek to destinations throughout the United States were and are unreasonable and unduly prejudicial. Original report covering rates to the southwest, 81 I. C. C. 108. Macaroni products include macaroni, spaghetti, vermicelli and noodles. They are made from semolina, a flour milled from durum wheat, which is a particularly hard wheat, rich in gluten and protein, and unsuitable for the manufacture of bread flour. Macaroni products are packed for shipment in fiberboard or wooden boxes or cases. The movement of macaroni products can be loaded to 40,000 pounds or more in ordinary equipment. The low average loading is due to the practice of jobbers of requesting a minimum carload. The movement of macaroni products is principally in less than carload lots, as the orders do not usually call for carload quantities and the saving affected by shipping in carloads is not sufficient to offset the carrying and storage charges which would accrue on portions of carload shipments not covered by specific orders. On carload shipments, the amount of claims on account of loss or damage is small. Macaroni products are rated fifth class, in carloads, minimum weight 30,000 pounds, and fourth class in less than carloads. Complainants contended that their product is an uncooked grain product or a cereal food preparation and should be accorded the basis applicable on an extensive list of cereal food preparations, which take the grain products basis in the east and west, and sixth class in the south. HELD, upon the consolidated records the Commission is unable to find that the rates assailed, by reason of the lower rates on grain products and cereal preparations, by reason of the other matters complained of, result in undue prejudice to complainants or their traffic, nor is it persuaded that the rates on grain products and cereal

food preparations, when viewed in the light of their history and development, should be accepted as the reasonable measure of the rates on macaroni products. HELD, rates assailed not unduly prejudicial, but since Oct. 10, 1923 those to points in Oklahoma, Arkansas, Louisiana and Texas, unreasonable to extent they exceeded fifth class rates prescribed in Consolidated Southwestern cases, 123 I. C. C. 203. The rates assailed to other destinations, including those in official and southern territories, are with few exceptions on the fifth class basis. HELD, rates assailed, other than those specifically dealt with, not unreasonable. Reparation awarded. Skinner Mfg. Co. v. Director General, 132 I. C. C. 159.

(cc) Investigation upon motion of the Commission of the interstate rates on sugar, carloads, from New Orleans and other producing points in Louisiana and from Savannah, Ga., Boston, Mass., New York, N. Y., Philadelphia, Pa., Baltimore, Md., and other producing and distributing points on the Atlantic Seaboard to destinations in Kentucky, Tennessee, Mississippi, Alabama, Georgia, Florida, North Carolina, South Carolina, Louisiana east of the Mississippi river, including points on the west bank thereof, and points on the north bank of the Ohio river, with a view to determining whether such rates are unreasonable or unduly prejudicial and preferential. In southern classification territory sugar is rated fifth class in any quantity, but practically all traffic carloads and a substantial amount of the less carload traffic move on commodity rates materially lower than the class rates. There are sugar refineries at the four principal north Atlantic ports, at Savannah, at New Orleans, and at several other points in southern Louisiana. While there are no refineries at Norfolk, Va., Charleston, S. C., and Jacksonville and Tampa, Fla., sugar brought to those ports by water moves therefrom to some extent in carloads. The record suggests that a similar movement from Mobile, Ala., is likely to develop in the near future. The "basing point" system of making rates, which largely dominated the sugar adjustment throughout southern territory prior to 1915, is too well known to require specific description. Under this system socalled depressed rates applied to points on the coast or inland navigable waters and to certain other important competitive points in the interior, whereas to intermediate destinations much higher rates were maintained which were often combinations of the rates to and back from the basing points. The ultimate duty of the Commission is to determine, not necessarily the level of readjusted sugar rates which will neither increase nor decrease materially the aggregate revenues from this traffic, but rather a level of rates under which sugar will contribute its proper proportion of the revenues of the carriers, taking into consideration all pertinent factors including the value of the service. A fair distribution of the transportation burden, such as is contemplated by the Hoch Smith resolution, may at times involve requiring shippers to pay on certain commodities rates materially higher than the carriers are willing to charge, but before such a requirement is made the shippers are at least entitled to more notice and opportunity for opposition than they have had in this proceeding. The conclusion of the Commission is that for the future rates should be prescribed on the basis of 27.5 per cent of the new first class rates. Its best judgment is that such rates will average a little, but not a great deal, higher than the carriers proposed rates, taking into consideration the average haul, and that they will add somewhat to the carriers aggregate revenues, particularly if less than carload sugar traffic is placed on the classification basis. Certainly less than carload traffic, in view of the light loading the expense of both loading and unloading, and the character of trains in which it is apt to be handled, is on the whole much more expensive than carload traffic. The Commission is not prepared to find upon any evidence before it that a spread of 63.6% is too great. Reparation should not be awarded down to the basis of the rates prescribed for the future, but, on the other hand, to the extent that the rates attacked have in the past exceeded allowing for past general rate changes, the new class 8 rates which will shortly become effective, they have been "intrinsically unreasonable under any adjustment" and reparation should be awarded. Inasmuch as the readjustment which is here prescribed is based upon the new class rate structure, it is clear that whatever fourth section relief has been or is hereafter granted in connection with the class rates should also be granted in connection with these sugar rates. Relief corresponding to that which has been

accorded in connection with the class rates will now be granted, and if further relief proves necessary appropriate applications may be filed. Southeastern Sugar Investigation, 132 I. C. C. 477.

(dd) Complainants alleged rates on moss, in machine pressed bales, in carloads, from Louisiana to various destinations were unreasonable and unduly prejudicial. Prior order 98 I. C. C. 501. HELD, the prior finding that the indicated rates affirmed from Rosedale and other west side points to those destinations in the destination territories within the complaint which are intermediate to Albany, Rochester, Syracuse, and Utica, N. Y., over the lines of the designated carriers, in so far as those rates were higher than the indicated rates from Baton Rouge and Rosedale to the four points next above named, and were made subject to a rule 77 provision from and to intermediate points, were unreasonable prior to August 1, 1924 to the extent that they exceeded the rates to the four more distant points, reparation awarded. Except as next above indicated rates assailed and increased present rates were not and are not unreasonable. HELD, further, rates from the west side producing points and from New Orleans to destinations in Chicago, Cincinnati, Dayton, South Bend, Detroit, Cleveland, Pittsburgh, Memphis, St. Louis, Louisville and Nashville territories, to the extent that one or more defendants participate in both the rates from the west side points and in the rates from New Orleans were, are, and for the future will be unduly prejudicial to the west side points and to the traffic therefrom, to the undue preference of New Orleans and of the traffic therefrom, to the extent that the rates from the west side points have exceeded or may exceed those contemporaneously applied by or participated in by one or more of the same defendants for transportation of the same commodity from New Orleans to the same destinations, respectively by percentages greater than those by which the maximum first class rates prescribed in Consolidated Southwestern Cases, 123 I. C. C. 203, for application from the west side producing points to the respective destinations exceed the maximum first class rates prescribed in Southern Class Rate Investigation, 100 I. C. C. 513, 109 I. C. C. 300, 113 I. C. C. 200, 128 I. C. C. 567, for application from New Orleans to the same points of destination, and that the undue prejudice and preference should be removed. The respective rates to Kansas City, Fox River and Omaha Davenport territories appear not to be unfavorable to the west side producing points, reparation denied. National Asso. of Furniture Mfrs. v. A. A. R. R. Co., 132 I. C. C. 546.

(ee) Rates on wall plaster from Hanover, Mont., to western and central portions of North Dakota and South Dakota, found unreasonable as compared with rates contemporaneously in effect from competing points in Loveland, Colo., Laramie, Wyo., and St. Paul, Minn., and from South Dakota points to destinations in North Dakota, for comparable distances; and unreasonable and unduly prejudicial as compared with intrastate rates from Piedmont and Black Hawk, S. Dak., to various South Dakota destinations. While distance rates herein prescribed will not completely remove existing undue prejudice and preference between intrastate and interstate rates in South Dakota, no order will at present be entered with respect thereto but carriers and State authorities will be given opportunity to adjust their rates so as to remove balance thereof. Reasonable and nonprejudicial basis of rates prescribed for future. Three Forks Portland Cement Co. v. C., B. & Q., 129 I. C. C. 107.

(ff) Rates on limestone containing 2.5 per cent or more of asphalt, broken, crushed, or ground, from Margerum and Colrock, Ala., to destinations in southern territory, except Florida, found unreasonable and unduly prejudicial as compared with rates on similar asphalt rock from Oklahoma and Texas to Mississippi River points and west thereof and with those on sandstone asphaltic rock produced at Kyrock, Ky., competitive products; with rates prescribed in 96 I. C. C. 319 on crushed asphalt rock from Dougherty, Okla., to Kansas City, Mo.-Kans.; and to extent they exceeded distance rates herein prescribed. Reasonable maximum rates prescribed for future and reparation denied. Colbert Limerock Asphalt Co. v. A. C., 129 I. C. C. 177.

(gg) Rate on paving brick from Buffalo, Kans., to Dodge Street (Irvington),

Nebr., found not unreasonable but unduly prejudicial to extent it exceeded lower rate contemporaneously in effect from Galesburg, Ill.; a competitive producing point, and subsequently established over route of movement. Complainant showed that Galesburg has set price on Nebraska brick for years and that selling price of brick shipped was based on rate from Galesburg, difference being absorbed by complainant, and cited 61 I. C. C. 185 and other cases in which reparation was awarded under similar circumstances. Reparation awarded. Buffalo Brick Co. v. C. & N. W., 129 I. C. C. 294.

§4½. Section 2 and Comparable Commodities.

See Absorption of Charges §5½ (a); Classification §17; Evidence §12.

(a) Rates on cured meats, packed, and green salted hides from Chicago and other c. f. a. packing points, including Mississippi River Points, St. Louis to Dubuque, to destinations in trunk-line and New England territories, found not unreasonable or unduly prejudicial in relation to contemporaneous rates on hogs and sheep in double-deck cars or on cattle from and to same points. Morrell & Co. v. N. Y. C., 104 I. C. C. 104, 135.

(b) In 62 I. C. C. 194 commission found rates on iron ore from Ironwood, Mich., and Baraboo, Wis., to Granite City, Ill., unreasonable and awarded reparation. Upon complaint alleging discrimination as to like traffic from same points to Carondelet, Mo., on ground that Granite City and Carondelet have long been accorded same rates from and to points 100 miles distant, which can only be corrected by an award of reparation to complainant; HELD: In cited case delivery in northern East St. Louis switching district was involved, whereas here a greater haul, crossing of Mississippi River, and transportation through congested St. Louis district are involved. These facts can not be considered as transportation "under substantially simliar circumstances and conditions" as contemplated by section 2 of the act. Mississippi Valley Iron Co. v. C. & N. W., 104 I. C. C. 243, 245, 246.

(c) No damage shown due to undue prejudice in the past because of existence of rate on steel tanks, k. d., fabricated in transit at Iola, Kans., which were higher than rates between same origin and destination points with fabrication in transit at Kansas City. All fabricators at time of movement paid Pittsburgh price plus freight rate from that point to their plants for raw materials regardless of its origin and complainant here failed to show that any preferred fabricators bid upon traffic here in controversy, set sale price which complainant was compelled to meet, or that complainaint's sale price was based on rates paid by any such competitors. United Iron Works v. Director General, 104 I. C. C. 449, 451.

(d) Grape juice, in bulk: Rates on unfermented grape juice, in bulk, in barrels, found unreasonable and unduly prejudicial to extent they exceed rates contemporaneously in effect on same commodity, in glass, in boxes. Joseph v. O.-W. R. R. & N. Co., 104 I. C. C. 477.

(e) Sand and gravel: Rates on sand and gravel from points in western Pennsylvania to destinations in Ohio, West Virginia, and New York, found unreasonable and unduly prejudicial to extent they exceed rates contemporaneously maintained on slag and crushed stone. Penn. Sand & Gravel Prod. Asso. v. B. & O., 104 I. C. C. 717.

(f) Apples: Following 96 I. C. C. 437, apples in bulk or in lug boxes without tops, found unreasonable and unduly prejudicial to extent they exceeded lower rates on same commodity in boxes and crates. Lane v. S. P., 107 I. C. C. 253.

(g) A mere showing of difference in ratings between different commodities is not sufficient to establish discrimination, nor does it of itself prove that higher ratings are unreasonable. Union Metal Mfg. Co. v. A., C. & Y., 109 I. C. C. 490, 491.

(h) Fact that lower rates apply on spices than on pyrethrum flowers can not be considered a violation of either section 2 or 3 of the act. These commodities are not like kinds of traffic and there is no competition between them. Nor does it follow that a violation of either of these sections exists because rate adjustment permits eastern grinders to secure pyrethrum flowers from the Orient at lower delivered prices via Atlantic ports than those paid by grinders in the mid-west on shipments through Pacific coast ports. Winona Asso. of Commerce v. C., R. I. & P., 109 I. C. C. 648, 649.

(i) Rates on compo-board, found not unreasonable but unduly prejudicial to

extent they exceeded rates contemporaneously maintained on wall board. Reparation denied for lack of proof of damage such as is required to support an award of reparation under a finding of undue prejudice. Wright Lumber Co. v. A. A., 112 I. C. C. 337.

(j) Rates on worn-out autotruck rims with solid rubber tires attached found unreasonable and unduly prejudicial to extent they exceed rates on scrap iron. Reasonable and nonprejudicial rates prescribed for the future. Ames & Co. v. N. Y., N. H. & H., 112 I. C. C. 624.

(k) Competition between carriers does not constitute such a dissimilarity of circumstances and conditions as will excuse what would otherwise be an unjust discrimination under section 2 of the act. See 167 U. S. 512, 254 U. S. 57. Drayage Absorptions by S. W. M., 113 I. C. C. 179, 185.

(l) A competitive relationship among shippers is not essential to a finding of unjust discrimination, and competition between carriers does not justify an otherwise unlawful discrimination under section 2 of the act. Transit on iron and steel, 115 I. C. C. 381, 385.

(m) The phrase "under substantially similar circumstances and conditions," as found in section 2 of the act, refers to the matter of carriage and does not include competition. See 44 I. C. C. 455 and cases there cited. Winding Gulf Colliery Co. v. C. & O., 115 I. C. C. 113, 119.

(n) Staves and lumber do not constitute such "like traffic" that a different charge for their contemporaneous transportation establishes unjust discrimination under section 2 of the act. Chess-Wymond Co. v. A. & V., 115 I. C. C. 703.

(o) Rates on oak staves and oak heading from Mississippi and Louisiana to California destinations found not unreasonable or otherwise unlawful as compared with contemporaneous rates on rough and dressed lumber. Staves and lumber do not constitute such "like traffic" that a different charge for their contemporaneous transportation is violative of section 2 of the act. See 50 I. C. C. 229. While equal rates are maintained on these commodities to various destinations a history of cooperage stock and lumber rates shows that no rigid relationship has been maintained between them. Therefore lumber rates are not determinative of reasonableness of rates on cooperage stock. Moreover, assailed rates compare favorably with those found reasonable by commission on various commodities for comparable transcontinental hauls. Chess-Wymond Co. v. A. & V., 115 I. C. C. 703.

(p) Rates on brick and hollow building tile from Vale, Mo., a point outside Kansas City switching district, to Kansas City, Mo.-Kans., found not unreasonable or unduly prejudicial as compared with other rates on same and related products for comparable distances to same destination from points both within and without the district, or as compared with distance rates for similar hauls in effect on intrastate and interstate traffic in Kansas, Nebraska, Missouri, Texas, Arkansas, Illinois, and Iowa. Kansas City Brick Co. v. C., R. I. & P. 115 I. C. C. 750.

(q) Rates on stone, rough or sawed, not further finished from Bedford district in southern Indiana to Wichita, Kans., found not unreasonable or unduly prejudicial as compared with rates on dressed and other kinds of stone, brick or cement. Cuthbert Cut Stone Co. v. St. L.-S. F. 118 I. C. C. 69.

(r) Upon further hearing, former report 98 I. C. C. 331 modified in part and ratings and rates on coconut stearine in boxes or barrels found unreasonable to extent they exceeded third class l. c. l. and fifth class c. l., minimum 30,000 pounds, and unduly prejudicial to extent they exceed ratings and rates contemporaneously applicable on palm-kernel, palm, and mixed stearines in bags, boxes, or barrels. Reasonable ratings and rates prescribed for future and reparation denied. Best Foods v. C. R. R. Co. of N. J., 120 I. C. C. 169.

(s) First-class l. c. l. rate on fresh beef hams, salted, from Chicago to Philadelphia, Pa., and Phillipsburg, N. J., found unreasonable to extent it exceeded rate one class lower than l. c. l. rate on fresh meats. See 85 I. C. C. 725. Application of a rate reasonable for fresh meats to meats partially cured by salting is unreasonable in view of protection against deterioration afforded by the salting process. Guggenheim Bros. v. B. & O., 120 I. C. C. 340.

(t) Rate on cotton-lined burlap bags, and cotton bags, in straight or mixed carloads, found unreasonable to extent it exceeded lower rate contemporane-

ously maintained on burlap bagging. Reasonable rate prescribed for future and reparation awarded. Biegel Sack Co. v. C. R. R. Co. of N. J., 122 I. C. C. 78.

(u) Eastbound rates on flour, minimum 40,000 pounds, from points in Colorado, Utah, Idaho, Montana, Oregon, and Wyoming found unreasonable and unduly prejudicial in favor of dealers located at points in Montana and Colorado, to extent they exceed corresponding rates on wheat. Ogden Grain Exchange v. A. & S., 122 I. C. C. 691, 718.

(v) Upon contention that assessment of equal rates on rough and dressed granite is unreasonable, discriminatory, unduly prejudicial to complainant, and unduly preferential of competitive shippers of dressed granite, since latter is of greater value than rough granite, HELD: Rate assailed is subject to declaration of value by shippers and complainant's competitors can not lawfully apply that rate on dressed granite if its value exceeds the value fixed by the tariff. Bourgoin & Co. v. M. & W. R., 123 I. C. C. 545.

(w) Complainant alleged that charges collected on numerous carload shipments of iron and steel tank material from Meadville, Greenville, Fallston, Pittsburgh and Franklin, Pa., Gary, Indiana Harbor and East Chicago, Ind., Washington Heights and South Chicago, Ill., Steubenville and Cleveland, O., and Kansas City, Kas., to Humboldt, Kas., Healdton, Cushing, Shidler, Manion, Hominy, and Pauls Switch, Okla., and Holden, Mexia and Navarro, Tex., between Dec. 31, 1921 and Nov. 22, 1923 and present rates are unreasonable. At the time of movement the same rate applied to all of the destination points in Oklahoma with the exception of Healdton and Pauls Switch. Healdton is on the O. N. M. & P. about 31 miles west of Ardmore, Okla., rate charged exceeded Ardmore rate by 7.5c. Since the hearing the rate to Healdton has been made the same as to Ardmore. Pauls Switch is on the O. S., 5 miles south of Bristow, Okla. Complainants contend that the rates charged were unreasonable to the extent they exceeded the rates on iron or steel pipe. Claims for damage are negligible. The value of pipe is in excess of that of tank material and so far as the transportation characteristics of the two commodities are concerned, no persuasive reason appears why tank material should take a higher rate than pipe. HELD, rates attacked unreasonable to extend they exceed the rates and minima applicable on iron or steel pipe, reparation awarded. Sinclair Crude Oil Purchasing Co., v. A. T. & S. F. Ry., 126 I. C. C. 73.

(x) Fifth-class rates on tin oxide, found not unreasonable or otherwise unlawful as compared with lower commodity rates contemporaneously in effect on pig tin. Pig tin is an imported commodity and low basis of rates was undoubtedly established to assist industries, where as, record does not show competitive or other influences which would necessitate or justify establishment of lower commodity rates on tin oxide. Federated Metals Corp. v. P. R. R. Co., 126 I. C. C. 144.

(y) Fact that two articles may resemble each other in respect of material, appearance, process of manufacture, value, and other characteristics, their only difference being the uses to which they are put, while not sufficient to make them the same, may afford a basis for a finding of undue prejudice. Chicago Carton Co. v. N. Y. C., 126 I. C. C. 457, 458.

(z) Rates on rods, steel, in straight lengths, found discriminatory and unduly prejudicial to extent they exceeded the contemporaneous rates on same articles when shipped in coils. Since cost of both articles and transportation conditions are the same, no valid reason appears why rates on the two shapes of same material should be different. Standard Nut & Bolt Co. v. N. Y., N. H. & H., 126 I. C. C. 731.

(aa) Unjust discrimination prohibited by section 2 is in movements over the same road or roads, and not over different roads or partly over the same road and partly over different roads. Bunker Hill & Sullivan M. & C. Co. v. N. P. Ry., 129 I. C. C. 242, 246.

(bb) In Ogden Grain Exchange v. A. & E. R. R., 126 I. C. C. 255, the Commission found that certain rates on grain and grain products, in carloads, from Idaho, Montana, Oregon, Utah, Wyoming and Colorado to north Pacific coast and California terminals were not unreasonable, with certain exceptions. The same rates and bases were required on flour as on wheat and somewhat lower rates, generally 5c per 100 pounds, and bases

on coarse grains. Defendants by petition now ask for a further modification of the original findings herein so as to permit continued maintenance of rates on coarse grains no higher than on wheat. HELD, petition granted. Ogden Grain Exchange v. A. E. R. R., 132 I. C. C. 46.

(cc) Shipments billed as cottonseed-hull fiber or shavings, or descriptions of similar import, were inspected in transit, description changed to "cotton linters," and rates collected accordingly. Upon contention that rates assessed were inapplicable and unduly prejudicial to extent they exceeded rate on shavings. FOUND: While various methods for determining difference between commodities were presented they were not published as tariffs nor on file with commission and are not controlling. Neither were commodities defined in governing tariffs or classification. In 107 I. C. C. 161, shipments claimed by carriers to be linters were found to be entitled to rates on shavings by a showing that they were sold at prices lower than market price of average linters. However, a like showing has not been made here, and since no burden rests upon carrier for determination of question involved and complainant has not sustained its burden of proof, rates charged were applicable and not unduly prejudicial. Glarner & Co. v. S. Ry., 129 I. C. C. 75.

(dd) Class rates on rough quarried granite, c. l.; from East Weymouth, Mass., to local points on the N. Y., N. H. & H., found unreasonable and unduly prejudicial as compared with lower commodity rates contemporaneously applicable on common brick and on stone and granite paving and curbing; and to extent they exceeded, exceed, or may exceed, rates based on distance scale herein prescribed, minimum 48,000 pounds. Reparation awarded. Plymouth Quarries v. N. Y., N. H. & H., 129 I. C. C. 621.

(ee) Rates on schoolbooks from Chicago to Oklahoma City, Okla., and Dallas, Tex., found not unreasonable, discriminatory unduly prejudicial or otherwise unlawful as compared with lower rates on paper articles, including school blanks or forms and school copy books. Complainant contends that as schoolbooks are approved by State educational authorities, and follow a prescribed form they should take lower rates applicable on school blanks or forms. However, schoolbooks in question can not be termed forms. Moreover, rates assailed are lower than third-class rates on books n. o. i. b. n., between same points. Wheeler Publishing Co. v. A., T. & S. F., 129 I. C. C. 672.

§4¾. State Rates.

See Supra §2½; State Rates and Regulation.

(a) Intrastate rates on flaxseed from Minnesota points to Minneapolis and Duluth found unduly preferential and prejudicial and unjustly discriminatory against interstate commerce. Nonprejudicial basis of rates prescribed. South Dakota R. R. Commrs. v. C. & N. W., 107 I. C. C. 35.

(b) Interstate rates should not be made too high on assumption that intrastate rates may be too low. Southern Class Rate Investigation, 109 I. C. C. 300, 304.

(c) Application of ratings provided by southern classification and notes A and 4 of exceptions thereto in connection with rates on classes 1 to D, both inclusive, from Augusta, Ga., to South Carolina points for distances of 100 miles, found not unreasonable but unduly prejudicial to Augusta and shippers located there, unduly preferential of South Carolina points, and unjustly discriminatory against interstate commerce, as compared with lower ratings provided in note 53 exceptions governing rates on intrastate traffic in South Carolina for comparable distances. City of Augusta v. A. C. L., 113 I. C. C. 303.

(d) While exact harmony between intrastate and interstate rates may not in all cases be required by law, nevertheless when there is a preponderance of intrastate traffic, the conclusion is inevitable that application of rates thereon substantially lower than interstate rates contemporaneously applied under similar conditions must bring about, in some degree at least, the unjust discrimination against interstate commerce as well as the undue prejudice to persons or localities in interstate commerce which are declared by the act to be unlawful. Fertilizers between Southern Points, 113 I. C. C. 389, 432.

(e) Maintenance of intrastate rates in Alabama on fertilizers and fertilizer materials lower than corresponding interstate rates found reasonable by commission for future application found to result in undue prejudice to persons and localities engaged in interstate commerce, in undue preference of persons engaged in intrastate commerce, and in unjust discrimination against interstate commerce. Effective intrastate rates in Georgia and South Carolina found not unlawful for future, except in individual instances. Fertilizers between Southern Points, 113 I. C. C. 389, 435.

(f) Upon further hearing, original report, 60 I. C. C. 337, modified so as to except from its provisions intrastate rates on sand and gravel from Ginger Hill, Ind., to Granger and Wyatt, Ind., such rates not being shown to have caused any undue or unreasonable advantage, preference, or prejudice as between persons and localities in intrastate commerce, on one hand, and interstate or foreign commerce, on other hand, or any undue, unreasonable, or unjust discrimination against interstate commerce. Indiana Rates, Fares, and Charges, 113 I. C. C. 531.

(g) Complainant attacked commodity rates charged on meat animals, carloads, from Alabama to Moultrie, Ga., as unreasonable compared with intrastate rates in Alabama for similar distances; that by reason of the disparity between the rates within Alabama and from Alabama to Moultrie complainant was subjected to undue prejudice. Original report by division 2, 109 I. C. C. 733. In the original report division 2 restricted its finding of undue prejudice to rates on hogs and limited the scope of its order so as to apply only to points of origin in southeastern Alabama. HELD, attacked rates not unreasonable; there are no conditions affecting the transportation of this traffic which justify a lower level of intrastate rates to Montgomery and Birmingham than the interstate rates to Moultrie; that the relationship of defendants rates on hogs, in carloads, from points on their lines in southeastern Alabama on and east of the L & N., from Montgomery to Pensacola, Fla., and on and south of the C. of Ga., from Montgomery to Eufaula, Ala., for interstate hauls to Moultrie and intrastate hauls to Montgomery and Birmingham unduly prejudicial, which should be removed by increasing the intrastate rates to the interstate basis. Swift & Co. v. Georgia Northern Ry., 115 I. C. C. 661.

(h) Refusal of carriers to accept and transport intrastate shipments tendered for transportation via a duly published unrestricted interstate route and compelling shipper to change routing in bills of lading to a higher intrastate route found to violate section 15 (8) of the act. Reparation awarded. Standard Oil Co. v. A. C. L. R. R., 115 I. C. C. 239.

(i) Upon reargument, original report, 109 I. C. C. 733, affirmed, and rates on meat animals from points in Alabama to Moultrie, Ga., found not unreasonable; but relationship of rates on hogs from southeastern Alabama to Moultrie, on the other hand, and Montgomery and Birmingham, Ala., on the other, found unduly prejudicial to Moultrie, unduly preferential of Montgomery and Birmingham, and unjustly discriminatory against interstate commerce. Removal of such prejudice, preference, and discrimination by establishment of intrastate rates upon basis of compromise scale set forth in Appendix A in 74 I. C. C. 419, prescribed. Swift & Co. v. G. N., 115 I. C. C. 661.

(j) Tariff rule published in compliance with a legislative enactment of the State of Missouri under which c. l. shipments of grain and products moving intrastate from Kansas City and St. Joseph, Mo., to other points in Missouri are permitted to be stopped in transit for purpose of partly unloading found reasonable for interstate application on shipments from Kansas City, Kans., to points in Missouri, and failure of carriers to apply said tariff rule to such interstate shipments found unduly prejudicial. Removal of undue prejudice ordered. Southwestern Milling Co. v. A., T. & S. F., 118 I. C. C. 61.

(k) Rates on salt from Kansas mines to points in Texas found unduly prejudicial to Kansas shippers, unduly preferential of Texas shippers, and unjustly discriminatory against interstate commerce. Removal of unjust discrimination left to Texas Railroad Commission. Salt Between Western and Southwestern Points, 120 I. C. C. 91, 109.

(l) Intrastate rates on sand and gravel between points in Mississippi found not unreasonable or to result in undue prejudice to shippers at Montgomery and Chattanooga, shipping to same Mississippi destinations. Rates on Chert, Clay, Sand, and Gravel, 122 I. C. C. 133, 170, 172.

(m) Circumstances and conditions surrounding the interstate transportation of cement from points in the Kansas gas belt, on the one hand, and interstate and intrastate transportation of like traffic from Cement City (Sugar Creek), Mo., and Bonner Springs and Sunflower, Kans., on the other hand, to destinations in the Kansas City, Mo.-Kans., switching district, found to be substantially similar, and interstate rate from points in the Kansas gas belt, including Chanute, Fredonia, Mildred, Humboldt, Independence and Iola, Kans., and Dewey, Okla., to said destinations found not unreasonable. Iola Cement Mills Traffic Asso. v. A., T. & S. F., 122 I. C. C. 337.

(n) Intrastate rates on cement from Cement City (Sugar Creek), Mo., and Bonner Springs and Sunflower, Kans., to destination in the Kansas City, Mo.-Kans., switching district, to extent they are lower by more than 4.5 cents than interstate rates contemporaneously maintained on like traffic from points in the Kansas gas belt, found unduly prejudicial to the Kansas gas-belt points and shippers therefrom, unduly preferential of Cement City (Sugar Creek), Bonner Springs and Sunflower, and shippers therefrom, and unjustly discriminatory against interstate commerce. Iola Cement Mills Traffic Asso. v. A. T. & S. F., 122 I. C. C. 337.

(o) Intrastate rates neither prescribed nor approved by the commission, but maintained under State authority, can not be regarded as controlling in determining the measure of interstate rates or the relationship of interstate and intrastate rates. Iola Cement Mills Traffic Asso. v. A. T. & S. F., 122 I. C. C. 337, 345.

(p) Rates prescribed by Railroad Commission of Texas, for application between Fort Bliss, Tex., military reservation and other points in Texas found not to be such as would result in undue prejudice to interstate shippers and undue preference of intrastate shippers. Nor are cost studies submitted by carriers convincing that under such rates intrastate traffic would be transported at charges so low as to produce substantial disparity which would operate as a real discrimination against and obstruction to interstate commerce. See 257 U. S. 563. Rates Between Points in Texas, 122 I. C. C. 373.

(q) Class and commodity rates on various articles between Mississippi River gateways, Missouri River cities, and defined territories, on the one hand, and points in Oklahoma and in Texas, Arkansas, Kansas, a portion of Missouri, and western Louisiana, on the other, found to result in undue prejudice to Oklahoma and in undue preference of the other named States or parts of States. Consolidated Southwestern Cases, 123 I. C. C. 203, 347, 348.

(r) Class and commodity rates on various articles between Oklahoma and designated portions of Kansas and Missouri, in their relations to relatively lower intrastate rates within those portions of Kansas and Missouri, found to result in undue prejudice and preference and in unjust discrimination against interstate commerce. Consolidated Southwestern Cases, 123 I. C. C. 203, 350, 351.

(s) Class and commodity rates on various articles between Oklahoma and Texas, and from Little Rock to Texas, in their relations to relatively lower rates between Shreveport, La., and Texas, and from Shreveport to Texas, respectively, found to result in undue prejudice and preference. Consolidated Southwestern Cases, 123 I. C. C. 203, 354.

(t) Class and commodity rates on various articles between Oklahoma and northeast Texas cities, in their relations to relatively lower intrastate rates in Oklahoma, and between Oklahoma and points in Texas commonpoint territory, in their relations to relatively lower intrastate rates within the latter territory, found to result in undue prejudice and preference and in unjust discrimination against interstate commerce. Consolidated Southwestern Cases, 123 I. C. C. 203, 355.

(u) Class and commodity rates on various articles between Oklahoma and points in Texas differential territory, in their relations to relatively lower intrastate rates within differential territory and between that territory and Texas common-point territory, found to result in undue prejudice and preference and in unjust discrimination against interstate commerce. Consolidated Southwestern Cases, 123 I. C. C. 203, 356, 357.

(v) As a whole, intrastate class and commodity rates in Texas, in their relations to corresponding rates between St.

Louis, Mo., and Texas, not shown to result in undue prejudice or preference, but in some instances, such as rates between Houston-Galveston-Beaumont and northern and northeastern Texas, intrastate rates result in undue preference, to the undue prejudice of shippers and receivers in St. Louis territory. Consolidated Southwestern Cases, 123 I. C. C. 203, 357, 358.

(w) Class and commodity rates on various articles between Arkansas and Oklahoma, and between Arkansas and northeast Texas cities, in their relations to relatively lower intrastate rates within Arkansas, found to result in undue prejudice to interstate shippers in favor of intrastate shippers and in unjust discrimination against interstate commerce. Consolidated Southwestern Cases, 123 I. C. C. 203, 361, 362.

(x) Class and commodity rates on various articles between Oklahoma and western Louisiana, and between western Louisiana and northeast Texas cities, in their relations to relatively lower intrastate rates in western Louisiana, found to result in undue prejudice to interstate shippers in favor of intrastate shippers, and in unjust discrimination against interstate commerce. Consolidated Southwestern Cases, 123 I. C. C. 203, 363, 364.

(y) After the Interstate Commerce Commission established maximum reasonable interstate freight rates, effective in districts which include a portion of the state of Minnesota, the carriers advanced their rates to the maximum allowed by the Commission. These rates are higher than the interstate rates established by the Railroad and Warehouse Commission. The disparity in the rates has produced unjust discriminations against certain cities in Minnesota. The Railroad and Warehouse Commission brought suit to compel the carriers to remove such discriminations and to observe the statutory requirements as respects intrastate rates. HELD, that the varying rates in effect in different portions of the state were legally established under either federal or state authority, and, since the discriminations complained of can be avoided only by the modification of one or both of the legally established rates, and ratemaking is a legislative and not a judicial function, the trial court correctly ruled that the suit could not be maintained. State Railroad and Warehouse Commission v. Northern Pac. Ry. Co., (Minn., 1926) 210 N. W. 399, 400.

(z) Fixing of intrastate rate, which compels interstate carrier to make like deduction of same arbitrary charge to obtain its share of traffic, is not unlawful discrimination against interstate commerce as matter of law, where rate fixed is reasonable for services rendered. Oregon-Washington R. & Nav. Co. v. Corey, (Ore., 1927) 252 Pac. 955, 956.

(aa) Rates on cement from Ada, Okla., and points in the Kansas gas belt to Texas destinations in Scale III and Scale IV territories, and from Portland and Concrete, Colo., to said Scale IV territory, found unreasonable, and rates from Kansas gas-belt points found unduly prejudicial as compared with those from Ada, Bonner Springs, Kans., Sugar Creek, Mo., and Portland and Concrete, Colo. Reasonable and nonprejudicial distance rates prescribed for interstate application, which will remove the undue prejudice in relationship of interstate and intrastate rates within Texas. Adjustment of intrastate rates left to State authorities and carriers. Oklahoma Portland Cement Co. v. D. & R. G. W., 128 I. C. C. 63.

(bb) Rates required by Public Utilities Commission of Ohio for intrastate application on bulk salt from Akron and points grouped therewith to Cincinnati, not shown to subject interstate traffic or shippers or localities outside of the state to undue prejudice or disadvantage nor to constitute an unjust discrimination against interstate commerce as contemplated by decision in 257 U. S. 563. Rate assailed is not unreasonably low nor a burden on interstate commerce, but compares favorably with rates between Akron and various destinations in Indiana, Illinois, and New York; between various points in c. f. a. territory for comparable distances; and with many rates approved in Salt Cases of 1923, 92 I. C. C. 388. Rates and Minimum Weights on Salt, 128 I. C. C. 499.

§5. Test of Discrimination.

(a) Both commission and the courts have held that proof of damage in undue-prejudice cases must be by such evidentiary facts as would be required to sustain such a recovery before a court of law. A complainant must show how discrimination found to exist affected him to his damage. In other words, he must show fact of his damage as well

as amount claimed. See 230 U. S. 134. Wright Lumber Co. v. A. A. R. R., 112 I. C. C. 337, 339.

(b) Complainant attacked rate on cotton factory sweepings from Mobile, Ala., to Columbus, Ga., as unduly prejudicial. The complaint is based upon the fact that lower rates on cotton factory sweepings are in effect from Mobile to Athens, Atlanta, Augusta, and Macon, Ga., over routes that are considerably longer. No competition with dealers in the four cities named, nor any advantage to any person in those cities or in Mobile by reason of the rates in effect to those cities is shown. Clearly there is no undue prejudice within the meaning of the act. HELD, rates attacked not unduly prejudicial, complaint dismissed. Friedlander Co. v. Southern Ry., 115 I. C. C. 589.

(c) Coal producers are entitled to nonprejudicial rates from their mines to any and all markets. See also 96 I. C. C. 359. Clinchfield Coal Corp. v. C., C. & O., 122 I. C. C. 37, 39.

(d) Preference and prejudice under section 3 of the act, to be undue and unlawful, must be such that it is a source of advantage to the party alleged to be favored and a disadvantage to the other party, and a competitive relation between the parties must ordinarily exist. Kansas Flour Mills Co. v. A., T. & S. F., 123 I. C. C. 19, 20.

(e) Undue prejudice or preference may not be found to exist as between shippers or communities unless the same carriers serve them or participate in their traffic. See 81 I. C. C. 352; 88 I. C. C. 152, Washington Coal Producers Asso. v. U. P., 129 I. C. C. 499, 501.

(f) Mere differences in rates do not necessarily result in undue prejudice. West Texas Chamber of Commerce v. H. & T. C., 129 I. C. C. 546, 555.

(g) To be undue, prejudice suffered by one person must ordinarily be such that it shall be a source of positive advantage to another. Indianapolis Board of Trade v. B. & O., 129 I. C. C. 675, 679.

(h) Disparity of rates does not necessarily result in undue prejudice. National Tube Co. v. B. &. O., 129 I. C. C. 693, 695.

III. JUSTIFICATION.

§5½. In General.

(a) No matter how numerous the territories are to which shippers have access, they are entitled to ship their products to any market at nonprejudicial rates. See 98 I. C. C. 488. Clinchfield Coal Corp. v. C., C. & O., 118 I. C. C. 79, 81

(b) No carrier has the right to so adjust rates on its own lines as unduly to prejudice shippers on other lines, or to deprive such shippers of reasonable and just rates, merely through a desire to serve shippers on its own lines. See 51 I. C. C. 250. White Eagle Oil & Refining Co. v. A., T. & S. F., 122 I. C. C. 223, 224.

§7. Carrier Not Serving Prejudiced Point.

See Evidence §23.

(ab) Undue prejudice or preference does not exist as between shippers or communities unless same carrier or carriers serve them or participate in their traffic. Case & Sons v. P. R. R., 115 I. C. C. 694, 695.

(c) Undue prejudice can not be said to exist where defendants are unable to remove it. The withdrawal by them from participation in the rates from the competitive points would afford no relief to complainant, as those rates would still be available over other lines. Fredonia Linseed Oil Works v. A. T. & S. F. Ry., 122 I. C. C. 291, 293.

(d) Complainant alleged undue prejudice resulting from lower rates from competitive points. Some of alleged preferred points were not served by carriers parties to the complaint, while other points were served both by defendant carriers and other lines. HELD: Undue prejudice can not be said to exist where carriers are unable to remove it, as withdrawal by them from participation in rates from competitive points would afford no relief to complainant, as those rates would still be available over other lines. See 22 I. C. C. 115; 100 I. C. C. 363. Fredonia Linseed Oil Works Co. v. A., T. & S. F., 122 I. C. C. 291. 293.

(ef) Not only may undue prejudice be found against a carrier participating in rates to alleged preferred points and to points suffering undue prejudice, but also against a carrier participating only in prejudicial rate. See 263 U. S. 515. Memphis Freight Bureau v. A. G. S. R. R., 126 I. C. C. 87, 91.

(g) One test of the presence of undue prejudice is: Can one of the carriers participating in through rates from two points of origin to the same group or destinations put an end to it by its own act? See 73 I. C. C. 311; 44 I. C. C. 455. Humble Oil & Rfg. Co. v. B., S. L. & W., 126 I. C. C. 717, 721.

(h) Railroad may in law be guilty of unjust discrimination against another road, though it has no direct physical connection. Chicago, I. & L. Ry. Co. v. United States, 46 Sup. Ct. 226.

(i) Carriers which serve Indiana and Illinois fields or act as intermediate or delivering carriers on traffic from those fields also participate in rates and traffic with all three of the originating lines named. Under circumstances indicated a basis exists for finding of undue prejudice. See Lake Dock Coal Cases 89 I. C. C. 170; also United States v. Illinois Cent. R. R. 263 U. S. 515. Illinois-Indiana Coal Cases, 128 I. C. C. 265, 284.

(j) In attempting to rebut allegation of undue prejudice the Texas & Pacific cited 115 U. S. 587 and contended that while the Missouri Pacific has majority control of its stock, that carrier has undertaken no active participation in its management and operation, does not in any legal sense control it, and has no responsibility for its rates. FOUND: As courts have consistently distinguished between stock ownership by one corporation in another for purpose of participating in latter's affairs in normal manner, and stock ownership for purpose of controlling a subsidiary company, and as in former circumstances finding in cited case in controlling, T. & P. is therefore an independently operated carrier, is not to be regarded as part of M. P. system, and since it does not serve any Texas port and has no controlling voice in fixing level of assailed rates to those ports published by M. P., it can not be held guilty of undue prejudice. See also 247 U. S. 490, 500. Galveston Commercial Asso. v. G. H. & S. A., 128 I. C. C. 349, 380, 381.

(k) Present rate in effect between Chicago and St. Louis would remain in effect over the short line between those points even though participation in rates should be canceled by Pennsylvania and Big Four, lines reaching those points, alleged to be preferred, and also Indianapolis, the complaining point. See 22 I. C. C. 115. Republic Creosoting Co. v. A. G. S., 128 I. C. C. 547, 550.

(l) In justifying its rates carrier contended that in order to reach its own pier it must use tracks of another line and in return for that user is required to maintain transshipment rates to piers on that line not accorded to piers on another line. FOUND: While this explains, it does not excuse, difference in treatment, because preference and prejudice as between deliveries to piers on both lines under like and similar circumstances of transportation are not rendered the less "undue" in so far as a complainant's right to equality of treatment is concerned, by proof of fact that with one of those lines there exists a contractual relation or condition of barter and trade which is absent as to the other. See 272 U. S. 658, 664, 665. Harbor Coaling Corp. v. B. & O., 128 I. C. C. 747, 750, 751.

(m) Complainant alleged that the rates on pig lead, lead oxide, red lead, and litharge, carloads, from Joplin, Mo., to Oklahoma City, Okla., were and are unreasonable and unduly prejudicial of Kansas City and St. Louis, Mo. Joplin is in southwestern Missouri and is served by the Frisco and M. K. T. Oklahoma City is in central Oklahoma and is also served by these carriers, which likewise serve Kansas City and St. Louis. None of the defendants serve East St. Louis, Ill. These articles are rated fifth class, rate applicable fifth class of 62.5c, for short line distance of 237 miles. Testing undue prejudice by the ability of the lines parties to this proceeding to put an end to the preference and prejudice, it is clear that neither the withdrawal by such lines from participation in this traffic to Kansas City nor an increase in their rate to that point would result in any benefit to complainants as the lower rate would still be available over the other lines. There is therefore insufficient basis for a finding of undue prejudice. HELD, rate attacked not unduly prejudicial but for future will be unreasonable to extent it exceeds 36c on pig lead and 45c on red lead and litharge, reparation awarded. Oklahoma Traffic Asso. v. St. L. S. F. Ry., 129 I. C. C. 461.

(n) It is a well established principle that undue prejudice or preference may not be found to exist as between shippers or communities unless the same carriers serve them or participate in their traffic. Washington Coal Producers

Asso. v. U. P. R. R., 129 I. C. C. 499, 501.

(o) Unjust discrimination prohibited by section 2 of the act is in movements over the same road or roads, and not over different roads or partly over same road and partly over different roads. See 69 I. C. C. 422. Bunker Hill & Sullivan M. & C. Co. v. N. P., 129 I. C. C. 242, 246.

(p) Finding of undue preference and prejudice not sustained upon showing that neither withdrawal by carriers parties to the complaint from participation in the traffic, nor an increase in their rate to point alleged to be prejudiced would put an end to the prejudice since lower rate would still be available over other lines. See 22 I. C. C. 115; 100 I. C. C. 363. Oklahoma Traffic Asso. v. St. L.-S. F., 129 I. C. C. 461, 465, 466.

§7½. Use of Commodity.

See Classification §10.

(a) Rates predicated upon use to be made of a commodity are unlawful because of resulting discrimination, nevertheless, such rates, while in effect, are the legally applicable rates on the particular commodity when conditions of tariffs publishing them have been fully complied with. Harlem & Morrisiana Transp. Line v. N. Y., N. H. & H., 123 I. C. C. 480, 484.

§8. Competition.

(1) In General.

See Competition.

(a) Competition between carriers does not constitute such a dissimilarity of circumstances and conditions as will excuse what would otherwise be an unjust discrimination under section 2. Drayage absorptions of S. W. M. R. R. 113 I. C. C. 179, 184.

(b) Where a carrier elects to meet commercial or carrier competition, in doing so it must not cause undue prejudice. See 43 I. C. C. 458, 465. Minnesota-Dakota Transit Millers v. A. A. R. R., 118 I. C. C. 585, 592.

(c) Preference or prejudice under section 3 of the act, to be undue and unlawful, must be such that it is a source of advantage to the party alleged to be favored and a disadvantage to the other party, and a competitive relation between the parties must ordinarily exist. Kansas Flour Mills Co. v. A. T. & S. F. Ry., 123 I. C. C. 19.

(d) Local rate on redwood lumber from Pittsburg, Calif., to Hayden, Ariz., originally moving from Casper, Calif., to Pittsburg by water, found not unreasonable, discriminatory, or unduly prejudicial, as compared with lower ex-water proportional rate from Pittsburgh to Pheonix and other points more distant than Hayden, or with lower rate established to Hayden subsequent to movement. Such lower rates are on a low basis, having been established because of market and carrier competition, which is not reflected at Hayden, and subsequent reduction is not conclusive of unreasonableness of the higher rate. Redwood Mfg. Co. v. S. P. Co., 123 I. C. C. 30, 32.

(e) While each community is entitled to benefits arising from its natural advantages, a carrier may meet competition so long as it is not guilty of undue prejudice, does not charge rates which are so low as to burden other traffic, and does not contravene the declared policy of Congress to foster and preserve in full vigor both rail and water transportation. Fact that the law declares unlawful only discrimination that is unjust and only prejudice that is undue indicates that it was the intent to give carriers some latitude in fixing rates, and that distance or cost of service need not be the sole criterion by which rates shall be measured. However, there are limits beyond which a carrier may not go, even in meeting competition. Galveston Commercial Asso. v. G., H. & S. A., 128 I. C. C. 349, 379.

§8. (3). Railroads in General.

See Railroad Competition.

(a) Competition between carriers does not constitute such a dissimilarity of circumstances and conditions as will excuse what would otherwise be an unjust discrimination under section 2 of the act. See 167 U. S. 512; 254 U. S. 57. Drayage Absorption by S. W. M. R. R., 113 I. C. C. 179, 185.

§8. (5). Water Carriers.

See Water Carriers.

(a) Rate on newsprint paper from Millinocket, Me., to Lynchburg, Va., found not unreasonable, discriminatory, or unduly prejudicial as compared with rates to Atlanta, Ga., Memphis and Chat-

tanooga, Tenn., and New Orleans, La. Rates to alleged preferred points are shown to be depressed, having been established to meet water competition, and are therefore not a fair measure of reasonableness of the rates to Lynchburg. Moreover, the Lynchburg rate compares favorably, distance considered, with rates from other paper producing points to destination in the same general territory. Lynchburg Chamber of Commerce v. B. & A. R. R., 115 I. C. C. 715.

(b) Rates on wooden box shooks from Baltimore, Md., to Jersey City, N. J., found unreasonable and unduly prejudicial as compared with rates contemporaneously in effect from Norfolk, Va., and other competing points in Virginia and North Carolina. While rates from latter points are depressed due to water competition, it was not shown that they are less than reasonable. Moreover, narrow spread in rates as compared with great difference in length of haul under substantially the same transportation conditions, can not be ignored. Reasonable and nonprejudicial rates prescribed for future and reparation awarded. Canton Box Co. v. P. R. R., 123 I. C. C. 663.

(c) Rate on crude phosphate rock, from Tilphosco and Brewster, Fla., to Meridian, Miss., found not unduly prejudicial as compared with lower rate to New Orleans, La., and Gulf ports, for greater distances. Carriers show that rate to the Gulf ports is depressed by reason of water competition, much phosphate rock being transported in tramp steamers which maintain no regular rates. Moreover, in 101 I. C. C. 165, the influence of water competition over these rates was recognized by commission and record in instant case substantiates the view there expressed. Meridian Fertilizer Factory v. A. C. L., 126 I. C. C. 478.

§8. (7). Market Competition.

See Market Competition.

(a) Rates on fiber furniture, l. c. l., from Columbia, S. C., to points in southern classification territory, found not unjustly discriminatory or unduly prejudicial. Other than general statement to effect that complainants meet competition in the sale of their product with manufacturers at Winston-Salem and Siler City, N. C., there was no showing as to the extent of competition met from those points. Mere reference to lower rates to common points of destination is not sufficient to establish undue preference and prejudice. South Carolina Penitentiary v. A. & R. R. R., 113 I. C. C. 584.

(b) Rates on cement from Kosmosdale, Ky., to destinations in c. f. a. territory, found unduly prejudicial to Kosmosdale and unduly preferential to Marquette, St. Louis, and Hannibal, Mo., Mitchell, Speeds, and Buffington, Ind., and other producing points with which Kosmosdale comes into active competition, to extent that rates from Kosmosdale exceed those contemporaneously maintained from the competing points for like distances under the Atlas scale prescribed in 81 I. C. C. 1. Kosmosdale Portland Cement Co. v. I. C., 115 I. C. C. 561.

(c) Rate on crushed slate from Whiteford, Md., and Slate Hill, Pa., to New Orleans, La., and Mobile Ala., found not unreasonable but unduly prejudicial to extent they exceeded contemporaneous rate from Esmont, Va., a competing point, by more than $1.50 per net ton. Reparation denied. Staso Milling Co. v. M. & P., 115 I. C. C. 605.

(d) Rates on naval store (rosin and turpentine) from Louisiana and Texas points to destinations in c. f. a. territory found unreasonable and unduly prejudicial; and to points in western trunk-line territory found unreasonable; as compared with rates contemporaneously maintained from competing producing points in southeastern and Mississippi Valley territories. Reasonable and nonprejudicial basis of rates prescribed and reparation denied. Turpentine & Rosin Producers Asso. v. A. & V., 115 I. C. C. 667.

(e) In 98 I. C. C. 352, division 4 found that the rates for the interstate transportation of fresh meats and packing house products, in carloads, from Duluth to St. Paul, Minn., were unreasonable to the extent they exceeded 28c on fresh meats and 23c on packing house products, and unduly prejudicial to the extent they exceeded the rates on like traffic from St. Paul to Duluth. The C. St. P. M. & O., G. N. and Soo Line operate over interstate routes between St. Paul and Duluth and these carriers have complied with the order by establishing rates of 28c on fresh meats and 23c on packing house products in both directions. The N. P. and C. M. & St. P. maintain intrastate routes and

in order to adjust their rates it was necessary for them to petition the Minnesota Commission for authority to make the revision. It was deemed advisable to reopen the case for further hearing with the Minnesota Commission. There is here a clear discrimination in the rates charged for the movement of the same kind of traffic under similar transportation conditions. But to prove this discrimination results in a violation of section 3 it must be shown that complainant suffers injury by reason of the discrimination, and that this injury will cease if the discrimination is removed, regardless of the manner of its removal. It is true that "ordinarily" a competitive relation must exist as a prerequisite to such injury, and it is also true that injury can more readily be shown where the preference or advantage relates to the "same market," but it does not follow that it can only be shown under such conditions. It is wholly impossible upon this record to reach the conclusion that the Duluth packing plant suffers no measure of injury because of this discriminatory rate situation, or that its competitive position would not be improved if the discrimination were removed. Manifestly it is an unfair situation for which no justification has been offered and which should be corrected. HELD, original finding affirmed. Duluth Chamber of Commerce v. C. St. P. M. & O. Ry., 122 I. C. C. 739.

(f) Coal producers are entitled to nonprejudicial rates from their mines to any and all markets. See also 96 I. C. C. 359. Clinchfield Coal Corp. v. C., C. & O., 122 I. C. C. 37, 39.

(g) Carrier published rates on their own line for single-line haul, lower than rate for similar joint-line hauls from points on other carriers to destinations on their own lines, contending that the rate for single-line haul was established for competitive reasons and that while earnings thereunder were low they were more satisfactory than would have been the case if the same rate were applied for joint-line hauls where it would receive but a part of the haul and a division of the rate. HELD: Similar situation was considered in 98 I. C. C. 488, in which commission stated that such rates resulted in a denial to shippers of ability to choose their market, and concluded that prejudice against such shippers was undue within meaning of the act. See also 58 I. C. C. 261. White Eagle Oil & Refining Co. v. A., T. & S. F., 122 I. C. C. 223, 225.

(h) Fact that complainants' competitors were placed in a more favorable position does not of itself establish damage to complainants as a result of such undue prejudice. Whittemore's Sons v. N. Y., N. H. & H., 122 I. C. C. 451, 457.

(i) Citing 36 I. C. C. 259, 261; 181 Fed. 403, 411, carriers contended that to sustain a finding of undue preference and prejudice under section 3 a competitive relation must exist between persons, companies, or localities concerned, and this competition must be in the same market. HELD: While it is "ordinarily" true that a competitive relation must exist as a prerequisite to such a finding and that injury can more readily be shown where preference or advantage relates to the "same market," it does not follow that it can only be shown under such conditions. Duluth Chamber of Commerce v. C., St. P., M. & O., 122 I. C. C. 739, 742, 743.

(j) Preference and prejudice under section 3 of the act, to be undue and unlawful, must be such that it is a source of advantage to the party alleged to be favored and a disadvantage to the other party, and a competitive relation between the parties must ordinarily exist. Kansas Flour Mills Co. v. A., T. & S. F., 123 I. C. C. 19, 20.

(k) Local rate on redwood lumber from Pittsburg, Calif., to Hayden, Ariz., originally moving from Casper, Calif., to Pittsburg by water, found not unreasonable, discriminatory, or unduly prejudicial, as compared with lower ex-water proportional rate from Pittsburg to Pheonix and other points more distant than Hayden, or with lower rate established to Hayden subsequent to movement. Such lower rates are on a low basis, having been established because of market and carrier competition, which is not reflected at Hayden, and subsequent reduction is not conclusive of unreasonableness of the higher rate. Redwood Mfg. Co. v. S. P. Co., 123 I. C. C. 30, 32.

(l) It is the common practice of jobbers and manufacturers to make allowances in prices, and thus reduce their profits, where necessary to meet prices of competitors enjoying freight rates on lower bases. A shipper's enforced absorption of an unjustified difference in

freight rates in the sale of his products results in undue prejudice to him, which is more pronounced when a rate maladjustment precludes him from doing business in which he might engage if rates were equitably related. Consolidated Southwestern Cases, 123 I. C. C. 203, 211.

§10. Encouragement of own territory.

See Evidence §40½; Through Routes and Joint Rates §9.

(a) That preference resulting to part only of coal mines on particular railroad was merely incidental to a legitimate effort to develop that railroad's traffic in a particular direction HELD without legal significance on question of whether undue prejudice resulted. Virginian Ry. Co. v. United States. United States v. Virginian Ry. Co., 47 Sup. Ct. 222.

IV. REMOVAL OF DISCRIMINATION.

§11½. In General.

(a) Unless commission otherwise directs upon a proper showing, carriers have an alternative in removing undue prejudice. York Mfr. Asso. v. P. R. R., 107 I. C. C. 219, 229.

(b) The commission has frequently found and ordered the removal of undue prejudice where originating carriers are different but delivering carriers are the same. Seneca Wire & Mfg. Co. v. B. & O., 112 I. C. C. 95, 97.

(c) Manner of removing undue prejudice and preference as between persons or localities and unjust discrimination against interstate commerce found to exist in the rate structure in the Southwest, prescribed. Consolidated Southwestern Cases, 123 I. C. C. 203, 405.

§13. Disturbance of Settled Adjustment.

See Evidence §66; Relative Rates.

(a) Rates on bituminous coal from mining district in Ohio and from the so-called Inner Crescent regions, to all points in Indiana found not unreasonable or unduly prejudicial as compared with rates from same origin points to destinations in western Ohio, the southern peninsula of Michigan, and in Illinois; nor does grouping of Indiana destinations result in undue prejudice to certain localities and undue preference of others. The history and propriety of general adjustment of coal rates from the Inner and Outer Crescents and in Ohio were exhaustively considered in various cases and were found not unreasonable or otherwise unlawful. Moreover, the groups have been long maintained and evidence of record does not warrant a disturbance of the present adjustment. Indiana State Chamber of Commerce v. A. A. R. R., 115 I. C. C. 650.

V. PROCEDURE AND EVIDENCE.

§13½. In General.

See Evidence; Procedure Before Commission.

(a) Upon objection of carriers to a petition of intervention in a proceeding involving undue prejudice by a shipper located at a point not named in complaint, upon ground that it unduly broadens the issue, HELD: To some points same rates now prevail from the two points involved and to deny petition and at same time permit a reduction in rates from the point named in complaint would have effect of sanctioning an unwarranted rate situation as between competing manufacturers. Accordingly, petition in intervention allowed. Sonoco Products Co. v. A. C. L., 113 I. C. C. 553, 554.

(b) Comparisons of inbound and outbound rates are not very helpful in establishing unreasonableness or undue prejudice where only the inbound or outbound rates are in issue. Anthony Produce Co. v. B. & A., 120 I. C. C. 224, 227.

(c) In attempting to rebut allegation of undue prejudice the Texas & Pacific cited 115 U. S. 587, and contended that while the Missouri Pacific has majority control of its stock, that carrier has undertaken no active participation in its management and operation, does not in any legal sense control it, and has no responsibility for its rates. FOUND: As courts have consistently distinguished between stock ownership by one corporation in another for purpose of participating in latter's affairs in normal manner, and stock ownership for purpose of controlling a subsidiary company, and as in former circumstances finding in cited case is controlling, T. & P. is therefore an independently operator carrier, is not to be regarded as part of M. P. system, and since it does not serve any Texas port and has no controlling voice in fixing level of assailed rates to those ports published by M. P., it can not be held guilty of undue prejudice. See also

247 U. S. 490, 500. Galveston Commercial Asso. v. G., H. & S. A., 128 I. C. C. 349, 380, 381.

§14. Burden of Proof.

Burden of Proof; Evidence I.

(a) A case of undue prejudice is not made out by mere showing of lower rates on a competitive commodity. American Clay Products Co. v. P. R. R., 107 I. C. C. 153, 154.

(b) Burden of proof to establish fact and amount of damage due to unjust discrimination or undue prejudice as the proximate cause, is upon complainants. See 230 U. S. 184. Whittemore's Sons v. N. Y., N. H. & H., 122 I. C. C. 451, 457.

(c) Rates on linseed oil from, Portland, Oreg. to Spokane, Tacoma, and Seattle, Wash., and to San Francisco, Paraffin, Berkley, and Los Angeles, Calif., found not unreasonable or otherwise unlawful as compared with rates on creosote oil, coconut oil, cottonseed oil, cooking oils, and various other commodities, from Chicago, Milwaukee, and Minneapolis, to the same west-coast destinations. While the compared rates are lower than those on linseed oil, no showing was made as to competition or any movement from and to points specified. Moreover, rates assailed compare favorably with those approved by commission in 21 I. C. C. 640 and other cited cases. Portland Linseed Oil Works v. G. N., 122 I. C. C. 484.

(d) To prove that discrimination results in a violation of section 3 of the act, it must be shown that complainant suffers injury by reason of discrimination, and that this injury will cease if discrimination is removed, regardless of the manner of its removal. Duluth Chamber of Commerce v. C., St. P., M. & O., 122 I. C. C. 739, 742.

(e) Where undue prejudice has been established and reparation is prayed, not only injury but the fact and amount of resulting damage must be proved. City Coal Co. v. N. Y., N. H. & H., 123 I. C. C. 609, 611.

§15. Showing of Damage.

See Discrimination §4½ (c); Loss and Damage.

(a) No damage shown due to undue prejudice in the past because of existence of rates on steel tanks, k. d. fabricated in transit at Iola, Kans., which were higher than rates between same origin and destination points with fabrication in transit at Kansas City. All fabricators at time of movement paid Pittsburgh price plus freight rate from that point to their plants for raw materials regardless of its origin and complainant here failed to show that any preferred fabricators bid upon traffic here in controversy, set sale price which complainant was compelled to meet, or that complainant's sale price was based on rates paid by any such competitors. United Iron Works v. Director General, 104 I. C. C. 449, 451.

(b) Evidence introduced by complainant in support of allegation of discrimination and undue prejudice consisted of general statements to effect that it was in competition with an industry at alleged preferred point, and because rates from that point were lower and commodity was sold on a delivered basis "a discrimination" existed in favor of competing point. HELD: This evidence falls far short of that certainty of proof required by law to entitle complainant to damages for an alleged violation of section 2 or 3 of the act, and is further nullified by evidence of carriers, who showed that past shipments from competing point were few as compared with those from alleged prejudiced point. South River Lbr. Co. v. N. & W., 109 I. C. C. 173, 175.

(c) Both commission and the courts have held that proof of damage in undue-prejudice cases must be by such evidentiary facts as would be required to sustain such a recovery before a court of law. A complainant must show how discrimination found to exist affected him to his damage. In other words, he must show fact of his damage as well as amount claimed. See 230 U. S. 134. Wright Lumber Co. v. A. A., 112 I. C. C. 337, 339.

(d) Paper was sold f. o. b. mill at a price reflecting actual freight charges paid instead of applicable rate, deduction of such charges as such not being shown on face of invoice. Such freight charges were paid and borne by consignee who passed them on to its customers. Upon contention of consignee that in selling it has to meet prices of competing jobbers, and that if forced to pay outstanding undercharges, the paper having been resold, it will sustain a loss in the amount of undercharges collected, HELD: Under-

charges and consequent loss would have occurred even if rate assessed had not been unduly prejudicial, and since shippers as well as carriers are charged with a knowledge of the legally applicable tariff charges, the fact that there are outstanding undercharges is insufficient to sustain an award of damages under a finding of undue prejudice. Clements Paper Co. v. T. C., 112 I. C. C. 411, 416, 417.

(e) Reparation awarded for undue prejudice where it was shown that complainant was compelled to shrink its profits in meeting competition of competitors located at the preferred points. Foster Lbr. Co. v. V. & S., 112 I. C. C. 651, 654.

(f) Upon complaint of a shipper alleging undue prejudice reparation was sought based solely upon a showing of a disparity in rates, HELD: That in the case of that violation of the law a mere difference in rates does not alone necessarily measure the amount, or prove the fact. of such shipper's damage. See 230 U. S. 184; 62 I. C. C. 296. Fertilizers between Southern Points, 113 I. C. C. 389, 435.

(g) Fact that complainants' competitors were placed in a more favorable position does not of itself establish damage to complainants as a result of such undue prejudice. Whittemore's Sons v. N. Y., N. H. & H., 122 I. C. C. 451, 457.

(h) To prove that discrimination results in a violation of section 3 of the act, it must be shown that complainant suffers injury by reason of discrimination, and that this injury will cease if discrimination is removed, regardless of the manner of its removal. Duluth Chamber of Commerce v. C., St. P., M. & O., 122 I. C. C. 739, 742.

(i) Preference and prejudice under section 3 of the act, to be undue and unlawful, must be such that it is a source of advantage to the party alleged to be favored and a disadvantage to the other party, and a competitive relation between the parties must ordinarily exist. Kansas Flour Mills Co. v. A. T. & S. F., 123 I. C. C. 19, 20.

(j) Where undue prejudice has been established and reparation is prayed, not only injury but the fact and amount of resulting damage must be proved. City Coal Co. v. N. Y., N. H. & H., 123 I. C. C. 609, 611.

(k) Proof of damage in undue-prejudice cases must be of such evidentiary facts as would be required to sustain such a recovery before a court of law. Knoxville Iron Co. v. L. & N., 128 I. C. C. 513, 514.

(l) Reparation awarded on basis of undue prejudice upon showing that complainant was forced to absorb difference in rates in order to compete with preferred points. Buffalo Brick Co. v. C. & N. W., 129 I. C. C. 294

§17. **Reparation.**

See Supra §15; Refrigeration IV; Reparation.

(a) Paper was sold f. o. b. mill at a price reflecting actual freight charges paid instead of applicable rate, deduction of such charges as such not being shown on face of invoice. Such freight charges were paid and borne by consignee who passed them on to its customers. Upon contention of consignee that in selling it has to meet prices of competing jobbers, and that if forced to pay outstanding undercharges, the paper having been resold, it will sustain a loss in the amount of undercharges collected. HELD: Undercharges and consequent loss would have occurred even if rate assessed had not been unduly prejudicial and since shippers as well as carriers are charged with a knowledge of legally applicable tariff charges, the fact that there are outstanding undercharges is insufficient to sustain an award of damages under a finding of undue prejudice. Clements Paper Co. v. T. C., 112 I. C. C. 411, 416, 417.

(b) Reparation will not ordinarily be awarded where rates have been prescribed primarily to remove undue prejudice. Beatty Coal Co. v. A. V. I., 115 I. C. C. 8, 14.

(c) On further hearing, reparation denied on stave shipments from Crowder, Miss., to interstate points, on account of alleged damage due to undue prejudice in favor of Batesville and Charleston, Miss., competing points shipping to same destinations. Complainant contended that because of lower rates from Charleston it was compelled to absorb excess freight charges to meet Charleston prices. However, it was not shown with reasonable certainty that complain-

ant's sole competition was with Charleston, particularly on shipments to manufacturers using barrels for commodities not known to complainant; that profits were reduced because of lower Charleston rates; or that such rates were the only or proximate cause of injury alleged. Hollingshead Co. v. Director General, 120 I. C. C. 55.

(d) Damages for undue prejudice, measured by difference in freight rates, awarded where complainants showed that their products are sold in same general competitive markets as are like products manufactured and sold by their competitors located at preferred point; that in sale of their products they were forced to meet their competitor's prices; that they were compelled to forego certain profits solely because freight rates from the prejudiced point exceeded rates contemporaneously available to such competitors; and that as a result of the additional transportation charges paid they have suffered pecuniary loss. Gannaway & Rice v. I. C., 120 I. C. C. 400, 404.

(e) The commission does not award damages following a finding of undue prejudice where evidence with respect to damage is uncertain and speculative. Grangers Mfg. Co. v. N. Y. C., 120 I. C. C. 648.

(f) Where undue prejudice has been established and reparation is prayed, not only injury but the fact and amount of resulting damage must be proved. City Coal Co. v. N. Y., N. H. & H., 123 I. C. C. 609, 611.

§18. Complaint.

See Procedure before Commission.

(a) Carrier filed motion to dismiss complaint alleging undue prejudice upon ground that it failed to show when shipments moved, points of origin, routes, rates applied, or wherein provisions of the act were violated. HELD: Commission has repeatedly said that technical pleading is not necessary in complaints filed with it and the courts have sustained this position. Statements "that these rates were when exacted and still are unduly preferential or prejudicial in violation of section 3," and "that they are unreasonable in and of themselves, unduly prejudicial to complainant, and unduly preferential of shippers at other points," are sufficient to place carriers upon notice to defend their rates. Motion is therefore denied. Rodgers-Wade Furniture Co. v. A., C. & Y., 126 I. C. C. 460, 461.

I. ESTABLISHMENT.

§1. In General.

(a) Present rates on sand from Lipe, Tenn., to Sheffield, Florence, and Tuscumbia, Ala., which conform with rates for similar distances under scales approved by commission in various cases, found not unreasonable. Florence Chamber of Commerce v. N. C. & St. L., 104 I .C. C. 393.

(b) Interstate rates on pulp wood from points in Maryland, the Virginias, and District of Columbia to various points in West Virginia, Maryland, Delaware and Pennsylvania, and from Ravensford, N. C., to Parsons, W. Va., found unreasonable. Distance scale of rates prescribed for future. West Virginia Pulp & Paper Co. v. B. & O., 104 I. C. C. 495.

(c) Rates on sand and gravel from points in western Pennsylvania to destinations in Ohio, West Virginia, and New York, found unreasonable and unduly prejudicial to extent they exceed rate contemporaneously maintained on slag and crushed stone. Reasonable and nonprejudicial scale of distance rates prescribed for future. Penn. Sand & Gravel Prod. Asso. v. B. & O., 104 I. C. C. 717.

(d) In cases where commission prescribes distance scales, carriers are not

required to establish over circuitous routes rates found reasonable for application over rate-making routes. They may do so if long-and-short-haul provision of section 4 of the act is observed or if relief therefrom is granted. Grain and Products to Mississippi Valley, 107 I. C. C. 167, 169.

(e) Class rates and commodity rates bearing a direct relation thereto from points in c. f. a. and border territories to Williamson, W. Va., found unreasonable as compared with rates from same territories of origin to Charleston, Gauley, Kenova, Huntington, and other West Virginia destinations, and to extent they exceed, for future, rates constructed on distance scale of class rates applicable in c. f. a. territory for short-line distance to Williamson, plus specific arbitraries for the six classes respectively. Williamson Chamber of Commerce v. A., C. & Y., 107 I. C. C. 639.

(f) Interstate rates on brick and related articles carried in uniform brick list prescribed in General Brick case, 68 I. C. C. 213, from points in Texas, Arkansas, Oklahoma, and Kansas, to points in those States and in Louisiana and to Memphis, Tenn., and from Texas, Arkansas, and Oklahoma, to points in southern Missouri, found unreasonable and unduly prejudicial. Reasonable distance scale of rates prescribed and reparation denied. Southwestern Brick Cases., 107 I. C. C. 681.

(g) Interstate rates on brick and related articles taking same rates, from specified points in Iowa to destinations in Iowa, Nebraska, South Dakota, and Minnesota, found unreasonable and unduly prejudicial. Reasonable maximum distance scale of rates and nonprejudicial relationships prescribed for future and reparation denied. Mason City Brick & Tile Co. v. Director General, 107 I. C. C. 702.

(h) Upon further hearing, order in Southern Brick Case, 88 I. C. C. 543, vacated in so far as it requires establishment of distance scales of rates from Johnson City, Kingsport, and Chattanooga, Tenn., to points on Norfolk & Western south of Ohio River. The southern brick scale is higher than present rates, and establishment of that scale from points named would accentuate existing ground for complaint on part of manufacturers and inevitably result in demands for same scale from other producing points. Brick and Clay Products in the South, 109 I. C. C. 161.

(i) Proposed revision of rates on bananas from Gulf ports to southeastern and Carolina territory found justified, except as to increased c. l. rates. A careful consideration of the record convinces commission that banana rates from such ports to the Ohio River, in so far as they apply over lines proposing increases, are upon less than a maximum reasonable basis. Rates proposed, however, are subject to criticism for the elimination of which a distance scale of rates is herein suggested. Bananas from Gulf Ports, 109 I. C. C. 211.

(j) Upon oral argument, former report 95 I. C. C. 430, wherein rates on animal manure from Perth and Lovelock, Nev., to eastbound transcontinental Groups B to J, inclusive, and M, were found unreasonable and reasonable rates, based on the Calivada scale prescribed in 73 I. C. C. 496, and 91 I. C. C. 228, were prescribed for future to Groups F to J, inclusive, and M, affirmed. The Calivada scale rates are not on a depressed scale as compared with distance rates prescribed on fertilizer in the Southwest in Memphis-Southwestern Investigation, 77 I. C. C. 473. Minimum distance, scale of progression, minimum weights, and other considerations applicable to the the two scales are different, much of the haul at rates herein prescribed is performed under transportation conditions at least no less favorable than those obtaining in the Southwest, and ton-mile earnings under rates prescribed decrease as distance increases. Pacific Manure & Fertilizer Co. v. A. & R. R. R., 109 I. C. C. 615.

(k) Interstate rate on fire brick from Joliet, Ill., to Gary and Indiana Harbor, Ind., and South Chicago, Ill., found unreasonable as compared with lower rates on silica blocks and numerous other commodities, and to extent it exceeded a rate based on maximum scale for like distances prescribed in General Brick case, 68 I. C. C. 213. Reasonable maximum rate for future prescribed. General Refractories Co. v. E. J. & E., 109 I. C. C. 635.

(l) In 107 I. C. C. 681 commission prescribed a distance scale of rates for application on brick and clay products in certain territory in the southwest. HELD, under the heading "computing distances" in the original report, change

to read: In computing distances in connection with the scale herein prescribed the following formula shall be used: Distances to be used shall be the distances over direct routes embracing as a maximum the lines or parts of lines of no more than three carriers via existing connections for the interchange of carload traffic, except that where shorter routes are now in use which embrace the lines of more than three carriers such shorter routes shall be used. Southwestern Brick Cases, 113 I. C. C. 169.

(m) In 88 I. C. C. 543, the commission prescribed a distance scale of carload rates for application to brick and related articles as defined therein from, to, and between points in southern territory. At the present time the tariffs name specific rates based upon the scale prescribed, but no routing is shown. Hence the rates apply over routes more circuitous than those authorized by the order. A rule such as the following should be published: The rates named in this tariff between any two points apply via all routes composed of lines parties to the tariff over which the distances do not exceed those shown in column 2 below opposite the corresponding rates shown in column 1: Col. 1 4 c, col. 2 distance 17 miles; 4.5 c, 34 miles, etc. The use of such a rule would permit somewhat greater circuity in some instances than is authorized under the strict terms of the order, for the reason that the distances shown in column 2 are computed on the basis of the percentage of circuity permitted by the order as applied to the maximum distance in the block for which each scale rate applies. Brick and Clay Products in the South, 113 I. C. C. 380.

(n) In view of particular circumstances and conditions surrounding transportation and marketing of cement, the commission is becoming more and more persuaded that there is substantial merit in the destination-scale principle for more general application to cement rates in western territory. Iola Cement Mills Traffic Asso. v. A. V. I., 115 I. C. C. 49, 63.

(o) Proposal to restrict application of distance rates between Missouri B territory and points in Arkansas, Louisiana, Oklahoma, and Texas so as to exclude therefrom points on the St. L.-S. F. Ry. between St. Louis and Pacific, Mo., inclusive, which would result in increased rates on glass sand and other commodities moving from such points, found not justified. The proposed description of Missouri B territory is at variance with that stated by commission in 77 I. C. C. 473, wherein it was also said that rates prescribed therein would be reasonable maximum rates for interstate application between points within the territory described. Nothing in present record indicates that transportation conditions have changed so as to warrant an increase in rates prescribed in cited case. Description of Missouri Group B Territory, 118 I. C. C. 119.

(p) Rates on hay from points in Texas differential territory and New Mexico, to destinations in southern Arkansas and northern Louisiana, found unreasonable to extent they exceeded distance-scale rates prescribed in 101 I. C. C. 116, extended beyond 800 miles at same rate of progression as for last 300 miles in that scale, plus differentials for hauls in differential territory and New Mexico. Reasonable rates prescribed for future. Arkansas Jobbers & Mfrs. Asso. v. A., T. & S. F., 118 I. C. C. 238.

(q) Prior report 98 I. C. C. 183, modified so as to provide for application of single-line distance-scale rates therein prescribed, in lieu of joint-line rates on cottonseed and related articles between points west of Mississippi River on the St. L., S. W. Ry., and Memphis, Tenn., when handled by that carrier over the C. R. I. & P. Ry., between Memphis and Brinkley, Ark., under a trackage arrangement. Oklahoma Corp. Commission v. A. & S., 118 I. C. C. 439.

(r) Findings in original report 100 I. C. C. 4, prescribing rates on cottonseed cake, meal, hulls and oil from Calexico and El Centro, Calif., to El Paso, Tex., modified, rates being established in accordance with distances agreed upon by parties thereto, using scale prescribed in 98 I. C. C. 183. Peyton Packing Co. v. A. E. R. R., 118 I. C. C. 452.

(s) I. & S. 2414 carriers proposed to increase rates on salt, carloads from Kansas mines to Lincoln, Omaha and other points in Nebraska and to Fort Worth, Dallas and other Texas common points. In I. & S. 2450 respondents sought to cancel the rates on salt, carloads, over certain routes from Shreveport, La., to Texas. In 16834 complainant attacked rates on salt, from Kansas producing points to Sioux Falls, S. D.,

as unreasonable. In 17011 complainant attacked rates on salt from Hutchinson, Kanopolis, and Lyons, Kas., to Arkansas, Louisiana, southern Missouri, Oklahoma and Texas as unreasonable and unduly prejudicial. In 17070 complainant attacked rates on salt from Kansas to Sioux City, Ia., Denver, Colo., Oklahoma City, Okla., and North Ft. Worth, Tex., as unreasonable. In 17218 complainant attacked carload rates and minima on salt from Kansas and Louisiana to Oklahoma City as unreasonable and unduly prejudicial. In 17347 complainant attacked rates on salt, carloads, from Kansas to Tulsa, Okla., as unreasonable. In 17428 complainant attacked rates on salt, carloads, from Kansas to Oklahoma as unreasonable. Kansas producing points are Hutchinson, Anthony, Little River, Sterling, Kanopolis and Lyons. Louisiana producing points are Anse La Butte, Avery, Bob Acres, Jefferson Island, Lafayette, Salt Mine, Weeks and Weeks Island. Texas producing points are Grand Saline, Salt City, Alba and Palestine. Bulk salt is not susceptible to loss and damage in transit, does not require first class equipment, and receives no special transportation service. The evidence in these cases relates principally to bulk salt. It is obvious that the table variety of salt, in packages, would be much more susceptible to loss and damage in transit and would require a better class of equipment than low grades of salt shipped in bulk. The commission does not believe that justice demands distinctions between bulk and other grades of salt, either in rates or in minima. RATES TO OMAHA AND LINCOLN. Present rate from Kansas to Omaha and Lincoln is 18.5 cents. Respondents proposed 20.5 cents. Average short line distance from the six producing points to Lincoln, using not more than three lines, is 268 miles, and the rate for this distance is 17.5 cents. Average short line distance Kansas to Omaha using not more than three lines is 327 miles, and rate for that distance is 20 cents. HELD, rate of 17.5 cents to Lincoln and 20 cents to Omaha justified for future. RATES TO SIOUX CITY. Present rate from Kansas mines is 23 cents based on average distance of 457 miles. Average short line distance using not more than three lines is 440 miles or 22.5 cents under the scale. HELD, rate attacked unreasonable to extent it exceeded 22.5 cents subsequent to May 23, 1925. RATES TO SIOUX FALLS. On May 23, 1925, rate was 27 cents. Short route from each of the Kansas points to Sioux Falls is through Sioux City. Beyond the latter point the short line distance is 91 miles, making a through distance of 531 miles, or 25 cents. HELD, rate attacked prior to May 23, 1925, not unreasonable but unreasonable subsequent thereto to extent it exceeded 25 cents. RATE TO DENVER. Present rate from Kansas mines is 32.5 cents average distance 471 miles. HELD, rate attacked subsequent to May 23, 1925, unreasonable to extent it exceeded 26.5 cents. RATES TO THE SOUTHWEST. By I. & S. 2414 respondents now propose to apply the 9702 scale from Kansas producing points to Dallas, Fort Worth and other Texas common points, using the distance from Lyons as representative. S. P. and G. C. L., serving the Louisiana mines did not propose any increase in their rates to points in Texas except to points on the T. & B. V., but proposed to republish the existing rates using the uniform description and minimum prescribed in Salt Cases of 1923. Present rate from Kansas to Fort Worth on bulk salt is 26 cents on package salt 42 cents. Proposed rate is 35 cents on all salt. This is the rate under the 9702 scale using the distance from Lyons. Present rate from Louisiana mines to Fort Worth is 24.5 cents on crushed salt. From Grand Saline rate is 12 cents on bulk salt and 17 cents on package salt. Many of the rates from Louisiana are lower, distance considered, than from Kansas mines, but for equal distances they are higher than the maximum of 27.5 cents from Texas mines. The evidence leaves no doubt that many of the rates to Texas from Louisiana mines are on a lower level, distance considered, than the rates from the Kansas mines, and that such mines are in competition. The withdrawal of the S. P. and G. C. L., from the rates from Kansas mines, or the withdrawal of the Kansas mines from participation in the rates from Louisiana would have no appreciable bearing upon the rate relationship. There is no adequate basis for a finding of undue prejudice. Average distance from Kansas to Oklahoma City was found to be 256 miles. Average distance is now shown to be 232 miles. Present rate of 227 cents is 1 cent higher than to Fort Worth in violation of the fourth section. Louisiana producing points to Oklahoma City

present rate is 42 cents, distance 666 miles. The 9702 scale for both single line and joint line hauls is about 50% higher than the western trunk line scale. Salt can be produced only from geological deposits of that mineral. The Kansas mines have a decided advantage in rates over all other salt producing points to a large number of the packing plants at points on the Missouri River and elsewhere in western trunk line territory. The Louisiana mines have no large consuming territory to which they have a corresponding advantage. Although the rates to Fort Worth and Dallas are less from Louisiana than from Kansas, the record shows that practically all of the movement of salt to packing plants at Fort Worth is from Kansas. HELD, rates proposed not justified from Kansas but justified from Louisiana. HELD, attacked rates from Kansas to southwest not unduly prejudicial but unreasonable for future to extent they exceed distance rates ranging from 8 cents for 10 miles to 33 cents for 800 miles. Reparation awarded. Salt between Western and Southwestern Points, 120 I. C. C. 91.

(t) In 102 I. C. C. 419, the commission found rates on metal beds and other kindred articles taking the same rates, in carloads, unreasonable and prescribed for the future two distance scales, based on carload minima of 12,000 and 30,000 pounds. HELD, on consideration rates prescribed should be modified to basis of fourth class as prescribed in the Southern case and sixth class minimum 30,000 pounds, minimum on fourth class 12,000 pounds. Crescent Bed Co. v. A. & V. Ry., 120 I. C. C. 151.

(u) Complainant attacked sixth class rates charged on fertilizer, carloads, from trunk line and central territories to destinations in central territory as unjust, unreasonable, unjustly discriminatory and unduly prejudicial in that they are substantially higher than commodity rates on the same traffic in western and southern territories. Rates from trunk line to central territory were withdrawn. Shipments are made in burlap bags of gross weights, ranging from 125 to 200 pounds. Water tight box cars are required. Loss and damage claims are said to be negligible. It is a well known fact that rates lower than sixth class rates apply on many commodities in central territory. Fertilizer is a low grade traffic, subject to no great risk in transit and requiring no special service for its transportation in the sense that special service is generally understood. Its free movement and use is an auxiliary tending to produce and furnish a larger volume of traffic and thus promote the prosperity of carriers and their patrons, so that considering both commercial and transportation conditions, it is entitled to comparatively low rates. The volume of movement is substantial and increasing. The high importance of continued and augmented use of fertilizers to successful farming in central territory is clear from the record. HELD, distance rates prescribed ranging from 6 cents for 5 miles to 33.5 cents for 800 miles. Ohio Farm Bureau Federation v. A. & W. Ry., 120 I. C. C. 361.

(v) L. & N., respondent, proposed to increase and reduce rates on manure, carloads, and to increase the minimum weight thereon from New Orleans, La., to Alabama and Mississippi on its New Orleans Mobile division. The destinations are stations between Baldwin Lodge, Miss., and Mobile, Ala., 38 and 140 miles from New Orleans. Reductions are proposed to those over 90 miles from New Orleans and increases to those 84 miles or less from that point. Increases alone were suspended. The basis for the proposed rates is a distance scale the same as that applicable on agricultural limestone. HELD, proposed schedules justified. Manure from New Orleans, 120 I. C. C. 525.

(w) Upon further hearing, FOUND, that in applying distance scale of rates prescribed in 112 I. C. C. 7, on lime from Ohio points to destinations in c. f. a. territory, the so-called Woodville, Sandusky, and Carey groups should be considered as a single group. This finding expresses unanimous desire of Ohio lime producers, and commission is unable to find that use of a single group would unduly prejudice other shippers, or be inconsistent with application of distance scale prescribed in original report. Washington Building Lime Co. v. A. & B. B., 122 I. C. C. 105.

(x) Rates on linseed oil from Fredonia, Kans., to points in Missouri, Illinois, Michigan, Indiana, Kentucky, Ohio, Pennsylvania, and New York, found unreasonable as compared with rates from Minneapolis, Des Moines, St. Louis, and Chicago, to same destinations. Reasonable rates based upon dis-

tance scale approved in 98 I. C. C. 183, prescribed for future and reparation awarded. Fredonia Linseed Oil Works Co. v. A. T. & S. F., 123 I. C. C. 153.

(y) Proposed revision of rates on bananas from Gulf ports to southeastern, Carolina, and Mississippi Valley territories, Ohio River crossings, and other southern points, in purported compliance with commission's findings in the banana case, 109 I. C. C. 211, found not justified. The suspended rates, in so far as their application to southeastern and Carolina territories are concerned, are not in accordance with commission's report in cited case. Moreover, the further revision contemplated by carriers to and from points not involved in that proceeding, if permitted to become effective, would create preferences and inequalities which commission cannot sanction. Proper revision of rates upon basis of a mileage scale suggested. Bananas from Gulf Ports, 123 I. C. C. 181.

(z) Class and commodity rates applying to, from, or between points in the Southwest and Kansas-Missouri territory found to be in generally chaotic condition, and tariffs there applying complicated and unsatisfactory. Comprehensive system of rates based on distance, and embodying uniform class percentage so adjusted as to permit greater car-load movement on class rates needed to correct the situation. Consolidated Southwestern Cases, 123 I. C. C. 203, 217, 235.

(aa) Complainant attacked commodity rates on cement, carloads, from Ada, Okla., Portland, and Concrete, Colo., and from Kansas producing points to Texas as unreasonable and unduly prejudicial. Ada is in south central Oklahoma on the Frisco about 80 miles from the Texas Oklahoma border. Portland and Concrete are on the D. & R. G. W. about 26 miles west of Pueblo, Colo. Kansas gas belt is in southeastern Kansas and northeastern Oklahoma. Complainants contend that rates to destinations in eastern Texas should not exceed western cement scale III rates, and from Colorado should not exceed scale IV rates. In the judgment of the Commission there is here sufficient reason for departing from the principle of averaging scales between territories and for applying scale IV rates from points in scale III territory to destinations in scale IV territory. Scale IV rates should also apply from scale IV territory to scale III territory. HELD, scale IV rates should apply between points in scale III and scale IV territory, or rates ranging from 7.5c for 5 miles in scale III territory to 20c for 380 miles, and 9c and 24c, respectively in scale IV territory. Oklahoma Portland Cement Co. v. D. & R. G. W. Ry., 128 I. C. C. 63.

(bb) Competition between cement manufacturers is exceeding acute throughout the country and any basis of rates from one producing point that is relatively lower than from another in territory where transportation conditions justify the same scale, unduly prefers one to the undue prejudice of the other. Experience has demonstrated that the most equitable and satisfactory method of removing preference and prejudice ordinarily present in rate adjustments on cement created through rivalry of producing points and carriers, is establishment of distance scales, thereby according each point of production the advantage of its location. Oklahoma Portland Cement Co. v. D. & R. G. W., 128 I. C. C. 63, 81, 82.

§2. **Effect.**

See Differentials.

(a) In computing distances under scale of rates herein prescribed on sugar from Louisiana points east of Mississippi River to Oklahoma, the shortest routes via existing connections for interchange of c. l. traffic required to be used, embracing as a maximum not more than three line-haul carriers for distances not exceeding 500 miles; four line-haul carriers for distances not over 800 miles; and five line-haul carriers for distances exceeding 800 miles, lines under common ownership or control to be considered as a single line, and where same line is used twice, it to be counted as a separate line each time. Oklahoma Traffic Asso. v. A. G. S., 113 I. C. C. 635, 648, 649.

(b) Distances computed over shortest routes over which carload traffic can be moved without transfer of lading required to be used in computing rates under distance scales prescribed or approved for application in the Southwest. Consolidated Southwestern Cases, 123 I. C. C. 203, 384.

(c) All-rail class and commodity rates on various articles should be on same level throughout the Southwest and designated portions of Kansas-Mis-

souri territory; and on standard rail lines a single scale of first-class distance rates should be used as basis for maximum reasonable interstate rates within those areas. Consolidated Southwestern Cases, 123 I. C. C. 203, 382, 385, 386.

(d) Following 92 I. C. C. 453, and other cited cases, rates on wrought-iron pipe, well-drilling rigs, oil-well supplies and outfits, and steel tanks between points in Louisiana and Arkansas, found unreasonable to extent they exceeded those which would apply based on scale of rates and minimum weights prescribed in 77 I. C. C. 473. Reparation awarded. Standard Oil Co. v. C., R. I. & P., 123 I. C. C. 669.

(e) Rate on sand from Pacific, Mo., to Fort Smith, Ark., found inapplicable on shipments moving over St. Louis-San Francisco, but applicable on those moving over Missouri Pacific. Tariff carried a c. l. rate applicable over either route and also published a single-line distance rate applicable between points in Missouri B territory, use of either rate, whichever made lower, being authorized. During a certain period Pacific on the Frisco was included with Missouri B territory and as distance rate over that line made the lower rate, shipments assessed c. l. rate were overcharged. However, as haul over Missouri Pacific was considerably greater than over the Frisco and rate under distance scale exceeded the c. l. rate, it is immaterial whether or not Pacific over that route was in Missouri B territory inasmuch as the c. l. rate being lower was applicable in either event. Reparation awarded. Harding Glass Co. v. M. P., 128 I. C. C. 754.

(f) Complainants alleged that the rates on apples, in carloads, from St. Joseph, Mo., and nearby points to Nebraska, Iowa, Minnesota, North Dakota, and South Dakota are unreasonable, unjustly discriminatory, and unduly prejudicial as compared with rates from eastern Missouri and western Illinois, St. Louis and Hannibal, Mo., and Alton and Quincy, Ill., are representative of the points alleged to be preferred. Although there are some commodity rates from both the complaining and preferred points, the rates are generally on the fifth class basis. To Iowa and Minnesota, the St. Joseph rates apply from all the complaining points in Missouri and, in general, from those in Kansas. To Nebraska, South Dakota and North Dakota, the Kansas points generally pay combination rates based on St. Joseph although it appears that commodity rates are published direct from these points to some important Nebraska destinations. It has not been shown of record that there is any marked difference in the transportation conditions surrounding the movement of apples from the complaining and the preferred districts to the destinations in question. Whatever may be the situation so far as class rates generally are concerned, this is not an adequate justification of an adjustment of rates on apples from competing producing district which is clearly prejudicial to one of these districts and preferential of the others. In Consolidated Southwestern Cases 123 I. C. C. 203 the Commission prescribed a distance scale of rates on apples between eastern Kansas and southwestern Missouri. Certainly the rates under attack should not exceed that scale, except, perhaps, to the western portions of Nebraska, South Dakota and North Dakota. HELD, rates assailed unreasonable to extent they exceed column 35 rates in Consolidated Southwestern Cases, supra. Hunt Bros. Fruit Co. v. A. & W. Ry., 129 I. C. C. 579.

(g) Complainant alleged that the rates on tomatoes, in carloads, from Fruitland, Gibson and Humboldt, Tenn., to Hutchinson, Kas., since June 21, 1922 as unreasonable, unduly prejudicial and unjustly discriminatory. Original decision Grovier Starr Produce Co. v. C., R. I. & P. Ry., 104 I. C. C. 745. Hutchinson is on the main line of the Santa Fe and Rock Island 219 and 155 miles west of Kansas City and Topeka, Kas. It is also served by the M. P. Fruitland is a local station on the M. & O. 5 miles north of Humboldt, which is also on the L. & N. Gibson is a local station on the latter line 6 miles east of Humboldt. In Consolidated Southwestern Cases 123 I. C. C. 203, the Commission prescribed reasonable rates to apply from and to the points involved for the future. HELD, rates assailed not unreasonable for the past but for future will be unreasonable and unduly prejudicial to extent they exceed the rates prescribed in Consolidated Southwestern Cases. Grovier Starr Produce Co. v. C., R. I. & P. Ry., 129 I. C. C. 711.

(h) In computing distances for application of distance rates prescribed, the shortest routes over which carload traf-

fic can be moved without transfer of lading shall be used. Colbert Limerock Asphalt Co. v. A. C., 129 I. C. C. 177, 185.

II. REASONABLENESS OR DISCRIMINATION.

See Branch Lines §2 (i); Discrimination; Reasonableness of Rates.

§3. In General.

(a) Complainant attacked sixth class rate of 19c charged on two cars of logs shipped May 29 and 31, 1922, from Cottage Grove, Ind., to Hicksville, O., as unreasonable, unjustly discriminatory and unduly prejudicial. Shipments moved C. I. & W. to Hamilton, O., and B. & O. beyond, charged sixth class of 19c, reparation desired on basis of 12.5c or 65% of sixth class. A rate of 11c was published April 20, 1924, in compliance with 85 I. C. C. 533, in which the rates on logs between points in central territory were found unreasonable to extent they exceeded 65% of sixth class rates. The report indicates that the c. f. a. log mileage scale prior to general reductions of 1922 provided a rate of 17c for the distance the shipments here moved, which is 89% of sixth class. HELD, rate attacked unreasonable to extend it exceeded 17c, reparation awarded. Crook Son & Co. v. C. I. & W. Ry., 112 I. C. C. 399.

(b) Complainant attacked commodity rate charged on crude mine run fire clay, carloads, shipped between July 1, 1922, and Nov. 27, 1923, from St. Louis and Clayton, Mo., to South Fort Smith and Van Buren, Ark., as unjust and unreasonable. Clay is usually shipped in box cars, but it is not susceptive of damage if transported in open cars and it has moved in the latter. South Fort Smith is 421 miles from St. Louis over Frisco to Fort Smith and M. P. beyond. Van Buren 10 miles from South Fort Smith is less distant from St. Louis. These are the short line distances. To South Fort Smith the distances are 510 miles over M. P., 614 miles over M. K. T. in connection with M. V., and 639 miles over M. K. T. and Ft. S. & W. A rate of 17c applied over most of the routes. In 77 I. C. C. 473 the commission prescribed for these distances 12c for single line and 12.5c for join line hauls on this commodity. HELD: Rate attacked unreasonable for joint hauls and 14c for single line hauls, reparation awarded. Athletic Mining & Smelting Co. v. Ft. S. & W. Ry., 112 I. C. C. 497.

(c) Complainant attacked rates on prepared roofing, asphalt shingles, and related commodities from all important producing points north and east, respectively, of the Ohio and Mississippi rivers to territory south and east, respectively, of the same rivers. The complainants also attack as unreasonable and unduly prejudicial the rates from trunk line territory, other than the Buffalo-Pittsburgh zone to Virginia, West Virginia and North Carolina not dealt with in Southern class rate investigation 100 I. C. C. 513. Rates to West Virginia and Virginia points in official territory are generally on the official territory basis of 90% of sixth class, although there are some commodity rates. The rates from New York and Spa Spring are generally on a substantially higher level, distance considered, than the rates from Niagara Falls and Erie to the same destinations. The record leaves no doubt that many of the rates which complainants at points in trunk line territory are paying are unlawful and can be corrected in this proceeding. HELD, rates attacked to all points in southern territory except Virginia and North Carolina, and from central territory and Buffalo and Pittsburgh territory to all Virginia and North Carolina points in southern territory are unreasonable to extent they exceed 95% of ninth class rates prescribed in 109 I. C. C. 300 from and to the same points. Complainants also attacked rates on prepared roofing from Cincinnati and St. Louis and other producing points north of the Ohio river as unreasonable and in violation of section four. Rates for future are already disposed of. Reparation denied, complaints dismissed. Standard Paint Co. v. Director General, 112 I. C. C. 589.

(d) Complainant attacked commodity rate charged on five cars of face brick shipped between Aug. 2 and Sept. 5, 1923, from Wichita Heights, Kans., to Wellington, Tex., as unjust, unreasonable, unduly prejudicial and in excess of rate applicable. Wichita Heights is on the Frisco a few miles west of Wichita, Kans., and Wellington is the western terminus of the M. K. T. connecting at Altus, Okla., with another line of that carrier. Shipment moved as routed by shipper over Frisco to Wichita, K. C. M. & O. to Altus, M. K. T. through Hollis, Okla., to Wellington, 321 miles, charged

29.5c. The rate sought is the same as the joint line rate on face and other kinds of brick for 321 miles under the socalled 9702 scale prescribed in 1923. HELD, rate attacked unreasonable to extent it exceeded 17c, reparation awarded. Reliance Brick Co. v. St. L. S. F. Ry., 112 I. C. C. 619.

(e) Respondents proposed to publish specific rates on cotton seed from 15 points in southeastern Missouri on the Frisco and St. L. S. W. to Cairo, Ill. In 98 I. C. C. 183 the commission prescribed a distance scale of rates for application on cottonseed, carloads, to Cairo from points in Missouri on and south of the Frisco from St. Louis, Mo., to Seneca, Mo. The tariff published in compliance with the order in that case contained the prescribed scales of rates and made reference to the carriers distance tariffs. It did not contain point to point rates or show via just what junction points the shortest routes were made. Respondents admit that the distances and rates shown in the suspended schedules to Cairo from Benton, Cape Girardeau, Commerce, McBride, Menfro, Neeleys, Seventy Six, and Wittenburg are incorrect. Respondents are justified in computing distances over the shortest route via existing connections maintained for the interchange of carload traffic. The fact that by means of switch it is possible to so handle a car at a place not a point of interchange as to reduce the distance between points of origin and destination by the fraction of a mile or a few miles does not bring such a place within the meaning of the phrase "existing connections for the interchange of carload traffic." HELD, schedules not justified, schedules to be filed consistent with the findings therein. Cottonseed to Cairo, 112 I. C. C. 709.

(f) Complainant attacked class rates charged on sulphuric acid, in tank cars, from Tiltonville, O., to points in the Wheeling, W. Va., Youngstown, O., and Pittsburgh, Pa., districts as unreasonable, unjustly discriminatory, unduly prejudicial in violation of section 13. Complainant's plant at Tiltonville which is on the Ohio river near Wheeling, is served by the Pennsylvania and W. & L. E. It also has facilities for shipping by barge. The competing producing points are Newell, Pangeloth, Natrona, Beaver Falls and New Castle, Pa., Niles, O., and Moundsville, W. Va. Sulphuric acid is rated fifth class, but by exceptions is sixth class or 90% of fifth class. The movement on class rates appears to be restricted to long hauls and is relatively small. HELD, rates attacked unreasonable to extent they exceed rates ranging from 5c for 5 miles and under to 16c for 150 miles, undue prejudice to be removed by placing all competing points on the scale. Bertha Mineral Co. v. B. & O. R. R., 112 I. C. C. 754.

(g) Respondents proposed to increase the carload rates on scrap or waste paper, alkali, alum, papermakers' clay, lime (in mixed carloads only), precipitated lime (whiting substitute), rosin, soda ash, crude, unground, ore, unrefined sulphur, talc, and whiting, known as paper manufacturers' supplies, from and to certain points in New England. Present and proposed rates are distance commodity rates. The record shows that there is no interstate movement of these commodities, except scrap or waste paper, for these distances over respondents' lines, and that, with the exception of papermakers' clay and scrap or waste paper, these commodities are not imported or exported. Principal interstate movement of scrap or waste paper is from Boston as a part of through transportation by water from the Pacific coast. The record indicates that there is little, if any interstate movement of this commodity locally between points on respondents' lines for these distances. Papermakers' clay and scrap or waste paper are rated sixth class in official classification. HELD, proposed rates on scrap or waste paper from Boston to points on respondents' lines, shipped by water to Boston from the Pacific coast have not been justified, but that the proposed increased rates for the interstate transportation of this commodity originating at and destined to points on respondents' lines have been justified. Various commodities between New England points. 113 I. C. C. 44.

(h) Complainant attacked the class rates between points in Arizona, on the one hand, and points in California, New Mexico and Texas, on the other hand, as unreasonable, unjustly discriminatory. The allegations in respect to points in Texas was restricted to El Paso, Tex. Principal carriers serving Arizona are the Santa Fe, which crosses the northern part of the state and extends as far south as Phoenix, and the Southern Pacific, which traverses the more populous southern part of the state and connects with the Santa Fe through the Arizona

Eastern at Phoenix. The principal industries of Arizona are copper mining, livestock and agriculture. The traffic moving under class rates is much heavier into than out of the state. There are many more commodity rates from the eastern transcontinental groups than from points in the adjoining states into Arizona. There are practically no commodity rates on less than carload traffic between points in these states. There is some carload movement on the class rates, but the less than carload movement on such rates appears to be much greater. As there are few commodity rates on less than carload traffic, and there is a large movement of such traffic into Arizona, the class rates under consideration are of considerable importance. The evidence is insufficient to warrant any finding concerning the rates to and from points on the independent short lines in Arizona, except that such rates should reflect the changes herein required in the junction points. The present record does not warrant a finding that the public interest requires the establishment of through routes and joint class rates via Phoenix, but defendants should give consideration to the establishment of such routes and rates between points where there is a substantial movement of traffic and the use of the Phoenix gateway would effect a considerable saving in the transportation service. HELD, rates attacked are shown to be generally excessive not only by complainant's comparisons but also by those of the defendants, especially for the longer distances. The findings herein are to be understood as only a temporary measure to accord the Pacific southwest substantially the same scale of rates as now applies in the Pacific northwest. They are subject to reconsideration in the event the class rates throughout the mountain-Pacific group should be brought in issue in a general investigation or otherwise. HELD, local and joint class rates of the Santa Fe, including its subsidiary lines, and the S. P. system, including the E. P. & S. W., and A. E., between points in Arizona, on the one hand, and points in California and New Mexico and El Paso, Tex., on the other hand, are unreasonable to extent they exceed rates ranging first class for 10 miles to 25.5c for 800 miles. For joint hauls over the S. P., or its subsidiaries, and the Santa Fe and its subsidaries, where the total distance does not exceed 500 miles, there may be added to the rates shown in the above scale arbitrary of 10c first class. Distances should be computed over shortest possible routes formed by the above mentioned lines via existing connections for the interchange of carload traffic, and the rates shall be based on the distances over the single or joint line route that makes the lowest rates, taking into consideration the arbitraries for joint line hauls. The rates to and from points on branch lines in Arizona should be based on a constructive mileage of 150% of the actual mileage on the branch except Clarkdale and points which have been customarily accorded the main line basis of rates. If the rates from Los Angeles to points such as Phoenix and Tucson are kept on a parity they may be based on the average distance to such points computed as above directed, provided a similar adjustment is made from El Paso. Arizona Corp. Com. v. A. E. R. R., 113 I. C. C. 52.

(i) Following Oklahoma case, 98 I. C. C. 183, rate assessed on cottonseed from points in Texas to Memphis found unreasonable to extent it exceeded distance rates prescribed therein. Reparation awarded. Dixie Cotton Oil Co. v. F. W. & D. C., 112 I. C. C. 1.

(j) Rates on lime from producing points in Maryland, Pennsylvania, the Virginias, and Ohio to c. f. a. territory found unreasonable. Reasonable maximum rates and distance scale prescribed and findings in 85 I. C. C. 341 and 93 I. C. C. 617, modified in part. Eastern Line Mfrs. Traffic Bureau v. A. & B. B., 112 I. C. C. 7.

(k) Rates on mine timbers from points in Missouri to destinations in Illinois found unreasonable to extent they exceeded distance scale prescribed in the Palmer case, 87 I. C. C. 622 from and to same points. Egyptian Tie & Timber v. M. P., 112 I. C. C. 101.

(l) Rate on face brick from Wichita Heights, Kans., to Wellington, Tex., found unreasonable to extent it exceeded joint-line rate on face and other kinds of brick for like distances under the so-called 9702 distance scale prescribed for application throughout southwestern territory, as subsequently extended. The lower rate sought compares favorably with rates for equal distances from Kansas to Oklahoma and Texas, with rates from various points in Texas to Wellington, and with joint-line rates under

intrastate distance scales applying in Kansas, Oklahoma, Arkansas, and Missouri. Reparation awarded. Reliance Brick Co. v. St. L.-S. F., 112 I. C. C. 619.

(m) Proposed joint distance commodity rates on cottonseed from certain Missouri points to Cairo, Ill., established by carriers in purported compliance with commission's findings in Oklahoma Corporation Commission, 98 I. C. C. 183, found justified in instances where carriers computed distances over shortest route via existing connections maintained for interchange of carload traffic and not justified as to points where distances were not so computed. Cottonseed to Cairo, 112 I. C. C. 709.

(n) Fact that by means of a switch it is possible to so handle a car at a place not a point of interchange as to reduce distance between points of origin and destination by the fraction of a mile or a few miles does not bring such a place within the meaning of the phrase "existing connections for the interchange of carload traffic" as used in a finding of commission prescribing distance rates and which provided for computation of distances by the use of "the shortest routes via existing connections for the interchange of carload traffic * * *." Cottonseed to Cairo, 112 I. C. C. 709, 711.
